escaped. Before this short narrative was closed, a faint shriek was heard from the devoted and gentle wife of the surveyor, who had sunk to the floor like a doomed victim. Three of the women bore her off to one of the cabins, whilst a fourth took care of her child.

In a short time the station was surrounded by the whole force of the savages. The commander adopted the most judicious measures with the greatest deliberation. The establishment called the "station," was built of long logs, placed end to end, and close together, the outsides were hewed down smooth, so that an enemy could not reach the top, about twenty-five feet high, except by ladders. There were port-holes in the sides. This wooden wall enclosed about four acres of ground, within which there was a spring and many log dwellings. At the south-eastern corner there was a gate, high enough for a man on horseback to enter. This gate was used so continually that it became necessary to frame it out of substantial pieces of wood, placed six or eight inches apart, in order that it might have the proper lightness, turning as it did on imperfect wooden hinges.

The wife of the commander of this rude fortress was a heroine in the broadest sense of the term. At the time of which we are speaking she was about thirty, and the mother of six children. She was unusually tall, with large limbs, and inclined to corpulency. When she moved in pursuit of any purpose she seemed to stride over the earth. Her hair was of a light flaxen color, was turned back from her high, broad forehead, and tied behind by a simple leathern string. It was of great length, and spread all over her shoulders. Her step was quick; her eye piercing, and of the brightest blue; her complexion of the most beautiful white; her person was perfectly erect; her chest large and prominent; her voice was loud and penetrating. When she spoke, the hearer instantly detected in her the spirit of command. The passions of this woman were stormy, and yet her affections were tender and ardent. In all the relations of wife, mother, sister and friend, she manifested the deepest and most endearing devotion. Her female companions looked on her with awe and reverence, because she was gifted with so sound a judgment, and so great a share of common sense. Her apprehension was as rapid as the lightning. Unlike most of her sex, she was a total stranger to thick-coming fancies, but saw everything that concerned her interests through the medium of an unclouded reason. When placed in emergencies, she had all the admirable readiness of woman.

As soon as the men had taken the positions assigned them, Mrs. W. observed to her husband, whom she familiarly denominated John, "I think that there are not enough bullets moulded, or patches cut; the powder-horns want filling; the boys had better throw out their priming and pick their flints." To one of the women she said, "Go to yonder furthest cabin and bring me some bars of lead." To two others she cried out, "Mend up the fires—put on the skillets and hand me the moulds; set a bucket of water close by to cool the balls in." The lead being brought, she seized an axe and cut up enough of pieces to fill the vessels. Hurrying to a large poplar chest, she drew therefrom a wooden box containing powder; the flasks having been brought to her, she filled them with as steady

a hand as if she had been engaged in an indifferent duty, and apparently without losing a single grain—so concentrated were her energies in this cause of life and death! She cut up a quantity of patches, and when she delivered them, she remarked, "that without them the balls would be too small for the bores of the rifles, and that they might make scattering fire." In about an hour after the first alarm, the enemy gathered around the station. They kindled a fire near the gate, but so much wide of it that those within could not assail them successfully. Having gathered up some live chunks, they advanced with loud yells, with the view of applying them to the gate, but just as they were in the act of doing so, the whites poured into them a deadly volley. Several were heard to fall, and were quickly dragged away by the survivors.

A considerable time elapsed before a second assault was made. At length, the enemy approached, some with fire, and others with their guns in their hands, which they suddenly protruded through the spaces of the gate, discharged them, and shot down seven of the whites; five of whom were killed on the spot.

It was now clear that a desperate effort must be made to disperse the party. If the fortress were set on fire, the assailants would gain an entrance, and every soul within would be massacred. The force of the Indians was so great, that if they persevered, they could afford to lose a large number, provided they should be able at last to achieve a victory. A short council was held, when Henry G. stepping forward, with a firm voice and manner, suggested a new plan of operations. He proposed, that twenty of the men should clamber up the inside of the wall of the station, take their positions on the plate at the top, and fire upon the assailants as they gathered at the gate. Such an attack, he said, would do certain and fatal execution. The resolute wife of the commander, who was everywhere amidst these horrors wholly undismayed, listened to this plan with intense interest. Clapping her hand upon Henry's back, she said, with enthusiasm, "You are a dear, brave boy."

On Henry's turning his eye to his left, there stood his father. Every drop of blood seemed to have left him; his face was of an ashy hue. In a suppressed tone, he expostulated gently, and seemed convulsed by a struggle between paternal affection and the sentiments of a high and delicate honor. He said simply, that perhaps the assailants might be repelled without so great a hazard, and that the position on the top of the wall would expose every one who ascended to almost certain death.

But a very large majority were in favor of the new scheme. Henry offered to lead the party, and in a moment the required number were in readiness.—They reached the plate with much difficulty, but when there, they could not be readily seen, as the night was dark.

In a little time, upwards of one hundred Indians moved up to the gate; some with pieces of timber on their shoulders, with which they intended to batter it down; others with fire, and others with their pieces loaded. When they had become huddled together and had fallen into confusion, presenting the appearance of a disorderly and uncontrolled mob, the whites below and those above fired at the same instant. It was

understood, that Henry and his party should descend immediately after they had delivered their fire, but one of the men, who was large and heavy, was slow in his movements; an Indian who was standing some ten or fifteen paces from the crowd, saw him, raised his rifle, and drew the trigger: the bullet struck him between his eyes, and he fell like a mass of lead perfectly dead at the feet of his wife below, who was watching to ascertain his fate. She sunk down on his lifeless body, and both were quickly removed by the order of Mrs. W. Seeing him fall, she sprang to him, and throwing her keen eye upon him, she cried out in a plaintive tone, "Poor fellow, he is gone!"

It appeared afterwards that this last effort of the whites had been so fatal to the enemy that they were disheartened, and had imbibed the opinion that those within the fortress were far more numerous than they really were.

Accordingly they withdrew, taking both their dead and wounded with them, as was their established custom. After the day had dawned, the commander ordered that the necessary preparations should be made for the interment of those who had fallen. The young men procured some stakes, which being driven into the ground, rough planks were placed thereon, and the whole of the six corpses were laid out side by side, and dressed in white cotton homespun. The wife of the commander covered each gently with a white sheet. Having done this, she passed out of the station, and in about half an hour returned with both hands full of wild flowers, which she scattered over the dead bodies. Amongst the killed was a stripling, who was uncommonly handsome, and who was just nineteen, the oldest child of his parents, who were also residing within the fortress. Raising the sheet, this woman looked at him long and earnestly, then said, whilst the tears were stealing down her face, "What a pity that he should have been cut off so soon!"

The parents of this youth sat down together near his body, and remained by it throughout the day, to all appearance wholly inconsolable. On the other side, was the wife of him who had fallen from the top of the rampart, wrapt in grief.

Her two little children were at her feet, unconscious of their irreparable loss. Perceiving that their mother withheld from them her accustomed endearments, they endeavored in vain to arouse her attention by climbing up on her knee, and inquiring of her by their looks, "what was the matter with her?"

About eleven o'clock, the whole company was gathered around the dead bodies. The women sung several hymns. After they had ceased, those present dispersed, that they might partake of a slight repast. The order was, that the interment should take place a little before sundown. Just as the procession was formed, the commander said, that no brave soldier who fell in battle under his eye, should ever be buried without military honors; that this act of respect was always due to the memory and deeds of the gallant defenders of their country; that such was the established custom during the revolutionary war. A platoon was detailed for this duty. The company moved slowly on—the women singing as they proceeded. When it had reached the graves, Major G. stepped forward, and read the funeral service. The old veteran then waved

his hand, and the platoon fired into the cold and narrow abodes of the fallen. The sound reverberated along the neighboring hills, and at last died away upon the ear. The party returned in profound silence.

But there was one being who had participated in the recent tragedy, and who commanded the sympathy of every heart. This was the wife of the surveyor-general. Her misery seemed to be unsusceptible of any alleviation. Unlike most of those around her, she had left all her relatives behind her, for she had literally torn herself from the embraces of her father and mother, to participate in the fortunes of a husband whom she adored. The road before him was thickly beset with dangers—wealth and honor were within his grasp—but he had fallen, and she was desolate.

The wife of the commander used every effort to soothe her wounded spirit, by arousing her to a sense of the dependant condition of her infant. She sometimes dressed it, and laid it by her side; she offered her the consolations of religion; but the stormy scenes of a western frontier were too rough for the gentle nature of this woman. The arrow which had been shot at her had reached her heart. She gradually pined away, and mourned as one without hope. The long hours were passed in listlessness and dejection. She sat and watched day after day the sun descending in cloudless glory into twilight. She cast her longing eyes in the direction where they told her lay the unburied and unhonored corpse of her husband. At last, she sent one of the children one morning to the wife of the commander with a message that she wished to see her. This summons was obeyed instantly. She desired that her child should be brought and laid beside her. Pausing for several minutes, during which the tears ran rapidly down her pale cheeks, she broke silence, and said, "My time has come; my spirit is broken—life is to me a burden. I have struggled a good while between hope and despair. This child will soon be an orphan. Your never-ceasing kindness has enkindled in me towards you an affection almost filial. I have sent for you to bid you farewell, and to commit this infant to your charge. I have to request that you, whenever this horrid war shall be followed by peace, will cause my child to be taken, and placed in the arms of my mother." Then reclining her head, and placing her lips on those of the infant, she gently breathed out her immortal spirit.

PRYNNE'S HISTRIOMASTIX.

Prynne's 'Histriomastix' is a quarto of more than 1100 pages—an invective against the stage—the matter chiefly temporary and levelled at fugitive events—the author never ventures upon the most trivial opinion without calling to his aid whatever has been said in all ages and nations—a *Helluo librorum* in which are quoted more than a thousand authors. Milton says of Prynne, "that hot querist for tythes whom ye may know by his wits lying ever beside him in the margin to be ever beside his wits in the text."

THE FATE OF THE GIFTED.

"As the body wastes,
The spirit gathers greater strength, and sheds
On the admiring world supernal light.
Alas! that eloquence will soon be mute—
That harp, unstrung, shall lose its loveliness,
Nor know its own sweet sound again."

It has long been a popular superstition, that superior mental endowment marks its possessor for an early grave. And not only so, but that early doom must result, as a consequence, from a highly gifted mind. That the opinion is erroneous, at least in so far as a false cause is assigned for an effect, need not be denied. If it be true that unusual talent will inevitably invite death, the converse of the proposition ought to be equally true, that the entire void of mental possessions ensures a "green old age." But we do not propose to combat error, neither do we intend to write a philosophical disquisition. That the gifted *do* find an early tomb, is so frequently true, that we cannot wonder at the prevalence of the superstition, nor deem the sentiment of the ancients singular—

"Whom the gods love, die young."

In many instances, we may mark the foe that destroys them. In one case, a feeble physical frame seems to wear rapidly out, and consumption "flushes the cheek"

"With roses that bloom only o'er the grave;
And in that eye that once so mildly beamed,
Kindles unnatural fire."

In another case, poverty seems to have presided at the birth, and attends untiring throughout the short term of days, till despair and horror dry up the very fountain of life, and the poor victim sinks into an untimely grave. But we sometimes look in vain, and hence, no doubt, the notion, to which we have alluded, of the peculiar partiality of Heaven.

At the risk of the charge of exquisite sentimentality, we hazard the assertion, that men of unusual poetical character seem to possess but little sympathy with the utilitarian world around them: Their soul is cast in a finer mould than that of the crowd with which they are doomed to mingle. The hum and bustle of the machinery of life jars discordantly on their ear. It is true, that the poet sometimes makes a *business man*: but it is not his peculiar talent that makes him thus. He becomes so in opposition to it. We are indeed at fault if a political economist would not endorse his genius as *unproductive capital*.

When we speak of the poet, we by no means use the term in a limited sense. We mean the man of genius—of sensitive spirit—of brilliant imagination and fancy—of a soul delighting in the bright and beautiful things of earth—the child of nature. For such—though they possess many points of difference, and diversity of taste and pursuit—are united by a common bond of sympathy. The god within responds to the god without. The same yearning of soul after spiritual things is theirs. The same turning from the discordant throng away, to commune with the "voices of nature." They behold

"With mind inspired and genius-brightened eye,
Those beauties which eternally shine forth,
Nature, in all thy works! To them what joy
The morning landscape yields; when the young sun
Flings o'er the mountain his first bickering ray,
And tips with wavering gold the embattled tower,
While the first gleam the waters catch!

What joy
Amid the forest depths to wander on,
O'er flower-impurpled path, and list the tones
Of the deep water-fall at silent noon,
Drowning the wood-lark's song; and then to view
Its angry flood, headlong from rock to rock,
Leaping in thund'rous rush, with silvery arch,
Melodiously sublime!

And oh! how sweet
To them the golden sunset's glowing hour,
When high amid the evening's gorgeous pomp
That light the west, the mountain lifts its head,
A rich impurpled pillow for the god
Of day to rest on; when the flocks and herds
Are wandering homeward to the tinkling sound
Of their own tuneful bells: and pastoral reed
And song of milk-maid fill up every pause
In nature's vesper-anthem, while the spire
And sun-gilt tower glow with the day's last beam!"

What lover of literature has not mourned over the fate of the lamented White? Who can read the story of his toils—his sufferings—his death—without a tear? He was worthy the plaintive lay of the mighty bard who bewailed him. And such is the fate of many. After a few years of sorrow and suffering among those who cannot appreciate them aright—whose heart cannot sympathize with their heart—from poverty, from disease, from overwrought sensibility, or some kindred cause, the frail mortal tenement is dissolved, and the spirit which seemed formed only for heaven, seeks again its native skies!

"And then mankind
In generous mockery, pay that tribute due
To their transcendent talents, and the grave
That hides their cold remains with laurels deck!"

We have not chosen our present theme for the purpose of a mere idle waste of sympathy. We have been betrayed into a much longer prelude than we anticipated. We have long wished to publish in a connected form (accompanied with a brief biographical sketch) a few of the fugitive articles of some who have contributed largely to our periodical literature, and who have fallen early in the race, while winning an honorable renown. We would do it both from a sense of justice to departed worth, and also from what we deem the just merit of the articles themselves. Two hold an especial place in our memory, though, as circumstances favor, we may continue our notice. The sketches must of course be brief—*too brief*—and the number of articles extremely limited. In the *order* of the arrangement we design no reference to the relative talent of the individuals, but consult only our own convenience. The remainder of our present number we propose to devote to the memory of the late

CHESTER A. GRISWOLD.

"The spoiler came, and all thy promise fair,
Hath sought the grave, to sleep forever there."

Mr. Griswold was a native of Cooperstown, Otsego county, New York, but for the last few years of his life was a resident of Utica, New York, where, we be-

lieve he commenced his literary writings. He enjoyed early advantages for a good English education, which were well improved. Further than this his studies did not extend; and at a period of life when those who design pursuing a liberal education enter college, young G. assumed a station in a mercantile house. From hence his course of life was of nearly uniform tenor. He changed his situation once or twice, till he received an appointment to a place in a banking institution, in which he remained till his death.

In private life, Griswold was deservedly esteemed. His mind (by his own tuition,) was remarkably well cultivated: and from entire amiability of disposition, "none knew him but to love him." In the discharge of his business-duties, he was conscientiously faithful; and literary pursuits, for which he felt a passion, were only allowed to engross his leisure hours. When about eighteen years of age he first became known to the reading public, through the medium of the periodicals, to which he contributed largely, over the various signatures of "Malcom," "A.," "Alleyne," and "C. A. G." In several instances he proved a successful competitor for literary prizes. "*Lundy's Lane*," a prize tale, written for the "*Rochester (N. Y.) Craftsman*," a literary periodical of considerable repute, edited by Brooks, is doubtless fresh in the memory of many of our readers. Our author died soon after completing his twenty-fourth year. His literary career had but just begun: and we deem it but just to state that not only were his articles the fruit of occasional hours of leisure, and hastily written, but were generally sent to the press without revision or correction. Of his style we shall leave the reader to form his own opinion, from the various specimens we shall present.

Griswold was a poet, in every sense of the word: but he entirely intermitted poetical writing sometime before his death, and we think many of his prose articles by far the best. It is to be regretted that many of his articles are lost; yet from the few we possess, the reader will be able to form a somewhat just opinion of his merit.

From "Lines suggested by Salathiel," we select a few passages:—

"Tower and turret, citadel and wall,
Lay wrapped in falling sunlight! 'twas the hour
When Judah's sacrifice arose on high,
And o'er the hill, the valley, and the wave,
The mighty shadow of descending eve,
Was trembling like a visionary thing!
The sun went down, and all the golden glow
Of palace and of temple passed away,
And twilight wept o'er falling Israel!
Then the soft music of the hymn pealed forth
On cymbal and on harp to heaven!

* * * * *

Darkness fell—

Broad darkness: not a star looked down to earth.
Living and dead lay still: the sword was sheath'd,
But 'twas not in the scabbard; and the spear,
The blood-red javelin and the gory helm,
The broken buckler and the tatter'd flag,
Were strew'd in ruins, tarnished and defaced.
Then came the star forth from its glorious seat,
On wings up-borne, descending like a bride
In nuptial garments, till it hung upon
Its self-depending balance o'er the walls,
Clothed in unearthly splendor: not the sun
In all his glory, not the meteor blaze
In all its fierceness, ever beamed so bright!
At length it stood, in all its burning glow,

The mighty image forth, to earth and heaven,
Of heaven's first earthly temple! then a sound
From fitting forms and airy shapes came down,
Floating on ether: 'twas the song of heaven—
Sweet, melancholy, wild; 'Let us go hence!
Nature stood still—all earthly sounds were still!
'Let us go hence'—'Let us depart'—'Away'—
Again rung mournful, mild, and freely forth;
And clouds came down, and roll'd in snowy coil
O'er all the visionary scene: but still
The wailing sound was heard—'Let us go hence!'"

There is certainly musical versification and fine sentiment in the following *tranquil*

" STANZAS.

"Sad and low o'er the dark tomb where sleep the departed,
The white charnelled bones in their clay-covered bed,
Sweeps a voice like the moaning of one broken-hearted,
A voice like a wail from the land of the dead.

Oh! it loves the calm hour when the daylight has faded,
The still of the evening, the hush of the grave!
When the mountain and valley by moonlight are shaded,
And the sun hath withdrawn all the glory he gave.

Then it comes, with its silvery sweet tone of sadness,
And sighs as it lingers, and moans as it flies:
Then hush'd as the tomb be the vain voice of gladness,
And wet with the sad tear of sorrow, the eyes.

Ah! kneel by the place where are charnelled the lowly,
Who once trod the earth with a step like thine own;
The earth which thy footstep now presses is holy,
And rife with a moral the cold sculptured stone.

How soon must thy slumber, like his thou art reading,
Be silent—as lonely, as lowly, as deep!
Even now is the breath, tho' it passes unheeding,
Gone forth, that may sigh o'er the place of thy sleep.

Then lay thee in mourning, in sorrow, and anguish,
Beside the green mound where the cold sleepers lie:
For the spirit—a pris'ner the spirit doth languish—
To hail the glad hour when its clay cell shall die!"

The following verses from "The Song of the Sea Dæmon," though not perfect, contain many thrilling lines:

"I dwell in the ocean wave,
Low in the boundless deep:
There in the halls of Neptune's cave,
Where serpents glide and where monsters creep,
When the billows have rocked the god to sleep,
I love to waken the whirlwind's rage,
And smile when the waters rave!

I waken the sleeping gale,
And revel in the surge;
And I laugh when the whirlwinds rattle,
And sing with glee my unhallowed dirge,
And over the angry waters urge
With lightning speed the tattered sail,
And yell with joy when the proud turn pale!

I fly with the groaning barque,
And smile at the mortal fear;
I am seen in the fitful dark,
And shriek my dirge in the tingling ear,
Laugh at the toil and the terrors jeer;
I flap my wing o'er the quivering ark,
Like the dæmon of anguish, pale and stark.

I ride on the lightning's flash;
I come like the angry cloud;
And I mock the terrible crash
Of the thunder's pealing deep and loud;
I bring the sailor his ghastly shroud,
And over the deck like a dark wave dash,
While the sea, the sky, and the whirlwinds clash!

I hide with a mist the rock,
And cover it with a wave;
And scream aloud when I hear the shock,
And view the death of the fair and the brave:
I fly to open the briny grave,
And an hundred daemons around me flock;
Discordant their screams as their red hands lock,
And with fiendish yells their requiem mock!"

Our author's imagination seemed at times especially to delight in scenes of wildness and gloom. The following has much of the "German" in its conception and execution:

"REVELS OF THE DEAD.

"Dark midnight abroad
Her robe doth fling,
And spirits awake
To their revelling;
And the groaning yew, and the howling blast,
Bring fear to the heart as it wanders past.

Pale Luna is hid;
She would weep to see
The reckless mirth,
And the revelry;
Wild as the blast and rude as the gale
That paints the cheek of the proudest pale!

In the darkened sky
Is the folded cloud,
Dense, cold and damp,
As a daemon's shroud;
Riven and torn, yet gathering still
For the storm to toss and spread at will.

And unearthly sounds
Are echoing near,
That chill the heart
Of the brave to hear;
Wild; ringing like those who the red wine quaff,
The fiendish glee and the fiend-like laugh!

Still when the sound
Of the storm is least,
You may hear the mirth
Of the goblin feast;
And when dim night the faint moon looks thro'
You may see the rites of the ghostly crew.

On the church-yard green
Is the spectre's walk;
By the charnel house
Cold spectres stalk;
And their white bones rattle at every breath;
Gaze on if thou wilt: 'tis the dance of death!"

We have already remarked that we thought Griswold's prose writings among his happiest efforts. Some of the finest "Tales" and "Sketches" we remember to have read, were from his pen. The length of these, of course, forbids their transfer in an article like the present.

A short time before his death, he commenced a series of articles for a literary periodical, of which we were for a time the editor, entitled "*Vagaries—by an Idler.*" It was a rambling, unconnected series—entirely free from restraint—abounding in fine sentiment, in the happiest style of composition. As these were his last articles, we shall venture upon a few extracts at random. From the first number the following seem the best for our purpose:

"The sun again comes out, bright and shining, just above the far faint line that bounds our vision; with clouds above and

around him, upon which his gentle looks fall like an infant's slumber.

How delicious the air is after a pleasant June shower. You can feel it almost by intuition before it has quite reached you, bearing the same pleasant sensation one feels standing beside a cool fountain as the clear jet leaps upward, and falls back into the basin, sparkling in the light of the moon and many lamps, like a host of diamonds and rubies. The wind steals along so silently and so softly, that but for the moving and trembling of the locks upon one's brow and its glad whisper, you would scarce know that it passed at all. And the beautiful flowers that were so faint and languid, now lift up their dewy heads to the sky in silent adoration! And there darts off a bright bird, with a clear long whistle, who has sung no song to-day till now; rising higher and higher up into the empyrean; and his song coming fainter down to the world beneath him.

It is a pleasant thing to look out upon the 'living things' of the vegetable world,—to commune with

'Nature in her cultivated trim.'

* * * *

How very soon it is possible to wear out and forever erase all the first loves, the warm and elastic feelings, that the young boy takes with him into the world, and should wear to his grave. One by one, month by month—they wither—fade—expire. And so sacred as they were too!—So mutable a thing the human mind is: Yesterday, sunshiny, clear: To-day, guilty, fearful: To-morrow, gloomy, morose: The day after, misery, with a painted smile for the world, and a curse for itself—

The mind is a strange compound. There is one I should much like to analyze. It was once, I am sure, full of all manner of kindly feelings: But I would not feel the bitterness of the sneer that is forever gathering on his lips and in his eye, for the wealth of Ind. He rhymes occasionally, and rather well too for one who makes no pretensions to the science. (Science! it's reduced to a science now, they say.) I have several pieces of his; but all of them—light or dark, gay or gloomy—bear the impress of—what shall I call it?—loneliness! Here is one, (I don't think he'll ever read this; so I may venture:) It is certainly far from being faultless, but it is better than nineteen-twentieths of the periodical trash with which we are absolutely deluged; and that is very far from being a compliment.

"They are breaking, one by one, the ties
That harmonized the spirit's tone;
Darker and deeper bows the gloom
That o'er the bosom's light is thrown,
A pall of night around the tomb.

Alas! so many strings are broken,
So many ties asunder rent
That never may be strung again,
That discord with its tones are blent,
And every tone is one of pain.

Stern worldliness creeps round the soul,
And cankers every gentle feeling;
Save in some far and secret part
Where memory from a cold world stealing,
Revives the tones that soothed the heart.

So, as a harp that once hath poured
The joy its master's spirits felt,
Hath one by one its tones all shattered;
And all the chords that used to melt
The soul to mirth, are torn and scattered:

Hangs silent on the lonely wall
That echoed once its stirring tone,
And the dust gathers softly o'er it;
The living harp's-strings, one by one,
Are broken, with the heart that wore it."

"There—I'm sorry the heart's broke, though—but think the harp is not, altogether; though it may be shattered."

We cannot pass by the following, from the second number:

"Hallowed, all hallowed, gentle eve, are the blushing glances of thy milky sky; when the glorious sunset, picture of the first golden gush of youthful idolatry, has faded to the mellow sadness of man's maturer years, and save a few exquisite purple tints reflected from the blue ocean below to the delicate ocean above, thou art with all thy fanciful and ethery forms, one languid yet spiritualized whiteness; yielding up thyself as to slumber, to purify and hallow man's aching, mammon-bound soul!!

'Oh the full flow of the fetterless spirit!' how joys she to speed, as on the snow-white pinions of a dove, and join communion with her kindred among thy unsullied phantasies, by ethery partitions. How would she rejoice to rest from her world-weariness upon the pale velvet ottoman which thou hast even now spread out for the resting place of thy wandering beautiful ones.

And thy quiet stars come forth on the great deep, the crystalline fount of heaven, to hold holy communion with spirits of earth and heaven: and they burn, and burn, and dazzle, as bright as they did when the first smile of their existence lit up the void gloom of an unredeemed chaos; and they sing—all cannot bear them—but they do sing, sweet as the first hymn of the whole creation—and then they melt into a delicate softened splendor, as a snowy haze flows like a gauze veil before them."

We cannot pass the third number so hastily. It is in the happiest vein of humor, and only regret that we must curtail it at all.

* * * * *

"The moss-covered ruin, where wild ivy weaves,
Lay darkly and lonely, all shrouded in leaves:
Within and around it were many a token
Of famished decay, stones scattered and broken,
And weeds thick and lank; foul grass, tall and lank,
Sprang out through the windows and up in the doors;
But grew where the sun might not nourish its blade,
Hiding its green where the wall cast a shade.

And up through the floors
Came the cold creeping vines,
That languidly twine
On the shattered wall and weep
Those venomous tears that steep
The soul to a voiceless, dreamless rest,
* * * * *
The soul to a dreamless sleep.

The wild wind swept the lanky leaves,
And closer crept to the mossy eaves
A black and loathly crow,
Who had dined that day on a wind-bleaching skeleton:
'Twas a feast that he relished you know,
So sweet, so tender, so gelatine;
Sooth 'twas a joy to his maw.
'Haw, haw,' he muttered 'haw, haw; haw, haw!'
And the wild woods echoed 'haw, haw; haw, haw!'

A wolf came out from his dusky den,
And a hungry look had he;
I woe he has sought the lonely glen,
Or slept all day in the dingy fen,
And stalked to-night to see
If a lamb had strayed the fold:
He 'grinned a ghastly smile' when he saw
Where the crow had dined that day,
And he crunched the bleaching bones, and rolled
The shattered skull away:
And the crow he shook his jetty wing,
And laughed till he made the ruin ring
With his hideous laugh, 'haw, haw; haw, haw!'

A bat crept out of his daylight hole
To breathe the smoky exhalation;
Fresh from the villanous congregation
Of hairy spider and sightless mole;
And he fluttered his wing and snapt his teeth,
As he met an owl on the swampy heath;
'Hoot, to-whoo! whither away,
Son of the night, whither, whither?'
'To breathe, to flutter, to play,
To see the young roses wither.'

Arcturus looked down through a mist-shrouded canopy,
(Armed to the teeth in his burnished gold panoply;)

South there was little to see;
Mists gathered thicker and faster and wider,
Darkness, (a steed without bridle or rider,
And a swift footed steed is she!)

Rolled her broad banner afloat:
'Gods!' growled the star, 'what a planet!
So dark and so gaunt,

When to us there is light from the gold-giving sun,
It is dreary and dismal: how can it
Linger along with its mist and its cloud,
Still breathing unburied, but robed in a shroud,
I wonder there's people to man it!"

And the star was in a wonderful passion
When he sniffed the steam that the earth gave up,
So he chirruped his steeds, and laid the lash on;
'How the mists gather! Phœbus! I'd rather
Suffer the steam of the Hadean cup:
Onward, gee ho! onward, gee up!
We leave the wind jogging, as onward we dash on.'"

The series only comprised five numbers. The manuscript for the fifth number, "*Piast of Kruxwitzer*," an historical tale, was received; but before it was in type the writer was called hence by death. The unostentatious piety which had marked his life, shone brightly at his death, and a world of change, of toil, and suffering, was doubtless exchanged for "the better land."

The following article was sent us for publication shortly after his death. It was evidently hastily written and unrevised:

"Paleness was on her face; the sickly glow
Of slow decline sat on that faded cheek;
O'er the blue, languishing, yet lucid orb,
Fell jetty ringlets; and the pencilled brow,
More deeply shaded by the pearly white
That gathered round it, far excelled the hue
Of feeble imitation. She reclined
In melancholy posture; and the tear
Wrung from the heart, steep'd the long silken lash,
And wandering o'er her face, at length reclined
In peace upon her bosom: there it slept!
I never gaze upon the languid form
Of youthful beauty, when the unwilling hand
Of the stern tyrant rests upon her heart,
And pales the hue, and drives the brilliant flash
Of the soul-speaking eye, but sadness steals
Down to my inmost soul, and lingers there
In melancholy sweetness. Then the voice,
Feeble, yet clear, like sounds unearthly, fall,
B'otting remembrance out of earthly things.
Her form was lovely, yet more lovely far,
And thrilling, was her low tuned voice. She sung:

'Yet linger awhile!
Speed not so swiftly, ye light winged hours,
For lovely yet are the spring-tide bowers,
And sweet the smile
And fragrant breath of the morning flowers;
Yet linger awhile!

'Ah! why depart?
There is comfort yet by the cheerful hearth;
There is verdure yet on the teeming earth;
And many a heart
Is beating yet in its hidden worth!
Then why depart?

'Ah! linger yet!
The earth is not all a worthless thing;
Still fair is the twilight hour of Spring,
When dew-drops wet
The glistening gold of the humbird's wing;
Ah! linger yet!

'Nay, then, depart!
Thou wilt not stay in thy ceaseless task,
When a lingering hour is all I ask;
But this warm heart
In eternity's sunshine soon shall bask;
Depart! depart!

A smile, a sad, sad smile, a starting tear
Lingered an instant on that spotless cheek,
And both departed with the dying strain!
The mould now rests upon that form; and cold,
Cold as her marble is that marble brow!"

We close our extracts, and in justice to their author again repeat that they must not be viewed as *finished productions*. They were only the first fruits of a genius that had not enjoyed every advantage of early cultivation; and were the production of occasional hours of relaxation from severe duties; and only as such should be judged. Had Heaven lengthened out the days of their author, we doubt not he would have won a high place among the writers of our country. But it was not so to be: the shaft of the spoiler was sped, and in the morning of his manhood Griswold was called to sleep in the grave of the gifted!

"Rest thee, bard! no cares beset thee,
In the mansions of the blest;
Though a mourning throng regret thee,
Yet it will not harm thy rest:
Fare thee well! thy place of sleeping
Guardian Virtue watchful keeps;
She will point to kindred weeping,
Where the sainted Peet sleeps!"

March 9, 1838.

C. W. E.

NOTES AND ANECDOTES,

Political and Miscellaneous—from 1798 to 1830.—Drawn from the Portfolio of an Officer of the Empire,—and translated from the French for the Messenger, by a gentleman in Paris.

MARSHAL DAVOUST.

Whoever is able to do so, may explain the following fact. I speak as an eyewitness.

The French army had lost the battle of Waterloo, in consequence of numerous faults committed (whatever may be said) by Marshal Ney, Marshal Grouchy, and the Emperor himself. The army had effected its retreat upon Paris. The Emperor, returned to the Elysée-Bourbon to sign a second abdication, had left the chief command with Marshal Davoust. The grand headquarters were at Villette.

In the opinion of many military men all was not yet lost; at any rate, things had not yet been brought to a conclusion. The army, a little recovered from its fatigues, was full of anger; it demanded to be led to battle; and would not have been deaf to the voice of the representatives of the people deputed to it. What might have been the consequence of a different course from that which was pursued, no one can tell.

What I pretend to establish, is, simply, that nothing was yet terminated. Twenty-four hours after the fact of which I am about to speak, the Prussians, chased by the French cavalry, fled along the road to Versailles. In fine, the words *suspension of arms* and *capitulation*, had not yet been pronounced.

Some business carried me to the saloon of the general-in-chief; he was standing up, speaking in a very bad humor (according to custom) to several officers. I waited my turn. Looking mechanically around me, my eyes fell upon a large sheet of paper open upon the Marshal's table; mechanically I read the line, in large letters, that was at the top of the paper. I read,

"CANTONMENT OF FRENCH TROOPS BEYOND THE LOIRE."

During the few days that the army remained under the walls of Paris, the Emperor offered several times, even after his abdication, to place himself at the head of the troops, as a simple General, for the purpose of striking a decisive blow. At several of the barriers there were horses kept in readiness, by domestics in his livery. Marshal Davoust being informed of these propositions—he who had obtained from the Emperor a fortune of eighteen hundred thousand livres of income—publicly announced his intention of arresting Bonaparte, in the event of his presenting himself either as Emperor or General!

THE ROYALISTS DURING THE HUNDRED DAYS.

A provisional government had been formed after the second abdication of the Emperor. The army was assembled under the walls of Paris. The enemy might still have been forced to purchase dearly the fruits of its lucky victory at Waterloo. M. Real, who had been appointed prefect of police, on the arrival of the Emperor at Paris, on the 20th of March, proceeded to the house of the Duke of Otranto, where the members of the provisional government, of which the Duke was president, were assembled. M. Real went for the purpose of resigning his office.

"I do not desire," said he, "to remain in office to open the gates of Paris to foreigners, as was done in 1814."

They replied that things were not yet desperate, that it was necessary to wait the result of the negotiations that had been commenced, and, if it should come to that, the chances of battle.

"Could you," said Carnot, a member of the government, "arrest two or three hundred royalists, who, by their intrigues, embarrass the action of the government, and prevent the execution of our plans?"

"Nothing would be easier, but I will not do it; the royalists at this moment are quiet. The Prussians and English are at work for them; they have no occasion to meddle in the matter. If it be resolved to defend ourselves, to fight, it will be a different thing. In that event I will remain at my post; and it will not be 300, or 600, but perhaps 6000 royalists that I will arrest. And if the struggle should be prolonged, it may be presumed that I will do more than arrest them; for in that case they may rise against us; my duty will then be to restrain them, and I will not hesitate about the means. But all this is perfectly useless. Instead of preparing for battle, you are treating with the enemy. Paris is your palladium, and you are ready to sacrifice everything to save a city. I am, consequently, perfectly useless to you, and I come accordingly to offer my resignation."

"Designate some one to supply your place."

"It is a bad trust to give to any one; I should despair, if any of my friends was charged with it."

"What do you think of M. Courtin, formerly imperial attorney?"

"I have heard him well spoken of. The firmness, which I am informed he possesses, would be superfluous; but take him if you please, and especially if he pleases to accept the office. I wish him much happiness."

M. Real, having again become a private man, was proscribed by Fouché, his old friend. He was indebted to the Duke of Descazes for his permission to return to France.

On quitting the prefecture of police, M. Real burnt all his correspondence during the Hundred Days. If these papers had been saved, the restoration would have found in them precious information as to the value of the devotion of certain men. I could cite names, but I will imitate the discretion of which M. Real has set me an example.

THE VOYAGE TO GHENT.

The voyage to Ghent, that title to so many favors in the first days of the second restoration, to so many accusations after the revolution of July, was not equally appreciated by all the ministers who came into power after the Hundred Days. The Duke of Feltre was almost the only person who attached great value to this proof of fidelity; the Duke was himself a new convert, he had all the zeal of a neophyte, and labored by all the means in his power to cover with oblivion his former services. For him, for the creator of *fourteen categories*, there existed in fact but two—the brigands of the Loire, and the men of Ghent; and if in his organization of the army—(I use the word organization to express an idea, for what the Duke of Feltre accomplished in 1815 and 1816, never deserved the name of an organization)—if then to complete the rolls of officers of his shadow of an army, he resolved to use the brigands of the Loire, it was because he was unable to find a large enough number among the men of Ghent.

Marshal Gouvion-Saint-Cyr, the immediate successor of the Duke of Feltre, required some other guarantees than could be furnished by an emigration of a few days. The voyage to Ghent was of but little importance in his eyes. When applications were made to him founded upon this claim alone, he would reply with an ironical smile—"You have then made the sentimental journey to Ghent; you have done well; but if you have no other antecedent services on which to found your claims, I advise you to destine yourself for a civil career."

This severe frankness rendered the illustrious Marshal, who took so much trouble to repair the blunders of the Duke de Feltre, extremely unpopular. Under the Duke they had dreamt of the return of the good old times; under him, at least, a duchess could solicit a regiment for her cousin, and a marchioness be brought to bed, as in former days, of a captain of dragoons. Marshal Saint-Cyr, to destroy at once all these hopes, to cut off all such solicitations, presented and caused to be adopted his famous recruiting law—his revolutionary

law as it was called, which classed in the same rank and subjected to the same law, the son of a duke, and that of his farmer, and which opposed a barrier to aristocratical ambition, which time or some distinguished action could alone beat down. From that moment France was lost, the scenes of '93 were returned.

M. de Talleyrand was a man of too much intelligence not to appreciate at its proper value the famous voyage to Ghent; but he had too much tact to speak of it as the Marshal Saint-Cyr had done.

A young man was engaged in soliciting a situation; he sought M. de Talleyrand. Louis XVIII. had particularly recommended him as having been at Ghent.

"It appears to me, sir, that if the King desires to give you a place, he has no occasion for my assistance to do so. But, in fine, you have been at Ghent?"

"Yes, sir."

"Are you very sure, sir, that you were at Ghent?"

"How, sir!"

"Do you see I also was at Ghent; I am certain of it. There were three or four hundred of us in that city, and I have already given places to more than fifteen hundred as having been there. You see, that without wronging any one, I may be allowed to doubt on this subject."

ZEAL.

M. de Talleyrand is one of those men to whom the public have ascribed the greatest number of *bons mots*. Loans are only made to the rich, they say, and M. de Talleyrand is really rich in wit. In 1815, after the Hundred Days, M. de Talleyrand, on his appointment as Minister of Foreign Affairs, received a visit from those employed in his department. "There is one thing, gentlemen," he said, "which I recommend to you above everything else; it is, that you have no zeal. I detest zeal."

THE PROVOST COURTS.

Whenever a government creates extraordinary tribunals, it appoints its judges not for the purpose of trying, but of condemning. This principle must be applied to the Provost Courts—an atrocious jurisdiction, which I will describe in a single word.

A Provost's Court which sat at Macon, in 1816, condemned to an imprisonment of two years an old soldier then employed as a laborer on a farm, for having called his horse *Cosack*; he had been found wanting in the respect due by France to the foreign armies, and the Provost's Court of the Saone and Loire thought itself charged with the duty of avenging the insult. The poor man died in prison.

Everybody at this time refuses the responsibility of the introduction of Provost's Courts; and it is with reason they do so. He who first conceived the idea of drawing the restoration beyond the law, was a great enemy both of his country and of the restoration. It is a mistake to suppose extraordinary tribunals useful under extraordinary circumstances. It is a violent but inefficient remedy, and inflicts the most deadly wound upon the hand that employs it.

MILITARY HONORS TO PORTE-COCHÈRE.

Had I only heard the story which I am about to relate, I should not have believed it to be true; but I speak as an eyewitness, and I could call more than fifteen hundred persons to substantiate its correctness.

On the return of Louis XVIII. from Ghent in 1815, he stopped at Cambray; he refused the lodgings which had been offered him in the palace of the bishopric, because the bishops had, during the Hundred Days, figured on the *Champ de Mai*; and he passed the night in the house of one of the richest inhabitants of the city. From 1816 to 1820, on the anniversary of the passage of Louis XVIII. through Cambray, the troops of the garrison were assembled on the parade ground, and there, formed in platoons, they defiled before the house which Louis XVIII. had inhabited; the officers saluting the *porte-cochère* with their swords. In 1820 this ceremony took place for the last time; the officers defiled before it on that occasion with their backs turned, shrugging their shoulders, and with such other strong marks of contempt that it was never attempted again.

THE GLASS EYE.

The true Emperor of Austria, H. M. Metternich the first, has but one eye; but this loss is so ingeniously concealed by a glass eye, that it is generally unknown, even in Germany. M. de Metternich, formerly a very handsome man, was still young when he lost the sight of his left eye in consequence of disease. The globe of the eye remained entire, but dulled and without light. A skilful artist, whose talent and discretion were well paid, succeeded in covering this globe with a moveable envelope of enamel, perfectly like the right eye, with all its color and brilliancy. The envelope is affected by every motion of the globe of the eye, and the illusion is so perfect, that M. de Metternich was enabled to figure in all the congresses, to pass his life in the world, and to marry twice, without his secret having been discovered. A singular circumstance betrayed it to the public.

George IV. King of England, had expressed a desire to obtain for his gallery the portraits of all the sovereigns of Europe. His most distinguished painter, the celebrated Lawrence, was sent for this purpose to the continent. Lawrence concluded that George IV. would be pleased to have the portrait of Metternich, were it only as an appendage to that of the Emperor Francis. He asked the permission of the Prince, and obtained several sittings from him.

On one of these occasions, Lawrence observed that a ray of light fell directly on the left eye of M. de Metternich, and that the Prince supported it without lowering the eyelid, and even without contracting the brow. He at first admired the eagle glance which could thus resist the sun; but fearing that such a position would finally fatigue the Prince, he engaged him to change it. But M. de Metternich found himself comfortably seated, and preferred to remain where he was. Lawrence insisted several times upon the change, and was unable to comprehend the obstinacy of M. de Metternich, until the *valet de chambre* informed him by a sign, that the left eye of the Chancellor of Austria had nothing to fear from the sun.

WERTHER.

Goethe represented at the congress of Aix-la-Chapelle, the sovereign of whom he was both the minister and friend. The great age of the poet, his fine figure, and his immense renown, drew upon him the attention and homage of all the plenipotentiaries of the congress. An Englishman, who had just arrived, and was but little familiar with German literature, inquired with a good deal of curiosity of one of his countrymen the name and title of a man whom the most distinguished persons only accosted with veneration. He was told that it was the celebrated Goethe, the illustrious author of *Werther*. He was satisfied with what he heard, and approaching Goethe, saluted him and said:

"I have just arrived, sir, from Paris; I have seen your *Werther*, it is a charming work, and has amused me extremely."

"How, sir?"

"It is one of the pieces at which I have laughed most heartily; there is particularly one actor, named Potier, who is full of rage—he is quite a curiosity."

The only reply that Goethe made was to turn his back upon the speaker, pronouncing the word *pfeif* (horse)!

HEROES IMPROVISED.

About the year 1817 or 1818, Lieutenant-General Count Cæsar Berthier had been named inspector-general of infantry in the 12th military division, of which the head-quarters, now at Nantes, were at that period at *la Rochelle*.

The isle of *Rhé*, which was a part of this division, had a garrison of two battalions of infantry; the General was to inspect them. He was received at Saint Martin, the principal, or rather the only city of the island, in the house of the mayor. This functionary thought it would be well in the presence of a Lieutenant-General of the King's armies, to make some display of the royalist sentiments which animated him.

The General professed the most perfect indifference in matters of political opinion, and it was not long before he grew weary of the loquacious loyalty of the municipal magistrate.

"Sir," said he to the mayor, "your opinions do you much honor; but I see in your house things which appear to me but little in accordance with the sentiments you profess."

"How, General?"

"What is the meaning of these pictures, on which I see the name of the Emperor, battles, capture of cities, &c. &c.? Do you think that we are still at that period? Are you ignorant that all the paintings representing scenes under the empire have been removed from the museum and the gallery of the Luxembourg? Ought it not to be so in the house of a functionary appointed by the King?"

"But, General, these pictures, to which I attach no sort of importance, are the only ornaments of this room."

"If you call those things ornaments, I have nothing more to say; it seems to me, however, that you might find better."

"I would have already had them removed, General,

but they were placed there at the time that the paper was; it has changed color everywhere except under the pictures, and my saloon would be frightful if there were four large squares of fresh papering in the midst of hangings already much faded."

"At least cause the seditious inscriptions that I read at the bottom of them to disappear; you might easily make better. Take down one of them, and give me some paper."

The General dictated an inscription to his aid-de-camp, had one of the frames opened, and pasted over the old inscription that which he had just dictated; it was—the battle of *Austerlitz*, gained by *H. M. Louis XVIII.* The same change effected in the second picture which represented the battle of Jena; this was given to *H. R. H. Monsieur, Count d'Artois*; the battle of Eylau to *H. R. H. the Duke d'Angoulême*; that of Moskowa to *H. R. H. the Duke of Berry*. Another and the last battle was about to be given to the Duchess d'Angoulême; but no woman was represented in this last picture, and the General, fearing lest the pleasantry should appear too striking, stopped with the Duke of Berry.

"You see," said he, "the resemblance in your pictures is not so striking that one may not be deceived; besides all did in fact take place under the virtual reign of *H. M. Louis XVIII.* One may, therefore, without impropriety attribute to him or the Princes of his house whatever was done, because it all passed under their names."

"It is true, General; I had not thought of that, and I thank you very much."*

SMALL STREAMS FROM GREAT RIVERS.

Besides the civil list, fixed at 25,000,000 of francs, *Louis XVIII.* and *Charles X.* enjoyed a handsome revenue, the product of certain taxes and rents, the origin and amount of which escaped the investigations of the Court of Accounts. That which is known as the *privy purse of the King*, was a separate affair, having, like the budget of the state, its expenses and its ways and means. In 1814 and 1815, diligent investigations were made to ascertain which of all these little branches of revenue enjoyed by the ancient monarchy could be preserved under the new laws. Among the discoveries they found that the produce of winning tickets in the royal lottery of France, not claimed by the owners, would rightfully fall to the King's share.

During the restoration, when a year had elapsed without any demand having been made for the money drawn by the tickets, a sort of prescription (I do not know how legal) determined that the produce of the sums thus forgotten, should be added to the *privy purse* of his majesty. The King, under these circumstances, exhibited himself as the real representative of his subjects.

From 1814 to 1830 the winning tickets not reclaimed produced, at least, the sum of 500,000 francs a year.

The King of France, it will be seen, was the only person in his kingdom who could gain by the lottery without adventuring anything. If, in its origin, the

* This pleasantry of General Caesar Berthier caused him soon to be placed in retirement.

lottery had not been called the *royal lottery* of France, the circumstance that I have just mentioned would have sufficed to make it deserve the title.

CONSEQUENCES OF MILITARY EXECUTIONS.

When an unfortunate soldier is condemned to death by a council of war and executed at Paris, the receipts at the bureaux of the lottery are augmented by more than a half in the fortnight which succeeds. Whenever the *Gazette des Tribunaux* publishes the account of the execution of a soldier, it registers with great care the number of the coach used to carry him to the *plaine de Grenelle*: it is this number (of the coach) which decomposed and recomposed in every possible way, reproduces itself on an immense number of tickets, *all of which will be certainly successful*. The calculations are infallible if it be possible to obtain the age of the prisoner, and to combine the number of his years with that of the coach.

Since the government, in its exalted philanthropy, has prohibited the circulation of chances below the price of two francs, associations of *under shareholders* are formed (the fools who lay out their money in lotteries are pompously styled *shareholders*). These *under shareholders*, to the number of four or five, unite their capitals for the purchase of the *minimum* chance fixed by the legislature.

The seat of these societies is generally in the environs of the potato markets; it is there that the chances are discussed and the dreams commented on.

M. NEPOMUCENE LEMERCIER.

M. Lemerrier, as member of the French Academy, has exhibited throughout his life evidence of the most honorable independence. Though received with the most extreme favor by Bonaparte when first consul, he did not vote the less publicly against his accession to the imperial throne; and he ceased to visit him as soon as he assumed the imperial crown. The Emperor loved the character of M. Lemerrier, and esteemed his talents. The only favor, however, that M. Lemerrier ever accepted from him, was the restitution of the various confiscated property that had belonged to his family. Under the restoration, M. Lemerrier was what he had been under the empire; but the restoration was less fond than the empire of independence, and M. Lemerrier was from 1815 to 1830, in the most complete disgrace. He revenged himself by writings, breathing the purest patriotism, and contended courageously against the rigors of the censorship. M. Lemerrier had, besides, to struggle under every government against the minor annoyances of those in power. His fine drama of *Pinta* was forbidden to be represented under the directory, under the empire, and under the restoration. Under the consulate, Bonaparte, who had not then established a censorship, supplied its place by sending on their travels the principal actors who played in the drama of M. Lemerrier.

When, after the Hundred Days, M. de Vaublanc, the most original of all ministers of the interior, past, pre-

sent, or to come, wished to purify literature, the sciences and the fine arts, he struck from the list of the members of the institute a certain number of men whose political opinions were considered suspicious.

Among this number were Messrs. Étienne and Arnault. It was necessary to supply their places. M. Desèze presided at the sitting during which the new members were to be named. In examining the ballots, M. Desèze came across a ticket on which were the names of Molière and J. J. Rousseau.

M. Desèze spoke in severe terms of this vote, which he said was an *insult to the Academy*.

M. Lemer cier, rising immediately, said:

"I am unwilling that any one of my brother members should be suspected of what has been called an insult to the Academy. The ticket which has been thus spoken of is mine. Far be from me the thought of failing in the respect which I owe to the Academy; I have had but one wish—to give a logical vote. Heretofore, we have been invited to supply the places of deceased Academicians, we have naturally chosen from among living candidates; now we have to choose the successors of living members, we cannot do better than to select from dead candidates."

OUR ROBINS.*

At a short distance from the village of S——, on the top of a hill, and somewhat retired and sheltered from the roadside, lives a farmer by the name of Lyman. He is an industrious, intelligent, and honest man; and though he has but a small farm, and that lying on bleak stony hills, he has, by dint of working hard, applying his mind to his labor, and living frugally, met many losses and crosses without being cast down by them, and has always had a comfortable home for his children; and how comfortable is the home of even the humblest New-England farmer! with plenty to satisfy the physical wants of man, with plenty to give to the few wandering poor, and plenty wherewith to welcome to his board the friend that comes to his gate. And, added to this, he has books to read, a weekly newspaper, a school for his children, a church in which to worship, and kind neighbors to take part in his joy and gather about him in time of trouble. Such a man is sheltered from many of the wants and discontents of those that are richer than he, and secured from the wants and temptations of those that are poorer.

Late last winter Mr. Lyman's daughter, Mrs. Bradley, returned from Ohio, a widow, with three children. Mrs. Bradley and I were old friends. When we were young girls we went to the same district school, and we had always loved and respected one another. Neither she nor I thought it any reason why we should not, that she lived on a little farm, and in an old small house, and I in one of the best in the village; nor that she dressed in very common clothes, and that mine,

* This is the story promised in our last No., from Miss Sedgwick's "Love-Token for Children." It is, in the language of the writer on Sunday Schools, "a touching and instructive lesson to young readers;" yet "Mill Hill," or "Widow Ellis and her son Willie," would have been selected in preference, but for their greater length.—[Ed. Mess.]

being purchased in the city, were a little better and smarter than any bought in the country. It was not the bonnets and gowns we cared for, but the heads and hearts those bonnets and gowns covered.

The very morning after Mrs. Bradley's arrival in S——, her eldest son, Lyman, a boy ten years old, came to ask me to go and see his mother. "Mother," he said, "was not very well, and wanted very much to see Miss S——." So I went home with him. After walking half a mile along the road, I proposed getting over the fence and going, as we say in the country, "'cross lots." So we got into the field, and pursued our way along the little noisy brook that, cutting Lyman's farm in two, winds its way down the hill, sometimes taking a jump of five or six feet, then murmuring over the stones, or playing round the bare roots of the old trees, as a child fondles about its parent, and finally steals off among the flowers it nourishes, the brilliant cardinals and snow-white clematis, till it mingles with the river that winds through our meadows. I would advise my young friends to choose the fields for their walks. Nature has always something in store for those who love her and seek her favors. You will be sure to see more birds in the green fields than on the roadside. Secure from the boys who may be idling along the road, ready to let fly stones at them, they rest longer on the perch and feel more at home there. Then, as Lyman and I did, you will find many a familiar flower that, in these by-places, will look to you like the face of a friend; and you may chance to make a new acquaintance, and in that case you will take pleasure in picking it and carrying it home, and learning its name of some one wiser than you are. Most persons are curious to know the names of men and women whom they never saw before, and never may see again. This is idle curiosity; but often, in learning the common name of a flower or plant, we learn something of its character or use; "bitter-sweet," "devil's cream-pitcher," or "fever-bush," for example.

"You like flowers, Lyman," I said as he scrambled up a rock to reach some pink columbines that grew from its crevices.

"Oh, yes, indeed I do like them," he said; "but I am getting these for mother; she loves flowers above all things—all such sorts of things," he added, with a smile.

"I remember very well," said I, "your mother loved them when she was a little girl, and she and I once attended together some lectures on botany; that is, the science that describes plants and explains their nature."

"Oh, I know, ma'am," said he, "mother remembers all about it, and she has taught me a great deal she learned then. When we lived out in Ohio, I used to find her a great many flowers she never saw before; but she could class them, she said, though they seemed like strangers; and she loved best the little flowers she had known at home, and those we used to plant about the door, and mother said she took comfort in them in the darkest times."

Dark times I knew my poor friend had had—much sickness, many deaths, many, many sorrows in her family; and I was thankful that she had continued to enjoy such a pleasure as flowers are to those that love them.

As we approached Mrs. Lyman's, I looked for my

friend, expecting she would come out to meet me, but I found she was not able to do so; and, when I saw her, I was struck with the thought that she would never living leave the house again. She was at first overcome at meeting me, but, after a few moments, she wiped away her tears and talked cheerfully. "I hoped," she said, "my journey would have done me good, but I think it has been too much for me; I have so longed to get back to father's house, and to look over these hills once more: and though I am weak and sick, words can't tell how contented I feel; I sit in this chair and look out of this window, and feel as a hungry man sitting down to a full table. "Look there," she continued, pointing to a cherry-tree before the window, "do you see that robin? ever since I can remember, every year a robin has had a nest in that tree. I used to write to father and inquire about it when I was gone; and when he wrote to me, in the season of bird-nesting, he always said something about the robins; so that this morning, when I heard the robin's note, it seemed to me like the voice of one of the family."

"Have you taught your children, Mary," I asked, "to love birds as well as flowers?"

"I believe it is natural to them," she replied; "but I suppose they take more notice of them from seeing how much I love them. I have not had much to give my children, for we have had great disappointments in the new countries, and have been what are called very poor folks; so I have been more anxious to give them what little knowledge I had, and to make them feel that God has given them a portion in the birds and the flowers, his good and beautiful creation."

"Mother always says," said Lyman; and there, seeming to remember that I was a stranger, he stopped.

"What does mother always say?" I asked.

"She says we can enjoy looking out upon beautiful prospects, and smelling the flowers, and hearing the birds sing, just as much as if we could say 'they are mine!'"

"Well, is it not just so?" said Mrs. Lyman; "has not our Father in heaven given his children a share in all his works? I often think, when I look out upon the beautiful sky, the clear moon, the stars, the sunset clouds, the dawning day; when I smell the fresh woods and the perfumed air; when I hear the birds sing, and my heart is glad, I think, after all, that there is not so much difference in the possessions of the rich and poor as some think; 'God giveth to us all liberally, and withholdeth not.'"

"Ah!" thought I, "the Bible says truly, 'as a man thinketh, so is he.' Here is my friend, a widow and poor, and with a sickness that she well knows must end in death, and yet, instead of sorrowing and complaining, she is cheerful and enjoying those pleasures that all may enjoy if they will; for the kingdom of nature abounds with them. Mrs. Bradley was a disciple of Christ; this was the foundation of her peace; but, alas, all the disciples of Christ do not cultivate her wise, cheerful, and grateful spirit."

I began with the story of the robin-family on the cherry-tree, and I must adhere to that. I went often to see my friend, and I usually found her in her favorite seat by the window. There she delighted to watch, with her children, the progress of the little lady-bird that was preparing for her young. She collected her

materials for building, straw by straw and feather by feather; for, as I suppose all little people know, birds line their nests with some soft material, feathers, wool, shreds, or something of the sort that will feel smooth and comfortable to the little unfledged birds. Strange, is it not, that a bird should know how to build its nest and prepare for housekeeping! How, think you, did it learn? who teaches it? Some birds work quicker and more skilfully than others. A friend of mine who used to rear canaries in cages, and who observed their ways accurately, told me there was as much difference between them as between housewives. Some are neat and quick, and others slatternly and slow. Those who have not observed much are apt to fancy that all birds of one kind, for instance, that all hens are just alike; but each, like each child in a family, has a character of its own. One will be a quiet, patient little body, always giving up to its companions; and another for ever fretting, fluttering, and pecking. I know a little girl who names the fowls in her poultry-yard according to their characters. A lordly fellow who has beaten all the other cocks in regular battle, who cares for nobody's rights, and seems to think that all his companions were made to be subservient to him, she calls *Napoleon*. A pert, handsome little cockcomb, who spends all his time in dressing his feathers and strutting about the yard, is named *Narcissus*. *Bessie* is a young hen, who, though she seems very well to understand her own rights, is a general favorite in the poultry-yard. Other lively young fowls are named after favorite cousins, as *Lizzy*, *Susy*, &c. But the best loved of all is one called "*Mother*," because she never seems to think of herself, but is always scratching for others; because, in short, she is, in this respect, like that best, kindest, and dearest of parents, the mother of our little mistress of the poultry-yard.

To return to the robin. She seemed to be of the quietest and gentlest, minding her own affairs, and never meddling with other people's; never stopping to gossip with other birds, but always intent on her own work. In a few days the nest was done, and four eggs laid in it. The faithful mother seldom left her nest. Her mate, like a good husband, was almost always to be seen near her. Lyman would point him out to me as he perched on a bough close to his little lady, where he would sit and sing most sweetly. Lyman and I used to guess what his notes might mean. Lyman thought he might be relating what he saw when he was abroad upon the wing, his narrow escapes from the sportsman's shot, and from the stones which the thoughtless boy sends, breaking a wing or a leg, just to show how he can hit. I thought he might be telling his little wife how much he loved her, and what good times they would have when their children came forth from the shells. It was all guesswork, but we could only guess about such matters, and I believe there is more thought in all the animal creation than we dream of.

Once, when he had been talking in this playful way, Lyman's mother said, "God has ever set the solitary birds in families. They are just like you, children; better off and happier for having some one to watch over them and provide for them. Sometimes they lose both their parents, and then the poor little birds must perish; but it is not so with children; there are always some to take pity on orphan children, and, besides, they

can make up, by their love to one another, for the love they have lost."

I saw Lyman understood his mother; his eyes filled with tears, and, putting his face close to hers, he said, "Oh no, mother! they never can make it up; it may help them to bear it."

When the young birds came out of their shells it was our pleasure to watch the parents feeding them. Sometimes the father-bird would bring food in his bill, and the mother would receive it and give it to her young. She seemed to think, like a good, energetic mother, that she ought not to sit idle and let her husband do all the providing, and she would go forth and bring food for the young ones, and then a pretty sight it was to see them stretch up their little necks to receive it.

Our eyes were one day fixed on the little family. Both parents were perched on the tree. Two young men from the village, who had been out sporting, were passing along the road. "I'll bet you a dollar, Tom," said one of them, "I'll put a shot into that robin's head." "Done!" said the other; and done it was for our poor little mother. Bang went the gun, and down to the ground, gasping and dying, fell the bird. My poor friend shut her eyes and groaned; the children burst out into cries and lamentations; and, I must confess, I shed some tears—I could not help it. We ran out and picked up the dead bird, and lamented over it. The young man stopped, and said he was very sorry; that if he had known we cared about the bird he would not have shot it; he did not want it; he only shot to try his skill. I asked him if he could not as well have tried his skill by shooting at a mark. "Certainly!" he answered, and laughed, and walked on. Now I do not think this young man was a monster, or any such thing, but I do think that, if he had known as much of the habits and history of birds as Lyman did, he would not have shot this robin at the season when it is known they are employed in rearing their young, and are enjoying a happiness so like what human beings feel; nor, if he had looked upon a bird as a member of God's great family, would he have shot it, at any season, just to show his skill in hitting a mark. We have no right to abate innocent enjoyment nor inflict unnecessary and useless pain.*

The father-bird, in his first fright, darted away, but he soon returned and flew round and round the tree, uttering cries which we understood as if they had been words; and then he would flutter over the nest, and the little motherless birds stretched up their necks and answered with feeble, mournful sounds. It was not long that he stayed vainly lamenting. The wisdom God had given him taught him that he must not stand still and suffer, for there is always something to do; a lesson that some human beings are slow to learn. So off he flew in search of food; and from that moment, as Lyman told me, he was father and mother to the little ones; he not only fed them, but brooded over them just as the mother had done; a busy, busy life he had of it.

* Lord Byron somewhere says, that he was so much moved by seeing the change from life to death in a bird he had shot, that he could never shoot another. I may lay myself open to the inculcation of a mawkish and unnecessary tenderness, but I believe a respect to the rights and happiness of the defenceless always does a good work upon the heart.

"Is it not strange," said Lyman to me, "that any one can begrudge birds their small portion of food? They are all summer singing for us, and I am sure it is little to pay them to give them what they want to eat. I believe, as mother says, God has provided for them as well as for us, and mother says she often thinks they deserve it better, for they do just what God means them to do." It was easy to see that Lyman had been taught to consider the birds, and therefore he loved them.

Our attention was, for some days, taken off the birds. The very night after the robin's death, my friend, in a fit of coughing, burst a bloodvessel. Lyman came for me early the next morning. She died before evening. I shall not now describe the sorrow and the loss of the poor children. If any one who reads this has lost a good mother, he will know, better than I can tell, what a grief it is; and, if his mother be still living, I pray him to be faithful, as Lyman was, so that he may feel as Lyman did when he said, "Oh, I could not bear it if I had not done all I could for mother!"

The day after the funeral I went to see the children. As I was crossing the field and walking beside the little brook I have mentioned, I saw Sam Sibley loitering along. Sam is an idle boy, and, like all idle boys I ever knew, mischievous. Sam was not liked in the village; and, if you will observe, you will see that those children who are in the habit of pulling off flies' wings, throwing stones at birds, beating dogs, and kicking horses, are never loved; such children cannot be, for those that are cruel to animals will not care for the feelings of their companions.

At a short distance from the brook there was a rocky mound, and shrubbery growing around it, and an old oak-tree in front of it. The upper limbs of the oak were quite dead. Sam had his hand full of pebbles, and, as he loitered along, he threw them in every direction at the birds that lighted on the trees and fences. Luckily for the birds, Sam was a poor marksman, as he was poor in everything else; so they were unhurt till, at length, he hit one perched on the dead oak. As Sam's stone whistled through the air, Lyman started from behind the rocks, crying, "Oh, don't—it's our robin!" He was too late; our robin fell at his feet; he took it up and burst into tears. He did not reproach Sam; he was too sorry to be angry. As I went up to him he said, in a low voice, "Everything I love dies!" I did not reply, I could not. "How sweetly," resumed Lyman, "he sung only last night, after we came home from the burying-ground, and this morning the first sound Mary and I heard was his note; but he will never sing again!"

Sam had come up to us. I saw he was ashamed, and I believe he was sorry too; for, as he turned away, I heard him say to himself, "By George! I'll never fling another stone at a bird so long as I live."

It must have done something towards curing his bad habits to see the useless pain he had caused to the bird and the bird's friend; and the lesson sank much deeper than if Lyman had spoken one angry or reproachful word, for now he felt really sorry for Lyman. One good feeling makes way for another.

To our great joy, the robin soon exhibited some signs of animation; and, on examination, I perceived he had received no other injury than the breaking of a

leg. A similar misfortune had once happened to a canary-bird of mine, and I had seen a surgeon set its leg; so, in imitation of the doctor, I set to work and splinted it, and then despatched Lyman for an empty cage in our garret. We moved the little family from the tree to the cage. The father-bird, even with the young ones, felt strange and unhappy for some time. It was a very different thing living in this pent-up place from enjoying the sweet liberty of hill and valley, and he did not know our good reason for thus afflicting him any better than we sometimes do of our troubles when we impatiently fret and grieve. In a short time he became more contented. The family said he knew Lyman's footstep, and would reply to his whistle; sure am I Lyman deserved his love and gratitude, for he was the faithful minister of Providence to the helpless little family. They never wanted food nor drink. When, at the end of a very few weeks, he found them all able to take care of themselves, he opened the door of the cage and said, "Go, little birds, and be happy, for that is what God made you for."

The birds could speak no word of praise or thanks; but happiest are those who find their best reward, not in the praise they receive, but the good they do.

VISIT TO THE NATIVE PLACE.

BY MRS. L. H. SIGOURNEY.

Bright summer's flush was on thee, clime belov'd,
When last I trod thy vales. Now, all around,
Autumn, her rainbow-energy of tint
Pours o'er copse and forest,—beautiful,
Yet speaking of decay. The aspiring pine
Wears his undying green, but the strong oak
Like smitten giant, casts his honors down,
Strewing brown earth, with emerald and gold.
Yon lofty elms, the glory of our land,
So lately drooping 'neath their weight of leaves,
With proud, yet graceful elegance, to earth,
Stand half in nakedness, and half in show
Of gaudy colors. Hath some secret shaft
Wounded the maple's breast?—that thus it bends
Like bleeding warrior, tinging all its robes
With crimson,—while in pity by its side,
The pallid poplar, turning to the eye
Its silver lining, moans at every breeze.
I walk'd with sadness thro' these alter'd scenes.
The voice of man was painful. On the ear,
Idly and vain it fell,—for tearful thought
Brought faded images of early joys,
And lost affections.

Yonder low-brow'd cot,
Whose threshold oft my childish foot has cross'd
So merrily,—whose hearth-stone shone so bright,
At eve,—where with her skillful needle wrought
The industrious matron, while our younger group
Beguil'd with fruit and nuts, and storied page,
The winter's stormy hour,—where are they now?
Who coldly answers,—dead?

Fast by its side,
A dearer mansion stands, where my young eyes
First opened on the light. Yon garden's bound,

Where erst I roam'd delighted, deeming earth
With all its wealth, had nought so beautiful,
As its trim hedge of roses, and the ranks
Of daffodils, with snow-drops at their feet,
How small and chang'd, it seems!—That velvet turf
With its cool arbor, where I lingered long,
Learning my little lesson, or perchance,
Eying the slowly-ripening peach, that lean'd
Its glowing cheek against the lattic'd wall,—
Or holding converse with the violet-buds,
That were to me as sisters,—giving back
Sweet thoughts. I would not wish to sit there now!
Changes, 'mid scenes that we so much have lov'd,
Are death-bells to the soul.

See,—by rude cliffs
O'er-canopied,—the dome, where science taught
Her infant rudiments. First day of school!
I well remember thee,—just on the verge
Of my fourth summer. Every face around,
How wonderful and new! The months mov'd on,
Majestically slow. Awe-struck, I mark'd
The solemn school-dame, in her chair of state,
Much fearing, lest her all-observant eye
Should note me, wandering from my patch-work task,
Or spelling-lesson. Still, that humble soil
Lent nutriment to young ambition's germs:
"Head of the class!" what music in that sound,
Link'd to my name—and then, the crowning joy,
Homeward to bear, on shoulder neatly pinn'd,
The bow of crimson satin, rich reward
Of well-deserving,—not too lightly won,
Or worn too meekly. Still, ye need not scorn
Our ancient system, ye, of modern times,
Wiser, and more accomplish'd. Learning's field,
Indeed, was circumscribed,—but its few plants
Had such close pruning, and strict discipline,
As giveth healthful root,—and hardy stalk,—
Perchance, enduring fruit.

Beneath yon roof,—
Our own no more,—beneath my planted trees,
Where unfamiliar faces now appear,
She dwelt, whose hallow'd welcome was so dear,—
O Mother, Mother!—all thy priceless love
Is fresh before me,—as of yesterday.
Thy pleasant smile,—the beauty of thy brow,
Thine idol fondness, for thine only one,—
The untold tenderness, with which thy heart
Embrac'd my first-born infant, when it came
With its young look of wonder,—to thy home
A stranger visitant. Fade!—visions, fade!—
For I would think of thine eternal rest,
And praise my God for thee.

And now, farewell
Dear native spot! with fairest landscapes deck'd,
Of old romantic cliff, and crystal rill,
And verdant soil,—enrich'd with proudest wealth,
Warm hearts and true.

Yet deem not I shall wear
The mourner's weeds for thee. Another home
Hath joys and duties,—and where'er my path
On earth shall lead,—I'll keep a nesting bough
For Hope the song-bird,—and with cheerful step
Hold on my pilgrimage,—remembering where
Flowers have no autumn-languor. Eden's gate
No flaming sword to guard the tree of life.

SPRING.

A SONNET.

"From all she brought to all she could not bring."

The gentle gales, the warbling birds of spring,
 Its woods, its verdant fields and opening flowers,
 Fresh o'er the mind that feels their presence—bring
 The memory sad of unreturning hours:—
 Of friends whose heart his heart was wont to meet
 When on the earth this joyous season shone,
 Of scenes and pleasures mournful—yet how sweet!
 Sweet, for they have been,—*mournful*, because gone!
 Alas! that joys should be so brief, so few,
 While griefs are many and so long remain:
 Like shady springs which once or twice we view
 In toilsome journeys o'er a desert plain,
 Or like lone isles that dot the deep wide sea;
 So small life's bliss,—so great its griefs to me!

Norfolk, May, 1838.

C. H.

TO MARY,

ON HER BIRTH-DAY.

'Tis a wild fancy, but the heart believes it,—
 That when on earth of nature's handiwork
 The best and loveliest specimens appear,
 Her humbler children wear their robes of joy
 And smile a welcome to her favorites.

Fair child of May! when thou wast born—the rose
 Its sweetest breath, its richest hue displayed;
 The drooping lily raised its head and smiled;
 The laurel and the ivy filled the woods
 With varying colors and with soft perfumes;
 The sun then shed his gentlest beams and served
 But to illumine, not to heat the earth,
 While little birds their liveliest carols sung,
 And in full chorus joined to hail thy birth.

Since then, sweet friend, thy life has been all May,
 The autumn blast has scared no joys of thine,
 The wintry snows have fallen not on thy heart,
 Nor has the breath of summer—hot and dry—
 Over thy vernal happiness been blown.
 Such may it ever be,—may flowers still strew
 Thy path through life, and rainbows fill thy sky;
 May sorrow shun thee,—no dark cloud o'ercast
 Thy blissful prospect or obscure the past!

Norfolk, May, 1838.

C. H.

CHILDREN.

Blossoms of earth! our path of life adorning,
 Ye are the types of guilelessness and truth!
 Fresh and untainted as the breath of morning,
 Ye give to age itself, a touch of youth,
 And in your pure caresses hold a charm,
 All grief to soothe, all anger to disarm.

Yours is the power to win us and to soften
 With words of music, far beyond the notes
 Of harp or viol—I have heard them often,
 Still on my ear their fairy sweetness floats—
 And bright locks parted o'er a snowy brow,
 And soft blue eyes beam on me—even now!

I mark your eager looks, your shouts of gladness,
 In sports where laughter rings a joyous peal—
 Your voices chase away all thoughts of sadness,
 My infant days before me seem to steal,
 And bright-winged hopes a seraph train arise,
 Of bliss for ye on earth and in the skies!

Hearts that seem frozen to all tender feeling
 Melt at the glance of childhood—as the snow
 Dissolves in sunshine—in its looks appealing
 Angelic innocence and beauty glow,
 And breathe new harmony in life's dull strain,
 Gild every sorrow—soften every pain.

Babe! whose sweet laugh like tuneful bells is ringing,—
 Boy! of the sturdy step and beaming eye—
 Girl! on whose dimpled cheek the rose is springing,
 With voice of clear and thrilling melody—
 Ye touch the chords of pleasure's silent lyre,
 And with a joy untold, the soul inspire.

Visions of happy times ye bring before me—
 Hours when my heart was like th' untired wing
 Of a gay bird—their mem'ry hovers o'er me
 Like autumn days that wear the smile of spring.
 Ah! ye are gems indeed, whose heavenly light
 Is the pure spirit's lustre, always bright.

Be blessings on your gentle hearts forever!
 May no unkindness chill your artless glee!
 No hand the links of love between ye sever,
 And virtue's star your guiding planet be!
 May peace and health in life's dark chalice pour
 For you their sparkling waters, evermore!

E. A. S.

March, 1838.

INNOVATIONS IN STYLE.

Multa genera sunt enuntiandi, nec ullus distortius quam hoc.
Petrus.

Man's unceasing thirst for novelty and change, is almost as conspicuous in language as in dress. Sometimes we see it in a single word or phrase, which, introduced by some eminent writer or speaker, is readily adopted by the herd of imitators until it obtains a general currency, and either becomes incorporated in the language, or, sharing the fate of last year's fashions, is laid aside and forgotten. At other times the love of innovation takes a higher aim, and ambitiously strives to introduce a new manner and style of writing, well aware that there is no praise an author can obtain which ranks so high as that of originality. If this enterprise be associated with genius, and be cleverly executed, it is sure to be rewarded with an ample harvest of admirers and imitators, most of whom, not very nicely discriminating between its merits and defects, will be likely to copy the latter, as the easier of the two, until by the effect of reiteration and extravagance, they gradually open the eyes of the public to false pretension, and good taste resumes its legitimate ascendancy.

Of this character were the affectations of Sterne, who had for a time a host of copyists, but who has long since ceased to exert any influence on English

literature. Dr. Johnson, too, had somewhat earlier introduced a new manner of writing English, which was recommended by yet more genius and mental vigor than Sterne's. He added something, as he justly alleges, "to the grammatical purity of the language, and to the harmony of its cadence," and yet more, he might have added, to its compactness and precision. But with all these real improvements of our style, he *worsened* it, as Mr. Southey would say, or deteriorated it, as he himself would have said, by the introduction of so many words from the Latin and the Greek. The body and heart of our language are Anglo-Saxon, and while it has been enriched and improved by the naturalization of new words to express ideas which our simple-minded ancestors did not possess, such foreign intruders should not be so numerous or conspicuous as to overcrowd the natives of the language. These words of foreign derivation not only take away from the homogeneousness of our mother tongue, and give to it the air of a piece of patch-work, but they also want the raciness and pungent force possessed by the Anglo-Saxon, by reason of its furnishing nearly all our names of sensible objects, our household terms, and the expressions of our simplest and strongest feelings.

Nor was it only by his profusion of Anglicised Latin words, that Dr. Johnson presented a faulty model of style. He had also a stately pomp of manner, which he no more laid aside on light and gay topics, than on grave and important occasions; and he was withal so habitually sententious, that he would express the most trite and familiar truth with the solemnity of an oracle. Such as, "Labor necessarily requires pauses of ease and relaxation, and the deliciousness of ease commonly makes us unwilling to return to labor"—"It is not only common to find the difficulty of an enterprise greater, but the profit less, than hope had pictured it"—"He that never extends his view beyond the praises or rewards of men, will be dejected by neglect and envy, or infatuated by honors and applause." Such truisms, which have been taken at random from a paper in the Rambler, Vol. III, No. 128, should be merely hinted, not formally stated. Even when the weight of matter, as is most frequently the case, has much to recommend it, these insulated sentences, assuming the importance of maxims, seem ostentatious and dictatorial, and are, at best, objectionable for their mannerism.

It was in vain that these faults were seen by a few and condemned; that Goldsmith, Hume, and some others, continued to write with the graceful ease and simplicity of Addison, and that the voice of criticism was now and then raised to condemn these solemn fopperies of style; the various knowledge and the sterling sense they bedizened, so recommended them to the mass of readers, that their magniloquence and sententiousness were everywhere, either purposely or unconsciously imitated.

There can be no question that Dr. Johnson's influence on English style was long and extensively felt, nor was there clear evidence that this influence was in the wane, until some time after the beginning of this century. There then appeared a body of writers, who resisting the force of his authority and example, wrote in that free, spirited, and natural manner which accords with the genius of the language as well as of the people who speak it; and to which the national taste is sure to return, as to its home, however it may be for a while, led astray by the seductive glare of novelty.

From the time that all vestiges of Dr. Johnson's characteristics began to disappear, and a purer taste prevailed, English style continued to improve, and the language was never, perhaps, so generally well written as it has been in the 19th century. Since then it has possessed the terse vigor of the age of Elizabeth, without its quaintness or harshness; the simplicity of the reign of Queen Anne, without its looseness; and the rhythm and correctness of Johnson, without his formality or pomp. It has added, in short, precision and force to the ease of nature and the grace of variety. In proof of this, I may refer to the writings of Southey and Sir Walter Scott, generally, to the best articles in the Edinburgh and Quarterly Reviews, to Gifford, to Hallam, to Washington Irving, to the elder Bulwer, to Charles Lamb, to very many of the lighter articles in the English periodicals, to a few of our own, and to Dr. Channing, though his style, perfect as it is in its kind, may be said to have the excellencies which characterise the last century rather than this.

But the prurient desire of innovation, it seems, could not remain long idle, and it has lately challenged public applause,

"while it pursues
Things, unattempted yet in prose."

Some writers in the most popular English journals, perceiving that style had gained greatly in vivacity and attractiveness by assuming the free and careless turn of conversation, or at least of epistolary writing, have so entirely affected this manner, that they often exceed the utmost license of extempore and unpremeditated speech. Finding that some happy novelty was occasionally a violation of rule, they make a merit of setting all rules at defiance, and systematically seek to give piquancy to language by disregarding its proprieties. Perceiving that words a little turned from their ordinary acceptation have given a grace to the diction of such masters as Burke, or Jeffrey, or Sidney Smith, these imitators wrench and twist them to all sorts of strange uses. Having seen that some of these seasonings were useful to stimulate the languid appetites of the overcrammed reader, they empty their little cruets into the dish and ruin it. They cannot distinguish between

freedom and licentiousness, and like the under-bred pretender to gentility, mistake impudence and forwardness for gentlemanly ease.

Of this class of innovators, Mr. Carlyle must be considered as the leader. Possessed of unquestionable talent, he seems determined, by pushing the late licentious novelties of style, and such others as he can devise, to the furthest verge of extravagance, to be the founder of a new school; and this honor, some of his complacent admirers are already disposed to award him. Assuredly no writer has taken such freedoms with the English language—not even the wildest rant of our July orators, or the silliest twaddle of the *Review*—or, in thus “overdoing termagant,” and out-heroding Herod, has so violated every rule of purity, elegance, rhythm and propriety, for the sake of unduly pricking the lagging attention of the reader. In a word, his purpose is to give to what he writes all the piquancy he can, provided it can be understood, and even to risk making it unintelligible, if only he can make it pungent.

Mr. Carlyle's style of writing corresponds to the *caricature* style in painting, which aims to produce effect by as much distortion and exaggeration as is consistent with resemblance. His object is to rouse the attention and quicken the conceptions of his reader; and not trusting solely to the originality, or force, or justness of the thought, to derive what aid he can from the quaintness and strangeness of the expression. He is, in this way, sure of the praise of boldness for his new, wild, out of the way phrases, if for nothing else, with the vulgar herd of readers, who are all the while kept in a sort of wonderment, very much as if they were listening to the mixture of rhapsody and burlesque of a clever man half drunk, or on the verge of insanity. If there be anything in the thought that is truly just, and sensible, and striking, as there often is, the author is likely to obtain the more credit for it by reason of the odd language in which it is conveyed. The awakened attention into which the reader is surprised, is regarded by the admirers of this style, as evidence of a livelier and clearer conception of the thought. But in this they are often mistaken. A caricature may be, and not unfrequently is, obviously like the original; but the resemblance is commonly far inferior to that of a regular portrait by a master. The pleasure it gives arises not so much from the fidelity of the likeness or the skill of the artist, as from surprise that there should be any resemblance where there is so much exaggeration. The *grotesque* may divert us by its oddity and incongruity, but it is only the *beautiful* that inspires us with admiration.

But, as some may say, if the mass of readers are pleased, and if they are made to attend to those facts and propositions which the author wished to impress on their minds, what does it signify that

this effect is produced by distortion and exaggeration? Is not his object, and indeed the main purpose of writing, answered? I answer that it is not. In the first place, the extraordinary effect of these clap-traps for the reader—of these spurs to quicken the flagging intellect—of these flaps imported from Laputa is but temporary. Whenever this caricature style of writing becomes familiar, as it soon must, it loses all that first recommended it both to its inventors and imitators. Besides, with the few whom an author would be most ambitious to please, and who are the final dispensers of literary fame, the difference between elegance and coarseness, between harmony, delicacy, polish and propriety on the one hand, and ruggedness, homeliness and rusticity on the other, can never be abolished; nor where the latter qualities are wanting, can any bold, new, odd devices of language supply their place. Whatever may be the stimulus of their novelty, real beauty, melody and grace will assert their sway over the human heart, as certainly as we find that the burlesque sketches of Cruikshanks do not impair our relish for the beautiful creations of Italian sculpture or painting, or that a farce, however ingenious or comic, cannot supersede the higher merit of tragedy or genteel comedy. Nor can the slipshod, uncombed, unwashed muse of Don Juan, with all the genius, wit and caustic satire she displays, ever throw Childe Harold, or Pope's Rape of the Lock, or his Moral Essays into the shade. No one knew this better than Byron, who, if he had not written other and better poems than Don Juan, would never have indulged his perverse humor in such a vagary.

The style that has been thus reprobated, has been, with some slight qualifications, warmly commended by the London and Westminster Review, in its notice of “The French Revolution,” in the July number. The reviewer admits that “a style more peculiar than that of Mr. Carlyle, more unlike the jog-trot characterless uniformity which distinguishes the English style of this age of periodicals, does not exist.” He admits, too, that some of the peculiarities of this author are mere mannerisms, “from some casual associations, and that some of his best thoughts are expressed in a phraseology borrowed from the German metaphysicians.” But after these admissions, the reviewer adds: “These transcendentalisms and the accidental mannerisms excepted, we pronounce the style of this book to be not only good, but of surpassing excellence; excelled, in its kind, only by the great masters of epic poetry; and a most suitable and glorious vesture for a work which is itself, as we have said, an epic poem.” I cannot resist the temptation of citing one or two specimens of this style of “surpassing excellence,” and which the reviewer intimates is to be the model of all future historiana. They must be considered

as fair specimens, as they are among those selected by the eulogising reviewer himself.

The fourth book thus opens in one of the author's soberest moods :

"The universal prayer, therefore, is to be fulfilled! Always in days of national perplexity, when wrong abounded, and help was not, this remedy of States General was called for, by a Malesherbes, nay by a Fenelon: even parliaments calling for it were 'escorted with blessings.' And now behold it is vouchsafed us; States General shall verily be!

"To say, let States General be, was easy; to say in what manner they shall be, is not so easy. Since the year 1614, there have no States General met in France; all trace of them has vanished from the living habits of men. Their structure, powers, methods of procedure, which were never in any measure fixed, have now become wholly a vague possibility. Clay, which the potter may shape this way or that:—say rather, the twenty-five millions of potters: for so many have now, more or less, a vote in it! How to shape the States General! There is a problem. Each body-corporate, each privileged, each organized class, has secret hopes of its own in that matter; and also secret misgivings of its own,—for, behold, this monstrous twenty-million class, hitherto the dumb sheep which these others had to agree about the manner of shearing, is now also arising with hopes! It has ceased, or is ceasing to be dumb; it speaks through pamphlets, or at least brays and growls behind them—in unison,—increasing wonderfully their volume of sound."

The next chapter thus notices the election of deputies to the States General :

"Up then, and be doing! The royal signal-word flies through France as through vast forests the rushing of a mighty wind. At parish churches, in townhalls, and every house of convocation; by bailliages, by senechalies, in whatsoever form men convene; there, with confusion enough, are primary assemblies forming. To elect your electors; such is the form prescribed: then to draw up your writ of complaints and grievances, of which latter there is no lack.

"With such virtue works this Royal January edict; as it rolls rapidly in its leathern mails, along the frost-bound highways, towards all the four winds. Like some fat or magic spell-word;—which such things do resemble! For always, as it sounds out, 'at the market-cross,' accompanied with trumpet-blast; presided by bailli, senechal, or other minor functionary, with beef-eaters; or, in country churches, is droned forth after sermon, '*au prône des messes paroissiales*;' and is registered, posted, and let fly over all the world,—you behold how this multitudinous French people, so long simmering and buzzing in eager expectancy, begins heaping and shaping itself into organic groups, which organic groups, again, hold smaller organic grouplets; the inarticulate buzzing becomes articulate speaking and acting. By primary assembly, and therefore secondary; by 'successive elections,' and infinite elaboration and scrutiny, according to prescribed process,—shall the genuine 'complaints and grievances' be at length got to paper; shall the fit national representative be at length laid hold of.

"How the whole people shakes itself, as if it had one life; and, in thousand-voiced rumor, announces that it is awake, suddenly out of long death-sleep, and will thenceforth sleep no more! The long-looked-for has come at last; wondrous news, of victory, deliverance, enfranchisement, sounds magical through every heart. To the proud strong man it has come; whose strong hands shall no more be gyved; to whom boundless unconquered continents lie disclosed. The weary day-drudge has heard of it; the beggar with his crust moistened with tears. What! To us also has

hope reached; down even to us? Hunger and hardship are not to be eternal! The bread we extorted from the rugged glebe, and with the toil of our sinews, reaped and ground, and kneaded into loaves, was not wholly for another, then; but we also shall eat of it, and be filled? Glorious news (answer the prudent elders,) but all too unlikely!—Thus, at any rate, may the lower people, who pay no money taxes, and have no right to vote, assiduously crowd around those that do; and most halls of assembly, within doors and without, seem animated enough."

On the preceding passage the puffer of a brother reviewer remarks, "Has the reader often seen the state of an agitated nation made thus present, thus palpable? How the thing paints itself in all its greatness—the men in all their littleness! and this is not done by reasoning about them, but by showing them." Letting this pass, I will cite one more passage, in which the author thus opens a chapter with a notice of the rescue of the Hotel-de-Ville from the flames :

"In flames, truly—were it not that Usher Maillard, swift of foot, shifty of head, has returned.

"Maillard, of his own motion, for Gouvion or the rest would not sanction him—snatches a drum; descends the porch-stairs, ran-tan, beating sharp, with loud rolls, his rogue's-march; to Versailles! *allons; à Versailles!* as men beat on kettle or warming-pan, when angry she-bees, or say, flying desperate wasps, are to be hived; and the desperate insects hear it, and cluster round it,—simply as round a guidance, where there was none; so now these menads round shifty Maillard, riding-usher of the Châtelet. The axe pauses uplifted; Abbé Lefevre is left half-hanged; from the belfry downwards all vomits itself. What rub-a-dub is that? Stanislas Maillard, Bastille-hero, will lead us to Versailles. Joy to thee, Maillard; blessed art thou above riding-ushers! Away then, away!

"The seized cannon are yoked with seized cart-horses: brown-locked Demoiselle Thérigne, with pike and helmet, sits there as gunneress, 'with haughty eye and serene fair countenance;' comparable some think to the *Maid of Orleans*, or even recalling 'the idea of Pallas Athene.' Maillard (for his drum still rolls) is, by heaven-rending acclamation, admitted General. Maillard hastens the languid march. Maillard, beating rhythmic, with sharp ran-tan, all along the quais, leads forward with difficulty, his menadic host. Such a host, marched not in silence. The bargeman pauses in the river; all wagoners and coach-drivers fly; men peer from windows,—not women, lest they be pressed. Sight of sights: Bacchantes, in these ultimate formalized ages! Brown Henri looks from his Pont-Neuf; the monarchic Louvre, medicean Tuileries see a day not theretofore seen."

Such is the work which the reviewer pronounces "not so much a history as an epic poem," whose extravagancies of diction, often is tasteless as they are affected, he would place in the same category with the inspirations and exquisite art of Shakspeare and Milton, of Homer and Virgil, of Tasso and Ariosto, of Byron and Scott. It is the picturesque and graphic character of Mr. Carlyle's book, on which the reviewer founds so outrageous a panegyric. These are sufficient in his eyes, not only to redeem it for the faults he has noticed, but also to exalt it into poetry. But he evidently confounds the separate provinces and excellencies of poetry and of prose. The purpose

of poetry, at least of the higher species, is to address itself to our sense of the beautiful and the grand, and by means of the artifices of language, to enkindle, through the medium of the imagination, the same rapture and enthusiasm which produced it. But how circumscribed is this purpose, compared with that of prose, which seeks to transmit every shade of thought as well as feeling, that can arise in the human mind? Its most frequent and its worthier object being to inform and instruct, its immediate aim is often not so much to excite feeling as to allay it or prevent it. It indeed also endeavors to please by the decorations of its language and imagery, but pleasure is its means, not its end. The graces of diction and the embellishments of fancy are useful auxiliaries to keep up the reader's attention, and to illustrate a subject by presenting a new object of resemblance. These are the legitimate purposes of ornament in prose, and when carried further, it is used as some use their finery, not so much for setting off their persons, as for making a display of their wealth.

But if we were to disregard the well-settled distinction between poetry and prose, it would be a very mistaken and insufficient theory of the former to consider its graphic power as its only, or even its highest excellence. Whatever ideas are conveyed to our minds through the eye, whatever visual objects assist in exciting emotion, as to these, the more vividly the poet can exhibit them the better. But he has much to transmit that is independent of form or color—much that has no sensible properties whatever. How many noble sentiments, tender feelings, deep seated emotions are best transmitted by the most shadowy abstractions, and can be transmitted in no other way!

Of this character are many of the finest stanzas in *Childe Harold*, as for example:

"Oh! ever loving, lovely and beloved!
How selfish sorrow ponders on the past,
And clings to thoughts now better far remov'd!
But Time shall tear thy shadow from me last."
Canto II, 96th Stanza.

"But I have liv'd, and have not liv'd in vain:
My mind may lose its force, my blood its fire;
And my frame perish, even in conquering pain;
But there is that within me which shall tire
Torture and Time, and breathe when I expire;
Something unearthly which they deem not of,
Like the remember'd tone of a mute lyre,
Shall on their softened spirits sink, and move
In hearts all rocky now the late remorse of love."
Canto IV, 137th Stanza.

"There is a pleasure in the pathless woods,
There is a rapture on the lonely shore,
There is a society where none intrudes
By the deep sea, and music in its roar:
I love not man the less, but nature more."
Canto IV, 178th Stanza.

So when Eve says to Adam,

"With thee conversing I forget all time;
All seasons and their change, all please alike.

Sweet is the breath of morn, her rising sweet,
With charm of earliest birds; pleasant the sun."

And when she goes on to describe the most striking beauties of nature, the most poetical part of the passage is when she adds,

"But neither breath of morn, &c.
—without thee is sweet."
Paradise Lost, IV, 639.

The reviewer has therefore overrated the powers of the graphic and picturesque, even in poetry, whose loftiest flights and most rapturous bursts touch our hearts by means that are beyond the reach of painting. But in history, which aims to make us acquainted with the progress of society, and of the causes and effects of its changes, and where it is of more importance to know the state of the general mind, as to intelligence, opinion, and moral feeling, the graphic style of writing can perform a much more limited part. Its chief use is to enhance the reader's pleasure, so that what he reads is more attended to and better remembered. But the historian would forego his highest duties, who should aim at nothing more than to present us with a series of lively portraits or groups of individuals, with all their attendant localities and personalities. The following paragraph from Hume's notice of the restoration of Charles the 2d contains more sound philosophy and conveys more solid instruction than a chapter of such sketchy stuff as we have cited from Mr. Carlyle.

"Agreeable to the present prosperity of public affairs, was the universal joy and festivity diffused throughout the nation. The melancholy austerity of the fanatics fell into discredit, together with their principles. The royalists, who had ever affected a contrary disposition, found in their recent success new motives for mirth and gaiety; and it now belonged to them to give repute and fashion to their manners. From past experience it had sufficiently appeared, that gravity was very distinct from wisdom, formality from virtue, and hypocrisy from religion. The king himself, who bore a strong propensity to pleasure, served, by his powerful and engaging example, to banish those sour and malignant humors, which had hitherto engendered such confusion. And though the just bounds were undoubtedly passed, when men returned from their former extreme; yet was the public happy in exchanging vices, pernicious to society, for disorders, hurtful chiefly to the individuals themselves who were guilty of them."

But the reviewer asks, "Does any reader feel, after having read Hume's history, that he can now picture to himself what human life was among the Anglo-Saxons? how an Anglo-Saxon would have acted in any supposable case? what were his joys, his sorrows, his hopes and fears, his ideas and opinions on any of the great and small matters of human interest? Would not the sight, if it could be had, of a single table or pair of

shoes, made by an Anglo-Saxon, tell us, directly and by inference, more of his whole way of life, more of how men thought and acted among the Anglo-Saxons, than Hume, with all his narrative skill, has contrived to tell us from all his materials." To this interrogatory I would give a decided negative. Such a sight might gratify an antiquary, might even give a vague idea of the state of some of the mechanical arts, but would afford us no insight into the moral qualities of the Anglo-Saxons, their opinions, laws, habits or civil institutions. We indulge an allowable, or if you please, a liberal curiosity in inquiring into the persons, dress, manners and domestic habits of the great *dramatis personæ* of history, but who is the wiser for a knowledge of these particulars? What reader ever had a juster conception of the important points of Julius Cæsar's character from the fact mentioned by Suetonius, that by way of concealing his baldness he was in the habit of bringing down his hair from the top of his head, (*capillum revocare à vertice*) and that of all his public honors there was no one that he so highly valued as the privilege conferred on him by the senate of always wearing a laurel crown.

But it is time to bring this disquisition to a close. It was prompted by a wish to put our young writers on their guard against imitating a style of writing which has been so bepraised as Mr. Carlyle's by partial friends, or perhaps interested associates,* and which, with some merits, appears to me to have still greater defects. The caution will scarcely appear unnecessary to one who will look into the January number of the Democratic Review, where he will see, in the article on the federal judiciary, a palpable imitation of Mr. Carlyle's peculiarities. The writer evidently possesses talent, was well informed on the subject of which he treated, and if he had been content to say what he knew or thought in his own way, he might have given to the public a pleasing as well as instructive essay, but by laboring at sudden transitions, at new turns of expression, and at wild bursts of extravagance on subjects essentially sober in their character, he has disfigured the suggestions of a shrewd and reflecting mind, and given a further offence to good taste by becoming the copyist of so faulty an original. Affectation is bad enough any way, but at second hand it is intolerable. Let me then hope that if our writers will content themselves to rank with the *servum pecus*, we shall select better models than the poetry-prose of Mr. Carlyle, whose recent writings, if they obtain more than an ephemeral notoriety, will in time be regarded as showing us what we ought rather to avoid than to imitate.

QUILIBES.

March 28, 1838.

* Mr. Carlyle is himself a regular contributor to the London and Westminster Review.

HICKORY CORNHILL.

A LETTER FROM HICKORY CORNHILL, ESQ. TO HIS FRIEND IN THE COUNTRY.*

Since you beg me to write how I pass off my time, I will try, my dear friend, to inform you in rhyme :
And first, every morn, the debates I attend
Of the folks who the laws come to make or to mend ;
Where I hear, now and then, mighty fine declamation
About judges and bridges, and banks and the nation.
But last night my amusement was somewhat more new,
Being ask'd to a party of ladies at loo.
Ah ! then, my dear neighbor, what splendor was seen !
Each dame who was there was array'd like a queen.
The camel, the ostrich, the tortoise, the bear,
And the kid might have found each his spoils on the fair.
Though their dresses were made of the finest of stuff,
It must be confess'd they were scanty enough.
Yet that nothing thus sav'd should their husbands avail,
What they take from the body they put in the tail.
When they sit they so tighten their clothes that you can
See a lady has legs just the same as a man :
Then stretch'd on the floor are their trains all so nice,
They brought to my mind Esop's council of mice.

'Ere tea was serv'd up, they were prim as you please,
But when cards were produc'd, all was freedom and ease.
Mrs. Winloo, our hostess, each lady entreated
To set the example. " I pray, ma'am, be seated."
" After you, Mrs. Clutch." " Nay, then, if you insist—
Tom Shuffle, sit down, you prefer loo to whist."
" I'm clear for the ladies. Come, Jack, take a touch.
You'll stump Mrs. Craven, and I Mrs. Clutch."

* Some thirty years since, the ladies of Richmond, influenced by the example of the other sex, were greatly addicted to cards. At first they merely sought to beguile the occasional dulness and formality of small evening parties, and played very low,—commonly at loo,—but after a while, they were prompted chiefly by the hope of winning, since, not content with the interest excited by the game itself, they also staked their money freely in by-bets, so that it was not unusual for a lady to win or lose fifty or sixty dollars of an evening. While the fair votaries of fashion were thus eagerly indulging in what appeared to them no doubt an allowable recreation, many saw with concern the prevalence of a practice that was no less unfriendly to the pleasures of conversation, than to some of the most amiable traits in the female character ; and especially to those which had been thought to characterize the matrons of Virginia. When the practice was at its greatest height, the above piece of humorous satire made its appearance in one of the city papers. It was cordially welcomed by the community generally—by the more moral part for its purpose, and by the other portions for its truth of resemblance, and a certain spice of *espiglerie*, which they thought they perceived in it. They even undertook to assign its imaginary characters to particular individuals, though this was always denied by the author, except so far as he had, in delineating from fancy, unconsciously copied some personal peculiarities of manner or language. The piece thus met with a popularity beyond its real merits, and for a week it might have been heard the subject of mirth and quotation from the boys in the streets to the belles in the drawing-room.

The practice of loo-playing was then seen to decline, and was finally laid aside. The public was inclined to attribute the change to the well-timed ridicule of Hickory Cornhill ; but it is highly probable that this rage for play, like other acute diseases, would, after having reached its crisis, have gradually disappeared. The Editor is now induced to republish it, from the belief that it will revive interesting recollections with some of the readers of the Messenger, and, as a piece of topographical history, be not unacceptable to the present generation. To such of them as have not been initiated in the mysteries of loo, many of the terms here introduced may be unintelligible. Indeed, these occupy perhaps too large a portion of Mr. Cornhill's epistle, if it had not been probably part of the author's purpose to throw ridicule on this very slang which is so offensive to good taste, and to all friends to female delicacy and refinement.—[Ed. Mess.]

Without further parley, anon were allur'd
Two beaux and four ladies around the green board.
When I could but admire that choice occupation
Which call'd forth such bright and refin'd conversation.

"Now, ladies, determine what shall be the loo."
"My dear Mrs. Clutch we will leave it to you."
"One and one, you know, Fribble, I think the best game."
"I always knew, Madam, our tastes were the same."
"Come, Shuffle, *throw round*---let us see who's to deal---
"I cannot tell why, but I already feel---
Stay, stay, there's a knave---that to-night I shall win.
It fell to you, Shuffle---you're dealer, begin."
"Is diamond the trump? then I vow I can't stand."
"I must also *throw up*"---"Let me look at your hand."
"Won't you take a *cross-hop*?" "Madam, what do you say?"
"I'll see you, friend Tom, *if I have but a tray*."
"Play on, Mrs. Clutch, for I know 'twas a *stump*."
"Ace of spades"---"I must take it; you're off with a trump."
"No indeed---but I've noticed, whenever you stood,
"If I was before you, I always was loo'd."
"And there's Mrs. Craven, she threw up the knave."
"I know I did, Ma'am, but I don't *play to save*."
"Come, ladies, put up, *don't be bashful* and shy."
"I'm already up"---"So am I"---"So am I."
"Say, Mrs. Inveigle"---"Oh, is it a spade?"
"I stand"---"So do I"---"After two I'm afraid."
"And I'll *make a third*"---"Well, *here goes* for the money,
"Though I don't win the pool, I'm sure of the *poney*.
And *here goes again*"---"Which of these must I play?"
"Always *keep a good heart*---ah! you've thrown it away."

And thus they go on---*checking, stumping, and fleeting*,
With other strange terms that are scarce worth repeating.
Till at length it struck twelve, when the winners proposed
With the loo which was up, that their sitting should close.
On a little more sport though the losers were bent,
They would not withhold their reluctant assent.

Mrs. Craven, who long since a word had not spoke,
Who scarce gave a smile to the sly equivoque,
But, like an old mouser, sat watching her prey,
Now utter'd the ominous sound of "I play,"
And straight loo'd the board, thus proving the rule,
That the still sow will ever draw most from the pool.

Though much had been lost, yet when now they had done,
Not one of these dames would confess she had won.
But soon I discover'd it plain could be seen
In each lady's face what her fortune had been.
For they frown when they lose, and again when they win
The dear creatures betray it as sure by a grin.

Mrs. Craven, whose temper seem'd one of the best---
So winning her ways---thus the circle address'd:
"Good ladies and gents, Monday eve'ning with me,
Remember you all are engag'd to take tea.
But don't stay after six, for I horribly hate,
When I am to play loo, to defer it so late.
I expect the Dasheagles, and mean to invite
The Squabs from the country, with old Col'nal Kite.
And I think, Mr. Cornhill, 'tis high time that you
Should, like the town beaux, join the ladies at loo."

I thank'd her, and told her that one day I might
Deserve such an honor, then wish'd her good night.
So I hied to the Eagle, resolving to send
Of this night scene a sketch to my neighbor and friend.

H. C.

CONFUCIUS.

Of the four books attributed to Confucius, viz. Ta-Kio, Chung-Young, Lungya, and the book of Conversations, only the first chapter of the first, i. e. of the Ta-Kio, is the work of Confucius.

ILLUSTRATION OF A PICTURE.

Written in the Album of Miss E. M. S.

BY J. C. M'CABE.

The lady from her casement gazes,
The gentle winds are sweetly sleeping,
While one bright star in beauty blazes,
Its vigils in the heavens keeping.
Why looks she forth at such an hour,
While smiles her lovely lips are wreathing?
Perhaps she hears within her bower
Some lover's lute its low tones breathing.
See! see! she looks upon that star!
Lone sentinel! whose solemn glory
Burns o'er the slumbering lake afar,
And gilds the distant mountain hoary.
Smile, sweet one, smile! for tears may soon
Chase from thy cheek the hue of gladness,
And morning hopes in sorrow's noon
May sink where joy is lost in sadness.
And thou, bright star, whose beams are shed
O'er hill and lake, with holy duty,
Mayst be a taper o'er the dead,
A watcher o'er the grave of beauty!
Richmond, April, 1838.

WASHINGTON'S WRITINGS.*

The eleventh and twelfth volumes of this work have now made their appearance. These, which complete the series of the writings of Washington, are accompanied by the long expected first volume which contains his life.

We have already taken notice of the first five volumes which appeared, and we are happy to say that the high praise then bestowed on them, is, in great measure due to the rest of the series. We acknowledge, however, that, in some instances we have been disappointed. From some specimens of Mr. Sparks's judgment in selecting and his skill in arranging the documents in his hands, we had, perhaps, been led to expect too much in other instances. We cannot better illustrate the character and value of this work, than by giving somewhat in detail, the papers relating to a particular transaction. The reader will thus be enabled to see the sort of light which it sheds on the history of the past, and the insight which it affords into the character of Washington, and of some of those with whom he had to do. We allude particularly to the papers relating to an affair popularly known as the "Conway cabal." Of this (though the volume containing it has already passed under our

* "The Writings of George Washington; being his Correspondence, Addresses, Messages, and other Papers, official and private, selected and published from the Original Manuscripts: with a Life of the Author, Notes, and Illustrations. By Jared Sparks. Boston: Russell, Odiorne & Metcalfe, and Hilliard, Gray & Co."

review) we beg leave to speak with some particularity. The public has heard much of this transaction, but has never before been permitted to look so closely into its details. That the general result was honorable to General Washington and disgraceful to his enemies, has often been proclaimed. The confidence of his countrymen in his virtues prepared them to receive this annunciation as just and true, but in doing this they rather acquiesced in the judgment of others than judged for themselves. The opportunity of thus judging is now afforded them. Unfortunately the number of those who have the means of acquiring the costly publication before us and the leisure to turn over its numerous pages is necessarily limited. There are thousands capable of investigating and understanding the subject who will not enjoy this advantage, and we trust that we may find favor with our readers, when we avail ourselves of this occasion to give them a nearer view of the transaction.

There was perhaps no event which conduced more to the successful conclusion of the revolutionary war, than the victory at Saratoga, and the consequent capture of Burgoyne. There had certainly been no affair before that time comparable to it for brilliancy, or for the importance of its results. Not only was the army which had so long hung on the northern frontier annihilated, but it was clearly shown that all attempts at invasion from that quarter must be fatal to the invaders. The attention of congress was no longer distracted by the necessity of resisting the efforts of the enemy to penetrate at once from the north and the south along the valley of the Hudson, and thus to effect a junction in the heart of the continent, and to cut off all communication between its eastern and western sections. Relieved from this double danger, men began to breathe more freely. In the splendor of the achievement they saw a glorious presage of ultimate success, and hailed it as the morning star of a day of triumphant liberty. The intelligence of this important event was the more striking because it was unexpected. It came like light shining out of a dark place. The remoteness of the scene and the tardiness of communication by land, had left the public in gloomy and boding ignorance of what was passing there. The news of the result preceded any knowledge of the causes which led to it, and its annunciation procured for General Gates a sudden burst of popularity which might have turned a sounder head.

At the same time the situation of General Washington was most unenviable. His unsuccessful attack on Germantown had just been made. The unfortunate affair of Brandywine had not long preceded it, and baffled and disheartened, he was preparing to withdraw his shattered and ineffective army to their inglorious winter-quarters at Valley Forge. Twelve months might be sup-

posed to have nearly obliterated the recollection of his brilliant but brief career of victory in the winter of '76-7, and men might have been excused for believing that nothing but the success of Gates saved him from destruction.

It was while he thus lay, incapable of doing anything to claim the favorable notice of the public, that the intrigue known by the name of the "Conway cabal" was set on foot. Its object was to dislodge him from his place in the confidence and service of the people, and to place General Gates at the head of the army. That officer was a soldier by profession, who had carried arms with honor to himself for more than twenty years. Beyond this, little was known of him besides his late brilliant achievement. Of the advantages and disadvantages of his situation when opposed to Burgoyne, the public had no means of judging. Everything was naturally presumed in his favor. It was not until the disastrous and disgraceful battle of Camden had stripped him of his laurels, that men began to reflect on the arduous character of the enterprise in which Burgoyne had been baffled. It was no less than an attempt to penetrate through the heart of a continent inhabited by a hardy and hostile yeomanry with arms in their hands. It was the spontaneous movement of these that cut off his retreat and hedged him around with difficulties, and drove him on his fate. He was caught in the cleft of the oak, and had no choice but to perish by famine, or to surrender at discretion.

But of all this, at the time, the world at large knew nothing. The whole merit of the achievement was attributed to the commander. He was the lion of the day; the theme of all eulogy, the object of universal admiration. Nothing was more natural than to suppose that the fickle voice of the multitude might claim for this new favorite the first place in the service of the public. The idea was caught at with avidity by many. This was especially the case with men whose aspiring and presumptuous ambition stood rebuked by the unpretending modesty of Washington, and with others whose loose morality quailed before his stern, uncompromising virtue. In each of these descriptions General Conway stood prominent. An Irishman by birth, and an adventurer by profession, he had in early life sought his fortunes in France, and devoted the prime of his manhood to the service of his country's enemies. The same spirit of adventure and quest of advancement led him to America, and hither he brought with him the taste and turn and talent for intrigue on which promotion so much depends in those ancient monarchies,

"Where ladies interpose, and slaves debate."

He was not slow to discover the unmeasured and vain-glorious ambition of General Gates, and anticipating his speedy advancement, determined

to secure his favor by being among the first to hail the dawn of his greatness, and to prognosticate its meridian splendor. His letters to Gates seem calculated to answer the double purpose of gaining his favor and stimulating his ambition. In confederacy with others of the same views, a party was formed in congress who contrived to procure the appointment of a board of war suited to their purposes, and anonymous letters were addressed to influential men everywhere, lauding the exploits of Gates, and arraigning the conduct of Washington. But the popularity of that extraordinary man was not of a nature to be dissipated by a puff of caprice, or a blast of adverse fortune. It rested on the universal conviction of his disinterestedness, his magnanimity, and his law-abiding devotion to the authority of congress, and to all the duties of his important trust. It rested too on the personal acquaintance of nearly all the leading men of the country, who had known him for more than twenty years as a model, not only of virtue, but of wisdom, sobriety, judgment, fortitude and firmness; in short, of all those great qualities from which alone success in great affairs can be confidently expected. The anonymous defamations addressed to these men were not merely thrown away; they were in several instances communicated directly to Washington himself, who was thus apprised of the intrigue which was going on. In all this there was nothing to indicate the parties to the conspiracy, but there was enough to rouse the sagacious vigilance of the commander-in-chief, and to enable him to draw conclusions from circumstances which might otherwise have demanded no notice.

It happened that about this time General Wilkinson mentioned, in a way which brought the fact to Washington, that Conway had written to Gates a letter containing these words: "Heaven has been determined to save your country, or a weak general and bad counsellors would have ruined it."

This was enough for Washington. He perfectly understood the characters of the men, and was at once *au fait* to the whole intrigue. His sagacity in detecting, and his address in exposing it, the dexterity with which he turned on General Gates his own arts and devices, convicting him on his own showing, of prevarication and falsehood, the withering sarcasm which is employed in the performance of this task, along with the delicate and self-respectful courtesy of his phraseology, and finally the calm magnanimity with which he forbears to press a disgraced and humbled adversary, present a study, of which they who would learn to "quarrel by the book," would do well to avail themselves. We doubt whether any more admirable composition can anywhere be found than the letter to General Gates, in which he plainly intimates that he does not believe him, and goes on to prove by an argument at once ingenuous and

conclusive, that his incredulity was justified by the words and actions of the party himself.

But we are getting ahead of our story. Immediately on receiving the information abovementioned, Washington addressed a letter to Conway, apprising him that it had been received. This letter contained only these words:

"Sir: A letter which I received last night contained the following paragraph:

"'In a letter from General Conway to General Gates, he says, "Heaven has been determined to save your country, or a weak general and bad counsellors would have ruined it.'

I am, sir, your humble servant."

Having despatched this letter, Washington coolly awaited the result. It came in due time. No sooner does Gates hear of the affair than he writes to Conway, (of whom Washington takes no farther notice,) telling him he had learned that one of Conway's letters to himself had been copied, and begging to know which. To this inquiry Conway could give no answer, and Gates, with a trembling eagerness to know the worst, addresses a letter to Washington himself. The latter knew his man. His enemy had ventured from his covert, and he was resolved not to permit him to escape without something decisive. It happened that General Gates, wishing to make a parade of openness and sincerity, had sent a copy of his letter to congress, in consequence of which he received the reply through that body. These letters we beg leave to lay before the reader, as being more interesting and satisfactory than any abstract that we can give of them.

Horatio Gates to George Washington.

"Albany, 8th December, 1777.

"Sir: I shall not attempt to describe what, as a private gentleman, I cannot help feeling, on representing to my mind the disagreeable situation in which confidential letters, when exposed to public inspection, may place an unsuspecting correspondent; but, as a public officer, I conjure your excellency to give me all the assistance you can, in tracing out the author of the infidelity, which put extracts from General Conway's letters to me into your hands. Those letters have been stealthily copied; but which of them, when, and by whom, is to me as yet an unfathomable secret. There is not one officer in my suite, nor amongst those who have free access to me, upon whom I could, with the least justification to myself, fix the suspicion; and yet my uneasiness may deprive me of the usefulness of the worthiest men. It is, I believe, in your excellency's power to do me and the United States a very important service, by detecting a wretch who may betray me, and capitally injure the very operations under your immediate directions. For this reason, sir, I beg your excellency will favor me with the proof you can procure to that effect. But the crime being eventually so important, that the least loss of time may be attended with the worst consequences, and it being unknown to me, whether the

letter came to you from a member of congress or from an officer, I shall have the honor of transmitting a copy of this to the president, that the congress may, in concert with your excellency, obtain as soon as possible a discovery, which so deeply affects the safety of the states. Crimes of that magnitude ought not to remain unpunished. I have the honor to be, &c."

George Washington to the President of Congress.

"Valley Forge, 4th January, 1778.

"Sir: Unwilling as I am to add anything to the multiplicity of business, that necessarily engages the attention of congress, I am compelled by unavoidable necessity to pass my answer to General Gates through their hands. What could induce General Gates to communicate to that honorable body a copy of his letter to me is beyond the depth of my comprehension, upon any fair ground; but the fact being so, must stand as an apology for the liberty of giving you this trouble, which no other consideration would have induced me to take. With the greatest respect, sir, I am, &c."

George Washington to Horatio Gates.

"Valley Forge, 4th January, 1778.

"Sir: Your letter of the 8th ultimo came to my hands a few days ago, and to my great surprise informed me that a copy of it had been sent to congress, for what reason I find myself unable to account; but as some end doubtless was intended to be answered by it, I am laid under the disagreeable necessity of returning my answer through the same channel, lest any member of that honorable body should harbor an unfavorable suspicion of my having practised some indirect means to come at the contents of the confidential letters between you and General Conway.

"I am to inform you, then, that Colonel Wilkinson, on his way to congress in the month of October last, fell in with Lord Stirling at Reading, and, not in confidence that I ever understood, informed his aid-de-camp, Major McWilliams, that General Conway had written this to you: 'Heaven has been determined to save your country, or a weak general and bad counsellors would have ruined it.' Lord Stirling, from motives of friendship, transmitted the account with this remark: 'The enclosed was communicated by Colonel Wilkinson to Major McWilliams; such wicked duplicity of conduct I shall always think it my duty to detect.' In consequence of this information, and without having anything more in view than merely to show that gentleman, that I was not unapprised of his intriguing disposition, I wrote to him a letter in these words:

"Sir: A letter which I received last night, contained the following paragraph: 'In a letter from General Conway to General Gates he says, *'Heaven has been determined to save your country, or a weak general and bad counsellors would have ruined it.'* I am, sir, &c."

"Neither this letter, nor the information which occasioned it, was ever directly or indirectly communicated by me to a single officer in this army out of my own family, excepting the Marquis de Lafayette, who, having been spoken to on the subject by Gen. Conway, applied for and saw, under injunctions of secrecy, the letter which contained Wilkinson's information; so desirous was I of concealing every matter that could, in

its consequences, give the smallest interruption to the tranquillity of this army, or afford a gleam of hope to the enemy by dissensions therein.

"Thus, sir, with an openness and candor, which I hope will ever characterise and mark my conduct, have I complied with your request. The only concern I feel upon the occasion, finding how matters stand, is, that in doing this I have necessarily been obliged to name a gentleman, who, I am persuaded, although I never exchanged a word with him upon the subject, thought he was rather doing an act of justice, than committing an act of infidelity; and sure I am, that, till Lord Stirling's letter came to my hands, I never knew that General Conway, whom I viewed in the light of a stranger to you, was a correspondent of yours; much less did I suspect that I was the subject of your confidential letters. Pardon me then for adding, that, so far from conceiving that the safety of the states can be affected, or in the smallest degree injured, by a discovery of this kind, or that I should be called upon in such solemn terms to point out the author, I considered the information as coming from yourself, and given with a friendly view to forewarn, and consequently to forearm me, against a secret enemy, or in other words, a dangerous incendiary; in which character, sooner or later, this country will know General Conway. But in this, as in other matters of late, I have found myself mistaken. I am, sir, your most obedient servant."

Horatio Gates to George Washington.

"Yorktown, 23d January, 1778.

"Sir: The letter of the 4th instant which I had the honor to receive yesterday from your excellency, has relieved me from unspeakable uneasiness. I now anticipate the pleasure it will give you, when you discover that what has been conveyed to you for an extract of General Conway's letter to me was not an information, which friendly motives induced a man of honor to give, that injured virtue might be forearmed against secret enemies. The paragraph, which your excellency has condescended to transcribe, is spurious. It was certainly fabricated to answer the most selfish and wicked purposes. I cannot avoid sketching out to your excellency the history of General Conway's letter, from the time that it came to my hands by Lieutenant-Colonel Troup, my aid-de-camp, to whom General Conway delivered it at Reading on the 11th of October, to this time, as far as it has affected me and the officers of my family.

"That letter contained very judicious remarks upon that want of discipline, which has often alarmed your excellency and, I believe, all observing patriots. The reasons which, in his judgment, deprived us of the success we could reasonably expect, were methodically explained by him; but neither the 'weakness' of any of our generals, nor 'bad counsellors,' were mentioned; and consequently cannot be assigned or imagined as part of those reasons to which General Conway attributed some of our losses. He wrote to me as a candid observer, as other officers in every service freely write to each other, for obtaining better intelligence than that of newspapers, and that freedom renders such letters thus far confidential in some measure. The judgment of the person who receives them points out to him, according to time and circumstances, the propriety or

impropriety attending their being communicated, when no particular injunction of secrecy was requested.

"Particular actions rather than persons were blamed, but with impartiality; and I am convinced that he did not aim at lessening in my opinion the merit of any person. His letter was perfectly harmless; however, now that various reports have been circulated concerning its contents, they ought not to be submitted to the solemn inspection of even those who stand most high in the public esteem. Anxiety and jealousy would arise in the breast of very respectable officers, who, rendered sensible of faults, which inexperience, and that alone, may have led them into, would be unnecessarily disgusted, if they perceived a probability of such errors being recorded. Honor forbids it, and patriotism demands that I should return the letter into the hands of the writer. I will do it; but at the same time I declare, that the paragraph conveyed to your excellency as a genuine part of it, was in words as well as in substance a wicked forgery.

"About the beginning of December I was informed that letter had occasioned an explanation between your excellency and that gentleman. Not knowing whether the whole letter or a part of it had been stealthily copied, but fearing malice had altered its original texture, I own, sir, that a dread of the mischiefs, which might attend the forgery, I suspected would be made, put me for some time in a most painful situation. When I communicated to the officers in my family the intelligence I had received, they all entreated me to rescue their characters from the suspicions they justly conceived themselves liable to, until the guilty person should be known. To facilitate the discovery, I wrote to your excellency; but, unable to learn whether General Conway's letter had been transmitted to you by a member of congress or a gentleman in the army, I was afraid much time would be lost in the course of the inquiry, and that the states might receive some capital injury from the infidelity of the person who I thought had stolen a copy of the obnoxious letter. Was it not probable that the secrets of the army might be obtained and betrayed through the same means to the enemy? For this reason, sir, not doubting the congress would most cheerfully concur with you in tracing out the criminal, I wrote to the president, and enclosed to him a copy of my letter to your excellency.

"About the time I was forwarding those letters, Brigadier-General Wilkinson returned to Albany. I informed him of the treachery which had been committed, but I concealed from him the measure I was pursuing to unmask the author. Wilkinson answered, he was assured it never would come to light, and endeavored to fix my suspicions on Lieutenant-Colonel Troup, who, said he, might have incautiously conversed on the substance of General Conway's letter with Colonel Hamilton, whom you had sent not long before to Albany. I did not listen to this insinuation against your aid-de-camp and mine.

"Would that your excellency's prediction relative to General Conway had not been inserted in your letter, which came to me unsealed through the channel of congress. I hope always to find that gentleman a firm and constant friend to America. I never wrote to him in my life, but to satisfy his doubts concerning the exposure of his private letter; nor had any sort of

intimacy, nor hardly the smallest acquaintance with him, before our meeting in this town. With great respect, I am, &c."

In reading this last letter of General Gates the reader is requested to observe that he speaks of Conway's letter as if there had been but one, and that he further favors this idea by declaring that he had no sort of intimacy with Conway, and had never written to him but to satisfy his mind concerning the exposure of his own letter. Of course, the inference is that Conway had written to him one letter which he never answered, and that the letter in question was written by Gates with no other view but to satisfy him on the subject. It is painful to think that a vice so contemptible as falsehood should be found in one who had won such proud distinction in the cause of freedom and of our country. But we find it impossible to read the following letter without imputing this paltry and disgraceful crime to General Gates:

Horatio Gates to Thomas Conway.

"Albany, 3d December, 1777.

"Dear General: Your excellent letter has given me pain; for, at the same time that I am indebted to you for a just idea of the cause of our misfortune, your judicious observations make me sensible of the difficulty there is in remedying the evils, which retard our success. The perfect establishment of military discipline, consistent with the honor and principles, which ought to be cherished amongst a free people, is not only the work of genius, but time. But, dear General, you have sent your resignation; and I assure you, I fondly hope it will not be accepted; it ought not.

"The antipathy, which has long subsisted between the French and English nations, will continue until they cease to be neighbors. Such is the unhappy lot of mankind. The separation occasioned by the declaration of independence has removed the cause of that hatred which the political connexion of the British colonists has implanted in their breasts against the French, and those who were attached to their interest. Now that Machiavelism can be no longer attempted to keep up those prejudices in the minds of the unthinking amongst us, the French and the people of the United States will become friends; and I am amazed that men, in the station you mention, should have been so impolitic, or have possessed so little of the philosophic spirit, as to provoke a gentleman of your acknowledged merits, by illiberal reflections; however, I must declare to you, that I firmly believe there would be more greatness in continuing to serve the states, notwithstanding the provocation you think you have received from one of their principal members, than in resigning the commission you hold. Capricious or disgraced warriors so often leave the army, that I do not wish to see the name of Conway on the list of officers who have withdrawn from the service of our republic. I hope the result of your considerations on this subject, will retain in our service an excellent officer, who has already exposed his life in our defence; and that you will believe I am, with the purest esteem, dear General, your most humble and most obedient servant."

"P.S. This moment I received a letter from our worthy friend, General Mifflin, who informs me, that extracts from your letters to me had been conveyed to General Washington, and that it occasioned an *éclaircissement*, in which you acted with all the dignity of a virtuous soldier. I intreat you, dear General, to let me know which of the letters was copied off. It is of the greatest importance that I should detect the person, who has been guilty of that act of infidelity. I cannot trace him out unless I have your assistance."

It has been said that he who would discover the subject nearest a woman's heart when she sits down to write a letter, must look for it in the postscript. A favorable judge might interpret General Gates in the same way; but unfortunately we have a letter of the next day to General Mifflin, in which he tells him that the letter to Conway had been written and sealed before Mifflin's letter, above referred to, was received. But let the matter and manner of this letter be carefully observed. What is there about it that betokens a first and only letter to a stranger in answer to an unexpected letter from that stranger? Who can believe that such a letter as Conway's appears to have been, was written to any but an intimate? The subject appears to have been, in good measure, that of the writer's private griefs, and Gates's eager inquiry as to *which* of the letters had been copied, shows that there had been several. The same anxious tone appears also in his first letter to Washington, and contrasts amusingly with the cool nonchalance with which he treats the whole affair, as soon as he received Washington's answer. He seems to have been completely set at ease by the discovery that no letter had been copied, and that only a short sentence had been detailed from memory. Nothing more was wanting than to protest that there was no such language in *some one* letter, which he might hold himself ready to produce, if called for; and there he doubtless supposed the matter would end. But he had to do with one who penetrated to the thoughts and intentions of his heart, and who, with no other light than that afforded by Gates's artful letter, saw the whole matter as it really was, and as plainly as we who are admitted behind the scenes. The following letter is an evidence of tact and sagacity without parallel:

George Washington to Horatio Gates.

"Valley Forge, 9th February, 1778.

"Sir: I was duly favored with your letter of the 23d of last month, to which I should have replied sooner, had I not been delayed by business that required my more immediate attention. It is my wish to give implicit credit to the assurances of every gentleman; but, in the subject of our present correspondence, I am sorry to confess, there happen to be some unlucky circumstances, which involuntarily compel me to consider the discovery you mention, not so satisfactory and conclusive, as you seem to think it. I am so unhappy as

to find no small difficulty in reconciling the spirit and import of your different letters, and sometimes of the different parts of the same letter with each other. It is not unreasonable to presume, that your first information of my having notice of General Conway's letter, came from himself; there were very few in the secret, and it is natural to suppose that he, being immediately concerned, would be most interested to convey the intelligence to you. It is also far from improbable that he acquainted you with the substance of the passage communicated to me; one would expect this, if he believed it to be spurious, in order to ascertain the imposition and evince his innocence; especially as he seemed to be under some uncertainty as to the precise contents of what he had written, when I signified my knowledge of the matter to him. If he neglected doing it, the omission cannot easily be interpreted into anything else than a consciousness of the reality of the extract, if not literally, at least substantially. If he did not neglect it, it must appear somewhat strange that the forgery remained so long undetected, and that your first letter to me from Albany, of the 8th of December, should tacitly recognise the genuineness of the paragraph in question; while your only concern at that time seemed to be the tracing out the 'author of the infidelity, which put extracts from General Conway's letter into my hands.'

"Throughout the whole of that letter, the reality of the extracts is by the fairest implication allowed, and your only solicitude is to find out the person that brought them to light. After making the most earnest pursuit of the author of the supposed treachery, without saying a word about the truth or falsehood of the passage, your letter of the 23d ultimo, to my great surprise, proclaims it 'in words, as well as in substance, a wicked forgery.' It is not my intention to contradict this assertion, but only to intimate some considerations, which tend to induce a supposition that, though none of General Conway's letters to you contained the offensive passage mentioned, there might have been something in them too nearly related to it, that could give such an extraordinary alarm. It may be said, if this were not the case, how easy in the first instance to have declared there was nothing exceptionable in them, and to have produced the letters themselves in support of it. This may be thought the most proper and effectual way of refuting misrepresentation and removing all suspicion. The propriety of the objections suggested against submitting them to inspection may very well be questioned. 'The various reports circulated concerning their contents,' were perhaps so many arguments for making them speak for themselves, to place the matter upon the footing of certainty. Concealment in an affair, which had made so much noise, though not by my means, will naturally lead men to conjecture the worst; and it will be a subject of speculation even to candor itself. The anxiety and jealousy you apprehended from revealing the letter, will be very apt to be increased by suppressing it.

"It may be asked, Why not submit to inspection a performance perfectly harmless, and of course conceived in terms of proper caution and delicacy? Why suppose, that 'anxiety and jealousy would have arisen in the breasts of very respectable officers, or that they would have been unnecessarily disgusted at being made sen-

sible of their faults, when related with judgment and impartiality by a candid observer? Surely they could not have been unreasonable enough to take offence at a performance so perfectly inoffensive, 'blaming actions rather than persons,' which have evidently no connexion with one another, and indulgently 'recording the errors of inexperience.'

"You are pleased to consider General Conway's letters as of a confidential nature; observing 'that time and circumstances must point out the propriety or impropriety of communicating such letters.' Permit me to inquire whether, when there is an impropriety in communicating, it is only applicable with respect to the parties, who are the subjects of them? One might be led to imagine this to be the case, from your having admitted others into the secret of your confidential correspondence, at the same time that you thought it ineligible it should be trusted to those 'officers, whose actions underwent its scrutiny.' Your not knowing whether the letter under consideration 'came to me from a member of congress, or from an officer,' plainly indicates that you originally communicated it to at least one of that honorable body; and I learn from General Conway, that before his late arrival at Yorktown, it had been committed to the perusal of several of its members, and was afterwards shown by himself to three more. It is somewhat difficult to conceive a reason, founded in generosity, for imparting the free and confidential strictures of that ingenious censor on the operations of the army under my command, to a member of congress; but perhaps 'time and circumstances pointed it out.' It must indeed be acknowledged, that the faults of very respectable officers, not less injurious for being the result of inexperience, were not improper topics to engage the attention of members of congress.

"It is, however, greatly to be lamented, that this adept in military science did not employ his abilities in the progress of the campaign, in pointing out those wise measures, which were calculated to give us 'that degree of success we could reasonably expect.' The United States have lost much from that unseasonable diffidence, which prevented his embracing the numerous opportunities he had in council of displaying those rich treasures of knowledge and experience he has since so freely laid open to you. I will not do him the injustice to impute the penurious reserve, which ever appeared in him upon such occasions, to any other cause than an excess of modesty; neither will I suppose, that he possesses no other merit than that after kind of sagacity, which qualifies a man better for profound discoveries of errors that have been committed, and advantages that have been lost, than for the exercise of that foresight and provident discernment, which enable him to avoid the one and anticipate the other. But, willing as I am to subscribe to all his pretensions, and to believe that his remarks on the operations of the campaign were very judicious, and that he has sagaciously descanted on many things that might have been done, I cannot help being a little skeptical as to his ability to have found out the means of accomplishing them, or to prove the sufficiency of those in our possession. These minutiae, I suspect, he did not think worth his attention, particularly as they might not be within the compass of his views.

"Notwithstanding the hopeful presages you are

pleased to figure to yourself of General Conway's firm and constant friendship to America, I cannot persuade myself to retract the prediction concerning him, which you so emphatically wish had not been inserted in my last. A better acquaintance with him, than I have reason to think you have had, from what you say, and a concurrence of circumstances, oblige me to give him but little credit for the qualifications of his heart; of which, at least, I beg leave to assume the privilege of being a tolerable judge. Were it necessary, more instances than one might be adduced, from his behavior and conversation, to manifest that he is capable of all the malignity of detraction, and all the meannesses of intrigue, to gratify the absurd resentment of disappointed vanity, or to answer the purposes of personal aggrandisement, and promote the interest of faction. I am with respect, sir, your most obedient servant."

Now here is the "lie by circumstance" insinuated with a degree of distinctness to which nothing but conscious guilt, christian forbearance, or abject cowardice, could have been expected to submit. It was the more provoking, too, because the whole of the argument drawn from the supposed communication of Washington's discovery by Conway himself, could have been shown to be destitute of any such foundation. Gates had got his information from Mifflin, who gave no intimation of the terms of the supposed letter or extract. Under these circumstances, it is almost incredible that Gates should have deigned to write the following reply:

Horatio Gates to George Washington.

"Yorktown, 19th February, 1778.

"Sir: Yesterday I had the honor to receive your excellency's letter of the 9th instant, and earnestly hope no more of that time, so precious to the public, may be lost upon the subject of General Conway's letter. Whether that gentleman does or does not deserve the suspicions you express, would be entirely indifferent to me, did he not possess an office of high rank in the army of the United States; for that reason solely I wish he may answer all the expectations of congress. As to the gentleman, I have no personal connexion with him, nor had I any correspondence, previous to his writing the letter which has given offence; nor have I since written to him, save to certify what I know to be the contents of the letter. He therefore must be responsible; as I heartily dislike controversy, even upon my own account, and much more in a matter wherein I was only accidentally concerned. In regard to the parts of your excellency's letter addressed particularly to me, I solemnly declare that I am of no faction; and if any of my letters taken aggregately or by paragraphs convey any meaning which in any construction is offensive to your excellency, that was by no means the intention of the writer. After this, I cannot believe your excellency will either suffer your suspicions or the prejudices of others to induce you to spend another moment upon this subject. With great respect, I am, sir, &c."

The reply of the commander-in-chief to this

neaking letter, which is found at page 513, closes this remarkable correspondence :

George Washington to Horatio Gates.

"Valley Forge, 24th February, 1778.

"Sir: I yesterday received your favor of the 19th instant. I am as averse to controversy as any man; and, had I not been forced into it, you never would have had occasion to impute to me even the shadow of a disposition towards it. Your repeatedly and solemnly disclaiming any offensive views, in those matters which have been the subject of our past correspondence, makes me willing to close with the desire you express, of burying them hereafter in silence and, as far as future events will permit, oblivion. My temper leads me to peace and harmony with all men; and it is peculiarly my wish to avoid any personal feuds or dimensions with those who are embarked in the same great national interest with myself, as every difference of this kind must in its consequences be very injurious. I am, sir, your most obedient servant."

After all this it is due to General Gates to own that he was no ordinary man, and yet we may safely challenge a search into all the records of this sort of diplomacy, in which the superiority of one party over the other is more triumphantly established. That it was the triumph of truth and virtue, is made manifest, to all who might doubt it, (if such there could be) by the following letter from Conway, written, as he then believed, on his death bed.

Thomas Conway to George Washington.

"Philadelphia, 23d July, 1778.

"Sir: I find myself just able to hold the pen during a few minutes, and take this opportunity of expressing my sincere grief for having done, written, or said anything disagreeable to your excellency. My career will soon be over; therefore justice and truth prompt me to declare my last sentiments. You are in my eyes the great and good man. May you long enjoy the love, veneration and esteem of these states, whose liberties you have asserted by your virtues. I am, with the greatest respect, &c.

"THOMAS CONWAY."

We have given these letters at large, not only because they are more interesting than anything of our own, but because we can no otherwise so well convey to the reader a just idea of the work under review. It is only thus that the character of such a work can be displayed. When we say that this is but a fair sample of the sort of information it contains, and of the manner in which it is communicated and substantiated, we have said enough to satisfy the public that it has well fulfilled the high expectations awakened by its annunciation.

We are not sure that in every instance the compiler's task has been executed with the same skill and fidelity. In the papers relating to the interesting affair of Major André, there is a meagerness which leaves the reader unsatisfied, and dis-

appointed. We can hardly bring ourselves to believe that the whole of them are given, and we look in vain in the appendix for the same amplitude of elucidation which we find in other cases. Instead of it, we have, indeed, a reference to "Sparks's Life and Treason of Arnold;" but, under favor, we think the purchasers of the present work had a right to expect that Mr. Sparks would have given them all the necessary information *here*. He certainly was at liberty to extract from his own work as freely as from that of any other person, although we are sensible the sale of it might be impaired by transferring from it a fuller account of the transaction which conferred on that traitor his only celebrity.

But we have no mind to say anything ill-natured to Mr. Sparks. He has given us a compilation of great interest to the general reader, and of infinite value to the historian. He has executed his task with exemplary diligence and fidelity, and deserves our thanks and our praise.

TO DYSPEPSIA.

Dyspepsia! horrid fiend, away!
Nor dog my steps from day to day:
Where'er I go—wherever fly,
I meet that dim and sunken eye.
That pallid and cadav'rous hue,
Those bloodless lips, so coldly blue,
Thy tott'ring gait and falt'ring breath,
Proclaim thee, messenger of death.

Behold thy work—my languid frame
Its vigor wasted, blood grown tame,
Afraid of what, it cannot tell,
Is held in thy demoniac spell;
Dark shadows round, thou seem'st to fling;
"My ears with hollow murmurs ring;"
My head grows giddy—eyesight dim,
My senses seem to reel and swim.

At night I start from hideous dream;
My pillow fly, with stifled scream;
I dare not sleep—at early morn,
I hear the huntsman's echoing horn;
My burthen'd heart one instant bounds
To spring to horse, and cheer the hounds—
Alas! no more for me the chase!
Myself pursued, I fly thy face.

I cannot breathe the balmy air—
It cheers me not, for thou art there;
I am not gladden'd by the sun—
His course is glorious, mine is run.
For me the flowers all vainly bloom;
They seem but things which strew the tomb.
All things that others seek, I shun—
The earth a blank—the world undone.

Is there no power, this brow to cool,
And wash me in Siloam's pool?

Bethesda's waters! where are they?
 The friendly hand to guide the way?
 Remorseless fiend! relax thy hold;
 The demons were cast out of old,
 And I will cling to Jesus' knee;
 Oh! let him speak, and thou must flee.

NUGATOR.

JACK-O'-LANTERN:

A NEW-LIGHT STORY. BY EYES-IN-GLASS.

CHAPTER I.*

"*Manager.* You know, upon our German stage, every one tries what he likes. Therefore, spare me neither scenery nor machinery upon this day. Use the greater and the lesser light of heaven; you are free to squander the stars; there is no want of water, fire, rocks, beasts and birds. So spread out, in this narrow booth, the whole circle of creation; and travel, with considerate speed, from heaven, through the world, to hell."

Goethe.—*The Faust.*

It is scarcely the best policy to begin the work of confession on one's first entry into the world, where, now-a-days, if men confess any sins at all, it is only such as are sufficiently equivocal to pass for virtues; but as my aim is a moral one, and my hope the reformation of this very infirmity among mankind, I know no better mode of beginning, than to put myself right in court, by a frank avowal of the matter which has brought me into it. Start not, therefore, ye devoutly pious—frown not, ye saints of the tabernacle,—and wring not your hands, ye godly dames, who form societies to help unto grace and gravy, the infinite number of wise young men, who are possessed of the spirit, and lack all other possessions,—when I boldly declare unto ye, that, like Saul of old, and the Witch of Endor, John Faustus, Michael Scott, and, possibly, the Reverend Edward Irving, I have a familiar—in plain language, a devil; one of those active and intelligent spirits, who from sympathy, animal magnetism, or some other equally unintelligible cause, attach themselves to the fortunes of that grub-worm, man, for his special comfort and edification; conveying him the news—canvassing morals, (and, *par parenthese*, the devil has a particular interest in this department of human economy,) and, altogether, affording him a mass of information not yet attainable even by the most adroit practitioner in *clair-voyancing*.

*And, possibly, chapter last, since I cannot be certain that the taste of the reader will so highly approve of my devil as my own does. Time will show. I will bind myself to no conditions. If the mood suits me—and the "Messenger"—there will be more words to this argument. The public shall be made wiser, if they have the wit to desire it. I shall be happy to serve and enlighten them, but I will not throw pearls away upon—those who do not know how to wear them. I' faith, I had nearly written out the proverb in full, and there were no good policy, my gentle public, in that.

How I became familiar, with this familiar, is, gentlest of all possible readers—without becoming too familiar—none of your business. He came to me, suffice it to know, not as visitors from the unsubstantial world usually come, reeking with smoke and stinking of antimony; there was not even a flourish of trumpets—not a breeze or breath of music—to intimate his approach. Never was coming more innocent and unimposing. I made use of no sort of incantations; none of your skulls and circles—grim, grinning jowls, skinned bats and withered frogs, encircled me; and, except the proverbial devil of the printing office, I do not remember to have ever had before the slightest communication, from or with, any of the botto-quartered gentry. Nor did I solicit, the honor of a visit, (rhyme is a devilish propensity,) but uninvited, uncommanded—I will not say, undesired—he stood before me; nay, there I am wrong, he stood behind me, such was the unobtrusive modesty of his approach at first; and a sound was the first notice which I had of his near neighborhood. My devil first made my acquaintance in the shape of a sound. But that, gentle reader, was no vulgar sound, though not an unfrequent one since the discovery of Maccoboy. My snuff-box lay beside me, on the table, and from its capacious treasury, I had just withdrawn, betwixt my forefinger and thumb, a generous pinch of the titillating dust. Applied to my nostril, it had promptly done its office in provoking a most relieving and liberal sneeze. What was my consternation to behold, in the next moment, another sneeze behind me—a sneeze, as it were, the very *fac-simile* and echo of my own. Such, at first, I was almost persuaded to believe it, but a repetition of the explosion soon convinced me that it was not the sneeze of humanity, and I clearly comprehended the operation of my Maccoboy upon the sternutatory organs of an infernal. "Ha!—tshe—tshe—tshe—ha!—ha!"—was the melodious acknowledgment which my visiter gave to the potency and general excellence of my tobacconist; and the sympathy which his nostril thus seemed to exhibit with my own, half removed the feeling of disquiet and apprehension which his first annunciation had occasioned me. In an instant I turned to confront him, and a moment's glance sufficed to set my heart at ease and silence all my annoyances. On looking at him, I felt, of a sudden, all the freedom and familiarity of a long acquaintance; and this feeling, the moment I had discovered his quality, forced upon me the unpleasant conviction that I had been no better than I should be. His face was by no means remarkable. Such a face I have often seen. It was rather Gallican in its contour and general expression. A disposition to laugh at all things seemed its predominating feature, but there was a slight sinking at the corners of the mouth, which denoted a habitual sneer, and a fond-

ness for sarcasm, which was strongly opposed to the general benevolence of his other features. The cheeks were full, fat and rosy, but the eyes were rather small, and the chin degenerated apishly. His figure was good enough—his person, though diminutive, was perfect. I cast my eyes with some curiosity towards his feet, but they were perfect also; and in a fashionable square-toed boot seemed even handsomely formed. There was nothing like club or hoof to offend my sensibilities or alarm my fears, and I wondered at our grandams who could tell, and really believe, such discreditable stories. My devil, on the whole, was really a comely fellow. I have seen the editor of a ladies' gazette, a far worse looking man, and infinitely less of a gentleman.

With that divine instinct which we have never denied to the devil, while denying him all other virtues, he readily discerned my annoyances and saw that his coming had put me out; but with that felicity of manner which it would be equally folly in us to deny to a person so proverbially persuasive, he took special care in what he said, not to suffer me to see that he ascribed my discomposure to any other cause than the natural irritability of an author at being disturbed in his daily scribblings. I was at this time busily engaged upon a new work, calling for all my taste and research, no other than a collection of the most fashionable negro melodies, such as Jim Crow, Coal Black Rose, Clare De Kitchen, and other pieces of like national and moral interest, with a copious appendix of illustrative notes, such as might well become a work of so much magnitude and interest.

"I see that you are busy, Mr. Silox, and I would not willingly disturb you at this moment."

"Pray, proceed, sir—I have time enough to spare, and will wait upon you."

He drew a chair as he said these words, and with the air of a man resolved, under all circumstances, to be as good as his word, he prepared to take a quiet seat in a corner, and give himself up to meditation.

"Beg pardon, sir," said I, "but you will find it tedious—may I be honored at once with the purpose of your visit?"

"That is soon told," said he in reply; "I see that you know me."

Here I expressed a little reluctance, and prayed for more direct information.

"I cannot deny," was my response, "that I have a shrewd guess, but——" There I paused.

"Which is perfectly correct, sir; your instinct is not less good than mine in matters of this sort, and there needs no formality between those already acquainted. Besides, there is something less than civil—certainly less than social—in calling folks continually by their titles of dignity. I freely confess to you a willingness to dispense with mine. It operates against me, and sits heavily

upon me at certain seasons. I am, like many of the princes of old, and some of the officers of penal justice in modern times, infinitely more fond of a snug disguise, and a good humored *nom de guerre*, than of the solemn ceremonial which follows upon and announces the presence of superior attributes. At present, sir, as I see you still somewhat at a loss, you will do me the favor to recognize me under one of my many names—the most innocent and least imposing, perhaps, among them—and whenever you may deem it necessary to call me by a name at all, which I trust will not be often the case, to know me as Jack-O'-Lantern. I shall certainly be willing to give you all the light I carry, should you require it. Jack-O'-Lantern is a common acquaintance, and nobody should be seriously alarmed or annoyed at his presence. You, I know, who are a poet and philosopher, will readily show yourself above all idle superstitious fancies; and you will soon find, upon doing so, that if I have few virtues, I have many uses; and my more imposing names of sovereignty thrown out of the account, there can be no objection to the employment of my services."

"Your services, Mr. John O'-Lantern?" I exclaimed with some wonder, in the sudden commotion of my thoughts, not exactly knowing what to make of this sort of introduction—"Your services!"

"Ay, my services," he replied; "I propose to serve you, because I see that you need my help, and because I have somehow taken a liking to you. You smile, but I am above jest in this. I am serious. In my friendship for you I have sought you out, and I am resolved to become your friend, companion, assistant, anything, whether you will or no! You want an amanuensis, and considering the color of the work on which I see you busy, perhaps I am the very person of all the world whom you should soonest choose. But I insist not on this. Take me in what capacity you please. I am an actor of all work, as the comedians call themselves. I can be a boon companion, a grave counsellor, a curious penman, and a dapper valet. Make me what you please, with a will, and rely on me to be the thing which you most desire. I will take no refusal; you must employ me."

So liberal an offer, so graciously volunteered, was not to be rejected idly. He saw me hesitate, and threw in certain additional suggestions.

"My library is large and various; I see that you are busy, and sometimes at a loss, in your search after authorities. Your correspondence is extensive; let me give you a taste of my skill in assisting you to answer some of these letters."

He turned over a pile, seated himself at the table, and with a pen that seemed rather to stream over the paper than to rest upon it, he wrote almost in a breath the most admirable and fitting

replies to the greater number of them. To a politician wanting a vote, and giving a dinner accordingly, he wrote a brief but comprehensive eulogium upon the arts of the cuisine, and concluded with an acceptance to his invitation, premising only that my wine for the current month was *Lachrymæ Christi*. To a lady of fashion whose billet for the next *soirée* was rather a summons than a solicitation, he pleaded a rule to reject all invitations for Friday, but complimented her at the same time upon the *recherche* fold of her missive. To the editor of a weekly magazine who begged for contributions, for which he promised to pay in praises, he wrote an essay on independent criticism. To a tailor soliciting custom and proffering extensive credits, he penned an order for a claret colored coat, such as the man wore who seized on the New York arsenal, and kept it for the whigs against General Arcularius and his man Friday. There was one letter which he was about to open, but as if he knew the contents already, or saw from the glance of my eye that he was now on forbidden ground, he paused in his progress, and I availed myself of the interval to acknowledge his powers, and relieve him for the present from their farther exercise.

"Enough, Mr. O'-Lantern, I am quite obliged to you. You are indeed a valuable acquisition, and really I know not how I shall requite you."

"Requite me—I ask no requital, Mr. Sillex—none. The pleasure of serving you is enough for me."

"Indeed! Truly you are becoming disinterested in your old age. You have not always toiled thus unprofitably, and with so little regard to self. If report speaks truly, you have usually been a severe expectant—a rigid exacter of your dues. You have done nothing for nothing."

"Report has done me wrong," he said coolly. "I have always been a much scandalized person among men, I assure you."

Never did injured mortal look more in need of sympathy. I felt myself getting lachrymose.

"What!" I proceeded, "and is your love in my case so great that you are willing to do for me those things for which you have exacted the eternal and unmitigated toils of other men, not to speak of their sufferings?"

"I do not understand you, really," was his reply, and he certainly looked at a loss when he spoke these words.

"'Pon my soul," I continued, "either you are exceedingly dull, Mr. O'-Lantern, or I have been grievously imposed upon in the histories I have heard of you. Is it really possible that you intend to serve me for nothing? Do you really want no compensation? Do you ask nothing of me in return?"

"Nothing."

"What! shall there be no bond between us?"

"Bond! for what? speak out my dear master that is to be, and tell me your real difficulty."

"Well, in plain terms then, Mr. O'-Lantern, do you not want to bind me, body and soul, in return for these services? Do you not want a mortgage of my soul?"

"Your soul, indeed, what do I want with it? Bless your stars, my dear Mr. Sillex, that thing is entirely out of fashion now. I have more souls than I know what to do with—they are positively rotting on my hands. I wouldn't be burdened or bothered with an increase on any terms; and next to the mistake which you have been led into by your grandmother on the subject of my character, is that monstrous error which you men seem to entertain as to the value of the article you think I trade in. Souls, indeed! The very idea is absurd. No, sir, if I wished for anything at your hands, it should be the breeches you have worn. Now I think of it, sir, I will have pay for my services. You shall pay me in old breeches; you shall contract to give me all your breeches after a month's wearing them, and I will trust to your generosity, should you ever get married, to throw in occasionally a petticoat of your wife's. These shall be my terms. I ask for no other. Keep your soul, and do what you please with it; I would'nt have it as a gift. But your breeches, sir—your breeches; and in the event of your marriage an occasional petticoat of your wife's; these you shall give me, if anything, in return for my services. What say you to these terms?"

"A bargain," I exclaimed, delighted with the humor of the fellow, not less than his generosity. "Breeches and petticoats! you shall have them all! Why, Mr. O'-Lantern, you are the very pink of liberality, and I rejoice at your coming. Pray resume your seat, and let us talk over this matter, that it may be the better understood between us. There may be something covert and equivocal in it, after all. You gentlemen of the lantern are apt to hang out false lights for the temptation of the unwary, and I am resolved to see that you have no occult signification in what you say, before I sign this agreement. It may be my soul, after all, that you're driving at, in aiming at my breeches. I know many men whose souls never go beyond their breeches, and though I trust that mine is not of this sort, yet I would take every precaution against involvements. I will have legal advice first in this business."

"You are right, my dear sir," he replied promptly, "take what precaution you please, and be satisfied before you proceed a single step in this matter. I have no disposition to deceive you—indeed, I am not a proficient in the arts of falsehood. I know many a lawyer who would put me to the blush for incompetence, and might, if lying were a prime requisite in my dominions, usurp their sovereignty. Even if your soul were in

your breeches, there would be little danger of its loss; all you have need to do is to shake them well before giving them to me, and unless it be a very sleepy or a very adhesive soul, it is physically impossible that it should stick there long after the shaking."

"But the instrument, itself! how would you have it drawn up? possibly you may desire that it should be written with my blood; if you do, I must tell you——."

His immoderate laughter silenced me.

"Another pinch of your Maccoboy," he said, helping himself. "I see you have been among the Germans. These are diabolical fancies I confess, and to my mind, rather dirty ones. I pray you, my dear master, look on me as one having a tolerable taste, and rather delicate stomach. These blood-pudding imaginings are my abomination. I deal differently with my friends. Leave the drawing up of the instrument to me, and keep your soul and blood to yourself. I would not rob you of a particle of either. The breeches will content me,—the breeches; and, mark me! an occasional petticoat, whenever you may think it necessary to bring home Mrs. Silex."

"You shall have them—that you shall," was my answer.

The deed was drawn out in the twinkling of an eye, and the contract signed and delivered. Nothing could exceed the delight of Jack upon his installation into office as my servant of all work. His joy broke out into tumultuous expressions the moment the papers were completed.

"I congratulate myself, my dear master, as well as you, on our mutual acquisitions. There is nothing so distressing as being out of place; I have been trying for sometime to employ a master after my own heart, and my rapture is now excessive at having found him."

"A double-edged compliment," I muttered to myself, with a slight shiver. He beheld and divined the sensation.

"Ay, I see," he cried playfully, "you are still unassured. You do not conjecture my value yet. But let me convince you. Say, what shall I do for you? It is proper that I commence my duties forthwith. Let me know them. I am ready now. I have no trunks to remove. My wardrobe is already here. As for my bedding, I want none. A chink in the chimney will yield me a sufficient sleeping place, and your saving in candles, alone, will be no small item. You have only to set me above the chimney-piece when you want a light, and I will burn at both ends to please you. In food I am moderate. A fricassee frog is the utmost that my stomach will bear, and in wine I am a single bottle man. In supplies I am a prime commissariat, and you would find me valuable for this quality, even if my consumption were greater than it is. To speak with due modesty, you will

find me a wondrous acquisition; and will soon wonder how you ever did without me before."

"I nothing doubt it, Mr. John O'-Lantern."

"Plain Jack, if you please, Mr. Silex. John O'-Lantern will do for visitors and state occasions, when we go into company. Between us, and at our own fireside, a little more familiarity is best, and plain Jack more agreeable to my ear than any other epithet. And now, sir, shall I bring in coffee? Your usual supper hour is at hand."

"If you please, Jack," was my answer; and yet, I had some qualms of stomach, not to say conscience, as I thought of the proverb which denounced all liquor, however pleasant, of the devil's brewing. While I thought thus, the coffee urn was hissing on the table, and to do my new retainer lean justice, I assure you, I never drank a better cup of the purple beverage in my life. As a cook alone, he deserved new breeches daily; we shall see, as we get on, that he displayed other qualities which entitled him to far higher rewards; but of these—anon.

MENTAL SOLITUDE.

By the author of "Atalanta."

The bells are gaily pealing, and the crowd,—
The thoughtless and the happy,—with light hearts,
Are moving by my casement:—I can hear
The rude din of their voices, and the tramp
Of hurrying footsteps o'er the pavement nigh,
And my soul sickens in its solitude.

Each hath his own companion, and can bend,
As to a centre of enlivening warmth,
To some abode of happiness and mirth;—
Greeted by pleasant voices,—words of cheer,
And hospitality,—whose outstretched hand
Draws in the smiling stranger at the door.
They go not singly by, as I should go,
But hanging on fond arms. They muse not thoughts
Of strange and timid sadness, such as mine;
But dreams of promised joys are in their souls,
And in their ears the music of fond words
That make them happy.

I, alas!—alone,
Of all this populous city, must remain,
Shut up in my dim chamber,—or, perchance,
If I dare venture out among the crowd,
Will be among, not of, them;—and, appear,—
For that I have not walked with them before,
Nor been a sharer in their festivals,—
As some strange monster brought from foreign clime
But to be baited with the thoughtless gaze,
The rude remark, cold eye, and sneering lip,
'Till I grow savage, and become, at last,
The rugged brute they do behold in me.

Talk not to me of solitude!—Thou hast
But little of its meaning in thy thought

And less in thy observance. It is not
 To go abroad into the wilderness,
 Or dart upon the ocean;—to behold,
 The broad expanse of prairie or of wood,
 And deem,—for that the human form is not
 A dweller on its bosom,—(with its shrill
 And senseless clamor oft, breaking away
 The melancholy of its sweet serene,
 That, like a mantle, lifted by the breath
 Of some presiding deity, o'erwraps,
 Making all mystery and gentleness,)—
 That solitude is thine. Thy thought is vain!—
 That is no desert, where the heart is free
 To its own spirit-worship;—where the soul,
 Untainted by the breath of busy life,
 Converses with the elements, and grows
 To a familiar notion of the skies,
 That are its portion. That is liberty!
 And the sweet quiet of the waving woods,
 The solemn song of ocean—the blue skies,
 That hang like canopies above the plain,
 And lend their richest hues to the fresh flow'rs
 That carpet its broad bosom,—are most full
 Of solace and the sweetest company!
 I love these teeming worlds,—their voiceless words,
 So full of truest teaching. God is there,
 Walking beside me, as, in elder times
 He walked beside the shepherds, and gave ear,
 To the first whispered doubts of early thought,
 And prompted it aright. Such wilds to me
 Seem full of friends and teachers. In the trees,
 The never-ceasing billows, winds and leaves,
 Feathered and finny tribes,—all that I see,
 All that I hear and fancy,—I have friends,
 That soothe my heart to meekness, lift my soul
 To loftiest hope, and, to my toiling mind,
 Impart just thoughts and safest principles.
 They have a language I can understand,
 When man is voiceless, or with vexing words
 Offends my judgment. They have melodies,
 That soothe my heart to peace, even as the dame
 Soothes her young infant with a song of sounds
 That have no meaning for the older ear,
 And mock the seeming wise. Even wintry clouds,
 Have charms for me amid their cheerlessness,
 And hang out images of love and light,
 At evening, 'mong the stars,—or, ere the dark
 That specks so stillly the gary twilight's wing,
 With many colors sweetly intermixt.
 And when the breezes gather with the night,
 And shake the roof-tree under which I sleep,
 'Till the dried leaves enshroud me, then I hear
 Voices of love and friendship in mine ear,
 That speak to me in soothing, idle sounds,
 And flatter me I am not all alone.

Darting o'er ocean's blue domain, or far
 In the deep woods, where the gaunt Choctaw yet
 Lingers to perish,—galloping o'er the bald
 Yet beautiful plain of prairie,—I become
 Part of the world around me, and my heart
 Forgets its singleness and solitude.

But in the city's crowd, where I am one,
 'Mongst many,—many who delight to throw
 The altar I have worshipp'd in the dust,
 And trample my best offerings—and revile

My prayers, and scorn the tribute which I still,
 Devoted with full heart and purest mind,
 To the all-wooing and all-visible God,
 In nature ever present—having no mood
 With mine, nor any sympathy with aught
 That I have loved;—'tis there that I am taught
 The essence and the form of solitude—
 'Tis there that I am lonely! 'mid a world
 To feel I have no business in that world,
 And when I hear men laughing, not to join,
 Because their cause of mirth is hid from me:—
 To feel the lights of the assembly glare
 And fever all my senses, till I grow
 Stupid or sad, and boorish;—then return,
 Sick of false joys and misnamed festivals,
 To my own gloomy chambers, and old books
 That counsel me no more, and cease to cheer,
 And, like an aged dotard, with dull truths,
 Significant of nothings, often told,
 And told to be denied—that wear me out
 In patience, as in peace;—and then to lie,
 And watch the lazy-footed night away,
 With fretful nerve, yet sorrow as it flies!—
 To feel the day advancing which must bring
 The weary night once more, that I had prayed
 Forever gone! To hear the laboring wind
 Depart, in melting murmurs, with the tide,
 And, ere the morn, to catch his sullen roar,
 Mocking the ear, with watching overdone,
 Returning from his rough lair on the seas!

If life be now denied me!—if I sit
 Within my chamber when all other men
 Are revelling;—if I must be alone,
 Musing on idle minstrelsy and lore—
 Weaving sad fancies with the fleeting hours,
 And making fetters of the folding thoughts,
 That crust into my heart, and canker there;—
 If nature calls me to her company—
 Takes up my time—teaches me legends strange,—
 Prattles of wild conceits that have no form,
 Save in extravagant fancy of old time,
 When spirits were abroad;—if still she leads
 My steps away from the established walks,
 And with seducing strains of syren song
 Beguiles my spirit far among the groves
 Of fairy-trodden forests, that I may
 Wrestle with dreams, that wear away my days,
 And make my nights a peopled realm that steals
 Sleep from my eyes, and peace;—if she ordains
 That I shall win no human blandishment,
 Nor, in the present hour, as other men,
 Find meet advantage,—she will sure provide,
 Just recompense—a better sphere and life,
 Atoning for the past, and full of hope,
 In a long future, or she treats me now
 Unkindly, and I may not help complaint.

THE EPHESIAN MATRON.

The story of the Ephesian matron versified by La Fontaine is found in Petronius, who took it from the Greeks—they from the Arabians—they lastly from the Chinese. It is found in Du Haide.

Bibliographical Notices.

[The Editor of the Messenger has opened a Review Department, through which his subscribers will be presented with a prompt notice of the literary and scientific works, which are constantly issuing from our prolific press. Such as require a more elaborate review, will be reserved for a subsequent number of the Messenger. Authors and publishers, who wish their works noticed in this Journal, are requested to forward them immediately after their publication.]

"The Principles of Political Economy. By Henry Vethake, LL. D. one of the Professors in the University of Pennsylvania; a Member of the American Philosophical Society, &c. Philadelphia: P. H. Nicklin & T. Johnson, Law-Booksellers. 1838."

In every free government, political economy should constitute an essential part of education, for as the source of power and government is the people, there should be a diffusion of knowledge upon those great general laws, which constitute the foundation of its political institutions. A people thoroughly instructed in the economy of government, may well be said to be capable of self-government; while ignorance of the principles upon which is constructed a nation's prosperity and power, must convulse and ultimately subvert it. Professor Vethake has furnished an excellent treatise upon this subject, in which he has briefly but lucidly discussed the many interesting questions connected with the science of government. It should be in the hands of every American.

"The Laws of Wages, Profit and Rent, investigated. By George Tucker, Professor of Moral Philosophy and Political Economy in the University of Virginia. 1838."

The political economist will take up this little treatise with the full expectation of being amply remunerated for the time consumed in turning over its pages; for few have enjoyed so many and varied opportunities of collecting information upon this subject as Professor Tucker. In this expectation the reader will not be disappointed, for the perspicuity, logical reasoning and simplicity of illustration, will convince him that the author is discussing a subject with which he is entirely familiar. The first division of the work is devoted to an able examination of the nature and value of labor, and the manner in which it is influenced by the demand for, or price of, the raw material; establishing this important and interesting position, that the rise of the raw produce, must in every instance, depress labor. The professor clearly illustrates and triumphantly defends this position, exposing, at the same time, the absurdity of Ricardo's theory of wages, which presumes labor to rise with the raw material. The error of Ricardo's position seems to depend upon the assumption, that the quantity or value of material necessary to support the laborer is determinate and uniform,—the necessary result of which, will be, that as the raw material increases in value, there must be a corresponding increase in the price of labor, or it would fail to

furnish a support. Mr. Tucker demonstrates clearly that the rise of the raw material necessarily induces a decline in labor, since it requires a greater expenditure of labor to produce the same return. By regarding labor as unsettled, varying with the increase of population and other causes, he at once reconciles all the difficulties which would appear to cluster about his views. We will give Professor Tucker's own reasoning upon this subject.

"Let us suppose the soil last taken in cultivation to yield at the rate of eight bushels to the acre, that is, four bushels per acre to the laborer, and four bushels as the profits of capital. This soil, according to the Ricardo theory, yields no rent; for its produce barely repays the wages of the labor and the profits of the capital expended in its cultivation. But population increases, and there is a demand for more raw produce. Land then, they say, of yet inferior quality, must be resorted to; and this, we will suppose, to yield seven bushels per acre. Now it is clear that either the capital or the labor must put up with a smaller return than before. If profits continue unchanged, and receive four bushels as previously, then the laborer can receive only three bushels, which would be a reduction of his wages, estimated in raw produce, of 25 per cent. But they say, the laborer must continue to receive his four bushels. It will be shown that this part of their theory is as erroneous as the rest; but admitting it for the present to be correct, how can labor be said to fall, if it receives the same four bushels as before? Or if now, or at any subsequent period, it is obliged to put up with a less portion than four bushels, how can it be said not to fall? But in truth, when eight bushels per acre was barely sufficient to pay the wages of labor and the profits of capital, it is clear that land yielding only seven bushels per acre could not be cultivated; and if the product of the last mentioned soil was required for the support of additional numbers, it could be obtained only because labor and capital would fall to the smaller remuneration of seven bushels; a result which, so far as labor is concerned, would naturally arise from the competition of increasing numbers.

"It forms indeed one of the most remarkable instances of illogical reasoning which the annals of science can exhibit, that, when the rise of raw produce is inferred from the greater expense of labor required in its production, the same rise of raw produce should be said to cause the rise in the price of labor, which is the same thing as saying that the fall of labor causes the rise of labor."

Professor Tucker has undoubtedly adopted the most philosophical and rational mode of explaining the effect of an increase or diminution in the price of produce upon the value of labor, and if we proceed on any other principle, we lose the only means by which an examination can be conducted. There must be a standard of valuation; without it, it would be impossible to determine whether the raw produce is stationary or variable. As labor is the trading capital of the world, and in the productions of the soil and of the ingenuity of man, is the great expenditure, it is of all others, the most uniform standard,—the surest index of prices.

The same ability and ingenuity is brought to bear upon the other divisions of the work,—“profits of capital,” and “rents.” These subjects must, at all times, prove interesting themes for reflection with the intelligent, but at none could they claim more attention than the present, when the very foundations of our nation's greatness are threatened by the maddening spirit of political rancor and strife, which, regardless of the welfare of our country, riots upon the trembling and tottering walls of our noblest institutions.

This treatise bears upon it the impress of a master mind, and will amply repay the reader for a calm and deliberate perusal.

"Charcoal Sketches; or Scenes in a Metropolis. By Joseph C. Neal. With Illustrations by D. C. Johnson. Philadelphia: E. L. Carey & A. Hart. 1838."

Few American pens have contributed more to the amusement of the public than that of Joseph C. Neal; for his exquisite wit has travelled far and wide, and engaged for itself a nook in almost every newspaper throughout our land. While it may be a fair subject for discussion, whether the style of writing selected by Mr. Neal will secure him literary fame, or improve the public taste, yet it must be conceded that his portraits of the foibles and vices of man, while they excite the risibles, will carry with them a moral of precious value.

The sketch of "the best natured man in the world," will be recognized by many as an old acquaintance, and by not a few, as their domiciliary companion. The number of those who have not yet learned how to say no! is by no means small in every large community, and if the fate of Leniter Salix will but present before them a view of the gloomy future, towards which they are hastening, Mr. Neal will not have labored in vain. We commend this little book to such of our readers as may be in quest of amusement, and we doubt not, that they will be delighted with the skill of the marksman, "shooting folly as it flies."

"Retrospect of Western Travel. By Harriet Martineau, author of 'Society in America,' 'Illustrations of Political Economy,' &c. 2 Vols. 1838."

This political *savante* has dismounted from the rampant pony she rode with Gilpin speed over this western world, and by a more staid and temperate gait begins to discover some glimmerings of rationality, civilization and christianity, among a people whose only sin against her, was an unbounded hospitality, amounting almost to servile attendance. "Society in America" is just such a return as our gullibility merits; for throw about a well clad foreigner the title of *Count*, *Earl*, or what is more magical, a literary mantle, however threadbare or worn out, and the whole press, from Maine to Florida, prefaces his migratory movements, by Count B. has arrived in our country, or the intelligent and interesting Miss M. is expected to visit our city during the next week. This amiable trait in our countrymen, is the fruitful source of the abuse and denunciation heaped upon us by a band of unprincipled scribblers, who, unaccustomed to a courteous notice by their aristocratic superiors at home, cannot appreciate that spirit of courtesy and hospitality characteristic of every well regulated American community. These rich returns will, ere long, teach us the necessity of circumspection, and he, who then panders for the corrupt taste of an English rabble, or measures his veracity and conscience by pecuniary reward, will, Trollop-like, be compelled to gather his "first impressions" of "Society in America," from the filthy and half-starved creatures who have but recently been ejected from the poor-houses and prisons of his own "blest land."

We are far from regarding Miss Martineau as having made the *amende honorable*, in her late "Retrospect of Western Travel." It is true, that much of the vindictive temper with which the first impressions were penned, has been softened down, and a more fair and

decent portrait of our distinguished statesmen is the result of a single *retrospect*; but we sincerely trust that the lapse of years, which wears away prejudice, will enable her, in future *retrospections*, to embody an honest sketch of the influence of our political and domestic institutions upon the prosperity and happiness of our citizens. She lacks not materials, for at every step of her "Western Travels," a free admission was given her into the arcana of a self-governing and free people. The present work, with the exception of a few interesting sketches of character, is devoted to a tirade against the institution of slavery; we say a tirade, for in no instance is the question argued upon the broad principle of right or justice, or in reference to its peculiar adaptation to the agriculture or polity of that district of our country in which it exists. The whole consists of an assemblage of what she saw and heard in reference to slavery in the south, much distorted, with occasionally a *sub-sentimental* reflection upon the melancholy condition of the slave. Miss M. is an abolitionist by her own admission, and the following extract will prove her an amalgamationist of the foulest kind, and therefore she can neither view the institution of slavery with an unprejudiced eye, nor descant rationally upon its ultimate influence upon the moral or political condition of the United States.

"She turned round upon me with the question 'whether I would not prevent, if I could, the marriage of a white person with a person of color.' I replied that I would never, *under any circumstances*, try to separate persons who really loved, believing such to be truly those whom God had joined; but I observed that the case she put was not likely to happen, as I believed the blacks were no more disposed to marry the whites, than the whites to marry the blacks. 'You are an amalgamationist!' cried she. I told her that the party term was new to me: but that she must give what name she pleased to the principle I had declared in answer to her question."

We unhesitatingly say, that the intention of the writer was to shape a new work for the British public, suited to its taste, and at the expense of our statesmen and institutions. It bears upon its front prejudice and fanaticism; and in catering for her countrymen, Miss M. has labored to conciliate one of the political parties of our country, by detracting from the political and private character of its opponents. We shall be greatly deceived if this attempt to secure the patronage of an intelligent and high-minded political party be successful.

No one who reads the Retrospect will recognize the political economist in the credulous and prepossessed tourist; at one moment the slave of her own prejudices; at the next, the dupe of a fanatical sectional jealousy.

"A Voyage Round the World, including an Embassy to Meaco and Siam, in 1835, 1836, and 1837. By W. S. W. Ruschenberger, M. D., Surgeon U. S. Navy, &c. &c. Philadelphia: Carey, Lea & Blanchard. 1838."

Dr. Ruschenberger deserves the sincere thanks of his fellow countrymen for the highly entertaining history of his voyage round the world; and we regret that we have not time and room to extract largely, that we might afford the readers of the Messenger a part of the enjoyment we have experienced. Faithful narratives

of travels and voyages are emphatically the most useful and valuable productions of the press; for although they do not captivate our fancy by the brilliant creations of genius, nor move the heart with "melting tales of woe," yet they bring us in juxta-position with the inhabitants of distant lands,—unfolding to us their capabilities and resources, and exposing the physical and moral peculiarities of their inhabitants; we join hands with the interesting traveller and accompany him in rapid flight over the same scenes; and even those of us, who are tied down by the harassing pursuits of life, become cosmopolites. We are rejoiced to see our intelligent officers turning their attention to letters, and are proud that while our gallant navy is defending the honor of our flag, it is contributing to the general stock of knowledge, and securing to itself and country literary distinction.

"Remarks on Literary Property. By Philip H. Nicklin, A. M. Member of the American Philosophical Society; of the Ashmolean Society, Oxford; and of the Natural History Society, Hartford. Philadelphia: 1838."

Mr. Nicklin feels, thinks, and writes like a publisher and bookseller, and has, we think, made the best use of the arguments in support of the great cause in which he has enlisted: which, when stripped of its wordy dress, and exposed in its naked deformity, is, the emolument of the bookseller, against the rights and fame of the author; and involves the question, whether the author, whose nightly labors are frittering away his mental and corporeal powers, and inviting disease and death, shall be possessed of a pittance, resulting from the sale of his own productions; or whether the cormorant publisher, shall swallow *all*, to appease an insatiable appetite for gain. This effort of a publisher to snatch from intellectual labor its just reward, is in keeping with the gross position of an ignorant rabble, that physical exertion is alone worthy of pecuniary compensation. We had hoped, for the honor of mankind, that our intelligent and enterprising publishers would not murmur nor raise the hand of opposition against an effort, (so liberal and worthy of an enlightened and free people,) to secure protection to those who are contributing a toilsome life to the intellectual advancement of the world, and are drawing from their rich and almost exhaustless imaginations, materials for its amusement. The claim is one of unquestioned right, and admits of no debate; it involves but two simple christian axioms,—*"The laborer is worthy of his hire,"*—*"Do unto others as you would they should do unto you."*

Regarding the position of the distinguished chairman of the committee, Hon. H. Clay, (to whom was referred the petition of foreign authors for the extension of the copy-right protection to their productions,) as entirely just, that the republic of letters should be considered one great community, co-extensive with civilization, we would hail them denizens, admitted to equal rights with our own literati. No legislative action could be more worthy of a free and intelligent nation than the extension of the security asked; and none would be received with greater enthusiasm by the authors of America, most of whom, to their credit, have united in this petition to guaranty to their trans-atlantic brethren their rightful possessions.

Mr. Nicklin would have us believe, that the present system operates to the advantage of American authors and the reading public. But the history of the past would teach us a different lesson. American authors now, are at the mercy of the publishers, and grosser instances of injustice cannot be found than are displayed in the purchase of manuscripts. The immense number of interesting works of science, and general literature, which are yearly issued from the foreign press, bearing no copy-right protection in this country, furnish ample materials to employ the American publishers, and, as they are available without the cost of a dollar, they are naturally selected to the exclusion of American productions. The result is, when an author presents his manuscript, (the effect of a long and laborious application,) he is told that the vast influx of foreign books, without cost, gives ample employment to their capital, and they feel unwilling to take much risk in publishing a work, the reputation of the author of which, is not entirely established. A paltry sum hardly enough to pay him for the paper and ink consumed, is forced upon the author, and thus closes a bargain between an *American* author and publisher.

But how differently would this transaction be conducted, if the foreign author possessed the privilege of our copy-right? A bonus being required, the publisher would be compelled to use a suitable circumspection, in selecting works for re-publication, and without we admit that American talent and genius is inferior to European, our authors would occasionally obtain the just meed of approbation,—a preference over an imported and inferior production. We hold it, then, as the *first* step in redressing the wrongs of native writers, and expunging the oppressions of an unrestrained spirit of speculation,—which respects not the talent and labor upon which it riots.

Nor will its benefits be confined to native authors; it will extend to the community, and ere the lapse of one year from the commencement of its operation, the polluted streams which now flood the country, will be purged of their poison. The literature of the day will be exalted, and for the insipid and oftentimes senseless effusions of a brainless author, will be substituted solid works of science, or the effusions of a really creative and chastened fancy. Who would not pay a fraction more for such works?

It is a reflection upon the taste and intelligence of our country, that while foreign inventions and improvements in the arts are protected by the patent laws, intellectual labor—which knows no repose, and prematurely wears away the springs of life—is neglected and overlooked. Mr. Nicklin's arguments appear specious, and are lost upon us, strongly impressed as we are of the justice and expediency of our national legislature responding favorably to the petitioners.

The style of the pamphlet is free, and would grace a better cause, saving the air of pedantry in the introduction of an unnecessary number of Latin phrases—seldom illustrating the subject discussed.

"History of the Reign of Ferdinand and Isabella, the Catholic. By Wm. H. Prescott. 3 Vols.—2d Edit. Boston: 1838."

We will not anticipate the labors of the reviewer, in whose hands this work is placed, by a detailed account

of its contents. We wish merely to welcome it among us, and to promise the readers of the Messenger, a full criticism of the manner in which Mr. Prescott has executed the task confided to him. At the mention of the reign of Ferdinand and Isabella, every American heart will beat with emotion. It perhaps was never before allowed to one individual, to be the actor in so many important scenes, as distinguished the career of Isabella,—the magnanimous, intelligent and courageous, yet effeminate Spanish queen. With her name is associated the conquest of Granada, the conquest of Naples, the establishment of the modern inquisition, the expulsion of the Jews, the revival of letters, the discovery and colonization of America. The excellent taste with which this work has been brought forth, reflects great credit upon the skill of the American Stationers' Company.

"The Spirit of the Age." An Address delivered before the two Literary Societies of the University of North Carolina, by Hon. Henry L. Pinckney. Published by the request of the Philanthropic Society. 1836."

We have just received a copy of the above able address, and, notwithstanding considerable time has elapsed since its delivery, we shall venture a word of approbation. It is a well written and logically arranged essay, and reflects great credit upon the acquirements and morality of its highly gifted author. His extensive research and classic taste, has thrown about the subject all the ornaments of a well stored mind; while the occasion—the separation of youthful friends at the close of a scholastic life—lends a peculiar interest to his christian counsel; and we doubt not, that in after years, the graduates of 1836, will look back with pride and gratitude to the admonitor of their youth.

"Catalogue of the Officers and Students of the University of Virginia. Session of 1837-38."

This deservedly popular institution of learning continues to sustain its claim upon the South, and notwithstanding the distracted state of the monetary affairs of our country, has its usual number of students. The number of the present class is 230, and although 39 less than the last, is no evidence of a decline in the scholastic or literary departments, but entirely referable to the changes which occurred in the medical department. We have appended the number in each class for the last two sessions.

1836-37.—Whole number of matriculates, 269. Ancient Languages, 78; Modern Languages, 65; Mathematics, 135; Natural Philosophy, 110; Chemistry, 130; Medicine, 55; Anatomy and Surgery, 61; Moral Philosophy, 49; Law, 55. Number of tickets taken, 743.

1837-38.—Whole number of matriculates, 230. Ancient Languages, 68; Modern Languages, 71; Mathematics, 115; Natural Philosophy, 88; Chemistry, 78; Medicine, 32; Anatomy and Surgery, 32; Moral Philosophy, 80; Law, 67. Number of tickets taken, 631.

The decline in several of the academic schools is compensated by the increase in others, so that in this department of the University there is no material falling off.

"A Visit to the Red Sulphur Springs of Virginia, during the Summer of 1837; with Observations on the Waters. By Henry Hunt, M. D. 1838.

Dr. Hunt has given us an interesting account of the curative powers of the Red Sulphur water, in diseases of the lungs; and for the benefit of our readers who may feel an interest in this subject, we will briefly state, that in the cure of the incipient stage of phthisis pulmonalis, or consumption, recognised by hemorrhage, attended with a quick pulse, cough and hectic fever, the Red Sulphur Spring has established an unrivalled reputation. In all the cases of this form, which came under the notice of the Doctor, the patients were much benefited and most of them restored. Dr. H. was himself attacked with hemoptysis and other symptoms indicating an approaching pulmonary disease of a formidable character. A residence of a few weeks, at the Red Sulphur, with the free use of the water, accomplished a cure. We earnestly trust that all who repair to this medicinal fountain may be effectually restored, and that subsequent experience will establish the fact, that from the mountains of Virginia issues the healing balm, the antidote to that dire scourge which moves unmolested through our land, despoiling it of the fairest portion of our race.

HISTORICAL ERROR CORRECTED.

In the 3d volume of Jefferson's Correspondence, page 382, is a letter from Mr. Jefferson to Colonel John Taylor of Caroline county, dated June 1, 1798, which contains the following passage:

"Mr. New showed me your letter on the subject of the patent, which gave me an opportunity of observing what you said as to the effect with you of public proceedings, and that it was not ~~unwise~~ now to estimate the separate mass of Virginia and North Carolina, with a view to their separate existence." After which Mr. Jefferson proceeds to urge a variety of arguments against a division of the states.

As the biographer of Mr. Jefferson, I was induced to refer to this letter for the purpose of repelling one of the calumnies against him, and in paying a merited tribute to his just and patriotic views on the value of the Union, some of my remarks exhibited Colonel Taylor in disadvantageous contrast.

It has, however, been lately discovered, on comparing Mr. Jefferson's original letter with the published copy, that he had, in citing Colonel Taylor's language to Mr. New, said, "it was not ~~unwise~~ now to estimate," instead of not "~~unwise~~," &c., by reason of which mistake, Colonel Taylor is made to express, as his own, sentiments which he merely attributed to others.

This error has been the subject of a recent correspondence between Mrs. William P. Taylor, Mr. T. J. Randolph, and myself, and it appears, on investigation, to have arisen from the obscurity of the press-copy, from which this letter, in common with the others of the published correspondence, was printed. These press-copies, though in general quite legible and plain, are occasionally so faint that they can be decyphered only by the aid of the adjoining words; and it so happens that the letter in question is one of the most imperfect in the collection.

In taking this notice of the error, which I truly regret, as well as my agency in giving it diffusion, it is proper for me to declare that had Mr. Jefferson's letter been printed as it was originally written, I should not have felt myself warranted in making these references to Colonel Taylor's opinions to which I have adverted. I cannot forbear to add, that since the mistake has occurred, I rejoice in its detection, not only because the injustice to Colonel Taylor's memory may be thereby repaired, but also because the weight of his name can no longer be brought to bear on a principle of our national policy on which I consider every other to be more or less dependent.

GEORGE TUCKER,
University of Virginia, March 19, 1838.

It is the wish of the parties concerned that the preceding notice should be inserted in the Enquirer, Whig and National Intelligencer.

SOUTHERN LITERARY MESSENGER.

Vol. IV.

RICHMOND, JUNE, 1838.

No. VI.

T. W. WHITE, *Editor and Proprietor.*

FIVE DOLLARS PER ANNUM.

JEREMIAH T. CHASE.*

Maryland boasts of no purer patriot than JEREMIAH TOWNLEY CHASE, who was born at Baltimore, May 23, 1748.

Schools were then rare, and conducted on a very limited scale, and his education, like that of Washington, was by no means liberal. His mind, however, being naturally strong, overcame the difficulties and impediments arising from the want of early culture. Certain it is, that no bosom ever glowed more intensely with the fire of patriotism; for in the dawn of our revolution, young Chase is found among the foremost of those gallant spirits who resisted the tyranny of Great Britain, and swore that they would be free. He was a member of the first committee of observation for Baltimore, whose duty it was to watch the movements of the enemies of liberty, and with vestal vigilance, guard the rights of their oppressed country.

When the tidings of the battle of Lexington reached Baltimore in the spring of '75, Mr. Chase enrolled himself as a private in the first company of militia raised in the state, and thus contributed to call into action that indomitable spirit of the Maryland line, which afterwards won for itself imperishable laurels at Cowpens, Guilford and Eutaw.

In the summer of '76, the convention met at Annapolis, to establish a form of government, and continued its session until August 14th, when the bill of rights and present constitution were adopted; founded on the principles of Magna Charta, the Petition of Right, and other bulwarks of English freedom, and beyond all, on the inalienable right of self-government. They declared that the people alone were the true fountain of all power, and could alter or abolish their form of government at their sovereign will. This was a new and untried experiment. History furnished no parallel: it shed but feeble light on their path. Yet did this assembly, amid the din of battle, proclaim to the universe, that they would maintain their rights, or die in the struggle. They undertook the enterprize under a perfect conviction that they must expiate their offence on a gibbet, if victory did not settle on their banner. I find, on examining the journal, that Mr. Chase was in constant attendance on all the deliberations of the convention.

From this period until 1779, when he removed to Annapolis, he represented Baltimore in the House of Delegates. During these three gloomy and appalling years, when the stoutest hearts were almost ready to despair, Mr. Chase cheered and animated the House with his powerful and eloquent speeches. "Our cause," he would say, "is just: Heaven is on our side: it is the

conflict of liberty with tyranny: innocent blood has been shed: our cities are conflagrated and our temples profaned: helpless families are flying at midnight from their homes: misery and wretchedness now clothe our land with sackcloth and ashes. Behold, the haughty foe now holds in his grasp the cities of New York and Philadelphia, while disease, exposure and famine daily waste our little army at Valley Forge! See them, naked and exposed to snow-storms, while the heart of their chief is dissolved in sorrow! That illustrious man now looks to us for aid; let it not be in vain. Cast your eye, to the prison shop. Hear ye not the groans of our starving brethren, held in cruel captivity since November '76. The genius of America cries to us for their relief. Now is the time to strike for our country. Tell me not of the portentous cloud hanging over us: look beyond it. The time will arrive when our fears shall vanish; when war shall end, and peace spread her balmy wing over this once fair, but now desolated land. Forget not that in August, '76, we proclaimed to the astonished world, that we would lay down our lives in defence of our dearest rights: that we would 'do or die.' Shall we now shrink from the contest and leave Washington to perish? The eyes of unnumbered millions are upon us: let us do justice to our posterity: the gratitude of future ages shall constitute our rich reward. It is true that our resources are scanty: our soldiers are undisciplined: munitions of war are hardly to be obtained: yet will aid come from unexpected sources. He who rules human destiny, will awaken the sympathy of European nations, who will supply our necessities and assist us in this mighty conflict." This appeal was irresistible—under the energetic administration of Thomas Johnson, first governor of the state, supplies of cattle and flour were sent to the army: troops were recruited and disciplined: the energies of war called into action: and the unsubdued spirit of Maryland felt in the cabinet and the field, until the banner of America floated on the heights of York Town. Mr. Chase was universally esteemed one of the most conspicuous actors in the war of independence, which terminated with the treaty of peace in '83. He was a member of Congress at Annapolis, when on the 23d of December of this year, the father of his country surrendered into the hands of that august assembly, his commission as commander-in-chief of the armies of the United States, which he had received in June, '75. He was now in his fifty-first year, in the full possession of all his powers; enjoying unbounded fame: the army, which he had just left at Newburgh, ready to clothe him with the imperial purple. Disdaining the proudest trophies of ambition, he comes before Congress, and begs them to receive the insignia of his authority. He is dressed in his military costume, surrounded by his aids de camp Walker and Humphreys; and in the presence of Howard, Smallwood, Williams, and the now venerable Mayor of Baltimore, who had fought by his side, and well knew the toils and perils he had encountered, he asks to become a private citizen of that country for

* We are indebted to a gentleman of Maryland for the Sketches of Jeremiah T. Chase, Daniel Sheffey, and Roger B. Taney. We are also promised for our July No., from the same pen, Memoirs of Judge White and of Samuel Cooper, of the revolutionary army, both of whom are now living in Georgetown, D. C.

whose independence he had oft perilled his life. Carroll of Carrollton, Madison and Monroe beheld the scene—the admiring nations of the earth echoed his praise, as he retired from public admiration to the enchanting lawns of Mount Vernon. Charles the 5th resigned his crown to Philip, only when he was incapable of wearing it: Cincinnatus surrendered his second dictatorship of Rome, after holding his power only fourteen days: but Washington for more than eight years reigned in the hearts of his countrymen with unexampled sway, during which period it might be supposed that lust of power had obtained such an ascendancy as would have tempted him to enlarge and perpetuate the influence which he now possessed. By this single act alone, he at once descends from the pinnacle of glory to his own peaceful fireside.

Having served with much honor in Congress the term for which he was elected, Mr. Chase engaged extensively in the practice of law, and occupied a very distinguished rank in his profession. The reports of Harris and Mr. Henry show that his cases were argued with much ability, evincing great labor in the examination of authorities: his profound learning, combined with distinguished clearness of reasoning, adorned with a manner plain and persuasive, always delighted and instructed the court and jury.

The constitution of the United States had been adopted by the convention at Philadelphia in September, 1787. Washington, who presided over that illustrious body of statesmen, with all the weight and simplicity of his character, recommended it to the ratification of Congress, with an affection and earnestness which equalled the great law-giver of the Jews. Like him he had led his countrymen from bondage to liberty, and like him now gave them the law of their future action. When this constitution was submitted to the people of Maryland, in convention assembled, Mr. Chase was its ardent, untiring, and able advocate. He coincided with Hamilton, Madison and Jay, in the fundamental doctrines contained in their joint work, and was eminently useful in removing the doubts and quieting the fears of his fellow-citizens as to many portions of that extraordinary charter of their political rights. From 1794 to 1805, Mr. Chase acted as chief judge of the general court of Maryland. During this period, no state in our Union beheld a more brilliant constellation of professional talent, than was now exhibited at the bar of this court; yet the decisions of judge Chase were not only admired by all, but very seldom reversed by the appellate tribunal. On the abolition of the General Court, he was appointed chief judge of the third judicial district, comprehending the counties of Anne Arundel, Calvert and Montgomery, and presiding judge of the Court of Appeals, which station he filled with consummate ability until 1824, when he resigned his commission.

It was in the fall of 1809 I first saw this venerable man at Rockville, where he was holding court. His locks were white as snow, floating on his shoulders; his countenance that of an angel: his brilliant eye combined the fire of genius with the meekness of the dove: his form bent under the weight of years: his voice feeble and tremulous: he seemed the representative of both worlds. When the prophet arose on the night previous to the battle, to admonish the ill-fated Saul of the dis-

astrous end which so soon awaited him on the mountains of Gilboah, he could not have exhibited an appearance more awfully enchanting, than did the judge in his address to the grand jury on this occasion. The silence of death reigned through the house, as he commenced his charge. The subject was duelling. His mind had been led to its contemplation from the recent death of a son of Robert Bowie, Esq. then governor of the state, and a friend of Mr. Chase. The youth was an officer in the army of the United States, of noble form, chivalric spirit and amiable bearing, who fell in the morning of life on the banks of the Mississippi, at the shrine of this cruel and gothic custom. His melancholy end filled Prince George county, where he had been reared, with undissembled sorrow. As the judge progressed, you saw before your eyes the bleeding corpse of the unfortunate man consigned to the lonely grave in a distant land; the forms of his mourning parents were visible: instantly the jury and audience were dissolved into tears. Presently he spoke of the Divine law, and how the shedding of blood was denounced at the death of the first martyr: that the Saviour of the world had inculcated peace and good will among men, and the forgiveness of injuries; and that he had died on the cross praying for his enemies. The laws of our country, too, said he, solemnly forbid this savage practice, which desolates our firesides, and drives the happiness of society far from the haunts of man. I invoke you, then, in the name of all these high and holy considerations, to rally round those laws which you have sworn to sustain, and assist the court in extirpating this wide-wasting iniquity. The charge continued for an hour: its effect was thrilling and pathetic.

On the 23d May, 1828, this pious judge was no more. In his lofty and useful career, he had pronounced the law affecting his fellow creatures, with the abiding conviction that he was himself soon to be passed upon by the Great Judge of both quick and dead: "Thou, God, seest me," was written on all his decisions. In his last hour, Addison called to his bedside an infidel young man, and requested him to witness how a christian could die. Judge Chase might not only have imitated the example, but have appealed to the whole world to point to any act of his well-spent life which fell short of the most perfect purity of intention, or which did not aim to promote the welfare of his fellow-men.

DANIEL SHEFFEY.

DANIEL SHEFFEY was born in Frederick, Maryland, in 1770. His education was inconsiderable. At an early age, his father taught him the trade of a shoemaker. He continued to work with him until he attained manhood. The house yet stands, where he spent, in this occupation, many long and wearisome years of his life. While engaged on his bench, he was frequently observed, during leisure moments, to be intensely occupied in the perusal of some author for his instruction or amusement. By moonlight he was to be found in his father's garden, making observations of the heavenly bodies, with telescopes, which he had borrowed: and then again he was buried in profound meditation, while detecting

the errors of mathematical or philosophical works, which occasionally met his eye. The arcana of nature, and the mysteries of astronomy, constantly exercised his strong and fertile genius. His more discerning friends saw that he would one day be ranked among the distinguished men of his country; yet none were so generous and disinterested as to assist his efforts with their pecuniary resources, or to polish the unsightly diamond with the fostering hand of education. His time was chiefly spent at his trade. Arrived at manhood, he left his father's house, with no other property than his tools, and travelled on foot to Winchester, Virginia, where he worked as a journeyman for some months, in the shop of a respectable mechanic. Having thus raised funds sufficient to supply his present wants, he sat out again in pursuit of employment, halting at the different villages through which he passed, on his route along the valley, in order to raise his expenses by his labor, until he arrived at Abbeville, Wythe county, as poor as ever. He knew no one: bore no letters of introduction; was friendless and destitute: a stranger in a strange land. Here he commenced at his trade once more. The novelty and originality of his character, and the flashes of genius which enlivened his conversation, often compelled his newly acquired friends to look on the eccentric youth with wonder and amazement. He became popular, and was finally received as a student into the office of Alexander Smyth, Esq. an eminent lawyer in that part of the state, and afterwards commander of our northern army in the war of 1812.

Sheffey was now in his long desired situation. Disposing of his tools, he toiled incessantly in his new vocation, and improved rapidly. Here, with his own hand did he lay the basis of his future fame, and resolved to avoid the application to himself of the verse of Gray:

"Full many a gem of purest ray serene
The dark unfathomed caves of ocean bear;
Full many a flower is born to blush unseen
And waste its sweetness on the desert air."

Who supplied his wants during his residence with Mr. Smyth, I have not been able to learn. Soon after his admission to the bar of Wythe county, he was called on to enter the lists with his old friend and patron, whom he handled with so much dexterity and adroitness, that it was generally said among the mass of the community, the apprentice will soon surpass the master. So it happened. Mr. Sheffey was employed in all the important causes of that court, and soon extended his practice to several adjoining counties. His professional brethren, however eminent, admired his powers, and treated him on all occasions with respect and kindness. In the county and superior courts of law and chancery, he was uniformly heard with unaffected pleasure, both by court and jury. His humble origin, meager education, and the singular incidents of his life, awakened the feelings and curiosity of his audience, while they were at once delighted and enlightened by the efforts of his powerful and original intellect. After some years, he settled in Staunton, where he soon commanded an extensive and lucrative practice. He often represented the county of Augusta in the House of Delegates, and in 1811 we find him in Congress, busily engaged in the important events of that

trying crisis. His speech in favor of a renewal of the charter of the first bank of the United States, was a masterly combination of sound argument and conclusive facts: for three hours profound silence prevailed; and the most experienced statesmen were astonished at this exhibition of his talents. He was opposed to the declaration of war in 1812. Ever on the side of his country, he felt indignant at the injuries which our commerce had sustained on the high seas: the impressment of our seamen, and the murder of our citizens within our own waters: yet he thought that these difficulties might be adjusted by negotiation, and that the last resort of nations might be avoided. He painted in glowing colors the horrors of war and the blessings of peace, and spoke of the treasure which must be wasted, and the blood which would be shed; the danger to our civil institutions amidst the clangor of arms and the shout of victory, and implored his fellow citizens to pause ere the country was plunged into the dangers which he foreboded. It was in vain. Mr. Sheffey, however, always rejoiced in the success of our arms. Sometimes in the ardor of debate, he was attacked rather uncourteously by some of his political opponents, but they never escaped the severity of his retort, and were often entirely overwhelmed. The celebrated and eccentric John Randolph of Roanoke, was for many years the Ajax Telamon of the House of Representatives, whose bitterness of satire no man could withstand. He once took occasion, in commenting on a speech of Mr. Sheffey, to say that "the shoemaker ought not to go beyond his *last*." Quick as the lightning's flash, he replied, "if that gentleman had ever been on the bench, he would never have left it." The Virginia orator never renewed the attack.

Having served for several years in the councils of his country, he withdrew to the practice of his profession at Staunton. A numerous family now reminded him, that intense diligence would be requisite, not only to supply their wants, but to sustain his fame. For a long time he toiled incessantly in the courts of Virginia, and occasionally was engaged in the supreme court of the United States. In December, 1830, he had been attending court, in Nelson county, and started for home in perfect health. He travelled about twelve miles, and stopped at a tavern for the night. Hardly had he taken his seat, when an apoplectic fit numbered him with the dead.

Thus died an extraordinary man, who by the native vigor of his intellect, and the force of industry, occupied a conspicuous station among the patriotic and distinguished men of America.

There was nothing dignified in the person of Mr. Sheffey: he was low of stature; his manners by no means polished; all was plain, energetic, original. His pronunciation was not agreeable: his German accent sounded heavy on the ear; yet the most refined audience always paid to him the most profound attention. In the argument of his causes, he seized on the strong points of the law and evidence, and maintained his positions with a courage and zeal which no difficulties could subdue. Like Patrick Henry, he was the artificer of his own fortunes, and like him, in after life, lamented that in his early days the lamp of science had shed but a feeble ray over the path along which it was his destiny to travel.

ROGER BROOKE TANEY.

Justum et tenacem propositis virum
Non civilium ardor prava jubentium
Non vultus instantis tyranni
Mente quatuor solida.

Horace.

The late Chief Justice of the United States has descended to the tomb, and left a nation in tears. His lofty virtue, fertile genius, and profound erudition, combined with the most patient assiduity and unsullied integrity, have embalmed his memory in the hearts of his countrymen, and constituted him one of the lights of the world.

His mantle fell on **ROGER BROOKE TANEY**, a favorite son of Maryland, whose fame is identified with the history of America. I design, in the ensuing sketch, to delineate the professional and public character of this amiable and upright citizen, who unites to the various acquirements of a profound jurist all the urbanity of a refined gentleman.

Soon after the usurpation of Cromwell, in 1656, the paternal and maternal ancestors of Mr. Taney were driven from their native land, because of their adherence to the Catholic church. They sacrificed all the tenderest ties which bound them to their birth place, encountered the dangers of the sea, and the hardships incident to every new settlement in a howling wilderness, to enjoy peace of conscience, and the liberty of worshipping God after the faith of their fathers. Well might these inoffensive people have said to the gloomy tyrant, as their native island gradually disappeared from their view,

"Man's inhumanity to man
Makes countless thousands mourn."

They however submitted to their fate without a murmur, and settled themselves on the banks of the Patuxet. On the accession of Charles the Second to the throne of his father, the disabilities of the Catholics were greatly mitigated; and even during the brief but turbulent reign of his brother James, they enjoyed comparative repose, when they looked back to their former sufferings under the dark and gloomy usurpation of the Protector. Hope once more dawned on the troubled bosoms of the Catholics, but it was soon changed into sorrow and anguish of spirit. For when William and Mary assumed the reins of government, their former disfranchisements were revived, and they were again enduring all the penalties of legislative proscription. The ancestors of Mr. Taney felt the tyranny of the English monarch even in their secluded retreat in Calvert county, where they tilled the soil in peace and charity with all men: they seemed studiously to have retired from the turmoils of the world, and sought happiness in their own humble dwellings. Such was their condition, until the convention of Maryland, in August, 1776, proclaimed to the world that the bill of rights and the constitution which then came from their hands, should be the sovereign rule of action to the once enslaved, but now emancipated colonists. To the Catholics it was the bow of promise, betokening the cessation of the storm: tyrants no more trampled down their rights: all civil disabilities were abolished: the spirit of toleration for the first time shed its heavenly influence equally over all religious sects: the heaviness of sorrow gave

place to the smile of joy, and happiness shed her divine ray over all classes of society.

The result of this new condition was, that after the revolution, Mr. Taney's father was repeatedly elected to represent his native county in the House of Delegates.

His eldest son, Roger, was born in Calvert county, on the 17th March, 1777.

In the spring of 1792, he became a student at Dickinson college, Carlisle, Pennsylvania, then under the superintendence of the Rev. Dr. Nesbitt, a Scotch Presbyterian divine, celebrated for his wit and extensive acquirements in classical literature. Here he was graduated in 1795. I have not been able to ascertain whether during his collegiate course, the first efforts of his intellect glowed with the light of that genius which was so strongly developed in after years; or whether he then manifested that ever-growing ambition in the acquisition of knowledge, which has placed him among the ablest lawyers of his country.

In the spring of 1796, he commenced the study of law at Annapolis, in the office of Jeremiah T. Chase, then judge of the general court of Maryland, and came to the bar in 1799. Soon after, he began the practice in Calvert, and in the fall of this year was elected to the House of Delegates. This was an all-important era in the political history of the United States. Great and violent was the struggle between the contending parties: popular feeling was aroused to an unprecedented height, ere the first office in the gift of the nation passed into the hands of Mr. Jefferson. The legislature of Maryland partook of its portion of this excitement, and amid the stormy debates which sometimes occurred, young Taney displayed an intrepidity of character and an uprightness of motive, which gained for him the admiration of his contemporaries. He declined a re-election, and in March, 1801, settled himself in the practice of law in Frederick. A new scene now opened to his view. He was a stranger in the county where he was about to commence his career. But the wary and reflecting yeomanry of Frederick, Washington, Alleghany, and Montgomery counties, soon discovered that his industry had no bounds: that he possessed a mind of the highest order: that judgment, acuteness, penetration, capacious memory, accurate learning, steady perseverance in the discharge of duty, a lofty integrity, united with a grave and winning elocution, were developed. These qualifications were soon rewarded with an extensive and lucrative practice. As his powers were unfolded with experience, they saw that in the argument of important causes, he disentangled what was intricate, confirmed what was doubtful, embellished what was dry, and illustrated what was obscure.

In 1806, he is engaged at the court of appeals, encountering some of the most distinguished men of the state, and the reports of Harris and Johnson show that he was always well prepared for argument, and was deservedly ranked with the most talented of his competitors. Martin, Harper, Shaofe, and Philip B. Key, were the monarchs of the bar. But Mr. Taney feared no one: relying on his own resources, he never allowed either the weakness or the power of an adversary to change his purpose or alter his views. Notwithstanding the unrivalled fame of his opponents, his reputation was now in the ascendant. Virgil tells us that his hero was borne through the regions of the nether realms by

the splendor of the golden bough: the genius of Mr. Taney was his guide. It spread itself over the tree of knowledge, and gilded with a new light every leaf on which it shone. He would argue no case in the higher courts until he had minutely examined all its relations and bearings; and for this end he would explore the vast and boundless regions of the common and statute law, and bring home their richest treasures, to instruct and enlighten all who heard him. His manner was strikingly impressive. When his slow and solemn form was seen rising in court, every ear was open, and all eyes were fixed on the speaker—the audience insensibly taken captive, and borne away by the weight of his arguments and the tones of his eloquence. He moved along like the majestic Mississippi, full, clear and magnificent. Whenever the late Mr. Wirt was opposed to Mr. Taney, he would facetiously say, that he dreaded nothing so much as his “apostolic simplicity.” So soft and amiable was his deportment, that even amidst the heat and turmoil of *res publica* litigation, he was never known to offend the feelings of any of his brethren: his conversation was never roughened by austerity or pedantry, and when his gallant bearing extorted from all the most unfeigned praise, he would almost hide himself from public admiration, with the unaffected modesty of his native character. Whatever the political principles of his clients might be, you could not discern the slightest difference in the discharge of his duty. A memorable instance occurred in 1811. Gen. Wilkinson, was then commander-in-chief of the United States army, and was brought before a court composed of thirteen general officers, assembled in Frederick, to answer accusations of very high and serious import. During the war of independence, he had acted a conspicuous part at Saratoga, when the ill-fated Burgoyne surrendered his army to Gates, and after the peace, was one of the pioneers of the west, where he acquired new laurels in subduing the Indians, and assisting the frontier inhabitants to meet and vanquish the obstacles which attend the settlement of a new country. But in 1806 he had aroused the jealousies of the people, when he suspended the *habeas corpus*, and imprisoned Bollman and Swartwout; and when he appeared at Richmond in August, 1807, as a prominent witness on the trial of Col. Burr for high treason, many believed that he was deeply concerned in the plot of that distinguished and talented man. The papers of that day teemed with incessant vituperation, and impugned in the strongest terms the motives of the General. He was naturally haughty, and the number of his personal enemies was constantly increasing. He had especially awakened the indignation of a large portion of the community in Frederick, because he had in 1803 successfully prosecuted before a court martial in that town, Col. Butler, a revolutionary veteran, of undaunted bravery, who had served his country in the most distinguished manner, but who was now old and poor. Although Mr. Taney participated in these feelings so common with men of high honor, yet did the accused, with full knowledge of that fact, select him and the lamented John Hanson Thomas, (the star of whose glory sat too soon for his country,) as his counsel on this important trial. He placed his destiny in their hands. For several months they labored with unabated zeal in behalf of their client. He was pronounced innocent, and his sword

was restored. His faithful counsel received no other reward than the gratitude of the veteran's heart.

From this time until 1823, Mr. Taney was engaged in extensive practice in various courts of the state. He removed, in the spring of this year, to Baltimore. Pinckney was now no more. His renown as a lawyer had been wafted to the distant regions of the earth: he fell almost on the field of his greatest fame, after arguing an important cause in the supreme court of the United States. Mr. Taney now aimed to occupy the place occasioned by his death. For this purpose, he had left the theatre of his long and laborious life, and separated himself from the friendships of twenty-two years. He was soon ranked among the foremost at the Baltimore bar, and extended his practice to the supreme court, where he was always admired by the court and lawyers of that high tribunal. In 1827, he was appointed attorney general of Maryland, which office he resigned in 1831, when, as attorney general of the United States, he was chosen a member of president Jackson's cabinet. No man ever discharged the duties of this station more faithfully than Mr. Taney.

On the 24th Sept. 1833, he was appointed secretary of the treasury, which not being confirmed by the senate, this modest and amiable citizen once more returned to the toils of his profession in Baltimore. His arrival was welcomed by thousands, and his society courted by all.

In March, 1836, he was appointed to the exalted situation which he now fills.

The political life of Mr. Taney, has been marked with honor to his country. In 1816 he was chosen a senator of Maryland, and served for five years in that body. He was married to a daughter of John Ross Key, and is the father of a numerous family. In his person he is full six feet high: spare, but yet so dignified in deportment, that you are at once impressed with an instinctive reverence and awe: his eye is full of genius, and indicative of the powerful mind that dwells within; his features marked with the deepest thought, and his manner so dignified, that he sheds around him in whatever circle he may move, a moral influence of the highest order.

The constitution of the United States, and the welfare of our union are now confided in an eminent degree into the hands of this distinguished jurist. Pursuing the brilliant and useful career of Mansfield and Marshall, he will erect for himself a monument to fame, which time itself can neither impair nor destroy.

NICHOLAS BIDDLE.*

This gentleman has been brought very prominently into public view of late. The embarrassments of commerce and the confusion of currency under which our country has so keenly suffered, have turned all eyes toward the man who fills a station of great financial importance; and fills it with acknowledged ability and manifest uprightness of purpose. His name has therefore obtained—perhaps unexpectedly to himself—a European as well as an American celebrity; yet his portrait has not been seen, except in clumsy caricatures, at

* Copied from the “American Monthly,” for May, 1838.

print-shop windows; nor has his biography yet graced the pages of a review or literary magazine.

Mr. Biddle is a native of Philadelphia, and now somewhat over fifty years of age. He is one of a family remarkable for eminent talent, and also for the better qualities that render men acceptable in social intercourse, and endear them to familiar acquaintance. His brother, the commodore, is certainly one of the most intelligent and accomplished officers of our navy, if not the first in both these particulars. In his boyhood he was a fellow-sufferer with the gallant Bainbridge in the captivity at Tripoli, endured by the crew of the unfortunate frigate which fell into the hands of the barbarians. In the war with the British he was gloriously distinguished; first at the capture of the Frolic by the Wasp, in which ship he was serving as a volunteer lieutenant; and then in the capture of the Penguin by the Hornet, which he commanded. In this last action, where, as well as in that of the Frolic, the enemy was of superior force, captain Biddle received a dangerous wound after the Penguin's colors had been struck. Since that period he has been in command in the Pacific, the Mediterranean, and elsewhere; always with honor to himself and his country; and it is well known to his many acquaintances in various parts of the world, that his qualities as a companion and a friend are not less estimable than his character as an officer.

Another brother is major John Biddle, now of the state of Michigan, formerly a meritorious officer of the army; and a third is the honorable Richard Biddle, a member of Congress from the city of Pittsburgh, who has already distinguished himself by his eloquence, and whose constituents hold him in high estimation for his forensic and literary abilities, as well as for the great amiability of his character in social life. This gentleman last named, is the youngest of the four brothers; and the eldest is Mr. Charles Biddle, now or lately in Guatemala, where he has been engaged in forming a company to cut the long-talked-of canal across the Isthmus of Panama. The eminent merchant or broker, of the same name, is of another family, which is likewise remarkable for personal merit of no common order.

The subject of our present sketch, being the son of a gentleman of independent property, had every early advantage of education, and was sent to Princeton college, where he was graduated with the highest honors of his class at the age of only sixteen years. After completing his college course, he was placed in the office of a lawyer; but before he had passed his minority, he was invited by general Armstrong, who had just been appointed envoy to the court of France, to accompany him to that country as his private secretary, or secretary of legation. Mr. Biddle accepted this offer, and went accordingly to Paris, where he remained several years as a member of the American embassy, during a period when its duties were rendered uncommonly arduous by the obligation to remonstrate incessantly against the repeated aggressions upon our neutral rights. The case of the ship New Jersey is recollected as one in which Mr. Biddle's name appeared, as in some manner connected with the controversy. During his residence near the French court, the first consulate was exchanged for the imperial crown, and he was present as one of the diplomatic corps, at the splendid ceremony of Napoleon's coronation; an incident in his life to which he

has very felicitously adverted in the beautiful oration delivered by him two years since, to the students and alumni of Princeton college.

After some years passed in the refined society of Paris, he quitted that brilliant capital to travel in Italy and the countries of the Levant, then seldom visited by Americans. He made some stay at Delphi and at Athens, to indulge or cultivate his classic taste, and then returned to Paris, whence he soon after passed over to England, and again entered the diplomatic service as secretary to Mr. Monroe, at that time our minister at the court of London.

His residence in the British metropolis was not a long one, as he preferred returning to the home from which he had so long been separated; but the friendship formed with Mr. Monroe continued through the life-time of that statesman, and perhaps materially influenced the after-life of both; for it was the remote cause of bringing Mr. Biddle into his present office, at the head of the most important financial institution of our country; and is believed to have been productive to Mr. Monroe of certain advantages, the details of which belong to private history alone. It was a friendship honorable to both; and if Mr. Biddle could have yielded the independence of his judgment so far as to act with the political party which supported his friend as a candidate for the presidency, it would almost certainly have brought him forward into office in the general government, for which his talents undoubtedly qualified him.

But several years elapsed between his return and Mr. Monroe's election to the chief magistracy, during which interval Mr. Biddle was admitted to the bar, and commenced the practice of the profession of law in his native city. There is yet sometimes to be met with in collections of the less valuable pamphlets of that period, a printed report of the trial and execution of two very guilty negroes for murder, on which occasion Mr. Biddle and Mr. Rush were the prisoners' counsel; and it seems rather curious that those two gentlemen, whose mutual attitudes, or at least that of Mr. Rush towards the other, has been so unfriendly, should have been associated in perhaps their earliest forensic appearance. *Tempus mutantur, says Horace, et nos mutamur cum illis.*

Soon after his admission to the bar, he married a lady of considerable fortune and most amiable character; and being tired of the "forum contentiosum," or finding it uncongenial to his taste, he withdrew from the legal profession, and devoted his attention to literature and politics, and that very costly amusement called sometimes "gentleman farming," and by those who follow it, dignified with the name of experimental agriculture. Andalusia, a beautiful country-seat on the banks of the Delaware, was the scene of these researches into the qualities of seeds and the power of manures; and though we do not know that any important discoveries crowned the labor, we have seen a discourse delivered to an agricultural society by the former Biddle, which seems to be a learned dissertation, (but on subjects of tillage, we confess ourselves unread, beyond the Georgics of Virgil,)—and is certainly marked with the eloquence which has appeared in everything proceeding from his pen.

His zeal in the cause of letters induced him to assume, as a labor of love, the editorship of the *Port-*

Folio, then the only literary journal of any repute in the country. It attained its most palmy state under his management; but soon passed into other hands, and began to decline.

For several successive winters he was a member of the legislature of Pennsylvania, and was in the senate, a very youthful member of the *patres conscripti* of the state—during the exciting period of the war with Great Britain. He was an able and ready debater, attentive to the business of legislation, and on two occasions at least was particularly distinguished. The legislature of one of the eastern states, had adopted resolutions condemning, in very severe terms, the conduct of the general administration and the policy of the war. These resolves being in due course communicated to the several states, it happened that Mr. Biddle was chairman, or the most active member, of the committee of senators to whom they were referred. He considered it no time for showing a divided front to the enemy; and possibly his own war-spirit was quickened by sympathy with two gallant brothers in the army and one in the navy, all of whom had been earning fame and honor by distinguished bravery. The report which he wrote upon that occasion embodied with signal ability the sentiments which all would now agree to have been entirely appropriate to the peculiar circumstances of the juncture. About the same period, very near the close of the war, Congress was about to adopt a very energetic war-measure, which was strongly opposed as unconstitutional. This was, to raise an army of fifty thousand men by means of militia drafts. The details of the plan would be tedious and uninteresting here; it is enough to say that Mr. Biddle advocated with zeal and eloquence the passage of resolutions in the Pennsylvania legislature favorable to the execution of the plan by the federal government; and it was, in fact, we believe, prevented only by the peace.

It was a period of much party exacerbation; and, as always must happen in such times, both parties, or leading men in them, said and did much that cannot on retrospection be entirely approved by men of any party now:

“*Simul insanavimus omnes;*”

but it is not our desire to revive any of the unpleasant questions of that day. The federalists had elected Mr. Biddle to the senate, and they were now somewhat divided upon both the subjects just referred to. His conduct therefore gave some dissatisfaction to a portion of his constituents, and he relinquished his seat in the legislature. At the next Congressional election he was one of the four candidates nominated by the democratic party in the district that included Philadelphia; but they did not receive a majority of the votes, and Mr. Biddle returned to the amusements of his country seat during the summer, and his city residence during winter; and possibly it was more at this period than at the earlier one, which we have named above, that his attention was particularly given to theoretic agriculture. Writing now, without attempting to correct our reminiscences by any inquiries or reference to himself or his immediate friends, it is obviously not impossible that, as to some of these less important particulars, we may transpose the dates.

After the bank of the United States was chartered by Congress, he was named by president Monroe as one of the directors on the part of the government; and attending regularly at the meetings of the Board, he entered upon a new and hitherto untried employment of his abilities. Though not a commercial man, but at that time merely a gentleman of literary taste and leisure, he became so efficient a member of the direction, that, on the resignation of Mr. Cheves, he was designated, at a convention of stockholders, as the most suitable person to fill the arduous office of president. It is known that he was continued in that very important station, by successive re-elections, until the expiration of the charter; and that whatever may have been the extent of hostile feeling generated among politicians by the angrily vexed question of the re-charter, there has been but one sentiment manifested toward him by the stockholders, namely, a grateful and constantly augmented approbation. This has been testified by a repeated vote of thanks; and at the time of the last one, when the new charter was accepted from the state of Pennsylvania, it was accompanied with a magnificent present of a memorial service of plate.

Nothing could be more characteristic of Mr. Biddle than his public appearance on the occasion just alluded to, nor could anything be more honorable to the head and heart of any man than the clear, plain, perspicuous, and satisfactory statement that he made of the advantages to be derived from the new charter, and the reasons for accepting it; and afterwards the acknowledgment which he made on behalf of the officers of the bank, as well as himself, in return for the vote of approval just adopted by the meeting of stockholders. The first address was an unadorned display of financial knowledge and sagacity, betraying, perhaps, some measure of that liberal confidence in his country and his countrymen, the indulgence of which too far is possibly his most ensnaring propensity; while the second was a spontaneous and eloquent effusion of cordial attachment to the friends and associates with whom and for whom he had labored.

It is not for us to pass a judgment upon the financial management of the board of directors of that institution from its commencement, or from Mr. Biddle's accession to the presidency, till its close; nor of the management of the bank under its state charter, of which he is now at the head. Such an inquiry would involve questions that have become too much mingled with feelings of party strife to admit of any decision that can be universally satisfactory, before the case is carried within the jurisdiction of that high court of errors and appeals that men call *POSTERITY*; and, however desirable a financial history of the institution may be, both for entertainment and instruction, it is plain that to write it would require opportunities of information such as we cannot, and few do possess. But we may suggest, in the meantime, that perhaps a greater share of the responsibility, whether for praise or blame, has been imputed to the president of the board of directors than was equitably his due. That board has always contained men of first rate abilities and intelligence;—acting harmoniously with the president, but never intermitting the free exercise of their judgments in aid of his, while he has been nowise accustomed or desirous to assume more of the government than they were dis-

posed to yield from an enlightened confidence in his urbanity, firmness, extraordinary knowledge, and untiring devotedness to the interests of the institution, which he and they believed to be identical with the interests of the country. It has been even said that one point of policy to which Mr. Biddle has owed much of his popularity as president, has been the forbearance with which he has allowed directors to be really directors, and cashiers actually cashiers, without interfering at all with their appropriate functions; a policy unhappily not duly appreciated by his predecessor.

Looking at him outside of the walls of the bank, it remains for us to say that he finds time still to be active in all useful projects of public improvement; to be hospitable, social, literary, and beneficent. As trustee of the university, commissioner for the Girard college, and member of numerous charitable and literary associations, he lends not merely his name, but his faithful attention to all the most elevated interests of society. Some of the English papers, by some strange misapprehension, have said he is a *Quaker*—meaning, doubtless, one of the Society of Friends;—but, in truth, there is as little as possible of the *Quaker*, in any sense of the word, about him. He is, in respect to religious faith, an Episcopalian, and a regular attendant upon the public worship of the church. Entirely amiable in domestic relations, no one attaches friends more warmly; and as the turmoil of politics into which he has been thrown, has failed to affect his temper or his spirits, so neither has his early relish for polite letters, in which he is an accomplished scholar, been spoiled by long devotion to the *musæ severiores* of finance and commerce. While, therefore, he is at the morning council the wisest among the wise, he is often to be seen in the evening circle the gayest of the gay. Happy in family ties, in the attachment of friends, the esteem of the community, and an official station which confers much power of doing good; he is yet happier in the recollection of a life, already past its meridian, spent hitherto in the untiring application of a cultivated mind and ardent feelings to varied objects of utility or refinement; and in the reflection that if he were obliged to write a faithful history of his career, the record would contain

“No line that, dying, he would wish to blot.”

THE BUSY-BODY.

NO. I.

Saturday, April 7th.

My lord, I am, as you see, a plain-spoken man, of rough visage, and, as some of your smooth-chinned gallants might say, not breeched in the latest fashion: of the rest your lordship must judge.

Dramat. Fragments.

There are few people who have not some sort of employment. Those who do nothing for themselves, and are, therefore, supposed to be, and called, idlers, are generally ready to attend to the affairs of their neighbors, and thus avoid that utter, listless sleepiness, which is a burden even to the most sluggish. Now, this concern of one person in another's business, may be, after a variety of manners, and on its manner depends, altogether, its propriety or impropriety. Sometimes it

is by way of interference and interruption, and such meddling is always odious. The fruit of idleness in one man, it renders unproductive another's labor. Then you may concern yourself in your neighbor's affairs, by way of admonition and advice, though seldom with much chance of thanks, even where the favor has been solicited. But advice is not often asked of seeming idlers: it is most common to interrupt the busy by such requests; and naturally enough, since those who attend most carefully to their own concerns, are generally thought best qualified, by experience, to judge for others. Mere gratuitous counsel is always frowned upon, unless it meet a very submissive temper. It is in man's nature to despise what is given gratis. It is galling enough to most men, to think, that all they have is the free gift of heaven: they would not increase their debt of gratitude, by the receipt of human bounty; and, as they cannot but receive, the mind is eased by undervaluing each gift. Besides, the tone of advice usually asserts a superiority in him that gives it; and, as we cannot brook a favor, that seems but to imply our own inferiority, in any respect, however trifling, much less can we bear an open claim of pre-eminence.

There is another class of *Busy-Bodies*—the name which they have received, who, idlers in domestic concerns, are always ready for foreign service—and a very clever class, that are always at hand to render assistance, when really needed. You have but to cry for Hercules, and one of these kind friends hastens to put a shoulder to the wheel, and help you out of difficulty. Such, it is true, are the rarest kind of idlers: their very virtues become, frequently, matter for ridicule; and, too often, they are repaid only by impositions and witticisms upon their good nature.

The last class which I shall mention needs a generic appellation, as it embraces several species. It is composed of those who, standing aloof from any direct interference in other people's business, look at all mankind, or that part, at least, which comes under their own notice, in the aggregate; make deductions from every thing they see and hear, and reflections thereupon; note down their remarks upon men's good qualities and foibles, virtues and vices, and give them to the public, that each one may apply them or not, use or abuse them, as he prefers. These examples and precepts, though drawn, frequently, from particular cases, are not applied, directly to these cases, by way of reproof or encouragement, unless, indeed, some individual recognise his own likeness, and himself claim the picture. Persons of this class give advice; but, then, it comes in such a way as seldom to appear obtrusive, seldom even gratuitous. Besides, advice is out of place, only when it is professedly or clearly personal. We are not very sensible of any favor received, when we gather, it may be, at some expense of money, time, or labor, from a stock thrown open to all: the receipt of such a benefit, therefore, is not irksome. Under this class, which, as I have already remarked, is very comprehensive, may be ranked those literary idlers, who deluge the world with moral essays, didactic poems, remarks upon men and manners, and other such trifles—trifles in appearance, at least; sometimes, perhaps most frequently, trifles in reality. Here may be grouped Tatlers and Spectators, Guardians and Ramblers, with many humbler personages, among

whom, in the far back-ground, I would respectfully introduce myself as a *Bury-Body*.

It has not been without consideration that I have chosen the profession of an idler. I early set my heart upon a liberal profession, and was educated for one. For the pulpit I never thought myself fitted. I entered a lawyer's office, but soon grew weary of the rays let in from Sir Edward Coke's "windows of the law:" they seemed to illuminate nothing but black-letter folios,—digests, pandects, year-books, and commentaries. The "gladsome light of jurisprudence" dimmed my eyes: I turned my back upon it. With sorrow I remember this now, for law is a noble study—"a science which distinguishes the criterions of right and wrong; which teaches to establish the one, and prevent, punish or redress the other; which employs in its theory the noblest faculties of the soul, and exerts in its practice the cardinal virtues of the heart; a science universal in its use and extent, accommodated to each individual, yet comprehending the whole community." He who tills, with patient perseverance, through its rugged course, will reach an honorable goal—will win a golden prize.

Next, I tried medicine, and with no better success. It seemed to me that dry, senseless, crumbling ruins of humanity were but an indifferent subject of study, compared with the form of life—the flesh and bones quick with the warm principle of being, and covered with the divine drapery of their Creator. The sight of bodies diseased and disfigured—corrupted in their very substance, by "wounds and bruises and putrifying sores"—of flesh, pallid, bloated, ulcerated, mortified, gangrened, sickened me, when I remembered the bright eye, the full, blushing cheek, the fair skin, and the warm, tingling blood of youth, health, and beauty. Could I study the body, even in its prime of health and strength, and in its proudest symmetry, and forget the soul—the spirit of life within? I turned away in disgust, and remember, that, as I hurried home from the doctor's office, to the seclusion of my chamber, every person that I met seemed to have a deathlike countenance, a hump upon his shoulder, an ulcer on his lip, cancer, gangrene, putrefaction, in every part! Here, again, I may have done wrong, but, now, do not feel the same regret, when I hear a skeleton rattling in its box, as when I take up old Littleton, or Coke, or their modern transcript, Blackstone, and find passages that bring back pleasant recollections.

I became, then, from choice, "a poor devil of an author," though without that almost necessary professional appurtenance—a garret, which seems to be considered the only true laboratory of attic salt.

Having thus disclosed something of my past life, it may be well, or, at least, in accordance with a good example, to describe, briefly, my manner of living. I lounge about upon principle, visit public places, study new features, and, when they can be come at, new minds and characters. I, frequently, wander away from home—sometimes from the haunts of men, where I am alone with nature and her God. Then I return and write, partly for my own pleasure and profit: partly—at least, I am willing to think so—for the good of my readers. The most of these excursions from home—and some of them are far journies—I make on foot. Whether the reason be, that I cannot afford to

ride, or that I prefer walking, it is not necessary to mention: one thing is very certain—that this mode of locomotion is most favorable to the free and satisfactory employ of both eyes and ears. They, who hurry through the world in a coach and four, at full gallop, not only lose the benefit of clear observation, while on the road, but, also, can make little improvement of temporary stops and sojourns, their sight having become unsteady from the rapid succession of passing objects, and their ears stunned by the bustle and din of the way. It is true that the pedestrian's field of observation, must, necessarily be small; but, therefore, each object in that field comes immediately under his notice: he can regard almost the whole, at a glance, and examine, carefully, the different parts in detail. And when we consider, that however extensive may be our range, we meet with no features of human character, at least, which might not all have been found within a very narrow compass; the advantages of careful observation seem to overbalance, greatly, those peculiar to an extensive sphere.

The pedestrian moves humbly along the surface of the earth, leaving the higher regions of ether to those who are elevated on wheels, or borne away sublime in the balloon. Of course, he is chiefly conversant with things of earth, and is not subject to those airy flights of the imagination, which are common with such as breathe a more elevated and a lighter atmosphere. Now, though I shall not attempt to decry the brilliant fancies of the latter, I must be indulged in the opinion, that more close and practical views of sublunary things are sometimes necessary; and must caution the reader against expecting to meet here with many beautiful figures and highly wrought fictions. My observations, and I go not beyond their limits, have been directed, entirely, to what some might call common-place matters; that is, to such every-day objects as are presented to our ordinary senses.

Perhaps some invidious person, hearing me thus disclaim much assistance from fancy, may, wittily, remind me of the fable of the fox and grapes; but I can assure them, that such an allusion cannot destroy my equanimity, or confidence in the utility of practical observations.

That a maxim has become trite is, generally, conclusive evidence of its truth. Instead, therefore, of making an apology, as is frequently done, for introducing a well worn or proverbial remark, in illustration of a subject, a writer might rather congratulate both his readers and himself, on having luckily met with an apt, concise, and universally admitted proposition, which does not require a long and studied demonstration, nor even a reference to the original authority, since use has, in some measure, made every man a sort of second-hand authority for its truth. Having premised this much, I may remark, that I have always adopted that celebrated line,

"The proper study of mankind is man,"

as a motto, while taking notes of my observations. Not that I think the study of the subordinate creation, useless or improper. In my rambles, I have frequently stopped to admire the wondrous works of Providence, as seen in the uplifted mountain, the teeming valley, the sweeping wave, the rushing torrent, the gently

gliding brook, and all that is sublime and beautiful in nature. At such scenes, when no mortal eye has beheld, I have gazed in silent wonder, and my heart has swelled with the creature's involuntary tribute of praise and adoration to the Creator. The poet did not mean to repress our ardor in philosophical pursuits, to reprove him who would trace, in the heavens and the earth, evidence of the omnipresence and omnipotence of God. He wished to restrain only that arrogant presumption, which stretched forth a puny arm to grasp the attributes of Deity; which claimed to investigate and understand the inmost mysteries of creation—even the nature and decrees of the Creator. He wished to turn man's ambition from things too wonderful for him—things so high that he could not attain to them, to studies suited to his capacity, though not more grovelling than his own nature.

Beings of superior intelligence regard man, as we look at the works of creation, animate and inanimate, by which we are surrounded. We may be only one of many races of rational creatures, which people a thousand worlds, rolling through the boundless universe, all objects of angelic observation and wonder. Doubtless the seraph's love may be warmed by admiration of God's skill, displayed in man's material frame and subtle spirit, just as the astronomer's devotion receives a new fire from the rays of every star which lights up the field of telescopic vision. But, to man, the study of his own species has a peculiar interest and importance. His success and happiness in the pursuits of life depend, essentially, upon a knowledge of himself and his fellow men—objects, which are one, in attainment, though separate in their application; for he who studies his own heart, at the same time, lays open the recesses of his neighbor's breast; while the examination of another's motives and springs of action may teach him, if he refuse not the lesson, the subtle workings of his own spirit. The observation of natural scenery—and of this we speak here rather than of scientific investigations—may tend to increase the fervor of piety; but a knowledge of human character, while it must bear witness to the truths of religion, fits us, pre-eminently, for the exigences of our present situation—for intercourse with our fellow men.

Besides, few descriptions of natural scenery have ever conveyed a tolerable idea of the reality—none have ever aroused those tumultuous feelings, which crowd upon the soul of the spectator. In order that something more than mere listless, vacant wonder should be excited, each one must look on nature, in its varied forms for himself. The mind may be affected by bold, clear and animated description, but the heart remains unmoved, and can be touched through the medium, only, of the outward senses—the eye and ear. Niagara's angry flood of waters and deafening roar, may be vividly presented to the imagination, by the pen of truth and poetry. Every reader may exclaim, beautiful! sublime! But the words scarcely warm the lips that utter them: no fire is kindled in the soul.

For these reasons, then, and, furthermore, doubting my descriptive powers, I shall not attempt to describe many things, in nature, which have excited deep and varied emotions in my own breast; but shall be content to trace the progress of studies confined to man as their object.

THE BUSY-BODY—No. II.

Saturday, April 21st.

He does nought

As others—always seeks an easier way;
Nor ever fails to think, at least, his own
The best and easiest. He wonders, oft,
That the sun still its olden orbit keeps,
Nor finds a cooler track.

Laziness is very frequently the mother of invention. Numerous modern contrivances, which pass under the general name of *labor-saving machines*, may properly be considered, as planned to save, not only the price, but, also, the exertion and fatigue of labor. A lazy boy is said to have contrived the common method of opening and closing the valves of the steam-engine, by connecting them with other parts of the machinery in motion. It had, before, been his business to turn these valves; but, by means of a few strings and some ingenuity, he managed to make the engine do his work, and to spend the time saved in play. A disinclination to labor is very sure to put the thoughts in operation, either to discover some method of abridging the necessary toil, or to invent a plausible excuse for idleness.

But often, according to the adage, "lazy folks take the most pains." And this, not only on account of the trouble in which they are involved, by crude and novel plans for diminishing labor, but sometimes, also, because of a habit of working, formed in the constant struggle to make work as light as possible. Give labor the name of play, and boys will toil as zealously, as if they were, in fact, only amusing themselves: and so the most indolent man will take great pains which do not result from a regular and necessary task, to avoid a job much less troublesome, but more formal in appearance. And some thus acquire a habit of laboring, cheerfully and with perseverance, in perfecting and employing their own labor-saving inventions, as they imagine them, however unproductive; and come to take a pleasure in contriving means to abridge even imaginary tasks. To illustrate, more fully, my meaning, I shall attempt to sketch the character of a gentleman with whom I have been long acquainted.

Henry Carlisle was my classmate and chum in college. He was noted only as "a clever fellow," and one of the worst scholars in the class. His low standing, however, was not the consequence of small talent, or an abstract contempt of scholarship. But, then, poor fellow, he seemed constitutionally indolent, and though continually concocting plans for regulating his studies, and making them more easy, he never arrived at any such satisfactory determination of the shortest route to learning, as would justify his commencing the journey thitherward. His pleasantest dreams and reveries were about royal roads to knowledge; and he loved to speculate on the happiness that would result from the Creator's endowing man with a mind fully developed at his birth. He was a constant patron of all who professed to teach any art or science "in half-a-dozen easy lessons, of an hour each, without any study at home," and had taken regular courses of instruction from six different writing masters of this class. Nor was his confidence in the validity of such pretensions at all shaken by the circumstance, that his scrawled autograph, which seemed to present the worst characteristics of all the different systems which he had attempt-

ed to learn—of the angular and anti-angular, the round and the running, the billet-doux and the counting-house hands—was scarcely legible even by himself.

Our room presented some strange evidences of his inventive genius. Being in the habit of sitting before the fire, with his feet somewhat more elevated than his head and resting against the mantel, he became at length too lazy to hold them in that position, and, that he might enjoy the pleasure, without any muscular exertion, nailed up an old shoe, at the proper height, by which, one leg, bearing the other above it, might be supported. I can see him, even now, sitting in this posture, his foot resting in the shoe, and considerably higher than his head; his text-book spread open in his lap; his hands acting, occasionally, as a rear guard, to ward off the heat of the fire; and his eyes perfectly vacant, or watching the smoke that curled upward from his cigar. Thus he would remain, after the labors of the refectory were over, until the recitation bell roused him from his reverie, and reminded him of the book which, before, had lain scarcely noticed.

Sometimes he imagined that the reclining posture was most favorable to study; and, as it was tiresome to hold anything before his eyes, while stretched upon the bed, contrived a book-holder for this purpose, consisting of a small wooden frame, suspended over his breast, by a string from the ceiling. How often have I seen him prepare this apparatus for use, get everything conveniently fixed, spread his book open at the proper page, lie down upon the bed, and compose himself—to sleep!

We graduated, and parted after mutual promises to correspond. Both of us commenced the study of law; and he, finding that so long a probation was not required in the western states, generally, as in the eastern, set out, after spending twelve months in a lawyer's office, to seek his fortune in the former, and, finally, settled down, to practice as an attorney, in Mississippi. Alas! poor Carlisle could not overcome his idle habits. He did not succeed in business, and returned home disappointed, though, still, he had but a lazy way of showing his mortification. I have since conversed with a gentleman, who became quite intimate with him, while spending some months at the same house in Natchez, but had not discovered, in all this time, that he was a lawyer.

Soon after his return he luckily married a country heiress; and, though not acquiring a very large estate by the match, was thereby placed in easy circumstances, and thought little more about his profession. Though a tin sign, with "Henry Carlisle, Attorney at Law," printed upon it in large letters, still graced a front window-shutter, all the neighbors seemed to understand, perfectly, that it remained, as a memento of the practice which he had once pretended to, rather than as a present attraction to clients. In fact he was too lazy to take it down.

It had now been some years since I had seen Carlisle, when, not long ago, on passing through the village where he resides, I accepted his invitation, to dine and spend a part of the day at his house. But a few years had made a great alteration in himself and everything about him. The dwelling had been done up, and looked comfortable; the attorney's sign was gone from the shutter, and the grounds seemed to be tolerably well

kept. At a loss to divine the cause of this change, I was led to observe, closely, at least the effect. On being shown into the room which he called his library, I found him sitting in a large arm-chair, surrounded by the greater part of his books, which were spread about the floor, many of them open, as if in immediate use. He rose to welcome me, and his frank, cordial manner was the same as always; but, then he appeared much more alert and active in his movements than ever before. I began, after a little general conversation, to rally him on having grown more brisk and youthful, but could not thus elicit anything that I wished to discover.

On glancing over the books, I found that, with few exceptions, they were on such practical subjects as machinery, manufactures, gardening and husbandry. A great number of little contrivances for various purposes, reminding me strongly of those that graced our college chamber, met my eyes in different parts of the room. But my attention was soon particularly directed to the stove, by its anomalous structure, the coldness of the apartment, and its being an object of constant care to my host. Every few minutes he left his seat, to turn a valve, or open or shut some air-hole, or insert the poker, warily, between the bars of the grate, or to watch the rise and fall of the mercury in a thermometer hanging against the wall. The number of appliances for regulating the draft, and for other purposes, made the stove a most complicated apparatus. I might have puzzled my head for hours, to discover the uses of the various parts, with each of which he seemed perfectly familiar. At first, I supposed that he was anxious to raise the temperature of the room for my comfort; and, really, I was beginning to suffer from the cold. But his frequent proximity to the fire, and constant motion in regulating it, seemed to keep his own blood quite warm, and, at length he left it with his face flushed, and complaining of the heat: I was afraid he would propose to throw open a window.

I made some remark about the stove's novel appearance. He was, instantly, ready to explain its construction, and show its good points: it was his own invention. He had been so troubled with other stoves and grates, had found them all so worthless, and to require such continual attention, that he had set about planning an improvement; and he assured me, that the result answered his warmest hopes, appealing to my own observation, to bear witness, that I had never seen anything more complete and effectual. I gave a shivering assent, while my teeth were beginning to chatter, and my ears to feel like icicles.

Besides this main contrivance, there were several others in the library, all quite as convenient and no less complete. By pulling a cord, which hung within his reach, he could lock or unlock the door. Another might be used to throw it open; and, by similar means, he could raise and let down the window sashes, close the shutters, or draw the curtains. His very boot-jack, which lay in one corner, was a curious product of inventive genius.

The dining-room, into which I was soon ushered, exhibited very much the same appearance as the library, as to a multitude of happy contrivances. It was furnished with a stove, the exact counterpart of that just described, but the atmosphere was rather warmer,

perhaps, because this fire had been less meddled with. My kind host, however, soon perceived, that the room was as cold as a barn; was very much afraid I should suffer; and declared that the servants were all too dumb, to be made to understand the management of the stove. His wife—an amiable, submissive creature—said nothing; but, I thought, looked rather blank when he began to twist the valves, and ply the poker. At any rate, the fire soon began visibly to decline, though he left the table, very frequently, to watch its progress, and apply his restoratives.

After dinner, Mrs. Carlisle retired, while we remained to discuss a bottle of wine. A few glasses made my friend more communicative, and, without needing much encouragement, he began to explain the causes of the change which I had noticed. For some time after marriage, his habits of indolence had remained in full force, until the house and grounds had fallen into a deplorable state of dilapidation and waste. This mode of life had become, at last, insupportable, and, by a vigorous effort, he had set about reform. Now he had acquired a love for business, and everything about him was tolerably comfortable; his greatest annoyance being, that the neighbors sometimes made themselves merry at his expense, and spoke, rather slightly, of his various "notions." I could not but agree that there had been a very great improvement in his circumstances; but, certainly, his labor was not of the most productive kind. He did everything after a new fashion; and, though all his inventions were intended to save labor, no man ever worked harder, to so little purpose.

A more curious contrivance than any which I had yet seen, was exhibited after we retired to the library. Carlisle begged me to be seated, remarking that, with my permission, he would change an article of dress, while I might occupy myself in turning over the books. Accordingly, I took up a volume, but could not avoid an occasional glance at his operations. Loosening his waistcoat, and a few buttons of his breeches, he inserted both hands beneath his outer garments, where they seemed busily employed, as if scratching for relief from some cutaneous disorder; which supposition the violent contortions of his body greatly favored. After a while, his uneasiness seemed to be gradually diminishing under this mode of treatment, and his hands were, apparently, working outward, as if there was some difficulty in withdrawing them; but, with them, at length, came out the mouse which had caused such mountain labors. From an unmentionable part of his unmentionables, he drew forth a flannel garment, or, rather, a large piece of flannel, provided with numberless strings, loops, button-holes and buttons. Then commenced an inverse system of operations, for putting on another article of the same construction; but suffice it to say, that, after a half hour's work, my friend rested from his exertions, and resumed his seat, when I perceived that, despite the coldness of the room, a dewy perspiration stood upon his forehead. He was kind enough to explain the wonderful construction of the flannel shirts. By a very simple and elegant contrivance—the skilful arrangement of a few strings and buttons only—a great desideratum had been obtained: he could put on and off these garments, without removing those above. The utility of his invention was so manifest, especially after

the exhibition which I had just witnessed, that my friend's character for ingenuity rose several degrees in my estimation.

Carlisle soon proposed that I should walk out and look at his garden, and a few acres of land, which he called a farm. Anticipating a rich fund for amusement in his out-door arrangements, I consented, and was not disappointed. The same whimsical genius that governed within, was evidently ruler without. The stable, the pig sty, and the cow shed, all exhibited the fruits of my host's ready invention. Even a few lugubrious looking geese, that waddled about the barn-yard, had yokes of a new fashion, though the poor things did not seem fully to appreciate their advantages. Carlisle mentioned a plan which he had once tried of yoking them together by pairs, like oxen. This, he had thought, would correct habits of vagrancy, and strengthen the social principle. But the unlucky fate of a pair thus connected, which were discovered one morning after the night's rest of the whole family had been disturbed, by certain unearthly sounds, so alarming that none dared, at the time, to investigate their origin—were discovered fairly hung by their yolk, and dangling on either side the top rail of a fence near the house, perfectly lifeless, put an untimely end to his experiment. Whether the poor geese had been placed in that position by some kindly disposed neighbor, or passer-by, in order to exhibit the merits of the invention, under trying circumstances; or whether, one of them having succeeded in getting over, the other remained behind, from want of strength to follow, or, as seemed more probable, from sheer obstinacy, had never been fully ascertained. A coroner's jury would undoubtedly have returned the mysterious verdict—"Found dead." But I must not detain the reader longer than to describe a very remarkable chicken coop, to which Carlisle directed my attention. It was divided into a number of small compartments, each of them intended for a single fowl—a sort of cell for solitary confinement. The plan had been found to work admirably. The chickens fattened better, when not allowed to jostle each other; and any inveterate disturbers of the public peace, among the breeding fowls, could here be subjected to a sort of prison discipline. Chickens were not just then in season; and the coop's empty cells testified to the excellent state of barn-yard morals.

I could not yield to my host's urgent solicitations, that I should spend another day with him: business hurried me forward. My reflections on his singular character need not be written: they, doubtless, were such as every reader has, already, made for himself.

THE MOCKINGBIRD.

Come, listen—oh hark! to that soft dying strain
Of my Mockingbird, up on the house-top again;
She comes every night to these old ruined walls,
Where, soft as the moonlight, her melody falls.
Oh, what can the bulbul or nightingale chant,
In the climes which they love and the groves which
they haunt,
More thrilling and wild, than the songs I have heard,
In the stillness of night, from my sweet Mockingbird?

I saw her to-day, on her favorite tree,
Where she constantly comes in her glory and glee,
Perch'd high on a limb, which was standing out far
Above all the rest, like a tall taper spar:
The wind, it was wafting that limb to and fro,
And she rode up and down, like a skiff in a blow,
When it sinks with the billow, and mounts with its
swell;

She knew I was watching—she knew it full well.

She fold'd her pinions, and swelled out her throat,
And mimick'd each bird in its own native note,—
The Thrush, and the Robin, the Redbird and all—
And the Partridge would whistle and answer her call;
Then stopping her carol, she seemed to prepare,
By the flit of her wings, for a flight in the air,
When rising sheer upward, she wheeled down again,
And took up her song where she left off the strain.

Would you cage such a creature, and draggle her
plumes—

Condemn her to prison, the worst of all dooms—
Take from her the pleasure of flying so free—
And deny her her ride on the wind-wafted tree?
Would you force her to droop within merciless bars,
When earth is all sunshine, or heaven all stars?
Forbid it, oh mercy! and grant her the boon
Of a sail in the sun and a song to the moon.

What a gift she possesses of throat and of lungs!
The gift apostolic—the gift of all tongues!
Ah! could she but utter the lessons of love,
To wean us from earth and to waft us above,
What siren could tempt us to wander again?
We'd seek but the siren, outpouring that strain—
Would listen to nought but her soft dying fall,
As she sat all alone on some old ruined wall.

NUGATOR.

FRIGATE CONSTITUTION.*

Arrival of the U. S. Frigate Constitution at Malta—Sir T. Briggs—Anecdote of Sir Thomas Fellowes—Celebration of the 23d of February—Admiral Sir R. Stopford—Brigade Review—Departure of the Constitution.

Early on the morning of the third of February, which was one of the most gusty days of our past wintry season, a foreign frigate was observed, under her reefed topsails, sailing near our uneven and rocky shores, and making for the harbor of Valletto. She was only seen during the intervals of the heavy squalls of wind and rain, and an hour had elapsed from the time of her first being signalized, before the man at the observatory was enabled to make her out sufficiently well, as to telegraph to the admiral, Sir R. Stopford, "that she was an American ship, and bearing the flag of a commodore." Sure enough it was "Old Ironsides," of "Guerriere," "Java," "Cyane" and "Levant" memory. In she came, entering in a most masterly way—anchored off Burmola, with its many walls, and bristling fortifications—having on one side the "Princess Charlotte" of one hundred and four guns, and on the other the razed "Barham," one of the finest men of war, of her class, in the British

service. After the expiration of her quarantine, which, coming as she did from Mahon, was of some four hours duration, several boats came hovering around, and among them we noticed that of rear admiral Sir Thomas Briggs, an officer well known, and much respected by every American, who has, during the past seven years, been at this island, for the many civilities received at his hands, both in a public and a private way. For the information of those who have met him here, I would mention that his term of service as admiral of this port has recently expired—that he left only yesterday in Her Majesty's ship "Portland," for England, and has been succeeded by Sir John Louis, who has no very easy task to perform, if he expects to make himself so beloved by all classes of the Maltese, and as popular with all foreigners, as his late predecessor. This is but a passing, parting compliment, one to which I am satisfied all of our countrymen who have ever met admiral Briggs at Malta, will most willingly give their hearty response.

Sir Thomas Fellowes, of H. M. ship Vanguard, an eighty-four—and of which ship commodore ***, after having witnessed the discipline on board, and the beautiful order in which every thing was arranged, not a long time ago, truly remarked, "if we shall ever have another war with England, our boys will have something to do to capture such a ship as this,"—was also present in the cabin of the Constitution, and marked in his attentions to commodore Elliott. The following anecdote of Sir Thomas Fellowes, as I heard him publicly narrate, may not be uninteresting to some of your American readers. In the year '94, or thereabouts, this officer was cast away in India, and the only chance of his getting away, which was likely to present itself for many months, was by a Philadelphia ship. He accepted the invitation tendered by Mr. Pringle, the supercargo, and during the voyage, was offered the situation of second mate, with a promise of promotion, should he remain in the employ. This was declined, as the then Mr. Fellowes preferred taking his chance in the service of his country. Sir Thomas, with some feeling, observed that most gladly would he again meet Mr. P. to thank him for his kindness, in having given him a passage, some forty odd years ago, from Madras to Bengal, when shipwrecked and friendless, he was cast ashore on one of the most unfrequented places of Indian navigation. Captain Fellowes commanded a frigate at the battle of Navarino, distinguished himself in the engagement, was charged by the admiral, Sir Edward Codrington, with despatches for the admiralty, and for this service was knighted on his arrival in England. This gentleman also commanded, within the last quarter of a century, a merchantman at Portsmouth, New Hampshire, had his vessel hove down, and coppered there, and from thence loaded a cargo of "notions" for the West Indies. Does Mr. S***** remember him? Not a few instances of this kind, have within the last few years come within the circle of my observation. Need I name captain F., of the "Asia," 74; captain L., of the "Bellerephon," 80; captain McK., late of the "Vernon," all of whom have attained their rank by their own exertions, and not by family patronage.

Never, may I venture to say, did the Constitution look better than when riding at anchor in our waters, and amidst the beautiful ships of all classes of Her Ma-

* From a Correspondent of the S. L. Messenger, at Malta.

jeaty's present Mediterranean squadron. Her crew were a fine looking set of men, who had been upwards of three years on board, appeared well content with their situation, and perfectly at home when duty called them to their respective stations. As regards the officers, I would only say, that where such disciplinarians are, no American at home need ever blush at a want of neatness or discipline on board our men of war, when stationed or cruising abroad. Every day brought with it for them new acquaintances and new invitations, and these were never received without also being repaid in a most liberal and handsome manner. The best proof is, that the longer "Old Ironsides" remained, the longer the officers wished her; and the more they became acquainted, the more by their English neighbors and friends was their absence regretted. It was not only with the navy, but also with the army, that intimacies were created; and on lieutenant Watson's dining with the fifty-ninth mess, they gave him "Hail Columbia!" and one of their oldest and most meritorious officers of the regiment, a captain Harward, rose and remarked, "that the corps to which he belonged was the first which fired a shot in the revolutionary war, on the plains of Lexington, and afterwards on the heights of Bunker Hill, and sincerely did he hope that if they were ever again called into action, it would be in defence, and never against their American brethren." This was not an isolated instance, but numerous anecdotes might be given of the general good feeling exhibited at all times, and even in instances where it was neither called for or expected.

The Constitution was known, on her arrival, for her deeds during the past war. She is now far more pleasantly remembered, by the urbanity, hospitality, and gentlemanly bearing of her officers.

During my residence here, I have oftentimes seen crowned heads, and heirs to crowns, received as strangers, but never have I observed more marked honors paid to them, than has recently been shown to commodore Elliott, and through him to the American nation. On the twenty-second of February, it being the anniversary of the birth of Washington, the United States flag was seen waving at the fore royal-mast-head of every man-of-war in our harbor. At twelve o'clock precisely, and at the moment when the Constitution had finished her firing, a national salute of one and twenty guns was given from each British ship, and I think they numbered fourteen in all, from the "104 flag" down to the two gun vapore "Confiance." It was thought the salute would have been returned from the "Princess Charlotte," but never did any one dream that it would have been answered by all. Never has the memory of Washington been so deservedly honored before, on one day, from the "wooden walls" of old England. At sun-set when, with the merry sounds from the fife and the beat of the drums, the American flags were hauled down, that of England was happily, and handsomely run up by the orders of commodore Elliott, and saluted with an equal number of guns. Thus closed the twenty-second of February at Malta. Sir Robert Stopford, by whose orders this compliment was paid, is the fifth on the navy list of the admirals of Great Britain, served on our coast during the war of our revolution, and was with admiral Digby when he attempted to relieve "Cornwallis and his army."

The policy of England—and many will not blame her—was once expressed in the following quaint lines of an old English poet; it is,

"The good old rule, the simple plan,
That they may take who have the power,
And they may keep who can."

England has as much territory, and as many people on her possessions, as she can now well govern, therefore all jealousy has ceased with us, and we are friends again. The praiseworthy conduct of the American government, with reference to the affairs of Canada, doubtless was one reason, why such attentions were shown to commodore Elliot, and such honors paid to our flag.

Major-general Sir H. A. Bowverie, the present governor of this island, is of the Radnor family, a distinguished officer, having served throughout the Peninsular war, and also acted as principal aid de camp, to the duke of Wellington, at the battle of Waterloo.

The Constitution left us at break of day on the 8th of March. As she passed out, her band was playing "God save the Queen," while those of Her Majesty's ships, gave in return "Hail Columbia." This visit of commodore Elliott has been a fortunate one, and to quote general Bowverie's words "the oftener we meet, the better it will be for both." W.

SCIENTIA MISCELLANEA.

No. I.

HAPPY ACCIDENTS.

"In speculating on the future prospects of physical science, we should not be justified in leaving out of consideration the probability, or rather certainty, of the occasional occurrence of those happy accidents which have had so powerful an influence on the past." *Herschel's Int. Dis. page 267.*

Perhaps a brief account of some of these "happy accidents," as Herschel has termed them, may not be uninteresting. Hiero, king of Syracuse, ordered his jeweller to make him a golden crown of a certain specified weight. The artist attempted a fraud, by substituting a portion of silver. In some manner the suspicions of the king were awakened, and he appointed Archimides, one of the most celebrated philosophers of antiquity, to examine the matter, and determine, if possible, the portion of silver which had been fraudulently introduced. For a long time Archimides could see no possible way of solving the question. At length, entering his bath one day, he is said to have caught the idea of specific gravities, and the method of determining them, by observing the water rise as his body was immersed in it. Perceiving at once the many important uses to which this knowledge might be applied, he was so overcome with admiration and delight, that he leaped from the water, and unconscious of his nakedness, pursued his way homeward, crying out, "I have found it—I have found it." The doctrine of specific gravities, which he seems in this accidental manner to have become acquainted with, he afterwards developed more fully in his work "De Humido Insidentibus."

One of these "happy accidents" laid the foundation for our knowledge of galvanism. It occurred during

the year 1791, in the laboratory of Galvani, professor of anatomy at Bologna. His wife being in a delicate state of health, employed as a restorative a soup made of frogs. Several of these animals were lying on a table near to an electrical machine. While the machine was in operation, a pupil of Galvani, happening to touch the crural nerve of a frog with one end of a knife, whilst the other end was in contact with the prime conductor of the machine, noticed that the muscles of the limb were thrown into strong convulsions. This curious fact attracted the notice of the professor's lady, who communicated it to her husband on his return. Galvani was at the time engaged in an examination into the nature of muscular motions. These he conceived to be owing to electricity; the nerve and the muscle with which it was connected, being oppositely charged (like the two coatings of a Leyden jar) and muscular motion ensuing whenever a discharge was made from one to the other. This newly observed fact seemed to confirm his hypothesis, and led him to prosecute his investigations with renewed ardor. During a course of experiments which he was in this way led to commence, he discovered that the same effect could be produced by establishing a metallic communication between a nerve and a muscle. This fact he communicated to the world in his treatise concerning animal electricity, and thus laid the foundation of that department of general physics which has since borne his name. Had not the attention of Galvani been directed at the time, to the subject of muscular motion, it is probable that this fact would have passed unnoticed; as it had in the case of Du Verney who had made the same observation about a century earlier, without its having received that attention from philosophers which it deserved. Another of these "happy accidents" gave rise to the modern science of crystallography. The Abbe Haüy, was engaged on a certain occasion in examining the collection of minerals belonging to M. France de Croisset, when accidentally he dropped a beautiful specimen of calcareous spar, crystallized in prisms. The specimen was broken by the fall, and Haüy observed with astonishment, that the fragments had the smooth regular form of rhomboid crystals of Iceland spar. "I have found it all," he exclaimed, for at that moment he conceived the fundamental idea of his new system. Having collected the fragments, he carried them home, and soon discovered the manner in which the derivative forms of crystals could be reduced to their primitives, as well as the geometric law for calculating the angles of the one, from a knowledge of the angles of the other. His discoveries were afterwards made public at the solicitation of La Place and Daubenton. The investigations to which this accident gave rise, have resulted in dispelling much of the mystery which before enveloped this subject, and in bringing to light many curious facts respecting these "flowers of the mineral world" as they have been called.

Another of these "happy accidents" has resulted in the creation of a new department of physical optics; that which treats of polarized light. A remarkable fact was noticed by Malus, in 1808, whilst accidentally viewing through a doubly refracting prism the light of the setting sun, as reflected from the windows of the Luxembourg palace in Paris. On turning the prism around, he was surprised to observe a remarkable dif-

ference in the intensity of the two images; the most refracted alternately surpassing and falling short of the least refracted in brilliancy, at each quadrant of the revolution. This phenomenon connecting itself in his mind with similar optical phenomena, which from the nature of his studies were fresh in his memory, led him to investigate the subject with all possible attention. The result has been (as remarked above) the creation of a new department of physical optics. Respecting this department, Herschel has justly remarked, that "the phenomena which belong to it, are so singular and various, that to a person familiar with the other departments of optics only, this is like a new world; so splendid as to render it one of the most delightful branches of experimental inquiry; and so fertile in the views which it lays open of the constitution of natural bodies, and the minuter mechanism of the universe, as to place it in the very first rank of physical sciences."

It may admit of question how far such facts as these are properly characterized as "happy accidents." In every instance, the attention of the observer had been previously awakened and his mind prepared by study and meditation for receiving the fact observed; and, had not this been the case, it would in all probability have passed without attracting his notice. The knowledge of such occurrences as these, when properly considered, will not lead us, when brought to a temporary stand, in a course of investigation, to sit down and idly wait for some "happy accident," which shall at once relieve us of our difficulty; but rather, to press forward, so that if haply one should occur, we may be ready to turn it to some good account. "The seeds of great discoveries are everywhere present and floating around us, but they fall in vain upon the unprepared mind, and germinate only where previous inquiry has elaborated the soil for their reception, and awakened the attention to a perception of their value."

No. II.

EXCEPTIONS TO GENERAL LAWS.

In the study of the natural sciences, we frequently meet with "exceptions to general laws." Doubtless the question has often suggested itself to the student: In what sense am I to consider these as exceptions? Have they arisen from an oversight in the Creator? Are they points in the structure of the universe, which have escaped the notice of the great architect, when he planned this mighty fabric? To all such questions, I would answer, no. Those cases which we are in the habit of considering exceptions, are instances, in which bodies are taken out from under the dominion of one law, to be placed under that of another. No substance can, in any circumstances, be looked upon as an outlaw in creation. I will illustrate this statement, in the case of one of these exceptions. It is a general law of nature that the dimensions of bodies should increase with an increase of temperature, and vice versa. A familiar instance of this change in dimensions, consequent upon a change in temperature, is afforded by the mercury in our common thermometers. This law may, with the strictest propriety, be called a general law of nature. So general is it in its application, that we can pardon the mistake of a certain Irish scholar, who wished to

bring even time itself under its dominion, and to account for the varying length of the days, by supposing that they were expanded by the heat of summer and contracted by the cold of winter.

Yet we meet with a few exceptions to this general law. If we take a portion of water at the boiling point, and gradually cool it, we will find that it contracts regularly, until it reaches the temperature of about 40° Far. It then commences expanding, and continues to do so, until converted into ice. If we continue the cooling process, it will again commence contracting, and continue so to do, until we are no longer able to trace it. If we reverse the process, just the opposite changes will take place, but in the same order. The ice first expanding with an increase of temperature, until it reaches the melting point, then contracting until its temperature is about 40° Far., then again expanding so far as we are able to trace it. In thus expanding, as its temperature is reduced from 40° to 32°, and also in contracting, as its temperature rises through the same part of the scale, water forms an exception to the general law which governs other matter, and which governs water itself, under other circumstances. But we must not on this account look upon it as an outlaw in creation. Its apparent want of obedience to the law of expansion and contraction arises from its real obedience to a different law, and one which can be looked upon as little less general than the former, viz., the law of crystallization. Whenever the particles of a body so arrange themselves as to give to that body the form of a regular geometric solid, they are said to crystallize. In thus regularly arranging themselves, the particles are generally compelled to occupy a larger space than they did when existing together, without any regular arrangement. When a company of soldiers, previous to mustering, are standing together in a crowd, they occupy a less space than the same number do when drawn up in the form of a hollow square, or in rank and file. The same is the case with the particles of water. Whilst existing in a perfectly liquid state, they stand irregularly crowded together; but so soon as the trumpet-call of the chill north wind is heard, they commence their marching and countermarching, until at length they present a solid and impenetrable front.

Ice is not, as is generally supposed, a simple sheet of particles, bound together by their mutual attractions, but consists of an infinite number of needle-shaped crystals, crossing and recrossing each other, at definite angles, until they present to the eye the appearance of a homogeneous mass. To be convinced of this, nothing more is necessary, than to watch the water of a pool as it freezes. At first, we will notice a number of long slender crystals, shooting out from the sides of the pool; then the enlargement of these by the addition of other particles in lines parallel to their sides, as well as a second set of crystals shooting from the sides of the first; then a repetition of this process, and so on until the whole surface of the pool is covered.

So far are such exceptions as these from being oversights in the Creator, that they furnish us with the most convincing evidence of his designing supervision. Had not water, between the temperatures of 32° and 40° Far., been made an exception to the general law of expansion and contraction, instead of having our rivers covered in winter with a thin coat of ice, ready

to dissolve before the first soft breath of spring, we should have had them converted into solid masses of ice;—and further north, it may be doubted whether even the midsummer sun, would have been able to loose their waters from the “bands of winter.” Instead of considering these exceptions as blemishes in the work, we ought rather to look upon them as its very perfections. Like the abutments to the walls of a gothic tower, they break in upon the uniformity of the structure, it is true, but, like them, they do so in order to confer a varied beauty, and substantial strength.

THE SISTER'S GIFT OF FLOWERS.

By the author of "Love at the Shrines," etc.

Young and loved sister, I have now, within that tumbler clear,
Your gentle gift, so like thyself—the angels of the year,
Culled by thy hands at early morn, while every leaf was bright
With kisses that were pressed on them by spirits in the night.
How beautiful—how delicate—the messengers from earth
Come up, and bloom, and blush away, as things of little worth!
But he who rules and reigns above, from his majestic bowers
Looks down with joy upon the buds, and gladdens in the flowers.
The deep dark sea, in vain lifts up its flashing waves on high,
And howls around the caverned earth—it cannot reach the sky.
No blessed dew falls down on it; but gloomily and dread
It covers with its mighty pall the bodies of the dead.
One little knoll, bedecked with flowers, is dearer to his sight,
Than millions of those stormy waves, that seem to spurn his might.

Washington, May 16.

THE EARLY DEAD.

He did not linger out his span,
Of a proud line the end,
A lonely and time-stricken man,
His staff his only friend;
Repining at the long delay
That barr'd him from his kindred clay:
But ere a sorrow stain'd,
Or thorn beset the path he trod,
Shook off its dust, to walk with God.

So the fair flower of morn displays
A rest as early won,
Ere scorch'd by Sol's meridian rays,
Or shut when day is done.
He left us as the early dew
Goes up from earth, to glass anew
The glories of the sun:
Saw just enough of life to know
Its joy, but not to feel its woe.

The crown that holy men have sought
In danger's stormy track;
For which the martyr's faith has fought
Through flood and flame and rack;
Came down to him, a placid boon,
As the calm sunlight falls at noon:
Oh! who could call him back,
To lay his robe of glory down,
That heav'n of love, that starry crown!

What could we offer in exchange,
To tempt his spirit's flight
Away from her unbounded range,
Through boundless fields of light?
The day of care; the night of pain;
Death's valley and dark shade again;
Hope's blossoms—and their blight!
Their bloom he saw; their blight he fled:
Thrice happy are the early dead!

Camden, S. C.

B. W. H.

WASHINGTON COLLEGE,

LEXINGTON, VIRGINIA.

About threescore years ago, the Hanover Presbytery, (at that time the only Presbytery in Virginia,) taking into consideration the low state of literature in this commonwealth, conceived a project of establishing a seminary of learning in the upper country. They wisely concluded that such an establishment in the limestone valley would afford to all classes an opportunity of acquiring a liberal education, thereby rendering unnecessary the inconvenience and extra expense of resorting to northern colleges. In accordance with these views, the Presbytery appointed agents to solicit and receive donations; and trustees to carry their plans into execution. It was readily foreseen, that the times were unfavorable for making collections of money for any public purpose. The whole valley was, comparatively, a new settlement; hitherto a frontier; often subjected to Indian depredations and to draughts on the militia for protection. This checked population; retarded enterprise and improvements, and whatever might contribute to the wealth of the country.

The Presbytery, however, considering the necessity of the case, thought that something might be done; and on making the experiment, something was done. The trustees soon determined to erect a building; and the site chosen was in a grove, on the summit of Timber-ridge, about one mile northwest of the present village of Fairfield. Here, on either side, was a delightful prospect of a picturesque country. The situation afforded plenty of firewood; timber sufficient for building, and good water convenient; and was very appropriately denominated Mount Pleasant. It was encircled by a numerous population. By contributions from the vicinity, of labor, &c. a building was soon reared. I will not here stop to describe the materials of which it was composed; its dimensions or proportions; its ornaments or orders of architecture—suffice it to say, that it blended comfort and convenience with cheapness, and was sufficiently large for present purposes. A teacher was now employed. The first whose name I remember was William Graham. He was a graduate of Nassau-Hall, during the administration of the celebrated Doctor Witherspoon. Mr. Graham came to this country with the character of a gentleman of genius, scholarship and piety, which character he supported through life.

A number of students from this and the neighboring counties now resorted to Mount Pleasant. In a short time a very respectable grammar-school was formed. This was the first germ of Washington College.

The ability of the preceptor; the industry, proficiency, and decorous demeanor of the students,

soon gave eclat to the institution. The neighborhood viewed this novelty, a Latin school, as it was called, as an important acquisition to the country. I happened at Mount Pleasant during Mr. Graham's superintendence. It was noon, the hour of recreation. Here was seen a large assemblage of fine, cheerful, vigorous looking youth, apparently from ten to twenty years of age. They were mostly engaged in feats of strength, speed or agility; each emulous to surpass his fellows in those exercises, for which youth of their age generally possess a strong predilection. Presently the sound of a horn summoned all to the business of the afternoon. The sports were dropped as by magic. Now you may see them seated singly or in pairs, or in small groups, with book in hand, conning over their afternoon's lesson. One portion resorted immediately to the hall, and, ranging themselves before the preceptor in semicircular order, handed him an open book containing their recitation. He seemed not to look into the book, and presently closed it; thinking, as I supposed, that he knew as well as the book. Of the recitation I understood not a syllable; yet it was highly agreeable to the ear, sonorous and musical: and although more than sixty winters have rolled away since that time, the impressions then made have not been entirely effaced from my memory. I have since discovered that the recitation was a portion of that beautiful Greek verb, *Tupto*; in which the sound of the consonants pi, tau, mu, theta, predominate. It was observable that, during the recitation, the preceptor gave no instruction, corrected no errors, made no remarks of any kind. He seemed to sit merely as a silent witness of the performance. The class itself resembled one of those self-regulating machines of which I have heard. Each member stood ready, by tripping and turning down, to correct the mishaps and mistakes of his fellows: and as much emulation was discovered here, as had been, an hour before, on the theatre of their sports, in their athletic exercise. Since that day, I have often thought that emulation would be a noble engine in the hands of a skilful teacher. It excites attention; creates accuracy and promptitude; and gives zest and variety to subjects, otherwise dry and jejune. During this recitation, an incipient smile of approbation was more than once observed on the countenance of the preceptor, maugre his native gravity and reserve. This happened when small boys, by their superior scholarship, raised themselves above those who were full grown. This class having gone through, several others, in regular order, presented themselves before the teacher and passed the ordeal. The business of the afternoon was closed by a devotional exercise. And now, the whole number, without delay, issuing from the hall, spread themselves over the area before the door; each conversing with much glee with those

nearest to him; then, hasting homewards, each took off his several way to some of the farm-houses, which furnished them refectories and dormitories; and the shadows of the evening lengthening fast, I, too, bied me home, much gratified and not a little disappointed. The systematic order of the place struck my attention. A signal called the whole school together; a signal announced the hour of recitation: each class was summoned to its recitation by a signal. These signals were obeyed without delay—and without noise. The students might pursue their studies in the hall or the open air as pleased them best. Talking or reading aloud was not permitted in the hall, except to the class reciting. The dignity of the preceptor, and his well known fitness for the station, gave him respectability, and he was respected. Before this day I had thought the course pursued in this Latin school resembled the common English schools with which I had been acquainted.

*"Sic canibus catulos semiles, sic matribus hædos
Noram, sic parvis componere magna solebam."*

But I now saw that the order and discipline of the former were essentially different from the noise, confusion and turmoil of the latter.—Fifty or sixty years after this, and but a few years ago, in passing near to Mount Pleasant, I turned out of my way to see this quondam seat of the muses. It was soon found, and readily recognized. The building and grove have entirely disappeared. No hedge or railing encloses the area. Neither the strength of man nor the labor of the ox—neither the barrow nor the crooked plough have subdued the soil. It appears an entire desolation. The elevated position, however, affords the same grand and delightful prospect, and might give employment to the pen or pencil of an artist. I felt myself on classic ground. Here Washington College drew its first breath. On this spot, Mount Pleasant, commenced the establishment of a seminary of learning. A few obscure clergymen, without political power, and, in those days of skepticism, possessing very little personal influence; without pecuniary resources, other than what might be expected from the voluntary contributions of a newly settled mountainous district of country; in perilous times, too, when the Indians behind and the British before, threatened to devour with open mouth; under all these appalling circumstances, these few men, Tod, Brown, Waddell, and their associates, relying on the favor of heaven, began the work, persevered and succeeded. They have long since slept with their fathers: and, were this benevolent work alone known of them, they would merit the grateful remembrance of the present and future generations. The trustees, too, were important auxiliaries in the same work. Most of them continued in office during life. Some of them, I think, for

more than half a century. They, too, have gone the way of all flesh. While remaining here, I called to mind the numerous population which once encircled Mount Pleasant, and which, in various ways, contributed to the advancement of the seminary; and I asked myself where are they all now? Where are the Willsons, Blackburns, Browns, Scotts, the Greenlees, McDowels, McClungs, Pattons and Pattersons? Where are they now? Gone to the land of forgetfulness! As whilst a tempest, sweeping through an ancient forest, uproots and rends from its base the growth of ages, if we look abroad, we behold but one universal ruin and desolation. Yet, when the wind has subsided, the clouds have dispersed, the war of elements has ceased, and the heavens have become serene, we may, here and there, descry a sturdy oak, scathed, indeed, stripped of its foliage and despoiled of its beauty, the trunk yet standing and retaining the principle of vitality—so of that numerous population, of various ages, character and pursuits, which once encircled the spot where I now am. A few, very few, indeed, children of another century, may, by careful inquiry, be discovered, far dispersed from each other, with hoary heads and furrowed cheeks, their steps marked with imbecility and decrepitude, having advanced far adown the vale of life, and still progressing with accelerated speed, destined soon to join, in the land of silence, their former associates. The students, too, that lovely band of youth, whom, long since, I saw animating the scenes around Mount Pleasant with youthful sports and jocundity; whose countenances beamed with health and intelligence, the joy and hope of their parents and their country; and in whom those hopes were not disappointed; they, too, have felt the tempest. They, too, have bowed to the King of Terrors. Yet a single exception to this may even now be found.* I wish I could recollect the names of all the students of that primary school. Priestly, Mitchel, Hoge, Stuart, Blackburn, McClung, the Willsons, Browns and Breckenridges, were of the number. These entered on a classical course about the same time, and were cotemporaries on the stage of public life. Several of them became practising attorneys. Two of them held seats on the bench of justice in the superior courts of law: four have been members of State Legislatures: four, of the Congress of the United States. One was called to preside over the important interests of a college, and one, in diplomatic capacity, to superintend our national interests at the court of Versailles. Besides, several of these have at different times received appointments by authority of the state, to manage special important trusts in behalf of the commonwealth. I think, it may be safely said, that no one of these was ever charged, or chargeable with delinquency in their important

* The Rev. James Mitchel, of Bedford, Virginia.

trusts, either through want of talents, or want of fidelity. A parallel to this can hardly be found; that twelve young men commencing a course of learning about the same time, should all appear in after life with so much respectability in the public estimation: and these, too, not selected; but taken, as it might be said, at random.

By this time my travelling companion became impatient, and manifested by gestures easily understood, his willingness to be unmoored and to leave this desolate place. I mounted, gave him the rein, and pursued my journey, ruminating much on former days, on scenes of childhood and youth; on my cotemporaries, the companions of my youth—how few of them now survive; and how many of those, by far my juniors, have gone the way of all flesh. I thought, too, of the brevity of human life, composed of a few short periods; youth, maturity and decay; and these followed by death and dissolution; and these few periods replete with toil and pain, losses and disappointments. What caducity in human affairs! What a perplexing maze is the life of man! To what a shadowy, precarious, evanescent state of being is he consigned! Might he not have been created exempt from evil? or, if evil must be, might he not have been gifted with those faculties, which would have enabled him to foresee and avoid it, successfully to resist and overcome? Or, could he not have been elevated to a station more congenial to the dignity of his intellectual character, where pursuits of a nobler kind might have led to permanent and substantial felicity? Here some superior being twitched my ear and checked my arrogance. "Man," said he, "forms a part of an immense system of being. The great Creator endowed him with those faculties, placed him in that station, and subjected him to those laws which he saw right and proper. Wouldst thou, O, mortal, alter the established order of things? Canst thou, who arose into being but yesterday, and tomorrow must return to your mother earth; frail, weak and erring creature, possessing but five scanty inlets of knowledge; resident in a remote corner of the universe, with but a speck of creation subject to your vision—can you, I say, scan the operations of the Almighty? Can you fathom the depths of the wisdom of his counsel? Would you sit in judgment on his doings; rejudge his justice, or reverse his decisions? Shall the thing formed say to him that formed it, why hast thou made me thus?"

Presumptuous man, wouldst thou the reason find,
Why formed so weak, so little and so blind?
First, if thou canst, the harder reason guess,
Why formed no weaker, blinder and no less.
He, who through vast immensity can pierce,
Can tell why Heaven has made man as he is.

Silence, submission and acquiescence become the creature." I stood reprov'd. I was dumb; I

opened not my mouth. "For your consolation let me inform you," subjoined he, "that the life of man, though short, is long enough for all the purposes of life, provided the time thereof be judiciously economized in accordance with the laws which a wise and beneficent Creator has given him for the regulation of his conduct; and this will lead to perpetuity of bliss." Here my monitor very unceremoniously withdrew. I had now arrived, almost unconsciously, at the dwelling of an old acquaintance. On entering, I was kindly saluted; many friendly inquiries and professions of regard succeeded, which were followed by an interesting conversation, in which every member of the cheerful family seemed willing to bear part. The conversation was not the less interesting on account of its being free from ceremony and constraint. Now the sombre train of my thoughts, which, erewhile, had held me in durance, was broken, and I soon became light-hearted and buoyant as a prisoner bird just escaped from its cage. But we have wandered far from our subject—let us return.

The seminary remained but for a few years at its first location. Land was procured by the trustees, and buildings prepared on a larger scale, about six miles south of Mount Pleasant, at Timber-ridge meeting-house. The seminary had now obtained the name of Liberty Hall; and a law was enacted by the legislature entitled, "An act to incorporate the Rector and Trustees of Liberty Hall Academy." Mr. Graham had been employed to travel northward to solicit donations. He went, I believe, as far as Boston. I have never heard precisely the amount of his collections; but it is probable that the lands purchased, the buildings prepared, and some expensive instruments procured about this time, were paid for, at least partly, from this source. Among the instruments were, an air-pump, an electric-machine, a sextant, microscope and telescope, a set of large maps, a pair of ten or twelve-inch globes, together with a number of valuable books, the beginning of a library.

Lexington was established as the county town of Rockbridge in 1779. The academy was removed from Timber-ridge, I think, soon afterwards to a situation nearly a mile west of this town. Here a frame building was erected, in which the business of instruction was continued for a number of years. During the Revolutionary war, the confusion and embarrassment, public and individual, had so deranged all business that every resource of the academy was cut off, and many of its friends began to despair of its longer existence. This war had been waged for national independence; and all the resources of the country, all its energies, physical and intellectual, were required, and also the services of every man—no one was exempt. The clergy, indeed, were exempted by

law; but they did not exempt themselves. They, laying aside the badge of their order, assuming the habiliments, and girding on the armor of the soldier, marched to the tented field, or to the field of battle. Mr. Graham, himself a clergyman, as well as principal of Liberty Hall, is known to have volunteered his services, on a pressing occasion, in concert with other volunteers, who, being destitute of officers, appointed him their captain, and marched to meet the enemy. The enemy had retired, and they were discharged. The students of the academy, too, were called forth in common with the other militia. On one occasion, not yet forgotten, leaving the hall of science, exchanging Hesiod and Homer for the rifle, they hastened with their associates to the head-quarters of the southern army; and, soon after arriving, were led on to battle. Placed in open ground, they faced the British regulars for hours together, contending with chivalrous bravery for the mastery of the field, alternately advancing or retreating, as the rifle or the bayonet prevailed. But war did not endure forever. The halcyon days of peace returned. The cruel instruments of Mars were laid aside, and the implements of husbandry and the arts were resumed. The doors of Liberty Hall were again thrown open, and students resorted thither in greater numbers than at any former period. Efforts were now made for their accommodation. A large stone building was erected, capable of accommodating forty or fifty students; also a refectory.

Mr. Graham now resumed the business of the academy, over which he had heretofore watched with parental care and solicitude. He had led it cautiously and tenderly through many difficulties to a certain stage of its existence. Besides the labor of teaching and governing, there devolved upon him the task of planning buildings; making contracts with the workmen; attending to the faithful execution of the contracts; the devising ways and means for fulfilling those engagements; and, in a word, all that was to be done for the academy fell chiefly on him. But the want of funds was now severely felt. Some, which had been possessed, were lost through the deception of a paper currency. The embarrassed state of the country precluded, at present, all hopes of procuring others.

Having superintended the academy for twenty or twenty-five years with great fidelity, Mr. Graham, now past the meridian of life; his strength worn down by age and toil; and seeing his labors continually increasing, without any prospect of assistance, resigned his charge into the hands of its guardians, the trustees. During this long period, he had, for the most part, performed all the duties in person, which in other public seminaries are confided to a faculty, consisting of several professors. He not only gave

instruction in the scientific and classical departments, but paid special attention to the grammar-school. "Here," said he, "should be laid a substratum on which to build a superstructure of learning." Amidst all discouragements, he had always entertained the most sanguine expectations that the academy would one day become an important and useful seat of learning. (See note A.) The prospects of Liberty Hall were now discouraging, indeed. Without instructors and without funds, many of its friends thought it could no longer exist. But how inscrutable are the ways of Heaven! How short-sighted are mortals! The father of his country, whose mind was ever bent on promoting objects of great public utility, gave to it that pecuniary aid which ensured its perpetuity; and, subsequently, the venerable society of the Virginia Cincinnati gave the whole of their funds, amounting to sixteen thousand dollars, to promote the same object. Still more recently, the late John Robinson of this county, did, by his last will, bequeath, for the same purpose, the whole of his estate, which has since come into the possession of the trustees, and is estimated at fifty thousand dollars. The two first of these donations were the legitimate consequences of that very war which produced much public distress, and which had threatened even the existence of the academy. Mr. Robinson, it is known, had served, for a length of time, as a soldier during the Revolutionary war, in the northern army, where Gen. Washington commanded; and had always expressed a high respect for his character, and also for the character of the officers of the American army, especially those of the Virginia line, with many of whom he was personally acquainted. Is it not presumable then, that Mr. Robinson, in making this splendid bequest, was influenced by a laudable desire to emulate the example of those illustrious names which had preceded him in this patriotic act of benevolence? If this be admitted, it must then be seen, that all these benefactions were the result of the Revolutionary war.

When it had been known that Gen. Washington would endow a seminary in this valley, the trustees availed themselves of Mr. Graham's assistance to form a memorial to his excellency, which presented a short history of the academy, its funds, some account of the salubrity, fertility, and population of the surrounding country. This was accompanied with a diagram of the adjacent counties, particularly noticing the relative situation of Liberty Hall, with respect to Fincastle, New London and Staunton, the only places that seemed to lay any claim to the donation. These papers were transmitted to Col. Moore, then a member of Congress. He being the representative of a district composed of several counties, thought it indelicate to press the claims of any one place; and, therefore, merely delivered the papers.

Gen. Washington soon put the matter to rest by making to Liberty Hall Academy a deed of gift of one hundred shares in the James River Company, worth, at this time, three thousand dollars per annum. The legislature of the state, at their next session, changed the name of the seminary to that of Washington College.

After the resignation of Mr. Graham, (see Note B.) an interregnum of several years took place, during which a few grammar scholars only were taught. The Rev. George A. Baxter, since Dr. Baxter, was soon after this appointed president; and, subsequently, the stone edifice belonging to the college was consumed by fire. The trustees then selected a location on an eminence adjoining Lexington, where buildings have since been erected. At this time, and during the whole of Dr. Baxter's presidency, the funds were incompetent to the maintenance of a sufficient number of instructors, and to meet other considerable expenditures, which were found necessary for the prosperity of the institution. Nevertheless, students returned in considerable numbers, and the college was respectable during his continuance in office. He resigned his presidency about the year 1827, and Louis Marshall, M. D., of Kentucky, was appointed his successor. On his abdication, Mr. Henry Vethake, of New York, was chosen president. His inauguration took place on the 22d of February, 1835: and in consequence of his resignation, the Rev. Henry Ruffner was elected president, and inaugurated the 22d of Feb. 1837.

Thus we have traced this seminary for more than threescore years. From a grammar-school to an academy, and from an academy to a college.

"So slow the growth of what is excellent;
So hard to attain perfection in this nether world."

We see that in all its different stages and stations; in all its fortunes and misfortunes; during all the administrations under which it existed, it is the same individual seminary—its personal identity is manifest. (See Note C.) Our narrative has now come to a close; and although it must stop here, we trust and believe that Washington College will progress and prosper until it equals, or surpasses all other kindred seminaries of our country. This is not said through envy or bad feeling. We wish prosperity to every place in which useful learning is pursued; and that there should be no rivalry. But our belief rests upon many auspicious events and circumstances, which have attended this seminary from its origin. That it should have survived the Revolutionary war may be considered an auspicious event; but that this war should have been instrumental in promoting its greatest prosperity is very extraordinary. These donations, unsought for by the seminary, were the spontaneous bounty of benevolent individuals. We think, it may be fairly concluded, without

being subjected to the charge of superstition, that these events were premonitory of the great future usefulness and celebrity of this institution. Besides these events, its location promises much for its future prosperity—situated in the centre of the largest state in the union; equally removed from the intense and long continued cold of the northern winters, and from the tedious, sultry, enfeebling summers of the south; elevated above the region where dull and lazy streams, creeping over a flat surface, produce marshes and stagnant pools emitting those deleterious vapors which generate agues with their direful train of *asthenic* diseases; it possesses a climate mild and salubrious. Here mountain streams and mountain breezes, with mountain exercise, ensure vigorous health, a keen appetite for food and easy digestion. All these contribute to a seasonable expansion of the different parts and powers of the youthful constitution. But it seems there must be a supply of food; and this is at hand. Good, solid, roast and boiled, with an accompaniment of esculent vegetables; also bread of several varieties, of sound materials, prepared *secundum artem*, with cheese, butter, &c. shall not be wanting; and is not this quantum sufficit? Methinks these viands might satisfy an epicure. But, perhaps, some fastidious stomach, vitiated by the tyrant custom, not pleased with these alpine productions, will demand foreign articles. These demands shall be met. Other climes shall be explored. The stores of the Indies shall be laid under contribution. Articles of foreign growth, leaving the place of their nativity, and travelling all the way by water, shall arrive at the very verge of Lexington without setting foot on land. Here now they are ready for use, save only a few moments' culinary preparation. Now I have fulfilled my promise—this is the *ne plus ultra*. All the country around the college abounds with the most necessary articles of living. It has all the most useful domestic animals: all the most valuable grains, grasses and other vegetables. The materials for breadstuff are so plentiful, that after supplying the home market, a large surplus, even in the most unfavorable season, is left for exportation. The buyer here pays nothing more than the prime cost—no profit to dealers, no expense of carriage. Other prospects, besides those already enumerated, of the future prosperity of this country, present themselves. The opening of navigable waters; improvement of roads; establishment of manufactories and the development of mineral treasures, must, before many years, have an important influence. In the mountainous country, southwest of this, salt, gypsum, lead and fossil coal, have been found in large quantities: the three former, in Washington and Wythe, and the latter in Botetourt county. A valuable quarry of hydraulic limestone has been found in the vicinity of Lexington, large quantities of which are now

manufactured to be used by the workmen on the James River canal. Indications of coal have been discovered in various places between the Alleghany and Blue-ridge; and it is thought by many that salt and gypsum are likely to be found in the same region. All these improvements and discoveries brought to some degree of perfection, certainly must greatly enhance the wealth and prosperity of this country, and have a most important bearing upon the interests of Washington College. In view of the available resources of our county, we think it would not be saying too much, that its wealth and population in less than a century will be tenfold. Improvements in husbandry have already commenced. These chiefly respect the cultivation and fertilization of the soil; the rotation of crops; and the judicious selection and skilful rearing of domestic animals.

The college itself will be a source of prosperity to the country by the money which will necessarily be thrown into circulation from abroad; and thus a reciprocal influence will be exerted upon each other; for, whatever promotes the wealth and prosperity of the country, must react with a salutary influence upon the college.

By a rule of college, the students are permitted to board in private families. This is thought preferable to the practice of congregating a large number at one hotel, where freedom of speech and freedom of action often terminate in rudeness. In private families, where but few are assembled, the presence of the seniors, and, especially the females, impose a wholesome restraint. The competition of the boarding-houses is a sufficient guarantee for good fare at a reasonable price.

The funds of the college have not all yet become productive. Their profits, however, have enabled the trustees to erect spacious and commodious buildings; to enlarge the philosophical, mathematical and chemical apparatus; and to constitute and maintain an able and learned faculty: these at present consist of the Rev. Henry Ruffner, President; Rev. Philo Calhoun, Professor of Mathematics; Mr. George Armstrong, Professor of Chemistry; and Mr. George Dabney, Professor of Languages. The Rev. Allen D. Metcalf conducts the grammar-school attached to the college. There has also been a judicious course of study laid out for the students, which has been practised on for several years, and which it is thought could not be improved by a revision. This course comprises all the most useful branches of literature which are taught in other public seminaries. Mathematics hold a prominent place, together with those more severe studies which tend to mental discipline, and produce habits of close and accurate investigation. The ancient classics are not neglected. During a considerable part of the course, the student is required to devote a portion

of each day to the writings of those masters of Greece and Rome, who have so long been the admiration of the learned, and who have given to the world such fine specimens of taste and eloquence. A system of rules and regulations for the good order and government of the institution has also been established, which experience has proved to be salutary in its operation.

And now our vessel is safely under way, with sails filled, streamers floating, gliding gallantly over the broad ocean with a strong western breeze; may all on board, fore and aft, from the captain to the cabin-boy, have good health, good cheer and a prosperous voyage.

SENEX.

Rockbridge, Virginia, January, 1838.

NOTES.

Note A.—A gentleman of Kentucky, Col. W. McKee, who formerly resided in this county, and who long acted as a trustee of the academy, expressed himself thus in a letter to a friend—“I rejoice to hear that Gen. Washington has placed Liberty Hall on a permanent foundation. This recalls to my mind the saying of Mr. Graham many years ago. I had often myself almost despaired of the academy, and on one occasion expressed my apprehensions to him. He in his usual concise manner replied, ‘There are people working for this academy, who don’t know it.’”

Note B.—Mr. Graham died about the end of the last century, at Col. Gamble’s, in Richmond, whither he had gone on business. His remains were interred in the cemetery of the old church, over which a marble slab has since been laid, with his name inscribed and some particulars of his life. His talents and public services have never been estimated according to their worth. He undertook the care of the grammar-school at Mount Pleasant about the beginning of the Revolutionary war, and was soon after licensed to preach the gospel by the Hanover Presbytery. This war was a period of great perplexity and distress; and its termination was followed by another of much embarrassment and a very unsettled state of things, owing to the inefficiency of the national government. The forming of a new system of government now produced general agitation. Political questions of vital importance were discussed; parties were formed, and the whole nation was thrown into a state of fermentation. During these different periods, (comprising a space of fifteen or eighteen years) the interests of literature and religion were almost entirely overlooked, matters of a political nature having engrossed the general attention, the natural consequence of which was, that the instructors in religion and literature themselves suffered neglect. Another period now followed still more unfavorable to the advancement and encouragement of literary men and ministers of the gospel. About the beginning of the French revolution, a flood of novel opinions and doctrines, under the name of French philosophy, were introduced and overspread the land. Foremost, amongst these, was infidelity, that deadly weed which corrupts every atmosphere where it vegetates, and poisons every fountain with which it mingles. The actors in this drama were zealous to stigmatize as fanatics, and to bring into contempt, all those who in any way lent their aid to strengthen and support those great pillars of society and civil government; and, for a time, were lamentably successful. Their doctrines, however, were not carried out in practice to the extent to which they naturally tended; and to which they had been carried in France. That devoted country had been doomed to drink the cup of bitterness in full measure. All law, authority and government; all those institutions, which the wisdom and experience of ages had established for the security of life and property were torn from their foundations and became one general wreck. Anarchy ensued. The lowest, most depraved and ruthless of the community were elevated and “swam to sovereign rule on seas of blood.” No age, sex, rank or condition was safe. The throne and the altar; the senate

chamber and the seat of justice; the castle and the cottage; and, even the prison, exhibited scenes of crime, cruelty and carnage. Ruin in his most direful form stalked with giant strides over the length and breadth of the land. When the catastrophe was finished; when the destroying angel had executed his commission; whilst he was averting his face, about to wing his way across the vast deep to the western world, a mandate seems to have gone forth, "It is enough, stay thy hand;" and the plague was stayed. But the harbingers of the destroyer had preceded. An impulse had been given. The multitude, thoughtless of the present and regardless of the future, went with the torrent. Another class, less numerous, amazed and astonished, not knowing whence these things proceeded and whither they tended, stood aghast: whilst a still smaller class resolutely opposed this pestilential deluge, and firmly maintained those principles, which observation and experience have shown to be in accordance with the best interests of man; principles which are sanctioned by divine revelation; and which tend to the order of society and stability of government. Had Mr. Graham lived in other times, his talents might have been duly appreciated, and his services adequately compensated. But we have seen that the whole of his public life, thus far, had been embarrassed by a want of that support which was necessary to his own comfort and the success of his public labors. The delusions of infidelity added new difficulties. He suffered, however, only in common with many others. All similarly circumstanced suffered more or less. A signal example of this kind may be found in the case of the Rev. James Waddell, D. D. who was cotemporary with Mr. Graham, and both ministers of the Presbyterian denomination. His piety was not doubted. His intellectual attainments were of a superior order. He possessed also impressive and commanding powers of eloquence. This was not the flash of a lively imagination. It was not like those evening coruscations which dazzle for a moment and then disappear, leaving the dimness of twilight more visible. It was calm, dignified, and sometimes sublime. It was the effusion of a vigorous, discriminating and comprehensive mind, contemplating with emotion grand and interesting subjects, and portraying upon the minds of the audience its own vivid impressions. Dr. Waddell resided for many years in a central part of the state, not far distant from its capital. He had the care of some congregations in the vicinity of his own residence, where he performed his official duties till old age and blindness came upon him. He was well known to his clerical brethren and a few others of distinction who had learned his worth, and who sought his acquaintance and friendship. Yet it is believed that in those degenerate times he was never invited to a higher station, where his talents might have become more conspicuous, and the sphere of his usefulness more extensive. This seems the more extraordinary, as at that day, there were but few preachers in Virginia; and still fewer who were respectable.

Note C.—Having set on foot the literary institution in the upper country, the same Hanover Presbytery, during the next year, projected a similar one in Prince Edward county, and with similar success. They applied to Nassau Hall again for an instructor. Samuel Stanhope Smith, a graduate of that college, was the first president. He, too, had profited by the teaching of Dr. Witherspoon. His successors were John Blair Smith, Archibald Alexander, Moses Hoge, ministers of the gospel; and Mr. Cushing, who has since been succeeded by the Rev. Dr. Carroll, the present incumbent. Hampden Sidney possessed the advantage of being in a more populous and wealthy country, which for many years had been free from border warfare.

LINES,

To a beautiful Child, who became blind by accident.

BY HENRY THOMPSON, ESQ.

Child of the sightless eye! thou canst not gaze
At twilight hour, as thou once hath done,
On earth's bright beauties, and the starry night;
Nor sit to watch the slow declining sun,
In meditation innocent. Thine is a sightless life!
A dim and rayless pilgrimage through time:
Moonless thy night—sunless thy day!

And nature's beauties from thee shut forever!
The garniture of earth, and woodland drapery,
For thee will wear their verdant robes in vain!
The opening blossom, and the early rose,
The modest lily and the violet too!
Thou canst not now behold! Their odor
Still is thine: their beauty else to thee, sweet child,
Is gone!
Yet hand in hand with those thou lov'dst,
Thou mayst go forth at spring-time hour
To catch the song and echo of the grove,
Which to thy heart will bring sweet melody.
Thy little feet may roam, with cautious guide
E'en to the leaping stream that lifts its exhalations
To thy cheek---and its wild music to thine ear---
These are reserved for thee, pale innocent!
And now alone is left the grief-worn eye
To watch thy opening life---a mother's heart
Thy herald still shall be thro' time---
Hope in thy sinless breast shall rear her throne
And hold her empire there---
And when the voice of piety shall catch thine ear---
When all around is lost in life's delusions---
A greater bliss be thine! Weaned from the world
On which thou canst not gaze---thy gentle heart
And virgin thought shall join in heavenly song,
Lifting thy soul to Him, who shut thine eye on earth.
Thou canst not gaze, Elizabeth, as thou hast done
At twilight hour, when the weary sun
Throws back its golden glories to the earth---
Nor watch the lark on light and flitting wing,
Nor the bright beauties of the early spring.
These are not thine! But ah! dear child!
A brighter, holier, purer bliss, be thine---
For thy young heart is offered up to Him
Where thou mayst ever gaze with eye undim---
Hope be thy light---and faith alone thy bliss,
To guide thee home, sweet innocent! to brighter worlds than
this.

Tellapocosa, Ala.

LECTURE ON CHEMISTRY.*

Anything that concerns southern literature, southern literary institutions, and southern literary men, is, and ought to be particularly interesting to the reading population of the southern states.

The pamphlet whose titlepage we have here transcribed, is the result of attainments and study, more properly scientific than literary, and yet the lecture introductory to a course of lectures on any science is generally expected to bring to light the literature of that science, or that knowledge of it which is readily received and enjoyed by the man of letters merely, and which is properly imparted to a class prior to its entrance upon a course of scientific study.

Thus it is mainly the literary attainments of Professor Armstrong, which are indicated in the very interesting paragraph or two with which the lecture commences.

"That department of natural science, on the study of which you are now about to enter, is of modern origin. Should we search the ponderous tomes of antiquity for the record of its birth, we would search in vain. The historian, the antiquary, the critic, may await with impatience developments which are yet to be made from amid the ruins of Herculaneum; or bend in anxious study over that record of themselves, which a people of former days have left inscribed in the mystic hieroglyphics of Egypt. For the chemist these possess no interest. He would have thought it but a little matter, had Herculaneum forever

* "Introductory Lecture to a course of Chemistry, delivered in Washington College, Lexington, Virginia, February 21st, 1833, by Geo. D. Armstrong, A. M."

remained buried beneath the lava which centuries since overwhelmed it; or had the hieroglyphics of Egypt been left to perish along with her mouldering temples, on which they stand inscribed. Among the sages of antiquity, chemistry had no existence—not even a name. It may perhaps excite surprise that a science pre-eminently practical in its character, should so long have remained unstudied. Had we now to reason respecting this matter *a priori*, we would probably conclude that it would have been far otherwise;—and yet as a matter of fact, man had arrived at some consistent notions of astronomy, long before he had any of chemistry. He had noted on his chart the place of each principal fixed star; he had marked out the orbit of the planets, he was even “able to trace the wanderer of the heavens in his course, and as he returned from his pilgrimage of ages, to point his place, and say there shall he appear,” before he was acquainted with the composition of the water, with which he slaked his thirst.

During that long period of ignorance which preceded the revival of learning in Europe, little attention appears to have been bestowed upon the observation of natural phenomena. It is true that, “now and then an earthquake, or a fiery meteor would awaken the attention of the whole world, and produce from all quarters a plentiful supply of crude conjectures respecting their origin;” but that careful and accurate observation of nature in detail, on which alone correct solutions of natural phenomena can be based, appears to have been thought beneath the attention of the philosopher. It is to alchemy that chemistry owes its birth;—and this must be added to the long catalogue of instances, in which enterprises useless so far as their immediate object was concerned, have yet in the end proved highly beneficial to man. The mad crusades led to the introduction of the humanizing and civilizing arts of the East, into western Europe;—the wild pursuit of the golden mountains of El Dorado, led to the settlement of some of the fairest portions of this western world:—so, the fruitless search after a method of converting the baser metals into gold, and a medicine before which disease should forever fly, has turned the attention of man to a study, which more than any other, has contributed to enlarge the circle of the necessities and luxuries of life.

The reasonings, or perhaps I should rather say the dreams of the alchemists, now that light has been let in upon the subject, cannot appear otherwise than ridiculous. We can hardly repress a smile, as we read of the heavy penalties, enacted by the wisdom of England, in parliament assembled, to prevent the transmutation of the baser metals into gold; or listen to the recital of the mighty evils which were to follow in the train of the derangement of currency consequent thereupon. And yet if we will admit their premises, their conclusions will appear far less absurd. They laid it down as a principle, that the baser metals were composed of gold and sulphur, together with a small portion of some earths;—admit this to be true, and it will appear by no means a hopeless task to separate these elements and to retain the gold. The assumption of this fundamental principle of alchemy, was not altogether gratuitous. There are substances, very much resembling gold in some respects, existing ready formed in nature, or which can be formed in the laboratory, yet consisting of nothing but the most rough and un-eligible materials. They erred not so much in their reasonings, as in the admission of false principles to reason upon.”

The lecture proceeds very instructively to point out the wrong principles which governed alchemical research in the dark ages, the explosion of which erroneous principles and their substitution by such as are practical and true, has prepared the vantage ground occupied with so much promise by chemical science in this age. They are such as these: “Their admission of general principles based upon isolated and half examined phenomena,”—“Their yielding to a love of mystery,”—“The value which they set upon theory, or rather hypotheses,”—each of which captions are happily expanded and illustrated.

The contrast in the last particular between the dicta of the alchemical school, and the maxims of the faculty of chemistry in this day, the lecture well exhibits as follows:

“At the present time it is peculiarly necessary that we should not mistake the true character of hypotheses. Many of the commonly received hypotheses of chemistry, we should now hold ready to be given up at any moment. Recent discoveries have shown their insufficiency, and the time cannot be far distant when this department of chemistry will present a very different appearance from that which it now does. Of such a character, in all probability, is our hypothesis respecting latent light: it has always seemed to me very much to resemble still wind, or silent thunder. But let us not hence conclude that the knowledge which we now gain, will thus be destroyed. So far as that knowledge is a knowledge of facts, it must remain. In times past, facts have remained unchanged in value, amid all the changes which have taken place in theory; and from their nature they must always so remain. The fact, that electricity is developed by the friction of sealing-wax against cloth, is stated by Aristotle; it is just as truly a fact now, as it was in his day; although since that time, many have been the electrical theories which have risen and disappeared.

Perhaps a great deal of that obstinacy, with which sinking theories have been clung to, has arisen from an unwillingness among philosophers to confess their real ignorance. It is unpleasant, after we have for a long time believed that we have understood a subject, to be compelled to confess that we really know nothing about it. Yet if we may judge from the history of the past, to do this, is a lesson which we should all learn. If we are out of the way, our wisest plan is immediately to retrace our steps; and not, from a foolish fear of being thought ignorant or fickle-minded, to persist in going further astray. In thus retracing our steps, we are actually approaching nearer to the goal. Scientific writers have hitherto contented themselves with recording that which is known; perhaps a more useful work at this present day, would be one which should direct attention to that which is not known; a record, not of human knowledge, but of human ignorance; a work which should draw a sharp and well defined line around that part on which the day has already risen, and then give such ideas of the region beyond as the twilight which is shed upon it renders possible.

The alchemists were in the habit of charging every discordance between facts and their hypotheses, to the malign influence of some star or spirit. There is but little danger of our falling into this error at the present day; but there is danger, of our falling into an opposite error, not less worthy of being avoided. Their age has been justly characterized as the age of superstition; ours, perhaps with equal justice, as the age of skepticism:—and to choose between the two, having reference only to their influence upon the advancement of science, is by no means an easy task. Perhaps, if we must choose, the former should be preferred to the latter. This skepticism has manifested itself among philosophers, in their attempts so to explain natural phenomena, as to get rid of the necessity of acknowledging the existence, either of a spirit within us, or of a spirit above us; a soul or a deity. The skeptical physiologist has assigned such offices to the different parts of the brain, and other similar organs, as to be able to dispense with the operations of a spirit, and to take, instead thereof, a principle only a little more ethereal than the galvanic fluid;—and the skeptical philosopher, following in the same path, has examined nature, and assigned such influences and operations to the laws of matter, as to be able to dispense with the services of a being who should create and set in order the materials of this world. Let us not mistake respecting this subject. Materialism is as utterly subversive of physics, as it is of morals. Is it possible for matter by and of itself, to think, choose, reason? Then why do I investigate its properties? How do I know, but that if I determine to-day that any given substance will combine with some second one, in preference to a third, but that before to-morrow, it may reconsider the matter, and determine to prefer the third to the second? If there is any part in the wide circle of human knowledge, where atheism should never set foot, that part is the domain of natural science. The evidence of the existence of a creator and governor is seen, not only in the harmony and adaptation of parts which characterize the world as a whole, but it is written on every separate atom of the structures, and I will yet show you this hand-writing. Are there laws, and no legislator? are there creatures and no creator? Is there manifest contrivance and no contriver? design, and no designer? No attempt to deny the existence of a spirit can prove successful, until there is not only no spirit to listen, but none also to make the denial. Ma-

materialism and atheism may seem so absurd to you, that you may think that natural science cannot possibly suffer from them; and yet if you will become acquainted with what has been written of late years, on scientific subjects, you will find traces of them where you would little suppose they had ever entered. Had the labor, and talents, and time, which have been wasted in fruitless attempts to establish them, been spent in the careful study of nature, and the laws which an all-wise Creator has impressed upon it, we should have known much more of our world than we now do. When natural science is pursued in a proper manner, and with a proper spirit, its effect is always to deepen the feeling of pious reverence which once found expression from the lips of one of old; 'How manifold are thy works, O Lord! in wisdom hast thou made them all.' "

The author adduces many instructive instances in illustration of the main position of his lecture: namely, that discarding mere hypotheses, holding mystery to be either mere vacant territory to be occupied as speedily as may be by the light and truth and facts of science, or else such *terra incognita* as the impenetrable desert or the bottom of the sea, which are never to be explored and understood by us in this world. We are to carry the torch of experiment into every obscurity in nature where access is practicable, and following in the path of discovery wherever it has gone before us, making the acquaintance of the whole community of mind employed in experimental science; and thus we are to move on, in the style of this advancing age, "with experiment and observation as our guide."

The claims of chemistry are quite creditably set forth under the following heads: *First*. "Its effect in disciplining the mind." *Second*. "Its connection with other studies of practical importance as well as its own practical character." *Third*. "The interesting character of the information which it imparts." Under the second head, a rapid view is given of the uses of chemistry in the mineralogical and geological surveys and explorations, and as yet unfulfilled purposes of the states of this union. The most interesting of which, to this community, of course is their own Virginia, with her vast territory and incalculable mineral resources.

Under the last head, important instances are given by way of illustration, which we insert.

"A long time since, a similarity was noticed between some of the phenomena of electricity, galvanism and magnetism; within a few years, chemists have suspected their identity; we now know them to be identical. We know that it is the same agent, which in one set of circumstances, in the form of electricity, we see leaping from cloud to cloud; in another, in the form of magnetism, putting forth its utmost effort to turn the well-poised needle to the pole; and in yet another, as the galvanic fluid, tearing asunder pieces of nature's neatest workmanship. But how is it that these changes are effected? what are the laws which govern its changes? in fine, what is this agent itself, this Proteus of the material world? These are questions yet unsolved, and who shall present the world with their solution?"

To state another instance. Some years since, it was discovered, that a galvanic current was capable of causing motions in the magnetic needle; and shortly after, that it was capable of imparting magnetism itself; and that too, so far as we yet know, to an unlimited extent. By an application of the principles involved in these two discoveries, it was found that a galvanic battery was capable of imparting motion to pieces of metal, when properly arranged. I suppose none of you are ignorant of the application which has lately been made of this knowledge, to the purpose of generating motion. Is this power capable of unlimited increase? or is it capable of increase to such an extent as to make it of real value, in assisting us to perform the business of life? If it is, what are the most economical and advantageous ways of generating and applying it? Should it prove to be, what it now bids fair to be, we may yet realize many of the

bright visions of those who have toiled to discover a perpetual motion."

The lecture concludes with a sober and yet quite an animating survey, prospective of the fields of discovery still open before the chemical profession. We insert the closing sentence.

"Our fathers pressed forward, when they had nothing but the few bunches of Eschcol, as evidence of the fertility of the land; we certainly will not remain idle, when with our own hands, we have already gathered the rich clusters which have ripened in its sunshine."

The lecture is a well thought and well expressed composition. There is no declamation in it, and no ambitious writing. Such is not, apparently, the character of the writer's mind. No doubt he could not have been where he is if it had been. As, however, Mr. A. is a very young man, he will, we may allow, excuse a hint or two which may be of use to the public in any of the literary or scientific contributions with which he may favor us in future.

First. There is some evidence, in the pamphlet before us, of a *too hasty preparation*. An allusion to former times, especially a definite and minute allusion to the less common documents of human history, such as give interest to some of these pages, and such as the man of science is apt to make, is easily rendered much more satisfactory and instructive by a date, or a notice of its synchronism with some familiar name, or even with some name that merely ought to be more familiar than it is. Such things gradually and very profitably fill up that map of human history as well as of science which every reading man's memory is endeavoring to make out and preserve.

Second, and principally. A much more strongly marked arrangement of the subject or subjects brought within the scope of the lecture, would have located the instruction it contains much more permanently in the understanding and memory of the reader. Even numerals and italics have their use in this respect; but the regular laying out in the first place makes the directory both easy and worth while. The symmetrical and copious shelving off seems to call for the open lettered label.

These hints are given to Mr. A. in the freedom of one who both wishes him well, and expects a good deal of him in the department of science, and of liberal education, to which he has been called; and they are accompanied by his best wishes at the same time for Washington College, with the character and interests of which Mr. A. has identified himself for the present, as also for the science of chemistry, and the interests of learning and the world.

THE FLOWER AND STAR.

The Flower beheld the Star above,
And long'd to reach its airy love,
But long'd in vain. A dewdrop fell
Into the soft and fragrant cell;
And then the star was imaged there,
As if it dropt from upper air;
And gliding down from Heaven, has come
To find on earth a kindred home.

SONG.

Air, Mrs. McDonalds.

Oh trust not her love, 'twill endure but a day,
Like the golden winged butterfly,—child of an hour,
Which only can live in the warm sunny ray,
And delights in still roving from flower to flower.

Oh trust not her love, for 'tis not like that star,
That in heaven so bright and so steadfastly shines;
Ah no, 'tis the moon, though surpassingly fair,
That is now at the full, and now waning declines.

Oh trust not her love; how unlike to that flower,
The emblem to love and to constancy dear,
That turns to the sun with each varying hour,
And follows her idol throughout his career.

Oh trust not her love, she will wind the soft chain
So closely around every chord of thy heart,
That when she proves faithless you'll struggle in vain
From her fair but false bosom to tear it apart.

THE BACHELOR'S DEATH-BED.

Mr. Ethelwaite sick! exclaimed I, hastily leaving my bed. What is the matter? I saw him this afternoon, and he seemed unusually well.

"I don't know," said the little boy, "but mammy heered him groanin', and did'nt like to go and see, 'cause he always looks so cross at her; so she sent me down to call you."

Poor man! poor man! filled my sighs continually, until I had completed my preparations for braving the inclemency of the weather. But let me not forget my readers are unacquainted with the individual so abruptly introduced to their notice.

On a fine morning in the month of May, a message came to one of our church elders that a stranger wished to see him.

"Indeed!" said the good man, putting on his best coat in some little confusion; for a stranger was a rare phenomenon in our village, and those who did visit us were of a class seldom disposed to trouble the elders,—except, indeed, to gull their simplicity with some proverbial "notions."

But the trepidation of the kind elder had no effect on his politeness. Down he went, to meet the unexpected visitant, with as much gravity as if he had in mind the apostolic injunction, "let your deacons be grave," yet as cordially as if he felt himself equally enjoined to be "given to hospitality."

The stranger exhibited, in manners and dress, the model of a finished gentleman. He was, perhaps, fifty years old, and dressed in black, with extreme neatness. A pair of gold spectacles did not obscure the expression of his calm blue eye,

and his gold-headed cane was grasped by a hand of most aristocratic proportions. Bowing to the elder's complimentary welcome, he observed, "In passing your little village yesterday I was so much pleased with its neatness and quiet, as to be tempted to stop and examine it more closely. The result is, I have been taken with the idea of terminating in it the span of my existence. Will you be kind enough to inform me if there are any vacant pews in your church?"

"We have several," replied the pious elder, almost revering the devotion that made God's worship the first care of its possessor—"we have several, but they are in a lonely, unfrequented part of the church, and may be disagreeable to you. But my own is too large for my family, and I need not speak of the pleasure it will afford me to have you aid us in filling it. The insignificance of the offer emboldens me to make it, and my gratification will be so great as to make your acceptance of it a personal favor."

"Pardon me," said the stranger, his eyes glistening as if the voice of sympathy was an unwonted sound; "I appreciate your kindness, but if the pews you speak of are lonely, they will present fewer objects to withdraw us from our motives of entering them. Even the house of God is not sacred from the world, and if I have not begun to justify, I have ceased to condemn their weakness, who attempt to exclude it from their hearts, by secluding from it their senses."

The good elder said not another word, but, taking his hat, they quietly walked towards the church; one, with his eyes lifted in praise to heaven that he had at last found an Ararat for the ark of his wanderings, and the other, with his bent to the ground in humility, to think how far his conceptions of devotion and charity were surpassed by those of his companion. Nothing occurred to disturb their meditations, until the rusty key grated in the lock of the old church door, when they passed down the aisle, to examine the pews. Just as the stranger had selected one for his use, he happened to cast his eyes back towards the pulpit, and was startled to observe beside it a marble slab, sacred to the memory of Dorcas Lindsay—who had been, indeed, a Dorcas to our village. Without stopping to read the catalogue of her virtues, he rushed out, leaving the worthy elder, who had not observed the cause, almost petrified with astonishment.

Even the little boys snatched up their marbles and ran to hide themselves, as he brushed down the street, striking the ground violently with his cane, and muttering, "Now may God forgive these worse than heathen, who defy him in his own temple with a graven image, and beside the elevated stand of his ministering servant, record the qualities of a human idol; that the virtues of the one, as recorded on the dead marble, may be set

over against the perfections of the other as proclaimed by his living oracle—and that idol a woman! The world has long ago sickened me with its man-worship—but *woman-worship*!—I had thought that left for the fools of France.”

Reader, our devout, godly stranger was not only a misogynist, but a monomaniac.

I had been at the hotel, visiting a patient, and was leaving it, when he entered. There was that in his quivering lip, slightly frothed, and his hurried tone as he demanded his horse of the landlord, that not only excited my curiosity, but awakened my sympathy. I paused at the door, in anxiety to see more of one whose agitation was so unwonted. Scarcely had I been there a moment, when he came out and stood on the sidewalk before me. Never had I seen our little village look so lovely. The long row of china-trees on either side glowed with an unwonted freshness. The balmy breath of spring was laden with their perfume, and groups of children were sporting under their shade, like cherubs in the garden of innocence. The scene went to the heart of the singular being before me, and when he turned to countermand his order, it was with the same bland expression in which he was first introduced to the reader. Since the harp of the shepherd-king was removed to heaven, man has found no music like the laugh of childhood, to calm the whirlwinds of the soul. Its silvery echoes break upon us amid the clouds of life, and we almost fancy a voice above us, saying, “Come up hither.” Its world is, indeed, a world above our own. Like the topmost of Babylon’s hanging gardens, it is canopied by heaven’s serenest blue. The dew falls upon it in all its freshness. The bright sunbeams dance on its foliage, and play upon the brows of its sylph-like inhabitants—lighting *them* to enjoyment, *us* to toil. Never is man so happy as when he can leave the world below him, join their innocent revels, and fancy himself a denizen of their world in miniature. The most hardened must melt,—the most profligate must be abashed,—the proudest must be brought low, in the presence of those, of whom, “such is the kingdom of heaven.”

It is needless to recount how my acquaintance began with this singular individual; how it was ripened into friendship, or from friendship into the most deep-rooted affection. It is not difficult for sympathy to gain the attention of its object under any circumstances, and especially of one so alive to its yearnings as he of whom we are speaking. It was not immediately that I ascertained either the existence or extent of his malady, but our subsequent intercourse displayed it to me in all its features. I might win a smile by depicting the ludicrous extremes to which it often carried him; but to this day his memory rests upon me like a pall, and laughter at his expense would sound like the laughter of demons.

A year had rolled by, during which my attentions to our unfortunate invalid had been most assiduous. I had seized every pretext of giving him such medicines as would have a sympathetic influence on his mind, and easily persuaded him to a regular course of diet and exercise. Hitherto I had forbore any allusion to the topic of his aversion, and been very careful to avoid, in his presence, the mention of even the feminine pronoun. But by this time I felt warranted to experiment on the success of my measures.

Some kind ladies to whom I had mentioned the fact of his derangement, were in the habit of sending him, in my name, occasional presents of fruit. On the day after his reception, in this way, of a fine saucer of strawberries, while he was expressing his sense of my kindness, I casually proposed a walk to the garden whence I had obtained them. He immediately assented, and the following afternoon was fixed upon for our walk.

This garden was delightfully situated in our suburbs, and belonged to the miller of our village. His wife, in their respective concessions of “*sum cuique*,” had received it as her special charge, and made its beauties her special boast. To this good lady I bent my steps, with the information of our intended visit. She expressed her gratification in the most lady-like terms, both on account of our proposed call, and that I had given her previous intimation; because she could thus see that none of the girls should inadvertently intrude upon us. Thanking her for her kindness, and observing that her suggestion in regard to the girls had anticipated my chief design in waiting upon her, I withdrew, feeling in my breast the alternations of hope and fear—

“Like light and shade upon a waving field,
Coursing each other, when the flying clouds
Now hide, and now reveal the sun.”

At the appointed time we started on our proposed walk. He was a most interesting companion, and well versed in general literature. Our way was so beguiled by his fine fund of anecdote and judicious remarks, that the beauties of the garden broke upon us before we had imagined our walk half completed. This, of all others, was the very thing I most desired, and to prevent his mind from being suddenly called off, I engaged him so deeply in the discussion pending between us, that we were delightfully seated in the shady arbor, before he seemed even to notice that we had entered the garden. When he realized the little paradise into which we had entered, and saw before us a table on which were placed some delicious strawberries, his admiration knew no bounds. While he was expressing his sense of the kindness displayed by the owner of the garden, I interrupted him by saying—Well, we shall make but a poor return, unless we pay some attention to the strawberries

her bounty has prepared for us. Afraid to give him an opportunity of replying, or even speaking, I hastily handed him the sugar and cream, which, to my infinite delight, he took without remark. It is as impossible for me to describe, as it is to forget, the sensations of joy that almost convulsed me, when I observed that my allusion to the sex of our hostess had fallen from me unnoticed. Afraid lest my emotions should betray themselves, I hastened back to the topic that had occupied us on our entrance, and found him as ready to renew the discussion as myself.

It is unnecessary to tax the reader's patience by a detail of the daily visits we continued to make to the same place. Suffice it to say, that I continued to make casual mention of the sex, and was daily more and more pointed in my allusions. I could observe no change in him on these occasions; he only seemed not to notice my remarks. Yet it was a matter of delight to me that he would at all suffer them to be made in his presence, since, formerly, the least mention of the feminine gender of any species whatever, would produce upon him a sensible expression of disgust—an allusion to a woman, had never failed to call forth a torrent of invective.

I pursued my original plan with him for weeks. Every opportunity of introducing the subject was embraced, and with more and more satisfying results. At length I ventured, occasionally, to touch upon instances where women had proved signal blessings to the world. He would listen to me—and that was all.

One afternoon the miller himself made one of our party in the little summer-house. Just as he was becoming warmly engaged in conversation, a servant came with a message requiring his personal attendance. He left us, expressing his sorrow that he was called away so soon, and begging that we would not let his departure affect our stay. Scarcely had he gone, when Mr. Ethelwaite remarked, "How rarely do we meet with such unaffected urbanity in the lower walks of life."

Ah, said I, he owes everything to his wife. He was once a degraded sot, but her affection and her prayers won him back to the paths of duty. She in turn owes everything to one who has entailed a debt of gratitude upon us all. I mean Dorcas Lindsay, to whose worth the marble slab in our church is a feeble tribute. I do not like the practice of blazoning forth the virtues of the creature in the temples of the Creator, but Miss Lindsay was of so pure and saintly a nature, that we could hardly reckon the atmosphere of earth her natural element.

Fearing that the eulogium into which I had been drawn would make him impatient, I changed the tone of my discourse, by remarking—Her manner of coming among us was rather mysterious. We had long felt the want of a good

female teacher, and the trustees of our female academy advertised for the purpose of obtaining one. Shortly after the publication of the advertisement, a letter was received from a lady stating that she had but lately arrived in this country from London. On her voyage she had suffered shipwreck, and was now a stranger among strangers, and destitute. She had left England because she was friendless, and it had been her design to engage in teaching from choice, even if shipwreck had not made her anxious to do so, from necessity. The delicacy of language in which the note was couched, and here and there a tear, which had blotted its pages, together with the unfortunate circumstances of the writer, won the sympathies of the trustees, and they sent for her immediately. It is thirty years since she came among us, but I remember her first appearance as if it was but yesterday. She had the brow of a queen and a full black eye, that might once have been bright and flashing—but sorrow had softened it. A gold chain around her neck was attached to a miniature almost concealed by her belt. This was the only earthly treasure the waves had left her.

I had never been in the habit of looking at Mr. Ethelwaite, when conversing with him in this way, lest he might suspect some design; but a deep groan hastily arrested me, and turning towards him, I saw the very soul of agony depicted on his features. The veins of his forehead stood out like cords, and were swelled almost to bursting. His eyes seemed starting from their sockets—his mouth was slightly open, as if to drink in every word that fell from my lips.

Shocked beyond the power of speech, I took his arm to lead him home.

Hastily repulsing my attempt, he gasped out "Dorcas Ad—— Lindsay?—Go on."

My dear sir, I have no more to say. She lived among us like a saint, and died as she lived. Let me lead you home, you are unwell.

"The miniature?"

She carried it with her to her dying day, and by her own request I had it buried with her in her coffin.

"Was it this?" grasping my arm, fixing his hair in a particular way that displayed a large scar, and glaring upon me with his eyes as if he would pierce my very soul.

The miniature certainly had a scar upon the head, but it was of quite a young man. Do let me lead you home.

"Was it this?" dashing his hand into his pocket and out again, with a miniature which he held full before my eyes, his own glaring upon me, as before.

What could I say? The miniature in his hand was fellow to the one I had buried with Dorcas Lindsay.

He rightly interpreted my silence. Gradually

his muscles relaxed, till he sunk upon his seat with a deep groan. I took his arm, and led him forth like a little child to my own house. All that night, all the next day, and all the night following, he was in a raging fever. On the morning of the second day he fell into a sleep so hushed, that my wife, who was standing with me by his bedside, gently felt his pulse. The touch aroused him; and opening his eyes he grasped her hand, saying, in a subdued voice, "Dorcas, have you come back to me?" His brain was still confused, but his senses were gradually returning. When they were more fully restored, he recognized me, and spoke of the long, long dream he had had.

From this time he gradually recovered. I would fain have prevailed with him to continue his abode at my house, but no; he had become attached to his little room, and expressed himself anxious to die there. Taking an affectionate leave of my wife, and venting his gratitude to her by a tear, he started, myself accompanying him, for his solitary residence.

"You will show me her grave," said he, as he pressed my hand, at parting. I bowed assent, and the next day complied with his request. After this, I visited him daily for three days, and always found him writing. It was on the night of the third day, that the little boy came for me, as above.

With a mind full of solicitude, I reached his door. I could hear him pacing the room in violent agitation, and venting, at intervals, groans that came from his soul's deepest chambers. I rapped, but received no answer. I rapped again, but still no answer was returned. I mentioned my name; still he continued walking to and fro. I repeated it, louder. The sound arrested him. He suddenly unlocked the door, and then went on pacing the room and groaning. I entered, and what a sight met my vision! There was Mr. Ethelwaite, his coat soiled and muddy, his features worked up to the highest pitch of anguish, and ever and anon, venting those unearthly groans that even now chill my blood. He held two miniatures, one in each hand, at which he alternately gazed, after which he would groan out—"Too true! too true!"

He took no notice of my entrance, nor of my entreaties that he would lie down. At length he suddenly turned to me and said vehemently, "God has sent you here. Too true! too true! This night I entered her grave, and found the miniature that was to be, to her, my type, during my absence. She was too happy as she gazed on it, and the fiends of hell first envied, and then stole her joy. Oh!—my—Go—"

The rush of thought choked his utterance. He would have fallen, but I caught and bore him to the bed. His breath became harder and harder—his groans less and less audible—when suddenly raising himself, he grasped my hand with a dying

effort—said faintly,—“You will—find—all—explained—in—that—.” I followed with my eyes the motion of his hand, as he pointed to a small writing desk, and when I turned them on him again, he was dead!

N. N. N.

NIGHT.*

By Professor C. C. Felton.

The sun goes down; along the western sky
Lies the warm flush, a sea of gold, outspread
Beneath the many-tinted pile that overhead
Blends with the blue of evening's canopy:—
High on the brow serene of star-crowned night
The tiny crescent of a new-born moon
Steals out, unseen at first, but soon
Shoots o'er the dreaming world her skimming light.
The darkling leaves, to heaven uplifted, sleep
On the still bosom of the "upper deep."
The west-wind rustling through the dusky trees
Shakes the rich odors of the blossomed spring
From every flutter of his dewy wing.
Again, O viewless spirit of the breeze,
Come forth, and linger on thy welcome way
Around my heated brow—its feverish throb allay.

BIOGRAPHICAL SKETCHES

OF LIVING AMERICAN POETS AND NOVELISTS.

NO. II.

JAMES FENIMORE COOPER, ESQ.

Until near the close of the last century, American literature was of an extremely miscellaneous character, and sustained by no writers who were authors by profession. Occasionally, a lawyer, a divine, a politician, or a schoolmaster, might turn aside from the serious business of his life, and compile or compose a book upon the subjects connected with his individual pursuits; and incipient poets, lovers and wits, adorn the pages of the two or three magazines then existing, with quaint sonnets, ballads, squibs, elegies and epigrams: further than this, American literature had neither form nor comeliness. We except here the diplomatic correspondence of Washington, Lee, Hamilton, Adams, and other distinguished writers and scholars of the revolution; compositions, which for elegance of diction, strength and directness of expression, and Roman vigor of style, are surpassed by no writings of a later period, and may compare with the best of the brightest era of British literature: it is alone of literature as a pursuit, of authors by profession, to which these remarks have reference. After Americans became

* Copied from the American Monthly Magazine.

independent of Great Britain, they began to think for themselves in literature as well as in politics; and writers on various subjects began to make their appearance, and rapidly to increase in numbers, dignifying and elevating their pursuit, by the extent, variety, and boldness of their productions, and by the genius and learning they displayed. But not until about the year seventeen hundred and ninety, could American literature be properly classed, or authors be designated by names derived from their devotion to one branch of learning. And although at the period we have just named, few or no writers followed, to the exclusion of other branches of science, or other professions, any one path of literature, still, with less difficulty than twenty years before, they admitted of classification under respective heads. Thus, in 1790, the United States could boast her historians, her biographers, her jurists, her theologians, her travellers, her poets, and her novelists; and so rapid, since that period, has been her progress in every field of literature, art and science, that at this time she holds a proud rank in the world of letters, to which, during the last forty years, her contributions in the various departments of science, have been equalled by no nations except England, and perhaps Germany.

Of the classes of writers abovementioned, the novelist was the slowest in his advances into public favor. The severe cast of character of that grave generation, which still retained traces of the stern and severely moral tone of feeling derived from the early settlers of the colonies, presented powerful obstacles to the introduction of a species of literature, whose object was amusement, and which, in the opinion of the sober people of the age, was akin to the sorceries of the Moabites and Ammonites, and a temptation of the devil. The first American novelist, who had the temerity to encounter these puritanic prejudices, was a clergyman! the Rev. Dr. Belknap. He was an accurate scholar, and distinguished for the soundness of his learning in various departments of science, especially legal jurisprudence, history, and politics, that do not usually invite the attention of divines. Some of his opinions upon society and political government, were of a bold, original and dangerous character; and such as he did not think it wise to divulge without some precautions. He therefore, in imitation of certain French writers, wrote a novel, in which he introduced many well-drawn characters, which he made the medium of expressing sentiments he deemed it imprudent to convey to the public through a more direct channel. This novel he entitled "The Foresters." It became very popular, and the reverend novelist, instead of being, with his book, compared with Aaron and the golden calf, tempting men to idolatry, in lieu of pointing them to Heaven, gained by his production, deserved reputation.

One or two unsuccessful imitations of "The Foresters," followed soon afterwards; but no novelist appeared until 1798, when Charles Brockden Brown published "Wieland," which noble composition gave the author a title to rank among the most popular writers of fiction of his time. This was succeeded by Arthur Mervyn, Edgar Huntly, Clara Howard, and others, which added to the fame of the writer. These novels are characterised by a richness of language, wild and brilliant imagery, and in every page betray the poet of nature, and man of genius. Brown was the pioneer in the wilds of American fiction; and like all who travel an unbeaten path, had many obstacles to encounter. The novelist of that period was looked upon as little better than an infidel; his work was seldom met with in the library of the learned, or the boudoir of the rich and refined; and a devout abhorrence for works of the imagination, was inculcated and considered a good test of morality. This prejudice has not yet entirely subsided; and the experience of many readers will no doubt readily revert to instances of its exhibition like the following: "A young friend, not a great while since, on entering his study after his return from church, was struck with the meager appearance of his book-case. On examination, he took from it the covers of threescore novels, the accumulation of years, including many of Scott's and Cooper's. His pious mother, taking advantage of his absence, had torn out and burned their godless contents, and replaced the harmless skeletons."

The next novelist of importance was Mrs. Foster, who, inspired by the popularity of *Wieland* and its successors, wrote a lively novel, called "The Boarding School;" but only added another to a numerous species of English novels, adapted to the taste of the day. Its success, however, was limited. Shortly afterwards, she published "The Coquette," a fiction of the same class and degree of merit; but many of its incidents having actually happened, and several of the characters which were drawn with skill and truth, being prominent living individuals, it created a certain kind of artificial excitement, and was read by every body. This novel was instrumental in creating a taste for fictitious compositions, which was increased by the publication of "Charlotte Temple," a captivating fiction from the pen of Mrs. Rawson. Several other works by the same graceful writer, afterwards made their appearance, and were extensively read and admired. Many romances, from anonymous authors, and from others whose names were then known, but which fame has not recorded, were successively published, read and forgotten.

The fame of the Great Unknown, and the revolution in public sentiment in relation to fiction, at length drew many competitors into the field, both in Great Britain and the United States. The genius of Sir Walter Scott seemed to have en-

kindled a hundred minds. Among the numerous candidates for novelistic honors in America, the gentleman whose name has given title to this paper, was destined to stand forth the most distinguished. Mr. Cooper is a native of Burlington, in the state of New-Jersey. He was educated at Yale College, and subsequently became a midshipman in the navy, in which situation he acquired that nautical knowledge to which his countrymen are indebted for the "Pilot," the "Red Rover," and the "Water Witch." At the close of the last war, he left the service, which after the peace, presented no attractions to an active and ardent mind, and returned to the family mansion of his father, Judge Cooper, then residing in New York, in the vicinity of Otsego Lake—the romantic scenery of which the novelist has described in "The Pioneer," with the pen of a poet and naturalist. Retirement, to an imaginative mind, is the parent of invention; invention pants for expression; the pen is at once seized as the medium, and the hermit is converted into the author. The genius of Cooper soon caught inspiration from the objects by which he was surrounded, and as the result of his seclusion, he produced a work of fiction, entitled "Precaution." Although this novel possesses distinguished merit, and is surpassed by but two or three of Mr. Cooper's later productions, it was received with indifference by the American public; for Waverley and Guy Mannering, at this period, had created, or rather confirmed the taste for English literature of this class, and a corresponding contempt for domestic talent. "Precaution" was not only neglected, but so severely criticised, that the author, if he had looked for fame to his countrymen, would never have resumed his pen. But the British press, with that justice, dignity and candor, which has almost universally characterised it, in relation to American literature, taught the Americans to appreciate his genius. The English critics praised his book; his countrymen re-echoed their opinions, and read and praised it also: for now that it was properly endorsed, there could be no error. To the justice and good sense of the English press, which may claim the distinction of giving America her most celebrated novelist, Mr. Cooper is also indebted to the ultimate success of his second novel, "The Spy," a revolutionary tale, which the encouragement of the British press induced him to publish, although not until some time afterward, in the year 1822. This production now ranks one of the first of the Cooperian novels; yet, on its first appearance, as it had not passed the ordeal of the English press, which at that time governed the literary taste of the American public, as absolutely as ever the ministry governed the American colonies, it was received with doubt and hesitation. No man ventured an opinion; all eyes were directed towards England, awaiting her decision.

The judgment proved to be favorable, and the shelves of the publishers, which had remained uninvaded until this crisis, were now rapidly cleared of a work, the merits of which had been first seen and appreciated in a foreign land. Verily, "a prophet hath no honor in his own country."

In 1823, Mr. Cooper sent forth his third work, "The Pioneers," the principal scenes of which are laid in the American wilderness. Taught by this time how to estimate their novelist, the American press received this production more favorably, but still held back the full meed of praise, until they could hear from the other side of the water.

It is not the object of the writer to discuss the merits of these novels, but to offer a brief notice of them and their author. The "Pilot," the scenes of which are laid on the coast of England, in the revolutionary war, and the hero of which, who also gives the title to the work, is John Paul Jones, was published in the year 1824, and forthwith became popular. The time embraced by the whole book, excepting the last chapter, is less than seventy-two hours. It is undoubtedly one of the best, as it certainly is the most finished, of Mr. Cooper's fictions. "Lionel Lincoln" soon followed "The Pilot," in 1825; and its popularity was unprecedented. The scenes of this romance are laid in Boston during its occupation by the British troops, at the beginning of the revolutionary struggle. It is second, in point of merit, to others by the same author, but yields to none of them in interest. It was this production that created in Boston and throughout New-England, a popularity for Mr. Cooper's works, at one period so great, as to become among novel readers, almost a mania.

In 1826, Mr. Cooper sent out from his prolific pen, another *annual*;—for his appearance was now marked with the regularity of the seasons; and a new novel, yearly, from the "author of the Spy," as he was designated, had got to be as much a matter of course, as the annual message from the president. This, his sixth romance, is entitled "The Last of the Mohicans," and is assimilated, in the peculiarities of its principal scenes and characters, to "The Pioneers," both of which fictions may, with propriety, be denominated in contradistinction to "Nautical,"—"Indian novels:" their prominent features being the portraiture of Indian manners and customs, the peculiarities of which are exhibited in the habitudes of certain aboriginal characters therein introduced. In painting Indian scenes of still life, or in delineating the warrior and hunter, the battle or the chase, our novelist, as he is the first who seized upon subjects so full of interest for the romancer, so is he alone and unrivalled in this branch of his art. The forest, ocean, and camp, constitute the legitimate empire of Mr. Cooper's genius. At his bidding the savage warrior, the fearless seaman, the gallant sol-

dier, move, speak and act with wonderful reality. But in the streets of a city; in the green fields; in the parlor or in the bower, he is not so entirely at home; and the details of rural and domestic life, are apparently unsuited to the character of his genius. His mind is deeply imbued with love for the stern and the sublime: as a poet, he doubtless would have written very much like Campbell.

In 1827, Mr. Cooper published his seventh romance, entitled "The Prairie,"—a fiction of the same species of the *Pioneers*, and by judicious critics esteemed one of the best from his pen. The "author of the *Spy*" had now attained to that degree of popularity, when, at length, an author's productions are received unquestioned, read without criticism, and have become a part of the current literature of the age. The words "By the author of the *Spy*," on the title page of a novel, was now sufficient for its introduction, unread, not only into the boudoir, but into the libraries of men of taste and learning. Having successfully overcome the rapids, quicksands and whirlpools which obstructed his onset, Mr. Cooper had now only to spread his sail, recline at ease in his bark, and, wafted by the breezes of popular favor, glide peacefully over the placid sea of literary fame.

The popularity of the *Prairie* was unprecedented by any previous works from the same pen. At this period, the English language presented the remarkable feature of two of its writers, natives of different lands, engrossing the whole field of romance, controlling the public taste, and each founding at the same time, in opposite hemispheres, an immortal school of fiction. Scott opened the treasures of the highlands, and scattered their inexhaustible stores throughout Christendom: and by the power of his unaided genius, he has thrown a classic interest over the hills, glens, towers and lakes of his native country, as imperishable as the charm which the epic poets of Rome and Greece have thrown around their lands. Cooper unfolded the mysteries of the pathless wilderness, snatched its native lords from the oblivion into which they were sinking, and bade them live, before the eyes of the admiring world, in all the poetry and romance of their characters. The magic of his pen has invested the forest with an interest such as genius can alone create. He has so portrayed the character of a primitive people, who were *men* until the contact of civilization made them brutes, that, when they shall at length live only in the page of history, it is alone through the inspired pen of the novelist, that future ages will most delight to contemplate their character. Both Scott and Cooper have thrown an exaggerated poetic interest around the characters they most loved to draw; and the rude highlander of the Scottish hills, and the savage of the American wilds, are, perhaps, equally indebted to the imagination of the novelist for the peculiar charms

with which they are invested, when exhibited to the reader through their seductive pages. The novelty of the subjects and characters on which Sir Walter Scott exercised his pen, contributed essentially, not only to the popularity of his novels in England, but especially in America. Here, we knew but little or nothing of highlanders from observation; and our imaginations exaggerating what little knowledge we did possess through distorted and imported traditions, prepared us for the reception of romances (such as Scott's earlier novels,) professing to portray the more romantic features of their manners and habits. Aside from their intrinsic merit, the novels of Cooper, also, from causes similar to these, became universally popular in England. An Englishman who has never visited America, has peculiar ideas of that *terra incognita*, an American forest, and of its aboriginal inhabitants. His imagination invests both with a sort of oriental interest, of which an American cannot well conceive. This can be readily referred to that "distance which lends enchantment to the view," and that leads us, this side of the Atlantic, to view all connected with England through a singularly false medium; an illusion, which, by merely substituting the telescopic for the microscopic distance, it has been proven may easily be dispelled. Mr. Cooper, therefore, so far as the English public were concerned, had his work half done to his hands; and his pictures of Indian character and western life and adventure, were received in Great Britain with unbounded enthusiasm: race-horses and club-boats were named after his novels; pretty villas were christened with half a dozen Indian monosyllables, and savage warriors in full costume stalked among masqueraders in the halls of mirth and fashion.

In 1828, the "Red Rover" made its appearance, and won for the author fresh laurels, both from his countrymen and Europeans. His works had not only reached Great Britain, but previous to this time had drawn the attention of Germany and France, into the languages of which nations they were translated, and received with a popularity rivalling that which they had met with in England and the United States. Perhaps no novel has been more extensively read by all classes of society, than this last mentioned production. The whole of this year, with the exception of a few weeks spent in England, was passed by Mr. Cooper in France, Belgium and Holland. The year 1829, which he also spent on the continent, was marked in his literary history by the publication of two works—"The Notes of a Travelling Bachelor," and the "Wept of the Wish-Ton-Wish." Neither of these productions materially increased his popularity as a writer. The first was not a fiction. Mr. Cooper had been so long treating his friends to an annual bumper of champaign, that they would not put up with healthy cider, though

bearing the same brand. He had created and fostered a taste for fictitious compositions, and he could not complain. The young ladies pouted their pretty lips from vexation, and would not read it from sheer spite. The young gentlemen took it up cavalierly, and determined to read and abuse it out of revenge. The "Travelling Bachelor" was read, nevertheless, with approbation by a large class of readers, whom his novels had not reached. It proved to be a work displaying the finest powers of the novelist, and although of a different character from his former productions, well worthy to rank among them, and advance undisputed claims to a high place in the branch of literature to which it belongs. "The Wept of the Wish-Ton-Wish," an Indian tale, or novel, published soon afterwards in the same year, was far from obtaining the popularity of its predecessors. In 1830, Mr. Cooper omitted sending forth his annual fiction. This year, also, he passed on the continent, during which period, we believe, he was acting as our consul at Lyons. In 1831, he published the "Water Witch," a nautical novel. It redeemed the doubtful success of "The Wept of the Wish-Ton-Wish," which, to pursue a figure before adopted, cast a brief shadow, as if from a passing cloud, upon the bright waters over which his bark had hitherto been prosperously careering. The apparent resemblance, which, in treating similar themes could not be avoided, without too manifest artifice, between this work and the "Red Rover," caused some severe and not always just criticisms from the press, on its first appearance; but this did not affect its popularity, which eventually equalled, if it did not surpass, that acquired by the production with which it was compared. The *Water Witch* was not only dramatised and successfully performed on the American boards, but, also, many of the previous novels by the same author, received this testimony of popularity.

In 1832, Mr. Cooper was still residing in Europe, where he had been since 1828, touring through England, Belgium, Germany, France and Italy. As the fruit, no doubt, of a some-time sojourn in Venice, he gave to the world this year, his twelfth book and eleventh novel, "The Bravo of Venice." This was the first time Mr. Cooper had placed the scenes of his fictions in other than his native land. Up to this period he had been emphatically a native novelist. He had explored the empire of American fiction, before untrodden, and proved to the world that Europe was not alone the land of story. He had shown that ivied walls, time-worn castles and gloomy dungeons, were not necessary to make a land a land of romance; that the war of the revolution rivalled, in romantic interest, the wars of the crusades; that the Indian warrior equally with the turbaned Saracen, was the theme of the romancer; and that heroes need not always to be clad in iron mail, nor heroines have

only knightly lovers sighing at their feet, or breaking lances and heads to attest their devotion. Solely by his genius and industry, he had laid the foundation for a school of romance as original, as extensive, and destined to be as perpetual as that instituted in another land by the author of *Waverley*. In quitting a field where he reigned without a rival, to adventure on unfamiliar ground, evinced, at least, temerity; and, if it did not endanger the fame he had already won in many a tilt, it at least promised no adequate honors to one who had already plucked unfading laurels. The "Bravo," however, attested on every page, the legitimacy of its authorship—the genius of Cooper pervaded the whole. There were two causes, however, which militated against its unmixed popularity, in England and in America; although in Italy, France and Germany, it was preeminently successful. The English palate was sated with continental productions from English pens, in every possible shape. The *Bravo* was regarded as only another of this *genus*, although coming from a source which enforced its favorable reception. It is not, however, here to be understood, that the *Bravo* was unpopular in England; viewed with some of its contemporaries, it was only comparatively so. Its reception was infinitely more flattering than that which usually attended the best continental novels of the same class. In the United States it was not well received, although the causes just advanced, could not, in this country, affect it. The objection, a somewhat invidious one, was, that it was a foreign work; and, many thought, with equal jealousy, that Mr. Cooper should have exhausted American subjects before he resorted to the hackneyed themes of Italian story. There may, perhaps, be some foundation in a wholesome national pride for these prejudices. They materially affected his popularity in the United States, although his fame was too firmly established to be sensibly moved by it. It has been accurately remarked by Sir Walter Scott, that the reputation of an author is neither gained nor lost by a single production.

In 1833, "The Heidenmauer" (heathen-wall) or "The Benedictines," followed the *Bravo*. The scenes of this fiction are likewise laid in Europe. This work, also, had to contend with the prejudices abovementioned. It was moreover written with somewhat less vigor and beauty of style, than characterised the former works by the same author. His spirit seemed to languish beneath a foreign sky, and labor and art to have succeeded the freshness of inspiration. A comparison of his two last works with the *Prairie* and *Red Rover*, showed clearly that America was the empire, as well as the birthplace, of Mr. Cooper's genius.

The thirteenth novel of the "Author of the *Spy*," and his fourteenth work, was published in 1834. It is entitled "The Headsman of Berne."

With the *Water Witch*, Mr. Cooper appears to have bidden adieu to the American soil as a novelist, and to have left the field to the numerous aspirants for his fame, who now began to occupy the arena. The scenes of this novel are laid in Switzerland. Its appearance revived in a measure the waning popularity of its author in the United States, although his countrymen were not pleased that their most distinguished novelist should expatriate both himself and his novels. The *Headsman* is marked with all the beauties of Mr. Cooper's best and most popular compositions. We believe it was previous to the publication of this romance, that the author received the appointment of *Charge d'Affaires* for the United States at Paris. "The Monikins," Mr. Cooper's fourteenth and last novel, followed the *Headsman*. It bore few traces of our author's manner, and was limited in its popularity.

In 1835, some political strictures appeared from the pen of Mr. Cooper, that were roughly handled by the American press. In 1836, two series of "Sketches of Switzerland, by an American," and in 1837, "England, by an American," and "Gleanings in Europe," were given to the public from the press of Carey & Lea, who have uniformly, we believe, been Mr. Cooper's publishers. These works, completing his nineteenth and last book, and being his thirty-eighth volume, produced in the space of nineteen years, bear testimony that the pen of the novelist has parted with no modicum of the strength and beauty of style, with which he has clothed his description of American scenery in the pages of the *Spy*, *Prairie* and *Pioneers*. Mr. Cooper has suppressed many portions of the original manuscript of the *Sketches of Switzerland*, for reasons which he has slightly touched upon in his preface. These volumes do not relate exclusively to Switzerland: France, Germany, Italy and Holland, are included in the observations of the writer. The first volume opens at Paris in 1828, and leaves the author at Milan. The second volume also begins at Paris, and the reflections of the writer embrace some of the countries above-named. We are particularly struck with the boldness and truth of Mr. Cooper's caustic remarks in his volumes on England, in relation to Americans at home and abroad. He has herein shown himself an able, impartial and fearless censor of the foibles and faults of his countrymen. These last works have been favorably received, although the bold attitude the writer has assumed, has elicited severe and often merited criticism. Mr. Cooper is now in his fiftieth year; his figure rather above the usual height, robust, and slightly inclined to portliness. His forehead is massive, and of an intellectual shape, and his eyes lively and expressive, denoting a thinking man and a close observer. His appearance is commanding. His manners are perhaps some-

what reserved, but his address is courteous and pleasing. He is at present a resident of New York, and will doubtless yield to the renewed inspiration of the native American muse, and entwine himself for many succeeding years around our hearts; for we are reluctant to believe, that he has yet filled up the measure of his country's honor.

A REVERIE.

A summer morning! How the balmy air
Comes blandly through the blind! The fragrant
Of myriad flowers and fields of budding grain,
Is borne upon its wings, and it hath stirred
The leaves of yonder tree whose shade I love.
Is it their rustling, or the murmured hum
Of tiny wings, sporting upon the rays
Of the warm sun, which bids the ear to mark,
But not to weary, of the silentness?
It whispers peace; it hints of melody,
As when the memory of a favorite air
Dwells in the soul, its tones, its cadences,
All save its soothing harmony, forgot.

In such an hour—so still, and yet not dull,
So resonant of life, and yet so calm—
How am I prone to think upon her love
Whose spirit's elements are the radiance,
The loveliness and freshness of the morn;
And from my weariness lured a little way,
By the mild beauty of the Sabbath time,
To yield my soul to fond imaginings.

Hark! from the shadows of that leafy grove,
Tones of exulting music, half subdued
By distance, rouse my lately listless ear.
Sweet songster, born of a mysterious race!
How oft upon thy fellows have I gazed,
And as I marked the bright intelligent eye,
Turned up to mine as if 'twould read my thought,
Or saw one hover round my lonely path,
Now perching here, and then a little on,
As if to lure me to his secret haunt,
Deep in the verdurous wilderness, have deemed
He sought communion with me. Who hath heard
Their song more eloquent than simple speech,
And while his sympathies answered joy for joy,
And pensiveness for sadness, hath not wished
To know each incident of the tale, thus told
To the far wandering, ne'er returning winds,
Or, haply to a fellow? Who hath seen
Their air-borne flights, now piercing through the clouds,
Now sweeping down to earth, now skimming o'er
The unruffled surface of the mirror lake;
Or who hath watched, ere yet the hectic flush
Was on the maple leaf, by some old wood,
When in their companies they disappeared
In ether's mazes, and when half a year
Had passed, beheld them to their ancient nests,
Greeting the earliest blossoms of the Spring,
All pilotless returned, and marvelled not
If more than instinct did not shape their flights?

Who hath observed them well, and dare rebuke
The unhelped learning of the olden time,
Which made them ministers of man's destiny?

Tell me, thou wanderer of the "upper deep,"
Thou, who canst only live where Nature wears
Her robe of pleasant green begemmed with flowers,
Tell me, if ever in thy rambling flight
O'er mount and river, from the orange groves
Of Florida, to where the covenant bow,
Fore'er its threads of ravelled light displaying,
Assures the soul that shudders at the roar
Of wild Niagara foaming down his steep—
Tell me, if ever thou hast "poured thy throat"
Where moves her form as graceful as thine own,
And o'er the flowers as lightly glides her step,
Who heard my vows and turned her not away.
I cannot think that with the power to wing
Thy form at will in search of happiness,
Thou hast not sought it where her presence bears
An atmosphere as bright and beautiful
As in the glory of a morn like this
Awakes the harmonies of grove and field.
Say, dost thou come her spirit's messenger,
From the far region which she gladdens now,
To bid my soul live o'er past happiness?
I feel thou dost; for, buoyant as thine own,
My heart is glowing with strange ecstasy.
Again the form I love is in my arms,
Again I clasp her to this longing breast,
Again I call the name which makes us one,
And press the lips which discord never passed.
I know thou dost; for, as I speak, thy tone
Is changed for one so chastely passionate;
So joyous with an untold happiness,
Yet something sad, as is the voice that tells
How from the meshes of anxieties
Deliverance hath been wrought triumphantly;
So like the kindling tones of love's own voice;
So like the voice my soul hath learned to love,
That it shall revel in thy melody:
Nor shall a thought be born, to intercept
The tide of joy now flowing to my heart.

A change again! Thou faithless messenger!
Thy tone is now more sad than hers was wont:
Yet doth it sound familiar. 'Tis the same
In which so oft she said her fond farewell.
Oh sing it still! for saddest memories
Are comforters, if with her image joined;
Sing on! sing on! nor wing thy rapid flight
Again to her whose envoy meet thou art,
Till I have told thee how the anxious days,
The watchful nights, bear witness to the truth
And constancy—

But thou, alas! hast gone:
And as the abandoned mariner, who sees
From rugged eminence of desert isle,
In ocean's wave the tallest topmast sink,
Still gazes on the trackless element
Which bears away his newly kindled hope;
So in my desolation do I gaze
Upon the void that parts thee from my sight.

Oh! thou Omnipotent! without whose ken,
Not even the meanest of the feathered race
Falls to the ground, be to my chosen one,
The pure in heart and blameless in intent,
If pure and blameless be upon the earth—
Be to her, Father! still a guide and guard;
Restore her to the home she loves so well;
And bid a blessing settle where she dwells.

NOTES AND ANECDOTES,

Political and Miscellaneous—from 1798 to 1830.—Drawn from the Portfolio of an Officer of the Empire,—and translated from the French for the Messenger, by a gentleman in Paris.

THE CONSPIRACY OF AUGUST, 1820.

I might take, at hazard, any one of the various conspiracies which were suppressed under the restoration, and I should find new evidence in support of what I have stated, that the French are, of all people, the least fit for a conspiracy. I am convinced, could the revolution of July have been brought about only by a conspiracy, that we should still be under the yoke of Charles X. There are peculiarities in the character of nations, as in that of individuals. The French people, the most warlike, perhaps, in the world, and the best adapted by nature to sustain the hardships and deprivations of war, are entirely destitute of that sort of firmness essential to the success of a conspiracy. They have none of that cold, calculating self-denial, necessary to the execution of a grand design. Precipitate a Frenchman upon some palpable danger, and you will find him admirable. Tell him to await its arrival, and it will be different. The French have more bravery than courage, and in a conspiracy, courage is more necessary than mere bravery.

There are no synonymes in the French language, though a dictionary of synonymes has been made. One may be brave without being courageous, as one may be courageous without being brave, or may be both at the same time. Bravery is a physical quality, courage is a moral virtue. Bravery is the result of a good constitution, of warm blood circulating freely; a man whose lungs beat freely under a large breast, ought to be a brave man. A man in the last stage of consumption may be extremely courageous, because courage has nothing in common with the physical form; because it is the result of a sentiment of honor, of the consciousness of duty. It is unnecessary for me to say that I speak generally. I am ready to admit that there are many exceptions, and no country has ever exhibited more glorious ones than our own. But it is a fact, proved beyond dispute, that while we are superior in the attack, we are worthless for defence; and it is precisely the sort of courage necessary for defensive war, that is required in a conspiracy.

It must also be confessed that we Frenchmen have, in general, something of the braggart, and are terrible babblers; these are virtues of the least possible value in a conspiracy. Thus it is that no conspiracy is possible in France, unless, indeed, as on the 10th Brumaire, all the world be in the secret; then, one may boast and babble at his ease—nobody is to be feared.

Notwithstanding the address voted in 1822, by the chamber of deputies, as a reply to the assertion of Manuel, it is not the less true that the Bourbons were received with repugnance by the majority of France; that, however, did not prevent a few acclamations on their passage to Paris. If such acclamations are to be reckoned of any importance, our affections must be very changeable. Nor will I deny that after the hundred days, bands of women of all conditions danced under the windows of the Tuileries, singing a *spirituelle* rondo, the first verse of which concealed under a sort of pun, a delicate allusion to the last journey of the king:

Rendez-nous notre père de Gund.

I do not know whether these evidences of affection could have deceived any one; Louis XVIII had too much shrewdness to suffer himself to be imposed upon after the 20th March.

The Bourbons had to struggle against their name, and the origin of their newly acquired power. I do not believe them either better or worse than others. Forced to support themselves in a minority, they submitted to its laws, and committed all the faults that this minority could impose upon them; faults forced upon the minority by the necessity of self-preservation. The government of the Bourbons was violent and sanguinary, because it was weak.

There were conspiracies of different sorts during the nine or ten first years of the restoration. From 1823 or 1824 until 1830, no one conspired; everybody held himself in readiness for an event which could not fail to arrive soon or late. Those conspiracies, in which the army had no part, were without any solid foundation; they could accomplish nothing. It was only towards 1818 that the secret societies, perceiving the insufficiency of their means, commenced by making proselytes in the army; the conspiracies then became more serious.

There existed in almost every regiment a strongly marked line of demarcation between the officers who had been attached to the old army, and those who had been created by the new government; a fusion had only been effected in a very few corps, whose officers were, by accident, men of firmness and intelligence. At the period of the pretended organization of the duke of Feltre, as I have before stated, the old officers had been almost entirely excluded. They were afterwards gradually recalled by Marshal Gouvion Saint Cyr and General Latour Maubourg. But they had then passed several years at their own firesides; the greater part had endured cruel privations. Many had been objects of persecution to the inferior agents of the government, who are always sufficiently disposed to exhibit any evidence of their zeal. They thus returned with their feelings soured; but yet, had they found in their new companions that fraternal feeling which prevailed in the old regiments, and which constituted them, as it were, into one family, their regrets might have been calmed, and their resentments extinguished.

But such was not the case; the chiefs were no longer men who had been but recently soldiers. They were quasi-great nobles, (I beg it will be remembered that I speak of 1818; things were, I know, afterwards changed,) whose inaction during twenty years, and

whose services to foreign powers during the emigration, had been thus liberally paid. They required a particle, a *de*, before the name even of a sub-lieutenant, and the title of a half-pay officer curled their lips with the most disdainful ill-humor. If these chiefs gave any dinners or soirées, the officers who had been taken from the half-pay class were excluded. From the chiefs, these sentiments were communicated to the officers most in favor. They did not openly show disrespect to the newly chosen officers, who would not have submitted to such treatment, but they isolated them completely; they formed them into a separate band. The latter bringing with them their claims of seniority, thus destroyed the hopes of the young officers of 1815, who saw in them the usurpers of their rights. Had they been animated by the best intentions in the world, they must thus have been made the enemies of the government.

There were certainly exceptions to all that I have just stated; I could cite the names of individuals, were it not that such a course would reflect upon those not mentioned. Twelve or fifteen regiments at the most were engaged in the conspiracies under the restoration; all of them were in the situation I have just described; and it will be easily understood, that with these regiments, the emissaries of the secret societies would naturally find a favorable reception.

The military conspiracy of August, 1820, was the most important of all those which broke out under the restoration. Discovered on the 18th or 19th of August, it was, by a royal ordinance of the 25th or 28th, referred to the court of peers. This conspiracy was never well understood, though the persons engaged in it were solemnly arraigned, and six weeks of debates were wasted on it. Was it that there was no wish to discover the truth? that there were, besides those accused, accomplices too exalted to be attacked? that the magistrates charged with the process were misled? This is a matter which I will not undertake to decide. There is one thing, however, certain: the conspiracy was not at all investigated.

From the commencement of the process, a voluntary or involuntary error had been committed. When this error had been once committed, the truth soon disappeared, and a gigantic conspiracy was soon reduced to the dwarfish proportions of a barracks' plot. The conspiracy was to have broken out simultaneously at Cambray and Paris. The movement proposed at Paris was regarded as the principal, and that of Cambray as a mere appendage to the former. To get at the truth, the opposite course should have been followed—the movement at Cambray have been regarded as the principal one, and that of Paris as nothing but an accessory, for the purpose of diverting the attention of the government from what was going on elsewhere. In attaching the movement of Paris to that of Cambray, and not the conspiracy of Cambray to that of Paris, the ramifications of the conspiracy would have been naturally disclosed. It would have been seen that all the strong places of the north were engaged in the plot, with ten regiments, cavalry and artillery. The treaty of 1815 would have been seen violated by an alliance with Belgium, of soldier with soldier; two thrones would have been seen menaced by the same conspiracy, those of France and the Low Countries; and such

a plot would have been worthy of the deliberations of the court of peers, while that which was submitted to it was but a farce. The accused, confident of almost perfect impunity, could mock at their case, accusers, witnesses and judges.

This conspiracy had been framed with much skill; it failed in consequence of the hesitation of its chiefs. Though discovered twenty-four or thirty-six hours before the time fixed for its breaking out, its extension was so great that, though foreseen, it might have produced incalculable embarrassment. The conspirators had for their chief a lieutenant-colonel who had belonged to the imperial guard, himself subordinate to other chiefs, such as are indistinctly seen behind the curtain in all conspiracies, but who disappear at the moment of their failure. Besides all these, a large number of generals, several of whom belonged to the chamber of peers and the chamber of deputies, had promised their adhesion and co-operation, but only after the execution of the plan had been commenced, and its efforts had been crowned by a first success.

The plan was to raise on the night between the 19th and 20th of August, two regiments, one of infantry, the other of cavalry, forming the garrison of Cambray. The subaltern officers of these two regiments were in the interest of the conspirators; and the soldiers would have followed without hesitation their subaltern officers. The two regiments were then to unite themselves at Douai, to two other corps, one of infantry and the other of artillery; they were to seize upon the stores of the arsenal, and, increasing their numbers in passing Valenciennes by the addition of the regiment of dragons in garrison at that place, to have effected a junction on the frontier of Belgium, with a corps of four thousand Belgians, who were to have met them at a given hour and day.

It has been said, but I have no certain information of the fact, that a prince of the royal family of the Low Countries had promised his assistance, and that he would have placed himself at the head of the four thousand Belgians. Many of the conspirators were convinced of the truth of this statement; and it was perhaps in consequence of the discovery of this promised participation, that it was determined to tear off but a part of the veil which concealed the conspiracy.

It will be seen, after what I have stated, that in less than twelve hours, a little army of at least ten thousand men might have been formed. It would have been quickly augmented by all the accessions promised by the regiments or parts of regiments of the garrisons of the North, of the Pas-de-Calais and of the Somme; and in this condition, appealing to the army and the people, it would have commenced its march upon Paris.

It had appeared advisable to throw some embarrassment in the way of the government at the moment that the conspiracy was to break out; that, compelled to divide its means, it might be unable to oppose itself successfully against the march of the army of the conspirators. It was with this view that the conspiracy of Paris had been got up; it was to break out at the same moment as that of Cambray. The first act of the regiment of the garrison of Paris would have been to possess itself of Vincennes, an understanding having been effected with certain persons in that place. It will thus be seen that the government, obliged to de-

fend itself even in Paris, would have been unable to detach any of the forces assembled in the capital, and that a rapid march upon Paris would have encountered little or no opposition.

All this was extremely well combined. But there exists a fatal principle in all conspiracies, destined to produce the failure of thousands: It is the necessity of proselytism—that want, which all conspirators feel, of enlarging their circle—of associating first one friend and then another, with the happy chances of the future. The officers and sub-officers of the infantry regiments of the garrison of Paris, had successfully attempted to attach to their plan the officers and sub-officers of the royal guard; they had also secured some half-pay officers. In thus regularly enlarging the circle of their accomplices, they might naturally calculate upon meeting with some agent of the police, and so in fact they did. When the plot was once discovered, denunciations arrived in abundance, even from those who had participated in the conspiracy, but who were now desirous of making a merit of their return to the government, thus securing a pardon for the past. The conspirators of Paris were arrested while in bed, on the night preceding the day fixed for the execution of the plot.

At Cambray, everything was prepared for action, but a delay of twenty-four hours appeared necessary to the chief, and this delay destroyed everything; for it allowed time for the receipt of the news from the capital. In a conspiracy, every one has not the same determination. The arrests which had been effected in the capital, had the effect of intimidating a few weak men, who saw in them the destruction of everything. The conspiracy was, in consequence, denounced to the commandant of the place; who, from that moment, and I think, somewhat against his will, was forced to take the measures necessary to prevent the accomplishment of the plot. Some arrests were ordered by him, but after a long enough period, and in such a manner, as to allow the individuals most seriously compromised, time to effect their escape. Five officers, in fact, left Cambray in the disguise of wagoners, and fled into Belgium. The escape of the one who set off last, was effected in a peculiar way. It was Sunday, and the regiment was at mass; an armed platoon occupied the nave of the church. The colonel had just ordered the officer who commanded this platoon to arrest, on leaving the church, and to conduct to the citadel, one of his comrades, whom he pointed out. The officer who was to be arrested was in the choir, at the lower extremity of the groupe formed by the staff of the regiment. At a moment when every one had his face inclined to the earth, the officer charged to effect the arrest, approached his comrade and whispered in his ear, *I must arrest you on leaving the church; save yourself.* The latter did not wait to have the caution repeated; a half-hour afterwards, he was out of the city.

The five officers who fled into Belgium, and who had been received by the Belgians as brothers, were not long in being delivered up by the government of the Low Countries. They had fairly risked their lives, and when brought to Paris, only thought of dying courageously. They expected to be handed over to a council of war, and to be despatched in three days. It was only after the first interrogatories had been propounded to them, that they discovered that the govern-

ment did not desire to ascertain the truth, or at least that it did not seek it in the only way in which it could be found. Arraigned before a council of war, and despairing of any escape, they would have freely confessed their plans. But as soon as they discovered that they were only examined about matters of which they were ignorant, and that no questions were propounded to them about anything that they really understood, they held themselves upon the defensive, and guarded themselves by systematically denying everything. Some confessions were obtained with much difficulty; but so isolated as to be of no real importance.

The court of peers conducted itself throughout this affair with great humanity and moderation. It is only necessary that a political process should be protracted a long time to secure such a result; for, as there is nothing vile or shameful in a political crime, when the judges and the accused have been many months together, a kindness of feeling naturally springs up between them, and a heavy condemnation becomes, in consequence, almost impossible. If the chamber of peers had desired to act with severity, and to apply the law in all its rigor, the conspiracy of 1820 would have brought thirty heads to the scaffold. There was but one condemnation to imprisonment for ten years, two for five years, and three for two years. The accused had secured themselves a party in the chamber of peers, and the chief of this party was General, now Marshal Maison. He pushed his good will towards them so far as to take upon himself to propound interrogatories to the witnesses, which the prisoners would not have dared to do themselves, and which were transmitted to him, by them, in writing.

According to its custom, the court had appointed a committee for the preliminary examination. General Rapp formed a part of it. An officer of my acquaintance had been brought before him. The general thus examined him:

What was your business on such a day and such an hour on the esplanade of the citadel of Cambray?

General, since I must avow the fact, I was waiting for a young woman.

It appeared that this was the common excuse of all the officers of the garrison of Cambray. The general replied:

You belong to a singular regiment; all the officers attached to it would seem to pass their lives in running after women.

Nearly all of the examinations consisted of conversations about as serious as that which I have just reported.

Now let it be supposed that the court of peers had perceived, or had wished to have perceived the truth, and had investigated the conspiracy in its natural order, what an immense field would have been opened! The result of the actual examinations only established a conspiracy perfectly inexplicable.

I cannot conclude this chapter without reporting a singular answer returned by a witness to a question of General Maison. The witness was Count Léon de Juigné, colonel of the regiment of infantry in garrison at Cambray. The chancellor, the president of the court of peers, had examined him upon the subject of the political opinions professed by such of

the prisoners as belonged to his regiment. He had replied that generally they thought badly.

And what do you understand, Colonel, replied General Maison, by thinking badly?

To think badly—to think badly, is to think badly. It is an expression which explains itself.

But I do not, for my part, understand it, and I beg you will explain yourself.

Ah, well! to think badly, is to think like the left side (*côté gauche*) of the chamber of deputies.*

* *Le côté gauche* of the chamber is the most liberal portion of that assembly.

TO MY CIGAR.

Selected.

Yes, social friend, I love thee well,
In learned Doctors' spite;
I love thy fragrant misty spell,
I love thy calm delight.

What if they tell, with phizes long,
Our years are sooner past,
I would reply, with reasoning strong,
They're sweeter while they last.

And oft, mild tube, to me thou art
A monitor, though still;
Thou speak'st lessons to my heart
Above the preacher's skill.

When in the evening—lonely hour—
Attended but by thee,
O'er history's varied page I pore,
Man's fate in thee I see.

Awhile like thee, the hero burns,
And smokes and fumes around;
And then like thee to ashes turns,
And mingles with the ground.

Thou'rt like the man of worth, who gives,
To goodness, every day;
The fragrance of whose virtues lives,
When he has passed away.

Oft when the snowy column grows
And breaks and falls away,
I trace how mighty realms thus rose,
Then tumbled to decay.

From beggar's frieze to monarch's robe
One common doom is passed;
Sweet nature's works—the mighty globe,
Must all burn out at last.

And what is he that smokes thee now?
A little moving heap,
That soon like thee to fate must bow,
Like thee in dust must sleep.

And when I see thy smoke roll high,
Thy ashes downward go,
'Tis thus methinks my soul shall fly,
Thus leave my body low.

FRAGMENT.

They struck thee when they smiled the most ;
 They taught thee what thy heart had lost ;
 They bade thee hope for better things,
 Yet barbed each word they spoke with stings.

Wilt thou not fly ?—in other lands,
 Thy spirit may renew its bands ;
 Its hurts restore, and haply, heal
 The wound, that here, thou still must feel.

I do not ask thee love again ;
 Too well I know the thought is pain—
 Yet, if the heart that's truly thine,
 Be worthy thee, then cherish mine.

Long years ago, thou hadst its vow ;
 Most truly it renews it now ;—
 When youth has fled thy form, oh, see,
 It comes, in all its youth, to thee !

Though threat'ning tones would fain affright,
 And bitter looks and thoughts would blight,
 I come once more with fondest will,
 To love—to suffer with thee still.

Oh, fly with me ! If I thus blest,
 With home, and there a cherish'd guest,
 Can thus that home, that homage, fly,
 With thee to mourn, to toil, to die ;—

Sure then, thus scorned by all that knew,
 Thus doom'd to slight, to shame, to woe,
 Can well forget the world once known,
 And fly to love so much thine own.

NO. III.

THE POPULATION OF THE WEST.

It might be supposed that the fact of a man's emigrating to the west, was presumptive evidence of his possessing an energetic turn of mind ; that a man devoid of enterprise and decision, could scarcely find his way to the distant west, over steep mountains and rapid rivers. Perhaps, however, an indolent man, pinched by necessity, might prefer to seek some El-Dorado of the west, rather than delve for years in a thankless soil.

In the west, however, if men are not found more energetic, they are much shrewder than in the older states. In the older states things have comparatively settled down and assumed their level.

In the west the process of fermentation is now at work ; there is a very free interchange of opinion between all classes of people—a large amount of intelligence is in circulation.

The population being made up of persons from different quarters, bringing with them variant opinions and prepossessions, a sort of effervescence naturally results ; and thus many prejudices are thrown off, which

if they had remained in the quarter whence they came, might have adhered to them for life.

There seems to be more equality in the new than in the old states : men being in a measure strangers to one another, stand on their merits, and few will presume to claim precedence above the rest : aristocracy is a plant that does not bear transplanting. There is then in the west a great deal of familiarity between all classes of people ; but it must be observed, that this familiarity, which grows out of the circumstances of the country, has its limits. A may be very familiar with B, in the streets, or at the court-house, or the tavern, and yet never invite him to his house—nor will B ever expect him so to do. It is tacitly understood, there is to be a footing of equality, but it is to be under limitations, thus far, and no farther.

Lastly, on this head, when I say there is much social equality, I mean much, considering how much the southern institutions tend to depress mechanical trades and the inferior orders, and to build up an aristocracy of wealth.

The laws of the new states are highly democratic, as they ought to be, but the democratic principle may be pushed to such an extreme as to defeat its own purpose, the substance may be sacrificed to the shadow. Thus if the election of all officers, civil and military, is committed to the people, it will either constitute a heavy tax on their time, or, what will probably happen, the election will fall into the hands of a minority, composed too, perhaps, of the less informed part of the community.

Electioneering is also a great evil in this part of the union—a system, the result of which often is, that a man is elected not on account of honesty or capacity, but on account of his agreeable manners ; and sometimes, what is far worse, an unworthy candidate triumphs over his competitors by a series of falsehood, shuffling and intrigue.

These remarks are made in reference to Alabama, but are perhaps applicable more or less to several other similar states.

THE VILLAGE IN THE WEST.

It adds much to the consequence of a village for it to be the county seat. It then becomes the mirror of the county, collecting and reflecting the rays. Here the courts hold their sessions, and elections take place. To the village, the people of the country repair, to patronise merchant, mechanic, doctor, lawyer. Thus a continual communication is kept up between town and country, and thus all the news of the country is conveyed to town, and all the news of town conveyed to the country. But as news is more common in town than in country, so the country people appear more curious than those in town, and it is a sort of proverbial expression to go to the country to hear the news.

There is a remarkable degree of familiarity among all classes in a western village, and they occupy a great deal of their leisure in out of door chat. In these conversations everything is discussed. Many questions which in the old states are settled beyond debate, are matter of discussion in the west.

Besides courts and elections, the court-house is occasionally occupied as a place of worship. Indeed it is put to a variety of uses, according to the exigency

of the case. Sometimes the town-council meets there, or an assembly of the people, or a debating society, or an itinerant company of jugglers or musicians. Here too, the school exhibition is held, and here a number of societies hold their sessions, and here on the fourth of July the oration is delivered.

A village is an epitome of the world, in which a thousand little influences are at work—a thousand currents and under-currents. The same motives which are at work in London or New York, operate in the petty village of the far west.

There are many important events in a village—the arrival of the stage-coach and opening of the mail—a court or a muster—a camp-meeting, or the examination of a female seminary, which last, always attracts great attention. Crowded room; young ladies in white and blue—on the walls, theorem paintings, birds and flowers, and bead-work purses, reticules and pincushions—music on the piano; and it is a right pleasant sight to see so many young ladies together with bright and happy faces. These are the future mothers of the land, and they are now laying up treasures of knowledge, which shall survive, when the roses that now bloom upon their cheeks shall have faded away. I cannot look upon such a group of interesting young people, without longing to be acquainted with them, and their homes, and families; to hear from themselves their little histories—what incidents may have checkered the current of their lives, and all the hopes, and troubles, and joys that have fluttered their young hearts; and with Shenstone, I sigh to think how many charming people, and happy families, and smiling faces, there are in the world that I shall never see.

Petersburg, Va.

C. C.

LINES.

Oh, do not give this ring so dear
To one so meritless as me—
For worlds I would not raise a tear,
For worlds I would not breed a care,
My dearest, fairest girl, to thee.

And well I know your tears are shed
Through grief for those you never knew;
Then must your heart in sorrow bleed
When troubles gather round the head
Of him, this pledge makes near to you.

And cares must furrow o'er my brow,
For poor, unfriended, lone I stand;
My only friend on earth art thou;
Absent, or near, none heed me now,
In this, "my own, my native land."

Take back the gift, nor leave a thought
With one whose portion's want and pain;
Move 'midst the great, where thou art brought
By birth, and wealth, nor suffer aught
To bring my memory back again.

Yet—yet, should pleasures tasteless grow,
The bustling world distracting be,
And shouldst thou tire with glare and show,
Which poor like me can never know—
Then dearest—dearest, fly to me.

The stream, endeared by childhood's joy,
Will murmur still, though I am there;
Its shady banks, where slept the boy,
And birds, and flowers, will give us joy,
And glad us with its scented air.

JOURNAL

OF A TRIP TO THE MOUNTAINS, CAVES AND SPRINGS
OF VIRGINIA.

By a New-Englander.

To CHARLES E. SHERMAN, Esq., of Mobile, Ala.
These fragments of a Diary, kept during a tour made in his
society, are respectfully and affectionately inscribed, by his
friend and fellow-traveller, THE AUTHOR.

CHAPTER VI.

The Salt Sulphur Springs. Organ Cave. Red Sulphur Springs.
Gray Sulphur Springs. The season growing old. Gambling
at the Springs. Indifference to the Sick. A Sunday at the
Springs. Mr. Burnap. New comers. Farewell to the White
Sulphur.

White Sulphur Springs, August 3, 1835.

When I set out from New England, all the Sulphur Springs of Virginia were my objects of travel. But my delay at the Warm Springs, the delightfulness of Colonel Fry's situation, and the luxuriousness of his cuisine,—the propinquity of the mountain, and the delicious fascination of the baths, all combined to postpone my journey hither for many days;—and on arriving here, so much of novelty and excitement met me at every step, that I soon began to find the season too rapidly passing away to enable me to put my original design into execution. Therefore is it that, deferring to another season the enjoyment of a pleasure, all hope of which I cannot bring myself to abandon, I take advantage of some oral accounts of friends who have recently visited the Springs situated westward of them, to become acquainted with the rest of the Spring region of Virginia.

I learn that the road hence to the Salt Sulphur, extending about twenty-five miles westwardly, is by no means so good as that which I have already described as running from Staunton to White Sulphur. It is rough, rugged, and rocky. Yet it is not without its full share of that romantic and picturesque interest, that mark the whole tour of the traveller among these mountains.

On the road you come to the "Organ Cave," which I also visited a few days ago, but without much interest. Mr. Nicklin, of Philadelphia, in his recently published "Letters by Peregrine Prolix," has made the most of this locality, and certainly the "Organ Cave" is a curiosity, and well worth visiting, by the lovers of caves. For my own part, I prefer nature in her brighter phases.

My friend tells me that I should admire the approach to Salt Sulphur equally with that to these Springs. Perhaps he is correct; but I had fancied it to be too far removed from the more grand and imposing mountain scenery, compared with this establishment, to strike a stranger with equal force. I look upon the position of the White Sulphur Spring, in the very centre of an immense mountain valley, as at the same time its grandest and its loveliest characteristic.

But it was upon the subjects of the general accommodations, the delightful temperature of the climate, the walks, the rides, and the facilities for each, that my informant dwelt with the most eloquence and depth of interest. He tells me that there are not so many people there, but that those who are there can see and talk with each other under fewer discouraging circumstances of haste, hurry, and interruption. He told me of the ball-room, but also that there were seldom people enough there to occupy it,—of the music-room, where the piano, if opened, is not so constantly so, nor to so good purpose, as at White Sulphur. He described the cabins to me as being more uniform and handsome than those here,—but still he preferred *White Sulphur*, though he maintained that the *Salt* was an excellent change. But the table—there was the rock upon which all my friend's devotedness to this spot had been well nigh suffering total shipwreck. "Such a contrast!" said he—but I cut him short by assuring him that I was luckily no gourmand!

The waters are not so agreeable to the taste as those of the *White Sulphur Springs*,—and are more purgative in their effects: although upon an analysis, it has been discovered that the two waters are very similar in their composition. Pursuing the same romantic track which leads from this to the *Salt Sulphur*, we come, in about seventeen miles travel, to the *Red Sulphur*. My friend arrived there, on horseback, after nightfall, and could not of course see the *coup d'œil* from the mountainous ridge that overlooks the valley in which the Springs are situated. This is spoken of by frequent visitors to that neighborhood as being very imposing.

The arrangements of the accommodations for guests at this place are excellent, and such as to entitle the proprietor to support at the hands of the public.

The Spring is very beautiful, deriving its name from a kind of fossil substance formed on the bottom, and rendering its transparent and pellucid waters, (in the words of Macbeth,) "one red." The water is cool and palatable. The hotels and lodges, cabins, eating rooms, tables, and attendance, H. spoke of as unexceptionable. "But, ah," exclaimed the fond youth, "after all, it was not *White Sulphur*!" And I verily believe that were a deed of gift of the *Red* to be offered as the bribe to keep my enthusiastic friend from his annual visitation here, he would valorously prefer to adhere to his truckle-bed and *Davy Payne*,* in "Fly-Row."

I have since discovered, however, that my friend's partiality for the *White Sulphur Springs* had considerably warped his judgment as to the fine establishment of Mr. Burke at *Red Sulphur*. The following extracts from an article in this Magazine, published

last year (1837) are made, as an offset to the account of H. with a great deal of pleasure.

"The *Red Sulphur Springs* are situated in Monroe county, forty-two miles southwest from the *White Sulphur*, thirty-nine miles from the *Sweet Springs*, and seventeen miles from the *Salt Sulphur*. We are informed that a turnpike road is now in progress between the *White* and *Salt*, and that those sections of it which, last year, were difficult and rugged, will, before the next season, be safe and level. The road from the *Salt* to the *Red* is greatly improved by several changes of location; and was indeed, during the last summer, one of the best, if not the very best, in the mountains. The traveller may now take stage at the *White Sulphur* after breakfast, dine at the *Salt*, and reach the *Red* early in the afternoon. The approach by the mountain road which crosses Indian creek for the last time near Neel's tavern, six and a half miles from the *Red*, we think the most interesting and better road. Arrived on the summit of the eastern mountain, you soon reach a point from which an almost bird's-eye view of the valley bursts on your sight. The impression you receive is magical, and as your carriage moves rapidly down the hill, and you catch ever-varying glimpses of the landscape, you are gradually prepared for the tasteful improvements that await you on entering. After travelling through a country which abounds in magnificent natural scenery, but with rare marks of cultivation, and none whatever of taste, such a scene cannot fail to inspire agreeable sensations. The road is so conducted, as to bring in view the whole establishment before you reach the hotel: you wind round a lovely hill, having a terrace promenade, immediately over the road; several rustic seats on the slope; and on its summit a platform raised to the branches of a spreading oak, on which, in the evening, a fine band of music delights the listening visitors: on your right, the centre lawn, intersected by convenient and judiciously planned walks, and overshadowed by numerous majestic sugar maples; the rich green sward forming a lovely contrast with the snow-white buildings and enclosure.

"The table is abundantly supplied with every luxury and comfort, and the wants of the sick are peculiarly attended to. No expense seems spared to give satisfaction to the visitors; the rooms are furnished with simplicity and neatness, and the servants obliging and honest.

"The *Red Sulphur*, in sulphuretted hydrogen, approaches nearer to the Harrowgate water than any other spring known; and in purity, it equals that of Tunbridge wells.

"We shall now take a cursory notice of the diseases in which we have known it to be successful, and shall begin with consumption, for which it is most celebrated.

"We do assert that if there be a ray of hope, it is at the *Red Sulphur Springs*; and we say farther, that if it fails, no other remedy will succeed.

"Similar results may be expected in bronchitis, which, when a simple disease, it never fails to cure.

"Neuralgic cases have also been relieved when all other remedies had failed. Scrofula, of most marked and severe character, has yielded to its influence; and the most rapid amendment of the general health succeeded. Diseased liver and jaundice will be remedied by this water, if properly used. Chronic diarrhoea of long standing, in which the other waters failed, has been invariably relieved, unless it be that species symptomatic of consumption in its final stages. Diseases of the uterus, such as amenorrhoea, dysmenorrhoea, and prolapsus, have been relieved. The first we have never known to fail. In chronic rheumatism it is invaluable. In removing the constitutional effects of gonorrhoea, syphilis, and the free use of mercury, it has always succeeded. In gravel it affords great and speedy relief. Dropsy has been known to be relieved, and, in some instances cured. In diseases of the skin, and in expelling worms, it has been celebrated from its discovery."

Gray Sulphur. This youngest of the numerous family of watering places that have for many years past been springing up, a lovely progeny, among these mountains, lies about ten miles further on, and is, I believe, in the county of Monroe. It is, like the other Springs, the property of an enterprising individual, a citizen of the South, who has discovered that two Springs upon his estate possess valuable medicinal

* The major-domo of the Row.

qualities, the one for dyspeptic cases, the other being an excellent diuretic. These waters are principally visited by South Carolinians and Georgians, either their fame not being sufficiently extended, or their properties being of too limited utility, as yet to render them places of very general resort. The buildings and accommodations are admirably arranged with a view to the comfort of visitors; and the Gray Sulphur may thus, even now, challenge comparison, in many important particulars, with her older and more celebrated sisters.

So much for *Salt, Red, and Gray Sulphur Springs*. Return we once again, not unwillingly, to the lovely shades and delicious waters of the *White*.

Aug. 5.

This may be considered as the grand climacteric of the season, and there are already symptoms of a speedy turn in the tide of events at White Sulphur. The sun of fashion is almost, if not quite, in its zenith, and it will soon begin to go down in the firmament, its rays disappearing one by one, and ultimately setting behind the blue mountain tops that overshadow this pleasant valley, until another season shall open.

Meantime the dance goes merrily on, the moon lights lovers on their evening rambles, the lute of the serenader is yet in tune, and all is gay and merry in the happy community, luxuriating among these pleasant mountain vallies, soon, too soon, alas! to separate, and perhaps forever!

Upon looking over my journal, this evening, I find that I have been sketching a succession of bright pictures, and describing a life devoted by hundreds around me to pleasure; thus showing only the lightest and brightest, the gayest and most pleasing tints of the picture. A season at a watering place, or a succession of watering places, is not, however, without its full proportion of that mixture, which, to the reflecting and benevolent mind of the philanthropist, tends to soften down the too gaudy colors that are apt to dazzle and deceive, into a sombre tint, upon which and through which the eye of contemplation may look without danger or deception, as the painter graduates the lenses of the Claude Lorraine glass, until, by a skilful combination of them, he has obtained the power of blending them harmoniously into one.

There are several subjects connected with my present residence, upon which my pen would fain dwell, when I find my mind taking this turn of reflection; and the chief among these is that of the indulgence afforded by the tolerance, not to say the direct encouragement of gambling, as a systematized establishment, by the proprietor and directors of this place.

A considerable portion of the grounds at White Sulphur Springs are set off and appropriated to faro and billiard tables and other games, where regular professors of the low art of gambling are regularly quartered, and for the occupation of which a certain stipulated rent, and that a large one, is regularly paid. This is a blot on the otherwise fair picture that the lover of nature in so beautiful a spot is fond of drawing, as he contemplates it from all its points of view, which should not be allowed to mar its beauty and destroy its harmony. I do not object to the moderate and proper use of many games that are used by gamblers as lures to the unwary and inexperienced. I only remonstrate against such a use of those games as require seclusion from the

eye of the world, and which renders it a disgraceful and ignominious act to play at them openly, and in the face of day. The proprietor of these Springs is wealthy,—and abundantly able to dispense with such accessories in the accumulation of property,—he can well afford to wipe out this, the only material stain upon the otherwise enviable reputation of his establishment. What to him are the few thousands that he receives from the tenants of that part of his estate, which, if not thus occupied, could be devoted to the wants of many who are now turned away, while vainly endeavoring to gain access to the means of regaining lost health, and of sharing in the innocent enjoyments of the society with which this place abounds? This is a custom that has grown up, and become indurated by long indulgence, and I sincerely hope that with increasing patronage the White Sulphur Springs may soon break its chains, and finally subdue it entirely.

* * * * *

Sunday, July 10.

Rev. Mr. Burnap of Baltimore being at the Springs, religious services were held in the hall, in the presence of a large and attentive audience. There was something very touching in the manner in which these services were performed, so primitive and fraught with old associations, and recollections of by-gone times, when our fathers worshipped God without any of those striking aids to devotion, which the increasing wealth, luxury, and improvements of society have established. The simple form of reading the hymns by alternate couplets, and then singing them, as with one voice, in the whole congregation,—the devout attention to the improvement of a portion of the word of God, characterising the whole assembly, though composed of adherents to different sectarian creeds,—and the sermon itself, a practical illustration of that most admirable sermon, delivered by the Founder of our religion to his disciples and the multitude from the Mount,—all combined to render these religious observances more impressive than any it has been my fortune to witness for years.

Where should God, the wise builder, and beneficent sustainer of the universe, be worshipped fitly, if not here,—amid the proudest monuments of his boundless power, the most touching evidences of his unceasing kindness, the loveliest associations of his ever watchful care for the health and welfare of his children? The salubrity of the climate, inviting the invalid to luxuriate in its health-giving influences,—and the fountains opened amid the vallies for the cure of disease, for the renovation of the weary, wasted form, for the strengthening of the dejected spirit,—call loudly upon the grateful heart to offer up its acknowledgments of the beneficence of the Almighty, here, in the temple his own hands have built: a temple, to which the name of that at whose gates the apostle bade the blind to receive sight and the lame to walk, may be more appropriately given,—“*Beautiful!*”

The loveliness of the day was in unison with the spirit that seemed to pervade the services at the church. Nature was in her most enchanting mood, and called aloud with all her thousand voices to join in the praise of the God whose inspiration taught them their glad chorus. It was indeed a lovely Sabbath. The gaiety of the neighborhood ceased in deference to the religious spirit that seemed to pervade the whole valley,—the

hum of busy intercourse was suspended, and something more like devotion than anything I had seen on former Sabbaths among the mountains, appeared to characterize the place. I believe that there is a deep-rooted natural sense of the existence and superintending providence of God implanted in every bosom,—and I do not believe that its impulses are ever entirely wanting, how much soever they may be disregarded by the thoughtless and the indifferent. This consciousness is the secret of human accountability,—and its results, its effects upon the conduct (the outward conduct, at least,) of mankind, may always be relied upon as tending to the establishment and preservation of the observances of religion.

* * * * *

New comers to the last. The northerners are beginning to pack up: some to make hasty visits to Salt, Red, Sweet, and Gray,—and others to reach home by the nearest routes. I have heard of some few indefatigable pleasure hunters, who think seriously of looking in on the water drinkers at Saratoga and Ballston, and the lingerers by Niagara. I caught a murmur of “commencement” a day or two since,—and some legal gentry are bethinking themselves of special pleas for September and October terms. Young ladies are beginning to look sad, and young men mad, and their papas and mammas glad, at the near approach of the returning day. The invalid is sighing that he came so late, or rejoicing that he came so opportunely,—and the votary of fortune, fun and fashion, respectively, is lamenting that his glories and excitements are so soon to be over.

Yet Virginia is still pouring in her myriads of fair ones and rare ones,—and the ball seems to a new comer to be as merrily kept up as ever. But the tide is just turning, and a few short weeks will witness its last ebbing wave.

* * * * *

August 12.

For myself, I have for the last ten days been in the predicament of the poor wight commemorated in that old verse, quoted by Walter Scott, and for aught I know the production of his own muse, who

“Now fitted the halter,
Now traversed the cart,
And often took leave,
Though loth to depart.”

But every thing must have an end, and a fortnight at White Sulphur, as well as every thing else. So good-bye, pleasant walks and shades, delightful drives, happy crowd of friends, blue hills, green forests, and deep valleys. Farewell *Hygeia*! May you for years continue to administer health and happiness to the myriads that cluster annually around your delicious fountain. Adieu, most gallant master of the festivities at White Sulphur! Well have you earned the wreath of fame that this season will add to those already won, and which even yet verdantly grace your smiling brow. It has been yours to take the loveliest and the fairest of the daughters of Columbia by the hand, and to bid them welcome to the enjoyments of this happy valley. May you return to your home in contentment, and continue as heretofore to renew your youth for future harvests in the field of gallantry. Good Colonel, fare you well! And mine host of the fountain, patriarch of the Sulphur valley, adieu! Pleasantly have I sojourned in your delightful

abode, and reluctantly do my feet turn from its threshold. May you live to what you seem, even now, to have hardly begun to anticipate, a green old age: and may your children possess themselves in the patrimony that shall descend to them, at some future day, in the same unpretending and praiseworthy manner, that has characterized the career of their father. Good bye, Davie, and Duncan, and Bob, ministers to the creature-comforts of the denizens of White Sulphur! May your gains for the season prove adequate to your respective merits, for what were such an establishment without such aid as yours? Adieu, one and all, and “may your shadows never be less!”

My travelling companions are a member of Congress from Maryland, a gentleman from Alabama, with whom I have formed quite an agreeable acquaintance, and a half dozen Virginians. We shall reach the Thermal waters tomorrow, and my friend and myself will pass some days there, to finish off our experiments upon the healthful qualities of the Virginia Springs.

THE VICISSITUDES OF LIFE,

As portrayed in a Sketch.

BY A LADY.

“What is the tale that I would tell? Not one
Of strange adventure, but a common tale
Of woman's wretchedness; one to be read
Daily, in many a young and blighted heart.”

L. E. L.

“Le monde est rempli de beaucoup de traverses.”

Moliere.

Ida V—— was the breathing portraiture of all that poet has sung, or painter embodied. At the time I first knew her, scarce fifteen summers had shed their radiance over her opening loveliness; she was, as it were, on the vestibule of womanhood, “beautiful as a sculptor's dream,” with a joyousness rarely varying, bursting like a fountain from its recesses, gleaming like a sunbeam over every object that came within its influence, and touching all things with its own golden and gorgeous hues. I have gazed on her with that intensity of admiration, which “outstrips our faint expression,” and never have I turned from the contemplation of her brightness of beauty without an involuntary sigh, a sickness of soul, lest a temple so glorious might be scathed by the rude blasts of adversity, crushed beneath the avalanche of “life's dark gift.” I have sometimes hoped, that unlike all that is most fair and bright, she would know no sorrow; that time, with its accompanying mutations, would bring unchanging bliss and gladness to her, that “like the long sunny lapse of a summer day's light,” existence would never be shadowed to her; but close as gloriously and auspiciously as it had dawned.

Idolized by all who knew her, followed by the lingering gaze of admiration, caressed by her friends, it would have been strange had Ida V—— dreamed life's book held, amid its pure leaves, one gift of darkness; the phantoms of sorrow had never invaded the beautiful scenes the world held out to her. Her feelings, though

deeply tinged with gladness, were, however, not without that usual accompaniment of a gifted mind—keen sensibility. She was morbidly alive to neglect from those she loved, and I have seen the tear brightening the lustre of her soft dark eye, laving the bloom and gloss of her young pure cheek, as her heart whispered the suspicion of alienation on the part of those to whose affection she clung; but it was only momentary. The cloud passed off to make succeeding sunshine more sparkling, and she was again wreathed in smiles—the personification of “youth and hope and joy.”

Mr. V——, who had emigrated to America shortly subsequent to Ida's birth, was an European, and it was beneath the starry skies of Italy, encompassed by all that is most beautiful and seductive in nature, that Ida V—— first awoke to wayward life. Her mother had closed her eyes in death almost immediately after giving birth to her only child, and the feeble wail of her infant voice stilled the bursting anguish of her father's grief, as it reminded him that although the ruthless spoiler had invaded his hearth, it had not borne thence *all* his “household gods.” Time, whose obliterating tide effaces the memory of the keenest grief, was not without its balm to the lacerated feelings of Mr. V——; and before the smiles and caresses of his infant daughter, whose features wore the impress of its mother's loveliness, the first agony of sorrow melted. He blessed heaven that he was not desolate, and the “lightly-fibred sprays” of his affection clung to the unconscious babe, with a tenacity the greater that he had nought else to love. As I have before said, he fixed his residence in America, in a retired and beautiful spot, which he took pleasure in ornamenting with classic elegance. Beneath the watchful care of her doating father, Ida sprang to womanhood, adorned with all the graces of her sex, gifted with a rare beauty, and her mind enriched with all those charms of literature, which, like the “glittering glory” of the fabled talisman, dazzled, but not to deceive. Though deprived of the gentle and elevating influences of a mother's love, a mother's care, she was as femininely soft and refined, as shrinkingly timid, as though she had been nurtured beneath its beams. Her whole soul seemed concentrated in her father, and there was a beautiful and touching blending of confiding devotion, playful tenderness and worshipping deference, in her deportment towards him, none predominating, but mingling in harmonious concord. Amid the shades and retirement of her own home, commenced the intimacy of that friendship between us, which after years so strongly cemented; but the imperative demands of duty soon called me from the enjoyment of personal communion, and with a tearful eye and sad heart, I tore myself from the parting embrace of Ida.

Time passed on, bearing many changes. The health of Mr. V—— became precarious, and he was induced to remove for a time to Italy. During their sojourn there, which was prolonged to nearly two years, I heard often from Ida; she seemed, with the enthusiasm inseparable from her temperament, to have burst upon a new existence in this land of poetry and romance, where every object glows with beauty beneath a sky always bathed in light, where the whisper of past grandeur is borne on its balmy breezes; the tale of departed glory written on its crumbling monuments of empire;

the echo of fortune's waywardness murmured within the tottering walls of its decaying palaces. Six months had fled, and I hailed a letter from Ida, which told me herself and her father were domesticated in the interesting family of an Englishman, who was residing in an elegant and picturesque villa near Naples. She dwelt with rapture on their new friends, and from the spirit of her letter I learned the lady of the mansion, Mrs. Clifford, was a genuine and practical christian, whose piety threw its halo round their circle, gleaned from every passing incident subject for gratitude to an Almighty Being, and the brightness of whose faith shone with unflickering lustre amid the mists of Romish superstition which environed her. To one whose susceptibility was extreme, who inhaled, as it were, the sentiments and principles of those whom she loved, and with whom she associated, this blessed example was not without its influences. Thoughtfulness perceptibly imbued the tone of Ida's communications, and usurped gradually the place of that light-heartedness and sportive gaiety, which had so characterised them. I was not therefore surprised to hear, before a year had passed, that she had renounced the “gilded hollowness” of the world's pleasures, for the hope of imperishable and eternal joys.

The term of their residence in Italy, though considerably prolonged after this event, was now drawing to a close. Mr. V—— found himself so renovated in health, he bethought him of returning to America, which, though but the land of his adoption, was loved by him far better than the sunny clime which had smiled alike on his happiness and misfortunes. It was early in April that I received from Ida intelligence of their intended embarkation for the United States, naming the probable time of their arrival, and conjuring me to meet them at their own home. It is not to be supposed I was deaf to these solicitations, and at the appointed time I found myself near Mr. V——'s residence. May—gladsome, laughing May—the bride of the summer, and child of the spring, with her fairy gifts of sunshine and flowers, had shaken her sparkling wreath over the smiling landscape, and every object had waked into life beneath the touch of her golden wand. I had scarce time to cast a glance towards these bursting beauties, for the carriage was bearing me rapidly to the house. On the portico I beheld Ida waiting to embrace me; a moment more and I was encircled in her arms—from her I turned to greet her father, who, with paternal fondness, drew me to his bosom, and imprinted a kiss upon my brow.

Oh, ye hours of happiness! ye days of youthful joy! ye are sunk into the ashes of the past! ye are shrouded beneath its dark pall—hidden within its hollow channels, but your fragrance has not departed with your freshness—

“Summer's breath, or spring,
A flower—a leaf,”

oft conspire to unseal the fount of memory, whose waters come gushing forth like rich music bursting into a requiem for that fate which consigns the brightest to earliest decay.

After the first salutations were over, I followed my friend to the saloon, where my attention was immediately arrested by a pale, romantic looking girl, who was seated in a recess of the apartment, seemingly ab-

sorbed in the pages of a book which rested on a table before her. Her profile was turned towards me as I entered, and struck me painfully with its attenuated and spirit-like appearance. Her features were beautifully and classically chiselled, and though "the rose of youth" had apparently been prematurely blighted in the dark, luxuriant tresses of her hair, which hung like a cloud around her, in the delicately pencilled and curved brows, the pure forehead and perfectly formed mouth, there lingered, if not the bloom of beauty, its breathing soul.

As Mr. V—— called "Nina," she raised her lustrous eyes, with an expression of such sadness and melancholy, that I was forcibly reminded of the poetical words of a certain authoress, and mentally applied them to the fair stranger before me. "If in her depression she resembles night, it is night wearing her stars." Slowly and gracefully she approached us. Mr. V—— presented her to me, and as she returned my greeting, I almost started; her soft low voice floated so like melody from her lips. She was dressed in deep black, which, added to the almost unearthly purity of her complexion and her mourning habiliments, (with a richly gemmed crucifix which hung on her breast,) told its own tale. After we were seated, Nina returned to her table and book, and on Ida crossing the room to speak to her, Mr. V—— briefly told me she was of Italian parentage, almost noble lineage, and had received her education within the walls of a convent, from which she had been emancipated, an enthusiast in the Catholic religion. High-born, surrounded by the glittering fascinations of rank and wealth, himself and daughter had formed her acquaintance. Her suavity of manner and superior intelligence, had contributed towards the continuance of that acquaintance; soon it sprang into friendship, and the successive calamities which had deprived her of friends, fortune, and even a home, in the little space of a few weeks, had increased the interest he had conceived for her. The peculiar desolation of her situation, encouraged him to offer her his guardianship and a home in his house; an offer which she had readily and thankfully accepted. This information added to the feeling of sympathy with which I already began to regard the fair Catholic—and every hour tended to augment the interest I entertained for her.

From the contemplation of Nina's subdued loveliness, I turned towards my friend, to see if time's wing had brushed aside one flower of that beauty which used to come over the beholder like "a burst of sunlight." She was now at my side, pouring forth her enthusiasm of admiration for the land she had so recently quitted. She was still beautiful, I saw at a glance, and as I gazed into her face as she continued to speak, and watched the "thousand blushing apparitions" which swept so changingly over her cheek, varying with every feeling she expressed, I lamented not the partial decay of that fading bloom which had given to her early girlhood its flashing brilliancy. Her smile was sweet, but not so frequent as formerly, and on the polished fairness of her lovely brow, thought had made itself a beautiful resting place. The rays of gladness which had so unceasingly danced in her beaming eyes, were shadowed by the depth of tenderness which reposed there so sweetly. There was, too, an irresistible softness and fascination of manner about her—a poetry of expres-

sion clothing her lightest words, which added unspeakably to her attractions. In short, she was no longer the laughing, rosy girl, sporting so heedlessly in life's path, but the regally, intellectually, beautiful woman, who felt a more exalted destiny awaited her than butterfly-like to be lured by the gorgeous hues of every flower which blossomed around her.

Before I had been an inmate of Mr. V——'s household many days, "a heart's hushed secret" was whispered in my ear, and I learned Ida was betrothed. The recital was too eloquently told to be forgotten, and I remember with vividness the tumult of feelings which crowded my bosom, as I first hearkened to that tale from the friend I had loved so long and so truly. There was the voice of joy for her coming happiness—the whisper of hope, that her sky might ever be as bright as now, mingling with other thick-coming fancies, which I thrust from me, not choosing to mar the sunlight of the future, by lowering forebodings.

"It was after we had been in Italy about eight months, and in the family of Mr. Clifford," said Ida V——, "that I first saw Gerald Beaumont. The increasing danger of my father's malady, which had induced us to remove from Naples, where we had established ourselves upon our arrival at Italy, and accept the polite and kind offer of our English friends, was not mitigated for several months, and my time was unremittingly engrossed for many long weeks in attendance on him. The duties of the sick chamber were lightened by my inestimable friend, Mrs. Clifford, and it was in those vigils, those hours of watching, beside my dear father's pillow, that I first learned to appreciate and admire the principles of piety, un murmuring resignation, and trusting faith, which she took pains to infuse into my soul. I have adverted to this change in my letters to you. Mrs. Clifford's whole deportment was the most beautiful exemplification of all that is hallowed in our blessed religion of which it is possible to conceive, and I cannot pass over this period when I first awoke to a sense of my depravity, and subsequently grasped the fulfilment of the most precious promise, without adding this merited tribute to my spiritual guide.

"The violence of my father's symptoms yielded before the remedies which were employed, and though he was still unable to quit his chamber, I could sometimes resign my duties near him for the enjoyment of a refreshing ramble over the beautiful grounds of Clifford villa. One day I had returned from such an excursion, and before ascending to my father, I had thrown myself listlessly and languidly in the embrace of a luxurious *fauteuil* which stood in the library. I had scarce recovered from the fatigue of my walk, and was preparing to seek my father's room, when an advancing footstep startled me, and before I had time to arise from my seat, the door of the apartment was thrown open. A tall and elegant looking young man, in a travelling dress, entered. He was evidently as much surprised at beholding me so unceremoniously established, as I had been at the interruption. I instantly arose, hastily returning the courtly salutation of the young stranger, and retreated through a door opposite the one near which he still continued standing. It was not till the dinner hour approached, and I repaired to the drawing room, that I learned the new comer was

Gerald Beaumont, the nephew of Mr. Clifford, who was making his continental tour, and had arrived at the seat of his uncle, intending to spend some time with his relatives.

"I will not dwell," continued Ida, "on the progress of my acquaintance with Gerald Beaumont, but hasten to speak of that event which has conspired to affect my future destiny. My father was enabled soon after Gerald's arrival, to join the social circle of our kind friends, and I was exposed to all the fascinating influences of the young Englishman's society. In this manner weeks fled, and before I was aware, the hope that I was beloved seemed inextricably interwoven with my happiness. The soul of tenderness which was conveyed in the tone in which Gerald addressed me, the deep affection which spoke in his very look, were enough to brighten the dimness of that hope. Yet no magical words, 'small, still, but sweet,' had bid me revel in the depth of bliss I had dared to image—no murmured vow had shown me my dream was reality. My father had long been anxious to visit Rome; thither he now purposed going, and the day before the one appointed for our departure from our hospitable friends, wooed by the balmy breath of summer's eve, I had strayed to the tiny lake which spread its silvery expanse amid the embowering shades of Clifford villa. Gerald followed me, and before we sought our friends, I had been told I was beloved with a passion unswerving and undying. Amid the hush of nature's repose; amid the glories of 'parting day,' we plighted our troth. My father confirmed it with his blessing. Our union was deferred till my return to America, and accompanied by Gerald, we spent the remainder of our stay in Italy, partly at Rome, partly at Naples. A few weeks previous to our departure for the United States, Gerald sailed for England in order to make some arrangements preparatory to changing his place of residence; for he has yielded to my wishes to fix his home here. He is an orphan, and has no ties which this decision would sever. Soon after, we bade adieu to our cherished friends, to the bright land which had fostered my dawning happiness, and in a few more days we were bounding 'o'er the glad waters of the dark blue sea.' My last letters from Gerald hold out to me the hope of his speedy arrival in America."

"But Ida," said I, after a moment's pause, "what can you tell me of Nina? My imagination has not been idle in picturing the history of one whose very glance is fraught with magical interest."

"Poor Nina!" sighed Ida, "her history is one, as far as I know, of fearful grief, and its pages bear sad testimony to the oft reiterated truth of earth's mutability. When we first knew her, she was encompassed by luxury and pomp, glowing in all the fascinations of beauty, and the incense of flattery and adulation was wafted to her shrine by all who knew her. With the sunshine of fortune this homage has departed. The sorrows of her heart are written on her brow in ineffaceable characters; the flowers of life have withered ere its morning has past, and the bitterness of her destiny is brooded on by her with an intensity of feeling which is blighting her soul's energies. We became acquainted with her some months after our arrival in Italy; our intercourse soon ripened into friendship, and the circumstance of her being attached to the Romish

communion increased the feelings of interest with which I regarded her, for I could not bear to think that her youth and bloom and gladness of heart should be immolated to superstition, and after I had become a participator in that 'peace which passeth understanding,' I conceived the hope of her conversion. Since that period my efforts to exhibit to her the purity and beauty of our holy religion, in hues which might disclose the glaring inconsistency of her professed faith, have been unceasing. I had the influences of early education to combat, than which, you know, none cling with a more tenacious grasp. I now hope she is only a nominal Catholic, though she has not openly abjured her faith."

Ida now ceased speaking, and the subject of Nina's history was never after revived by me, for there was a sacredness in the sorrows of the beautiful Italian, on which I forbore to intrude farther.

The moments passed with "a dove's wing," the singularly interesting Catholic girl entwining herself around me slowly, but surely. She joined us occasionally in our strolls, sang to us sometimes in her own sweet, low, thrilling tones, the lays of her "far-off land," in its melting, rich and glowing language, accompanying herself on her harp, the only relic of her departed grandeur which she retained—but she was more frequently secluded in the solitude of her own apartment, holding converse with her sad thoughts, bathing the memory of the past with such tears,

"As rain the hoarded agonies of years
From the heart's urn."

She seemed not insensible to my proffered affection, and before many weeks the chill of reserve had faded from our intercourse, and we were friends. I passed many quiet and happy hours with her: when sometimes she would revert with tearful sadness to her past sorrows, in the tone of resignation, humility and faith, which pervaded these conversations, I recognized not the sentiments I had been taught to expect from the Catholic, but those of the genuine and humble Christian, receiving chastenings with that unassuming gentleness and meekness which spring from unmixed love of an Almighty Being.

Nor did the arrival of Gerald Beaumont, which happened about this time, interrupt our tête-à-têtes. 'Tis true, Ida was less frequently with us, but then we could not regret it, she seemed so happy with Gerald; indeed I could not wonder at the idolatry of that affection he had waked in the bosom of my young friend; there was something so indescribably fascinating about him. It was not the symmetry of feature which rendered him so strikingly, so intensely handsome, though his were by no means defective; it was rather the glowing, speaking expression of the large, dark, lustrous eyes, the stamp of towering intellect, of "inborn nobleness," which reposed so proudly on the broad, pale brow; and then the deep, touching melancholy, which at times shaded his countenance, seized so on one's interest, and the rich tones of his voice were at times so thrillingly sad, one could not help imagining life's morn had not been cloudless. Be that as it may, 'twas evident he loved Ida with enthusiastic passion, and not willing to act Mademoiselle De Trop, I left the lovers to seek their own enjoyments, and continued to devote myself to Nina, whose gradually decaying health awakened

not our apprehensions; the unnatural brilliancy of her eye, and beauty of her rare smile, veiling the progress of the destroyer. Meanwhile the preparations for Ida's marriage continued, and the bridal morn at length arrived, being ushered in amid the cloudless brightness of heaven, and the flowering verdure of earth.

In the radiant glances of Ida, hope spoke, nor were the jewels sparkling amid the waves of her shining hair more gloriously bright than the smile which seemed banqueting on the roses of her young cheek. As I gazed on her in irrepressible admiration; as I watched the beams of fond affection which fell from the dark, flashing eye of the lordly-looking bridegroom on the beautiful being at his side, and hearkened to the tones of Ida's voice, as tremulous with agitated joy, she pronounced the "fitting vows," I prayed that the golden hours which were opening before them might never fade before the touch of decay, that no dark worm might prey on the bud of happiness which was unfolding its leaves in their smiling path.

But my eyes unconsciously sought Nina. She stood near the fair bride, and I could not conceive that even in the flush of health she could have appeared more touchingly lovely. The lustre of her expressive eye was not dimmed, and as I looked on her I could not believe the shadow of the tomb was then resting on aught so beautiful. She met my gaze—she read my thoughts, and a bright sweet smile wreathed her lip momentarily; it spoke of the hope of bliss beyond the grave.

In the evening, when I repaired to her apartment, she bore the traces of weeping, and as she extended her hand towards me, the large tears fell glittering on her sable dress.

"You will not be surprised," said she, "that the scene of happiness I have so recently beheld, has recalled to me my own blighted fortunes; and though I do not doubt the justice of that decree, which has thus darkened my horizon, I sometimes so far yield to my infirmity as to wish it had been otherwise. Your unwearied kindness and affection, my dear —, bearing so meekly my petulance and ill-humors, have endeared you to me beyond the power of words to express."

"Dear Nina," interrupted I, pressing my lips to her pale, silken cheek, "who could accuse you of ill-humors? One, so gentle, so uncomplaining."

She smiled gratefully, and continued—

"If the relation of those calamities which have thus depressed me, and thrown their shadows athwart my path, will not tire you, you shall hear it; and when the star of prosperity shines gloriously on you, when the bright wings of the world's favor are folded around you, remember the voice my history breathes. 'Lean not on earth;' trust it not; be not lured by its fair, but false promises; for its golden dreams must vanish, and what are the sensations of that bosom, when all it has loved, all it has rejoiced in, is melting in its grasp, and a hereafter is disclosed, shrouded in gloom, deep and impenetrable?"

As Nina concluded, the glow of enthusiasm bathed with its rich hues her pale cheek,—she looked not like the bride of death,—but it passed; for it was but the rush of thought which had stirred the waters of memory.

A gorgeous sky, which Nina said was "not unlike

the purple heaven of her own Italy," looked down upon us, and seemed to smile in mockery of the tale of grief to which I hearkened, and of whose bitterness I had not dreamed.

"My family name," said Nina, "is Genovesi, and my earliest recollections are blended with my mother—my beautiful mother! My father died while I was yet a feeble, wailing infant, leaving my mother the possessor of a princely estate. Surrounded by all the blandishments of wealth, youth and beauty, it is not to be supposed she was without many lovers, who, though they might not have been indifferent to the first mentioned attraction, were nevertheless as likely to have been captivated by her sunny loveliness; for I never remember to have looked on a face on which the soul of beauty was more indelibly stamped. Yet she nobly rejected all these offers, and devoted herself to the care of me—her only child. She was a zealous Catholic, and in the tenets of our national faith I was bred. She piqued herself on the long line of almost noble ancestry which we could boast, and failed not to inspire me with that pride in which she gloried. I was taught to believe myself all-powerful in the majesty of my titled kindred, in the accumulated wealth which I was to inherit, and in numberless other advantages of which I was not slow to imagine myself possessed. In short, I grew up a haughty, self-willed, obstinate, overbearing child, and if my mother was aware of my faults, she was too blindly devoted to me to correct them. I loved my mother with intensity, and I could not believe another than herself had ever been gifted with such superlative beauty. I used to stand for hours gazing on her portrait which hung in her dressing-room, and which represented her in the mid-day blaze of her loveliness, till in the enthusiasm of my admiration, I would exclaim to myself, 'Shall I ever be such a woman as my mother?' To hear myself, therefore, often called strikingly like her, to be said to resemble her, as she was in her girlhood, was a flattering observation; the pernicious effects of which were soon visible in the air of self-complacency and vanity, which assumed the place of that innocence and purity and freshness of feeling so inseparable from childhood.

"At the age of ten years I had the inexpressible misfortune to lose my mother; she was ill but for a short period; and when I was taken to see her for the last time, I could not look towards her without trembling; for I had never beheld death before. She called me to her bedside, and with a sad smile, placed in my hand a rich crucifix, saying to me—

"'Keep this, my child—remember your mother—be faithful to your religion—that holy religion, in which I die—the blessed Catholic faith.'"

"I bowed my youthful head upon the jewelled gift as I responded to my mother's dying charge. I was then suffered to kiss her pale cheek, and while she laid her hand on my head and blessed me long and fervently, the first tears I ever remember to have shed stole from my eyes.

"After this heavy bereavement, which I felt long and sensibly, I was sent to a convent for the completion of my education. I spent many years in this nursery of my faith, and as I hearkened to the beautiful ritual, when it rose with rich melody, filling the fretted dome of the chapel where I was a regular attendant—as I

viewed the gorgeous ceremonies which appeal so strongly to the senses—as the full clear voices of the sisters, swelling so musically, and blending so exquisitely with the deep-rolling organ, floated majestically through the magnificent building—as the glowing hues of the noble paintings, which seemed almost endowed with life, breath and being, met my eye in whatever direction I turned—as the golden censer swung to and fro, emitted the rich and overpowering fumes of incense, I buried my face in my hands, and in adoring humility, knelt reverently to the spirit of that religion in which I had been reared, in which I then dwelt, and which I soon learned to love with a fanaticism of whose extent I was not then sensible.

“I was the petted favorite of the whole sisterhood—my faults were overlooked—my offences palliated—my virtues, and they were few enough, applauded and magnified—that greatest ornament of the christian character, ‘a meek and quiet spirit,’ being scarcely assumed by me.

“The time was now approaching when I must exchange the manners of the wayward and spoiled child, for the bland and courteous address of the young lady. I wanted but two years of seventeen, and that was the period assigned for my leaving the convent and going to reside with my mother’s brother, who had been appointed my guardian, and whose home was in Venice. During this interval, I threw aside my childish ways, applied myself with intense vigor to my studies, devoted a portion of my time to the acquirement of accomplishments, and all this, with so much success, that when my uncle arrived to take me home with him, he expressed himself delighted with my attainments.

“It was a sad morning to me when I bade farewell to the gloomy old convent, and prepared to accompany my uncle to a place of which I knew nothing. Weeping, I tore myself from the embraces of the sisters who crowded around me, praying the holy Virgin to protect and bless me. I threw myself in an agony of tears beside my uncle, in the heavy lumbering coach, and as the dark mass of building in whose walls I had spent so many years, grew gradually more dim in the distance, as I at last strained my eyes in vain to catch a parting glimpse of the venerable pile, I leaned back in my seat and yielded, unrestrainedly, to my distress. My uncle did not seem flattered at this exhibition of feeling on my part, and as the emotions of youth are almost as soon lulled as excited, I exerted myself, and not unsuccessfully, to repress the grief which had crushed for the time my natural exuberance of spirit.

“At the close of the third day I found myself in the princely palazzo of my uncle, where a suite of apartments was appropriated me, and where I found myself encompassed with every gorgeous luxury which my inordinate love of pomp and display could desire. I needed no solicitation to plunge in the vortex of pleasure, and soon resigned myself delightedly to the brilliant and intoxicating homage my station and attractions commanded. With an exultant step and beaming brow, I might be seen in the halls of festal mirth, the gladsome laugh seeming to spring from a light heart, and wooing ‘joy’s echo’ from every bosom. Yet there were moments when I felt happiness dwelt not in the glittering throngs of the great, that the flowers scattered so richly o’er life’s highways, refused to yield freshness, fragrance or beauty, when trans-

planted to the crowded walks of fashion. Still I sought this happiness in like scenes—still it eluded my grasp; but the gem wealth and power refused to yield, flashed upon me from another source. I clasped it with the fervency and enthusiasm of my temperament, believed it unfading, enshrined it in the foldings of my heart, where its lustre was not quenched till base perfidy stole it thence, whispering, ‘how false is earth!’

“My uncle was childless, and after he was bereft of his wife, he adopted as his son a young nephew of hers, Antonio Bandini. This young man commonly resided with my uncle, but at the time of my arrival at Venice it happened he was absent.

“After I had been many weeks established at my uncle’s house, I casually heard Antonio’s return was expected the next day. That night, a rich, melting voice was wafted through my window—a gondola paused in its watery path, and the dark, Italian eyes of a graceful knight errant were raised towards my apartment. The serenader was Antonio Bandini!

“From the first hour of our intercourse, sprang an attachment on my part of passionate idolatry, at whose absorbing character I oft trembled, and in the consciousness of being beloved, I enjoyed a bliss too unloyed to endure. It was bright summer, and the fair bride of the Adriatic glowed in renovated beauty beneath the kindling sunbeams. Yet day, in its glare and pomp, its hum of life, had not for me the seductive charms of the still night, when in all its starry loveliness, it descended like a veil upon the proud city, ‘throned on her hundred isles.’ Then the gondola of Antonio came to warn me my hour of happiness was nigh. Buried in its rich cushions, gliding through a path of stars, Antonio the while breathing into my ear the voice of song, in his full, melodious tones, or whispering those impassioned, half-murmured words, which so beautifully and witchingly clothe a lover’s vows, I yielded myself to a dream-like happiness, fearful lest a breath might sever the golden tissue in which I had wrapped myself.

“On one occasion, when I had revelled in the perfection of my bliss, and the lateness of the hour admonished us to seek the marble steps of my uncle’s palazzo—on returning, the sounds of music arrested us, and as the tide of melody came swelling nearer and nearer, increasing in its deep and exquisite pathos, we were aware it issued from a gondola which was advancing towards us. The low tinkling of a guitar was quite drowned in the floods of that superb voice, and as the gondola neared our own, we discovered the tones which ceased not, though they softened as the boat glided slowly by us, proceeded from a lady, who with a solitary gentleman and two children were its occupants. We could see that the songstress was beautiful, and her rounded arm thrown over the guitar, reposed in the bright moonlight with the polished purity of marble.

“‘Who can they be?’ and ‘I cannot tell,’ were scarcely spoken by us before we were at my uncle’s palazzo, the other gondola having passed onwards, the voice of its music melting in the distance.

“It was not many weeks after this occurrence before my uncle suddenly determined to visit Naples, and take me with him. Antonio of course formed one in our party. It was while there that I became known to Mr. V—— and his daughter, and that intimacy commenced

which has been the solace of my remaining days. Of this acquaintance, however, I shall speak more hereafter.

"My uncle soon established himself in elegance at Naples, and among the first of our visitors came Lord Vernon, an Englishman, who, with his family, was spending the summer in the environs of Naples. His wife accompanied him, and her bland and courteous manners so fascinated me, that I accepted an invitation for the ensuing evening at her house, with a degree of pleasure warmly expressed by me, and as gracefully received by her.

"Mirthful music resounded through the noble halls to which we had been bidden—flashing lights wreathed with increasing brilliancy the bright throng congregated there—the soft breeze, whose wings were laden with the perfume and breath of summer, stole languidly through the open windows, when we advanced to make our salutations to the elegant mistress of the revel. She introduced me to many persons who surrounded her, and on vacating her seat by my side, it was immediately filled by a young Englishman, Theodore Wallingford, whom I had casually seen at Venice, and who had advanced towards me on my entrance, in order to renew our passing acquaintance. He was endowed with a mind whose rare attainments were only surpassed by his superlatively modest and unassuming deportment. In the rare fascination of his conversation I soon became so absorbed, that I was even deaf to the loud triumphal air which was waked from the harp by a masterly touch, and it was not till the sweet exquisite notes of a rich voice broke on my ear, at first tremulous, but gradually swelling in its delightful melody, that my attention was diverted from my companion. I started, for I had heard it before. I could not mistake its music; it was the voice which had been breathed from the gondola at Venice! I quickly arose, requesting Mr. Wallingford to lead me to the part of the room whence it issued, and as we threaded the labyrinth of the crowded apartment, I briefly stated to him the circumstances under which I had hearkened to its notes before. 'I am a stranger here, as well as yourself,' remarked he, 'and dazzled by the bright coloring with which you have gifted your adventure, I am dying of curiosity to behold your syren; of course she must be gloriously beautiful, and—but *la voici*,' exclaimed he, as we reached the circle which encompassed the songstress, and as it opened to admit us. Seated at a harp, her white arms thrown around the instrument, whence she drew such magic sounds, I beheld a fair girl, who appeared totally unconscious of the passionate admiration she elicited from the listening group. She seemed luxuriating in the sublimity of song. Apparently she was in delicate health; for her cheek, though wearing the roundness of youth, had none of its freshness; an air of languor reposed in the depths of her eloquent eyes, which were 'brightly, darkly, beautifully blue,' and the long jetty lashes oft drooped o'er the colorless cheek, like shadows resting on the snow. She was dressed simply, and without 'the foreign aid of ornament,' save a gemmed dart which restrained the luxuriance of the shining hair, and sparkled with regal magnificence in its bed of rich darkness.

"Antonio was one of the circle around her, and seemed

drinking in every tone which was warbled from the dewy lips. At this I was not surprised, for with his natural talent, his cultivated taste, such melody could not but be worshipped. The air the musician was performing, was one of melancholy, touching pathos, and as it ceased, and she was preparing to rise from the seat she filled so gracefully, I wondered not at the half-playful, half-serious opposition this movement excited. She was unanimously urged to retouch once more the magic chords, and again she was enthroned the enchantress of the group. Sweeping her hand o'er the strings of the harp by way of symphony, there came a gush of gay, sportive song, full of wild archness, in striking contrast with the impassioned strains so lately breathed. Ere its murmurs had ceased; ere the sighing of harp-strings was hushed, the songstress had vanished in the throng. I soon learned she was Miss Templeton, a portionless relative of Lady Vernon, who filled the capacity of instructress to her ladyship's children.

"The harp was again touched that evening, but not by the same 'cunning hands.' The fair *gouvernante* appeared no more in the halls of revelry during the evening; but as I bent over the instrument she had relinquished, and listlessly struck its chords, through the open window near which I sat, was borne the music of her peculiar voice, and two figures which flitted past in the bright moonlight, disclosed to me Antonio and his lovely companion, Miss Templeton.

"Under the guidance of my *preux chevalier*, Mr. Wallingford, I now arose to join the mirthful groups which were clustered here and there, through the walks of the beautiful garden, and whose silvery laugh of glee came o'er the ear like an outbreak of music from the spirit of glorious night.

"The splashing of a fountain, with its sound of refreshing coolness, wooed us to where its sparkling waters tossed themselves in the moonbeams. On the edge of its marble basin, reposed the fair, rounded arm of Miss Templeton, her eyes watching the glittering spray, which ever and anon broke beautifully over the hand that seemed inviting its caress. As we approached, a rose dropped from the girdle of Miss Templeton. Antonio stooped to recover the withered treasure, and as he gallantly pressed it to his lips and placed it in his bosom, the half-whispered compliment which followed, was wafted towards the spot where I had momentarily paused.

"'Henceforward,' said he, in his own bland tones, 'this is a talisman to me—sweeter far than any rose in eastern climes that nightingale e'er warbled to.'

"The next moment we were beyond the sound of their voices and the murmur of the fountain. A few hours more, and the gaudy pageant had vanished.

"During the many months of our prolonged sojourn at Naples, Antonio, though strictly devoted to Miss Templeton in public, was apparently happy in our betrothal; for in private he spoke with impassioned rapture of our approaching union, which was to be solemnized at an early period after our return to Venice. Thus, if my tenderness suffered, by seeing him always at Miss Templeton's side, when the world's gaze was on him, the perfume of his homage and professed adoration for me, the balm of his oft reiterated and burning vows, when that gaze was withdrawn, were not without their lulling influences.

"To say how fête succeeded fête, amusement crowded upon amusement, were the detail of the next fleeting weeks. I lived more in the future than in the present; more in anticipation than in actual enjoyment.

"One morning as we loitered over the breakfast table, my uncle threw a purse of gold towards Antonio, saying, with considerable asperity of tone—

" 'Since I must support you in your folly and extravagance, wonder not that I do it hesitatingly—grudgingly; and be not surprised, when I say my fortune, however ample, must soon be dissipated by these successive and exorbitant demands on it. Your note of last night, while it solicits this sum towards the discharge of debts which press so heavily upon you, says not how they have been incurred. Antonio! I have that confidence in you, to believe they have not been contracted by play!' I arose ere my uncle paused, and as I looked towards Antonio, ere I left the room, I saw that he reddened to the brow, and that fierce fire played in his flashing eye.

"I felt no desire to intrude in the examination of that course which had elicited so sharp a reprimand from my uncle. I heard their voices high in altercation for some time after I had retired, but at length there was stillness, and supposing the breakfast room vacated, I hastened there for a volume into which I had been looking, and which I had left there. As I withdrew the rich folds of the velvet curtain which separated this apartment from an adjoining one, I started back on beholding my uncle and Antonio still within, and in a low tone conversing so earnestly, that they did not observe my intrusion. My uncle's first words arrested me:

" 'Poor girl! she has then been the victim of a perfidy as base and unfeeling as it is consummate and artful.' The words that followed were not heard by me, for they were muttered in Antonio's ear, with an indistinctness for which my uncle's violence of emotion (for he appeared alarmingly agitated,) accounted.

"Antonio started from his seat, and with a threatening gesture exclaimed—'*Madre de Dios!* immolate my love, my plighted faith, at the shrine of wealth, of worldly aggrandizement! sacrifice the pure, fresh affection of a young trusting heart, to the cold selfishness of a woman whose idol is pomp, whose worship is herself!—never! never!' and as he flung himself back on the regal cushions of the chair, whence he had started, its massive frame seemed to quake with the tremor of passion which convulsed him. My uncle passed his hand slowly over his eyes, groaned seemingly in bitterness of spirit, and approaching Antonio, said—

" 'I do not reproach you for ingratitude—I do not speak of my gifts to you—I recall not the hours of your youth, your manhood, when I fulfilled with yearning affection every office of the kindest parent—I appeal not to your duty to me—but earnestly, tenderly, imploringly, do I ask you to think of the heart which has yet never dreamed of unhappiness, never imagined sorrow—of the noble spirit which has been nurtured by the very breath of love—of the young, bright form, springing so gladly in life's path—ere you bring desolation on that heart, contumely on that spirit, the blighting hand of grief to wither the rare loveliness of that form. One word more, Antonio, and I am done. By your extravagance, my fortune is—'

"I heard no more; hurrying to my apartment, I appeared no more that day. I could not doubt I was deserted by the only being who had breathed life into the fervency of love my heart held; and in the mingled emotions of anguish, pride, indignation, that heart seemed scorched. I shed no tears, but I was not the less miserable for that. In the silence and darkness of night, while I brooded over my own wretchedness, heavy footsteps in the hall and an unusual and confused murmur of voices aroused me. I listened—I heard the name of Antonio. Breathless, I sped to the top of the marble staircase. The body of a wounded man was borne slowly and heavily through the lordly hall—the dark blood dripping on the polished floor. My uncle followed it with a stern sorrow. I could not disguise from myself the fatal truth: it was Antonio Bandini! and as I gazed on his pallid features, (for I had descended to the hall) whose unearthly hue appeared more corpse-like from the purple stream which rolled sullenly over his face, issuing unceasingly from a wound in his head, I hardly repressed the shriek which seemed ready to burst from me. Almost fainting, I leaned against one of the marble pillars, as the sad spectacle passed onwards. Ere I recovered, I was alone—no! not alone; for that soul-piercing, harrowing shriek, which met my ear, told me there was other agony than mine own. A soft, gentle sob, again broke the hushed stillness—twining arms were around my knees—I opened my eyes; for in the bitterness of my sorrow, I had closed them, that no object might thrust itself between me and the contemplation of my grief. The fair, clinging form of Miss Templeton knelt at my feet; her dark hair, in its unbound luxuriance, sweeping the cold floor, and bright tears swimming in her eyes, rendering them even starry in their radiance.

"I involuntarily shrank from her, for I felt it was to her, in part, I owed my wretchedness—she had stolen from me the heart I had learned to love so utterly.

" 'Tell me,' she exclaimed, 'for the love of God, tell me where they have taken him?'

"It seems she was passing the house as Antonio was borne to it, and the rays of the lamps falling on his countenance, she had recognised him, alighted from her carriage, and in frantic despair, rushed into the hall through which she had beheld him carried. Her vehement ejaculations continued, notwithstanding my silence, for I spoke not, in answer to her inquiry. At length she arose—'I will go and seek him;' and as her eye fell on the dark spots which marked the progress of the wounded man, she shuddered. She was passing on, when I caught her arm, and remonstrated—

" 'Miss Templeton, what will the world, what will Lord, Lady Vernon say, if it is known you are here, at this hour, unattended, and with the avowed purpose of seeing a gentleman, who, at the most, is only your lover?'

" 'And what is the world, what Lord, Lady Vernon to me, when Antonio is dying? Think you, I respect the forms of that world which would banish from the pillow of an expiring man—but I lose time,' added she, checking herself—'every moment is golden now.' So saying, she would have gone on, but I still detained her.

" 'Miss Templeton, think one moment before you

adopt (shall I say it?) *indelicate* of conduct. Antonio is well attended, and your presence will only tend to agitate and embarrass him. Why persist in it? You, who are only the—

"*Wife of his bosom!*" interrupted she quickly, as she shook from her the arm those words had palsied. My heart's pulsations seemed stayed—a cold tremor passed over me, and I felt as if the earth was sinking, with me on her bosom, into that abyss where hope never comes. The delirium of love fled before the reality of such treachery; indignation nerved my fainting form, and with a pride I sought not to conceal, I followed to his apartment the one who had avowed herself his wife. That apartment, which one moment before I would have shunned, I now longed to enter. I reached the door, just in time to hear him exclaim, as Miss Templeton rushed in, passionately throwing herself into his embrace—

"*Misere coram deo.*" His voice was low and very weak, but tenderness spoke in those few words so softly breathed. The stains of blood had been removed from his face, and his matted hair hung heavily on his temples, contrasting fearfully with the hueless, deathlike complexion. As my shadow darkened the threshold, he looked towards me, and a smile of demoniac triumph broke over his face—the expression of a fiend crossed his colorless features. I quailed not beneath it. With that haughtiness I could so well assume, I flung back his look; with a contempt which should have withered his heart, I coldly returned his smile—and saying, 'I now leave you to the care of your wife, as I perceive she has gained your apartment,' I passed with unbending pride from the presence of the heartless traitor, whom I then saw for the last time.

"When I had departed, my uncle followed my steps, and on his bosom I wept tears, wrung from unspeakable anguish. His affection was now my only remaining solace, and infolded to his heart, I inwardly vowed to cherish that affection with unswerving tenderness. It was from him I then learned Antonio's desperate passion for play, and that the wounds of which he was then suffering, had been inflicted by one of his reckless associates, who, exasperated by his own losses, and suspicious of Antonio's success, had charged him with unfairness. Word succeeded to word—menace to menace—the cold blade of the dagger was unsheathed—they fought, and soon exhausted by loss of blood, Antonio fell. While his companion sought safety elsewhere, he was borne to his home, covered with wounds, and burning with vengeance.

"From my uncle I also gleaned (though he had just learned it,) the corroborated intelligence of Antonio's clandestine marriage, many weeks before, to the fair English girl, whose beauty and song had enchained him from the first moment he had beheld her, though the purity of that beauty, the heavenliness of that song, had failed to impart their elevating influences to his sordid mind.

"Although my affection, deep and beautiful, and trusting as it had been in its worship, was now changed into contempt and detestation, I do not say I suffered not. Ah, no! who that saw the faded cheek, the lustreless eye, the shrinking form, could say that grief had not touched them, and brushed off the gloss and brightness and buoyancy of youth! To my religion I

resorted for comfort, but from it I received not that peace which I had so bitterly proved 'the world cannot give.' Before the dying gift of my mother, I poured forth the agony of my spirit; but unclothed in humility, trusting to that very suffering, and not to the Saviour, I found no consolation. During this time, Ida V—— was my constant companion. I veiled from her the tale of my grief, but my religion was known to her, and by many arguments she sought to lead me from the darkness of superstition to the light of that faith on which 'the Sun of Righteousness, with healing in his wings,' had arisen. My agitated mind imparted its fever to my body; long, painful, and violent illness seized me, and the very day that Antonio Bandini, now recovered from his wounds, sought his home without my uncle's house, I was prostrated by the fever which had revelled so long and so fiercely in my veins. Ida now came daily, like a messenger of mercy—the beauty of her religion seemed waked into voice, in her meek, gentle, affectionate manner; and I have often, as with her countenance of heavenly peace she moved noiselessly about my sick chamber, asked myself, 'can *heresy*, which I have been taught to despise, grant these sweet fruits, while I, nourished on the very bosom of the holy mother church, almost a fanatic in my zeal for her, am doomed to suffer without alleviation, without abatement? Where are the consolations of my religion?' Then, repenting my murmurings, I sought forgiveness for them, not grasping the cross of Christ as my only hope, but trusting in the rigor of renewed penances, relying on my own 'good works!' I will not detain you by dwelling on the gradual process of my passage from death unto life; how I struggled against the effects of Ida's conversations; how I strove to convince her of the fallacy of her own faith, and the heavenly origin of my own; how I oft dreamed of reclaiming the heretic, wooing her back to the true fold, whence she had strayed, and as often found myself obliged to relinquish the sweet hope; how at last the fabric I had so proudly reared against the advancement of heresy, the strong hold to which I had fled for refuge from its encroachments, gradually tottered and sank, while I, its baffled, but repentant inhabitant, bowed before the superiority of a foe, against whom I had combated so long and so unavailingly. My Bible was, after some time, read with unprejudiced eyes; prayer became a source of sacred pleasure; I leaned on my Saviour for redemption, no longer on my own weak efforts. Ida saw this change, and the cords of friendship were tightened. Though I was nominally still a Catholic, she knew I possessed many sentiments in common with herself, and doubted not I was a pilgrim in the same 'strait and narrow way.'

"The few weeks immediately succeeding my recovery, were fraught with fresh sorrow to me, but I did not again sink beneath its accumulating burden, for an Almighty hand upheld me.

"My uncle, who often visited me during my illness, seemed always sorrowful. To the ingratitude of Antonio I attributed this depression, but as he was increasingly sad, as his countenance bore the traces of deep anxiety, I began to suspect other causes operated to produce his uneasiness. My conjectures were, however, ended, when one evening my uncle summoned me to a private interview, and at some length, with a quivering

lip and blanched cheek, he told me he was not master of a *piaster* ! From what I had heard of his conversation with Antonio, to which I have already alluded, I was inclined to believe the extravagant courses of his nephew had involved him in some embarrassments, yet I never imagined he was inextricably entangled. I scarcely heeded my uncle, as he proceeded to explain minutely how he had been so suddenly hurled from the very pinnacle of luxury ; my mind was engrossed with another subject : my part was taken ; and as he went on to deplore, for my sake, the necessity of resigning his magnificent establishment, I threw myself at his feet, exclaiming, 'Never, my dear uncle ! never shall it be said I luxuriated in the splendor of wealth, while one who had thrown around me the fostering care of a parent, pined in the bitterness of want : that I revelled in the enjoyment of those comforts which had been wrested from him. I have wealth, uncle—I want only sufficiency—take the rest, I implore, I supplicate you—and think not, in your last years, to deprive yourself of those possessions to which you were born the inheritor.' My uncle kissed my brow, as he gently raised me from my kneeling posture, spoke warmly of his gratitude, but firmly and resolutely rejected my offer. I pleaded, but in vain. I dwelt on his kindness—his generous kindness : I offered him my fortune as his right. He was deaf to all my prayers. While I acknowledged the nobleness of his motive, I deplored his pertinacious firmness ; but drying my tears, I quitted his presence, and before another eve had thrown its glory over our regal home, my uncle was again its rightful master. The clamor of the claimants for his noble possessions, was appeased by my gold, and though my vast heritage had dwindled to comparative competency, by the discharge of what I deemed my sacred duty, I lamented not its loss : I was happy in the consciousness of acting a *christian's* part.

"I now began to hope no farther blight might enter our circle, but I was mistaken. A few days after the occurrence I have just related, I was aroused at an early hour, and requested to go to my uncle's apartment. Tremblingly I obeyed. As I entered the chamber, my uncle's valet, who had opened the door to me, passed quickly into the adjoining room. Hastily I advanced to the centre of the apartment, and not seeing any one within, I walked to the bed-side, pulled aside the curtains of the bed, gave one wild scream, and fell senseless by the side of my dead uncle ! When I recovered, I was still alone with the departed ; my eye fell on an open letter, which apparently had been recently read, and which rested on the coverlid. I started to my feet, and with a dread foreboding I could not suppress, I glanced over its contents. It was from an old and tried friend of our family at Venice, and as the horrible truth it told was slowly revealed to me, I felt my fears had not whispered falsely : Antonio Bandini had given death all its sting, to the one who had loved him so blindly. I ceased to read ; I stood immovable. The last drop was added to the cup of agony, which had so long overflowed—that cup which sparkled so gloriously in life's early spring-time. By the corpse of him who had been all to me—the last of my house—the last of my kindred—I knew I was not only friendless and desolate, but I learned in that fatal letter I was a beggar also. Antonio Bandini had counterfeited my own and

my uncle's signature ; claimed and received my whole remaining property ; insuring the success of his villainous scheme, by concealing his actual marriage, and causing the report of his betrothal to me to be revived where it was readily hearkened to. The cold, calculating policy of the villain, was apparent throughout ! I wondered not it had sped death's shaft to the heart of my dear, kind uncle !

"With the brand of forgery, Bandini fled from his country, his home, his wife ; and the daring valor of a pirate's life shrouded the iniquity of those acts which induced him to take refuge in a perpetual home on the deep seas. Ida and her father were the first to offer the balm of sympathy to one who had so bitterly experienced 'the vicissitudes of life.' Yielding to their solicitations, offered in the fervor of friendship, I accepted the guardianship of Mr. V——, and when he decided on returning to America, it is not to be wondered at, that, without ties in my native land, I clung to that protection which their affection had thrown as a shield around me, and prepared to seek a home in another and strange clime.

"Although my inestimable and noble young friend, Mr. Wallingford, would fain have persuaded me to link my destinies with his own, I shrank from perilling my happiness again on the deep of affection, where it had been so fearfully wrecked ; and my heart, withered and blighted, my fortunes clouded, my spirit crushed, were unworthy of one so gifted, in whose book of life every page glowed so bright and fresh. As he accompanied us to the vessel which was to bear us over the billowy deep, and as he pressed my hand in parting, the prayer of a broken heart almost burst into utterance for his undying happiness. After our last adieu was exchanged, I felt that the sadness of departure was gone, although fair Italia, with her burnished skies, the land of my fathers, was fading before the lingering gaze of the exile."

* * * * *

Nina soon became too weak to join our friends below stairs. Ida shared with me the sad duty of administering to the meek sufferer, and not unfrequently would ask permission to read to her, which was always readily accorded. The book constantly selected was the Bible, and with clasped hands, and closed eyes, every word seemed to be eagerly drunk in by the dying girl. The Catholic only existed in name, and this was not destined long to continue. Since the avowal of her sentiments to me, I was in daily expectation of a formal renunciation of her faith ; but it was not until a short time before her death that this occurred. There, in that chamber, over whose threshold the destroying angel was hovering, Nina Genovesi abjured the Romish religion, and partook of the communion ; after which a sweet and holy calm seemed to pervade her soul ; every thought was detached from earth, and in perfect, uninterrupted peace, she awaited the approach of "the last enemy," fearing not her conflict, but believing the "dark valley and shadow of death" was but a passage to the realms of unfading glory and undying bliss. Every word which fell from her lips was tinged with these feelings, and as we watched her, languishing and withering, like a fair flower untimely crushed and blighted, such a glorious halo seemed playing around the beautiful ruin, that the tear was quenched, the prayer to detain her

longer amid the cares and tumults of the world was stilled, and from the ashes of the hope we so reluctantly yielded, there was kindled the flame of a christian's un murmuring submission.

"Dearest Ida," would Nina oftentimes exclaim, "had it not been for you, through Heaven's blessing, death would not now wear such a garb to me; I should shrink from encountering the billows of that tide which rolls between me and my promised inheritance; but now all fears, all doubts are hushed, and all is peace, unspeakable peace. What has wrought it? The Bible, whose truths you first unfolded to me—the precious Bible, which has revealed the glories and comforts and bliss of a Saviour's love!"

Each day saw Nina more spirit-like, and soon she was unable to leave her bed. The very spirit of sadness seemed breathed over the household; and the noiseless tread, the whispered word, the darkened room, the universal hush of every sound, interrupted only by the low and often labored breathings of the sufferer, told that the work of death was going on. Who could count on years, or even days, when all that was most fair and bright was fading under our gaze—when the wing of the spoiler was darkening the sun-light of youth and beauty? Yet life seemed to nestle lovingly to that form, and cling graspingly to that fabric, wherein it had revelled in such rare loveliness, yet so briefly. But death's progress was not to be stayed.

Summer was dancing in all its richness on the flowery earth. In an hour of brightness and melody, the one whom we had cherished so fondly was called hence. Supported on Ida's bosom, Nina gazed on the glowing face of nature. All was hushed in that chamber of death; we scarcely breathed, lest the spirit which animated that shadowy form should be frightened from its tenement. I had looked on death before. I had shuddered as I viewed its victim. I had feared, as the shroud, the narrow coffin, the deep and silent grave, passed before my mind's eye. I had trembled as I thought on the eternity that was unfolding; but mantled in beauty, the destroyer inspired no terror now. I stood beside Nina's couch, holding in mine her fevered and emaciated hand, and as the pure, bland breeze of evening swept over her transparent brow, stirring the dark, luxuriant curls, which rested on its marble surface, the tear gathered to my eye, as I thought how soon the tomb would forever veil from us the loved form over which we were leaning. A heavenly smile stole slowly over those beautiful features. The soft eyes were raised, and the low, sweet voice, broke the hushed stillness. Emphatically and distinctly she spoke: "I know that my Redeemer liveth, and that he shall stand at the latter day upon the earth, and though after my skin worms destroy this body, yet in my flesh shall I see God." She paused, and as it were, collecting all her energies, she murmured, "I walk through the valley and shadow of death, yet I fear no evil, for *Thou* art with me." There were some long breathings, a convulsive start, a slight gasp, and we looked on dust! The spirit was infolded in a Saviour's embrace!

In the stillness of midnight I stole with noiseless tread to the room where lay what had been so lovely in life—lovely even in death. The smile had not departed from the colorless lips; the fair wan hands were

folded on the breast, and between the taper fingers drooped a white rose, the image of life dwelling in the bosom of death. I knelt beside the beautiful corpse, and over the pale cheek, scarce distinguishable from the cold white shroud on which it rested, streamed my tears. From the ebon tress which passed over the noble brow, I severed one soft curl—then casting one look at the dead, I returned to my chamber. One more night of melancholy watching beside our "beloved and blest," and we committed her to the breast of earth, there to repose till the resurrection morn!

Though long years have passed since the event I have just recorded; though changes upon changes have thronged my pathway, the memory of Nina Genovesi, and her untimely end, is fresh amid the desolation which has embittered my life. Her grave stands solitary and alone, and the evergreens clambering over the marble tablet which marks it, half conceal the name which tells her the daughter of a sunnier clime. The flowers of spring blossom earliest there; the gorgeous sunbeam, the rays of the smiling stars, "Heaven's golden alphabet," repose on its verdant turf, with glorious lustre, and in the blythe carol of the winged songster, as he speeds by, there dwells no note of sadness for the early fate of one who sleeps beneath the green and flowery mound!

* * * * *

Time passed on, and his cold wing had chilled more than one emotion of my bosom; but my intercourse with Ida slumbered not, and my affection for her lost none of its freshness. For three years her married life was unclouded; and the birth of a lovely little girl, during this period, awakened in both parents an intensity of tenderness, of which only a parent can form an adequate conception. That of Gerald seemed strangely tinged with melancholy, and as he sometimes stooped to caress his beautiful child, as it slumbered on the bosom of his not less beautiful wife, or as sparkling with smiles, it sprang to his embrace, Ida had more than once marked the tearful eye and quivering lip which he in vain strove to conceal. How in the very noontide of their happiness, there could exist one shade of sadness, Ida could not conceive. That Gerald could feel aught but joyful gratitude, at that gift which had cemented their own ties, and promised to be "the rainbow to their future years," she could not doubt—that his love for her continued fadeless, she hesitated not to believe. What secret and untold grief preyed on his heart, then? It was a question she could not solve; and with the intuitive delicacy of woman, she shrank from soliciting the confidence her husband had thought proper to withhold from her.

She had one day sung her cherub to its "rosy rest," and the fair child, cradled in her arms, reposed in the calm of dreamless slumber. With a mother's rapture, she gazed on its budding loveliness, and hearkened to its soft, gentle breathings. She arose, and leaning over the chair of her husband, who sat thoughtfully at some distance from her, held to his view the smiling babe—"How beautiful, dear Gerald," she exclaimed, as she tenderly placed her precious burden on his lap, and rested her own arm affectionately on his shoulder; "how beautiful! only see how glowingly the rose mantles to that soft cheek; and the brow, dearest, is so like your own, so serene amid the dark, rich curls!" and the

silken ringlets which had escaped from the baby's cap, were gently put aside, and Ida leaned over and kissed its white forehead, with maternal fondness. Gerald smiled, for who could resist affection, clad as it was in its most fascinating garb? He passed his arm tenderly around the waist of his wife, and looked with a father's pride on that beauty of which she spoke so enthusiastically. There were visible only the beams of tenderness and joy in his dark eye. He stooped over the babe, and scarcely touched with his lips her velvet cheek, lest he might awaken her; but as he did so, there was breathed a half-smothered sigh, which the quick ear of Ida was not slow in detecting.

"What language speaks in that sigh?" asked she, half reproachfully, half playfully; "how should the voice of regret be heard here?" and she glanced affectionately towards her husband and child.

"It is not that I am ungrateful, my love," replied Gerald, "for those blessings which heaven has scattered so richly on my pathway. I ought to be happy, and were it not for one dark remembrance, which is ever throwing its shadow over me, I should be so. The cup of life, though wreathed with hope's bright flowers, holds bitterness in its draught, and as I look on my blessings, the thought of earth's 'pale changes' comes over me, with an intensity I cannot banish. I strive to chase these phantoms from my mind, and your affection, mine own, is clasped like armour to my heart, with almost a death grasp, to ward off the fangs of that viper, which is struggling to banquet on my vitals."

The entrance of Mr. V—— interrupted this conversation, which was becoming so painfully interesting to Ida. She received her child from the arms of its father, and casting a look of mingled sadness and love upon her husband, hurried from the room. The words of Gerald implied he was not happy! She brooded on that reflection with bitterness and tears, and who can tell the crowd of overpowering thoughts which came rushing over her heart, when in the hour of loneliness she recalled the confession he had made—those words so fraught with agony to her. Yet she swerved not from the wife's duty, and his tones of endearment (for he was always, even in his saddest hours, touchingly kind in his manner to her,) melted on her ear with the same sweet influences, which had given to the early years of her marriage such "magic of bliss."

The despondency of Gerald augmented daily, and seemed to affect his health. He grew thin and pale, and soon Ida ceased to remember her own griefs, amid engrossing attendance on her husband, whose mental uneasiness prostrated him soon on a bed of sickness. For weeks she watched around his couch of suffering, oft-times scarce daring to hope life yet lingered—and in the long, silent, melancholy hours of night, she hung over his pillow, with that anguish of soul, before which words are powerless, while her heart was lifted in voiceless prayer to the God of her youth. In the delirium of fever she stood by his side, unshrinkingly, with unblanching cheek, though another name was mingled with her own, in his wanderings. "Emily! Emily!" would he reiterate—his voice softening into tenderness as he dwelt on the name—"my beautiful, my lost one! why did they tear you from me?—ah! but I remember now; they told me the clanking chain kept you from murdering me! but I would not believe them—and

when they put the form I had loved so well, in the deep grave, I wept—oh! such tears! shall I ever shed such again! But Ida is mine now—and—and—and—but she *shall* not die. They shall not tear her away from my arms." Then with exhaustion he would sink back on his pillow, looking so death-like, Ida trembled lest his spirit might have passed as the tide of memory rolled over him. But he lived yet; and when—after a night of such deep slumber, that Ida almost feared death had come in that guise, so unmoved, almost breathless he lay—he awoke, weak and feeble, but with calmness and perfect renovation of his mental faculties, Ida felt a measure of gratitude which found expression in that fervency of prayer known only to the sincere believer.

Each day now witnessed improvement in Gerald's health and spirits, and in proportion as the excitement of Ida's anxiety yielded to the almost certain hope of her husband's recovery, the traces of her untiring vigils might be read in her faded cheek and languid eye. But her heart was light; the emotions of joy, gratitude and love, filled it to overflowing. In the fond smiles of her husband she saw the assurance of returning happiness, and of the cloud which had flitted across the sky of their affection, she forbore to think. Her confinement to the sick chamber of Gerald had been uninterrupted, but as his strength returned, and he was enabled to dispense more frequently with her attendance, he used to insist that she would sometimes exchange her duties there, for the advantages of air and exercise, which she so much needed.

One morning, when Mr. V—— was paying his accustomed visit at Gerald's room, he proposed that he should take his daughter a short drive, saying she would be refreshed by the excursion, and that Gerald would not require her attention for at least the space of an hour or two. Ida began to excuse herself, but Gerald seconded Mr. V——'s proposal with so much earnestness, that she assented, and prepared to accompany her father. The weather was unusually bright and calm for the season—stern winter having just sunk the lance point—and Ida acknowledged the influences of the soft breeze, as bearing the fragrance of early spring, it breathed upon her pale cheek. But the thought of her husband's loneliness, rendered her anxious and impatient, and after a ride of an hour, she prevailed on her father to return. It was earlier than Gerald expected her, and on hastening to his chamber, she entered so noiselessly that he did not arise to welcome her, and indeed seemed unconscious of her approach. He was sitting with his face buried in his hands, and on a table near rested the miniature of a very young and exceedingly beautiful girl. Ida leaned over the shoulder of her husband, and as her eye glanced momentarily upon it, the rich crimson leaped into her cheek, leaving it as suddenly deathly pale—she stood transfixed—she could not speak—her breath came faintly through her closed lips—the room swam before her like the shadowy objects in a dream, and she swooned. When she recovered, she was supported on the breast of her husband. With a shuddering remembrance of the past, she looked towards the table. The picture, in all its glow of young beauty, was still there. "Then it was reality, and not the phantasm of imagination!" The recollection of Gerald's confession of unhappiness, the name so fondly

repeated in his delirium, connected with such passionate expressions of tenderness, rushed like lightening through her mind; scathing in its passage every bright anticipation she had dared to foster. The "thick, warm tears" gushed to her eyes, but she quickly checked them, and with assumed calmness, attempted to disengage herself from Gerald's arms, saying "the exertion of riding had exhausted her, and exchanging so suddenly the cold air without for the close warm temperature of a sick chamber, had occasioned her swoon. "Not so, my love," whispered Gerald, as he twined his arms more closely round her. "Leave me not yet—I have something to say to you, which should not be deferred," and as he spoke he glanced towards the fatal miniature—Ida trembled. Gerald resumed—"I have long wished, my dear Ida, to communicate to you some circumstances connected with my history, but which are of so painful a nature, and awaken such bitterness of anguish, that I have always shrunk from dwelling on them—however, after the event of this morning, in justice to myself, I can have no farther concealment from you. Listen to me, and you shall hear what has been the hushed secret of my soul, what has haunted my dreams, engrossed every thought of my bosom, stilled every hope of happiness which I tremblingly cherished, and is slowly drinking the life-blood of my heart." He paused, and extended his arm towards the table, grasped the picture, and placed it in Ida's hand. "Think you that beautiful?" tremulously inquired he. It represented, as I have before said, one in extreme youth; the long, sunny hair waved on the dimpled shoulders, unconfined, save by a narrow fillet of blue, which vied with the clear cerulean of the beaming eyes. In the rounded cheek, the tint of summer's sunset seemed to linger, and the ruby lips appeared almost bursting into a glorious and exquisite smile. But the radiance of loveliness rested in the expression—it was indescribable. Hope was there, with her kindling influences, blending so beautifully with a thousand other imaginings, that one could have looked forever on that fair, young creature, without defining what was shadowed forth in the seraphic countenance. Ida gazed long on it, and as she restored it to Gerald, expressed her admiration in a tone calm, though sorrowful. "Such," said he, "was one whom I loved with all the fervor and impassioned devotion of boyhood, and her wondrous beauty and endearing qualities commanded my affection long after her bitter fate had severed us far and wide. In the glow of day, her memory is wafted to me, as I remember her, 'mantled with fair loveliness'—in the deep sublimity of night, I hear again her accents of tenderness and love, which never failed to awaken an echo in my bosom—then the remembrance of her dark destiny flits before me, filling my soul with uncontrollable anguish."

"And her name?" asked Ida, in a voice of irrepressible anxiety. "Was *Emily*," replied he; and her heart seemed to stand still, as he slowly and tenderly pronounced the name. Gerald apparently observed not her agitation, for which she was grateful. Woman, even in her first romance of passion, with inherent delicacy, veils from the eye of the beloved one, the deep bright fount of love, which is ever bubbling up in her heart's depths—conceals how inseparably

"Her life is ever twined
With other lives, and by no stormy wind
May thence be shaken."

Gerald clasped the picture in its case, after gazing fondly on it, and resumed his seat. When he spoke again, his voice was startling, in its deep and hollow tones. "I have said," continued he, "that I loved that bright being on whose resemblance you have just looked. Loved—oh! God! how worshippingly, how exclusively, who can know, who can conceive? In the entire and uninterrupted happiness, which for years marked this affection, a thought of change never intruded, and it was long before the threatened and lowering tempest, which had gathered so slowly, yet so darkly over the fair face of my dream-like existence, burst forth in irrepressible violence, devastating and desolating every sacred tie—blasting every oasis in life's pilgrimage. There was oftentimes a wildness in the eye of Emily, before which I quailed—a fierceness even in the demonstrations of her love, at which I trembled, but I ascribed it to the workings of that noble intellect, that glorious mind, which were as worthy of adoration as the beautiful temple which enshrined the rare gifts.

"Well do I remember the feeling of agony with which I left myself from her for the first time, when I bade adieu to the scenes of my boyhood for the more tumultuous career of my collegiate course. I was an orphan, but the sacredness of every feeling seemed concentrated in my love for her.

"Years passed, and my only enjoyment was poring over the burning professions of her unwaning affection, traced in her own fair and delicate characters. It was now drawing towards the close of my last year at college. Emily had not written to me at all of late, and though I had continued scrupulously punctual in my letters to her, days, weeks, months rolled by, and I hailed not one in return. This was inexplicable, and when, at length, I was emancipated from the frowning walls of my university, I hurried homewards, oppressed by a thousand indefinable apprehensions, whose shadows I strove in vain to cast from me. It was evening when I reached — Park. The weather was stormy and tempestuous, and as I drove with a rapid pace through the long avenues which led to the house, the old trees bent with a melancholy, dirge-like moaning, to the angry blast which swept onwards. 'Is Emily well?' asked I hastily, as I bounded up the noble staircase, and was met on the landing place by one of the domestics. I had arrived unexpectedly, and found no one waiting in the hall to receive me, I had therefore ascended, unbidden and unwelcomed. 'Is Emily well?' repeated I, as the old and faithful servant turned from me, to conceal the tears which gathered in her dim eyes, and to hide the expression of agony which crossed her time-worn features. I seized her by the arm with a grasp which seemed to startle her by its fierceness. She turned towards me; 'old woman,' muttered I, in an intensity of apprehension, which almost deprived me of breath, 'old woman, tell me the worst—is Emily dead?' and my voice sank into a whisper, a coldness benumbed my heart, a sickly dread came over me, as my worst fears found utterance.

"'Not dead! not dead!' replied she, 'but a living tomb is more fearful than the sepulchre of the dead!'

I released not my grasp—'Explain,' said I, 'why is it I do not see your young mistress?' She burst into tears, and between the sobs which seemed to come from her soul's depths, I learned,—lean down to me, Ida,—that Emily was a maniac, a raving, furious maniac! Oh! Heavens! the agony of that moment—I can not tell how I survived it:—there came a few scalding drops, wrung from my heart's anguish—but I could not weep—the fountain of tears was quenched—the fire of heaven seemed to have scathed my bosom. I laid my burning brow on the cold floor, where I had prostrated myself; and even in that moment, the events of the past, the images of vanished hours, flitted before my mental vision, and seemed to taunt me as they passed. I arose; the fearful, appalling calm of sorrow was on me. 'Lead me to her—quick'—added I, as the old woman seemed to hesitate—'instantly.' There was that in my tone, which intimidated her into obedience. I followed her through the long, dim passages of that old mansion, with a firm step. She led towards a portion of the building which had not been tenanted since my remembrance; and its crumbling dilapidation told that time's footstep had crushed it in his passage. We ascended a narrow and winding stairway—she paused:—'If I dare remonstrate,' urged she, hesitatingly—I waved my hand with an impatience I could not control,—'Continue—I see her, if my life is the forfeit.' We proceeded, and before a door on which the damps of years had rested, she stopped. She applied a key to it, and as it slowly grated on its hinges, I involuntarily and eagerly pressed forward. In the cold, darkly lighted room, whose misery and desolation a few expiring embers in the rusty grate only served to disclose, was my once beautiful, still loved Emily. She raised her mild, blue eyes as the noise of my entrance arrested her attention, and there passed over her countenance a strange, unnatural fire, which made me shudder. I rushed towards the couch from which she had started. The grasp of the aged servant, who would have restrained me, was as nothing before the strength of that despair which nerved my frame. I clasped in my arms the fragile form which months of suffering had rendered almost shadowy. I pressed my cold lips on that brow, where intellect, in all its proud regality, had once been enthroned—'Emily, my own, dear Emily'—whispered I, 'I am here—your Gerald.' I ceased—mind had fled; why should I thus speak to one, whom hopeless insanity had made its victim. I held her from me—I gazed upon her—her eyes met mine. 'Gerald!' murmured she, as she looked long and earnestly into my face—a rich glow passing over that cheek which had been before as of marble. I did not speak—I could not—but the tide of life seemed to have ceased, as I yielded to the intensity of hope that single word inspired—yet it was momentary—another instant, and a wild, hollow, sepulchral laugh burst from the lips of Emily. The old vaulted building seemed to seize it, and fling it back on my heart, with a weight which threatened to crush vitality. One moment more, and the long, sharp nails of the slender fingers were buried in my throat with a fierceness, a fury of which I had not conceived. The blood followed, and overcome with all I had endured, I sank in utter helplessness on the floor. I became unconscious. When I recovered, I was removed from that heart-rend-

ing scene, and for many weeks I exposed not myself to the view of its entire misery.

"Yet I saw her again; and as the door of her prison-chamber was thrown open to me, I observed a grate had been added, which prevented farther entrance. Emily glanced towards me; a demoniac scream parted her lips; fire flashed in her eyes. With extended arms, she sprang towards the grate. What was it struck on my ear? I could not mistake the dull, clanking sound—she was *chained!* and around that light, fairy form, which had oft felt the twinings of my embrace, was fastened the cold, heavy iron! It confined her to her dreary abode, and being attached to the wall, hindered her from reaching me. She sank prostrate on the floor, about midway between her couch and the door."

Gerald paused; the big tears stood on his manly cheek; his breast heaved beneath the avalanche of anguish which choked his utterance; while Ida, leaning her cheek on his shoulder, wept unrestrainedly.

"It was not long before my Emily was released from her sufferings," resumed Gerald; "death came, and without one ray of returning reason gilding her departing hours, she was wrapped in the cold embrace of the tomb. For months I lived in that lonely and deserted house, knowing no greater happiness than in the stillness of night to prostrate myself in the luxury of grief, beneath the shadows of the willows, whose long and graceful branches drooped in the silvery moonlight so sadly over the grave of her I had loved so well. But, Ida, you know not all. Listen! That young, bright creature, was my *sister!* The sister of the purest affection that ever sprung into life. I had known no mother's tenderness; no father's care. She was all the world to me: she guided my erring steps in boyhood; she watched beside my couch of pain, when burning fever scorched me; she shared every feeling of sadness or joyousness which agitated my bosom; and for me, for my improvement, for my advancement, she abdicated all those glittering pleasures to which her youth, beauty, wealth and rank entitled her. You may imagine with what idolatry I loved her; how the very poetry of affection lived in our intercourse. After that fatal malady had descended on her—after she was laid in the bosom of earth—I learned my mother's buoyancy of spirit and brightness of beauty had thus faded from life! that madness was my birthright, my inheritance!—Wonder you now that I tremble, as I view the young, fair pledge of our loves? that even in the enjoyment of the happiness I now possess, I oft shudder as I think how dark, how stormy a night may succeed to its brightness—but," added Gerald, in a hoarse, broken voice, "promise me, Ida, when the pall of insanity shall have descended to cover the light of intellect, when the fire of madness shall have scorched the sources of life, promise me, you will not leave, will not forsake me!"

"Never! never!" ejaculated the weeping wife, as she flung herself into his arms, pressing her cold cheek to the colder one of her husband; how her heart smote her for having so wronged him, by nurturing one suspicion of that noble nature. That heart clung to him with renewed idolatry, and who can know the passionate fervor of the prayer which arose from its inmost depths, that God would avert from her hearth a curse so bitter, so blighting!

* * * * *

It was but four years from the events recorded above, and a group, in which the very spirit of grief seemed dwelling, were assembled in a chamber of that mansion which had seen so forcibly portrayed the perishableness of life's gifts. It was night, and the howling of the tempest without, the heavy, monotonous pattering of the rain, the melancholy sighing of the wind, seemed unheard by the sorrowful occupants of that apartment, in which perfect stillness reigned. A solitary taper flung its sickly and flickering rays athwart a couch on which rested the form of a man apparently but in the noontide of life. In the restless and unquiet rolling of the large dark eyes, there beamed no mind, yet there was beauty, strange beauty, in the finely chiselled lips, in the high, pure brow, which seemed imbedded in the heavy masses of black hair clustering around the countenance of deadly paleness. A small, fair hand, was twined in those sable locks, and over the bed of insanity leaned the form of a female, painfully attenuated. In the depths of her languid eye, there lay a history—a tale of love, tenderness, suffering, and blighted happiness, but the meek and unmurmuring spirit of the christian reposed there also—that spirit, which yielded not to the blast as it swept over the treasure-house of the affections, but which even in the bitterness of desolation, could exclaim, “the cup which my father hath given me, shall I not drink of it!” Who in that premature wreck of all that was most beautiful, could recognize the once brilliant Ida V——, the creature of sunshine?—The stream of life, once mirroring nought but happiness, had been imbittered and troubled. Though she felt that the billows of anguish were breaking over her soul, as she watched beside her maniac husband, her sorrow was voiceless, and even the sigh, which oft struggled to escape its prison-house, was hushed; the eye was uplifted to heaven with renewed fervency, the lips moved in prayer with unabated frequency, as she sometimes almost yielded to the passionate impulses of her grief. At the foot of the couch, over which his daughter bent, stood Mr. V——, with folded arms, a rooted and stern sorrow depicted on his venerable countenance; and kneeling beside him, her dimpled arms embracing his knees, her young, bright head bowed on her bosom, was a fair child, whose few years seemed to preclude the possibility of her appreciating the peculiar and moving scene on which she had been looking. Yet her childhood had been nurtured in affliction, and on her young and graceful brow, thought had descended prematurely. She knew her father was dying—that father she had been taught to love passionately—and when she gazed on his sunken and emaciated face, she wept convulsively. Ida wiped away the chill damps of death, which had already begun to collect on the brow of the sufferer. Suddenly the storm without ceased,—the dying man moved—“Heaven,” ejaculated he, as with supernatural strength he started from his pillow, and a smile of ineffable sweetness passed over his pale countenance—“Heaven is gained! In Zion is no suffering, no tears! Ida, my own beloved!” and the next moment she is wreathed in his embrace. Reason had returned—though in his departing moments. She had prayed that he might not die in fearful insanity. That prayer was heard—answered—and she was happy, even while the fitful breathings of her husband passed fainter and fainter

over her cheek. “Hush, Ida! mine own one!” whispered he. “Glory is opening upon me—the Redeemer—precious—peace—” The tones, grew indistinct—Ida heard no more. Slowly, very slowly, the arms which were twined around her neck fell from their resting place. His spirit had passed, even while words of peace lingered on his colorless lips. Gently the stricken wife arose, lest she might disturb the beautiful repose of the dead—tremblingly she passed her hand over those lids which drooped over the glazed eyeballs—carefully she put aside the long, dark hair, which shaded the serene face of the marble-like corpse. Then kneeling beside the couch of death, her child nestling with sobs beside her, Ida gazed her last on the one who had been dearer to her than aught else earth held.

* * * * *

Ida lived many years after the golden link in life's chain had been shattered. She was not unmindful of her remaining blessings, and in the education of her daughter, in teaching her to tread the paths of holiness, in administering to the comforts of her aged father, she enjoyed serenity and composure. Yet the memories of her youth—the sacred remembrance of Gerald, the husband of her *deathless* love—were never dimmed; and her chastenings drew her more closely, more tenderly to that Father, who hath said unto his redeemed children—“When thou passest through the waters I will be with thee;—and through the rivers, they shall not overflow thee; when thou walkest through the fire, thou shalt not be burned; neither shall the flame kindle upon thee.”*

AFFECTION'S TRIUMPHS.

PART III.

Oh ye! who dare review the past, to find
A stimulus to rouse the exhausted mind,
When present, or approaching ills, disarm
Exciting pleasure of her wonted charm—
Ye, whom no agony it brings to trace
On Memory's scroll some old, familiar place;
Where parents, brethren, sisters, gathered round,
Indulgent read the oracles profound,
Which, from your school-room tripods, by the mail
Were sent to illuminate your native vale—
Or where, when on life's broader seas afloat,
And of past toils and triumphs won you wrote,
Warmed many a heart, which ne'er to you was cold,
As all exultingly your tale they told—
Or, where in gay luxuriance scattered round
The leaves of many a wild-flower strewed the ground,
You kissed the blushes from a fair one's cheek,
In witness of the love you could not speak—
'Tis not enough that on these pleasing themes,
As on the pageantry of vanished dreams,
Reflection dwells, while no reproachful voice
By conscience waked, forbids you to rejoice.

'Tis not enough, that by your peaceful hearth
Your hearts grow lighter while you list the mirth

* Isaiah, chapter 43, verses 2d.

Of children, who your flattered wisdom task
To impart the knowledge they so shrewdly ask :
'Tis not enough, that daily from your door,
Welcome partakers of your hard earned store,
Go age and want, while many a prayer is said
That choicest blessings shower upon your head :
'Tis not enough, that conscious of your own,
Toward kindred follies you have mercy shown ;
Nor not enough that even guilt, prepared
By penitence, your kind concern has shared ;
And landed safe on Virtue's lofty shore,
A waif on Passion's ocean floats no more.

See from their sheltered and secluded nooks,
Born of the rains of Heaven, a thousand brooks,
Impelled by unseen forces, onward go,
Just murmuring music as they gently flow ;
Wind lest they overwhelm each feeble shoot,
Or bare some sturdy oak's fantastic root ;
Dispense rich verdure through the unshaded mead,
And lend the strength which lifts the flowret's head ;
Then join, and still acceding streams receive,
Till 'neath alluvial banks Ohio heave ;
Which, as it glides, its kindred floods expand,
And Mississippi hastens through the land,
To add its depth to that unfathomed deep
Whose restless waves the isles and continents sweep.

Thus must Affection's votaries join ; thus lend
Their aid to each ; thus all their efforts blend ;
Till thy broad, placid river, Knowledge, pours
Its fertilizing wave along the shores
Itself has built ; where all that gladdens earth—
Harvests of mental wealth and mental worth—
Reward who will but plow, and sow the seeds,
And clear the virgin soil of shadowing weeds :—
Till Freedom's swelling and resistless flood,
Burst through the barriers which a while withstood,
Leaps on, by still increasing impulse urged,
Impatient in Truth's ocean to be merged.

On that bold flood the nations of mankind,
In one great league by pleased Affection joined,
Anxious that Truth shall bear their destiny
On the broad bosom of her bourneless sea,
Not careless of the weak, nor of the strong
Afraid, shall ride in triumph and ere long.

Vainly the dwindling band, who ne'er have known
A wish for blessings not to be their own,
Sneer at the ecstasies their coldness views,
Heightened by hopes each passing hour renews :
Vainly such aspirations they despise,
For, if untrue, the heart will hold them wise,
As kindles into life its honest pride
To feel how nearly 'tis to Heaven allied,
If, from their entertainment, it derives
Delights unknown to dull, insensate lives.

If, when the eagle aims his circling way
To the high fountain of terrestrial day,
His pinions, bathed too oft in earth's cold dews,
Or wearied by ignobler toil, refuse
To bear him till he reach his wished for goal ;
Yet far beneath the stormy vapors roll ;
And in the brilliant and unbroken rays,

Which ever through translucent ether blaze,
He joys, as never joy the meaner crowds
Whose highest flights scarce cleave the lowest clouds.
And some in eyries nursed, have dared essay
To reach the realm of intellectual day :
Restrained from flight eccentric by the guide
Long since by holiest oracles supplied ;
And borne on reason's pinions, far above
The earth-born mists of error now they move.
Though life is found too short, and all too weak
Their restless wings to gain what still they seek,
They strive not without hope, nor strive in vain,
To approach where mortal man can ne'er attain.

To deprecate man's frailties, not despise
His nobler aspirations, would be wise.
What matters it that some of plodding head
Learn their low parts and play them for their bread,
If, on the stage of life, some loftier minds,
Whom no set rule nor cherished error blinds,
Appear, as meteors in the impervious night,
Bright in themselves, but more by contrast bright ?
Them, moody bigots may refuse to hear ;
At them, untutored galleries may jeer ;
And stolid critics of the stage-box sneer,
Who hid in shadow see but half the stage ;
Mistake for rant the actor's generous rage ;
Rail at a pause 'twixt nominative and verb ;
Nor feel the emotions which can language curb :
But there are some admirers in the crowd
Whose praise rewards, though seldom breathed aloud—
Some who have conned Experience' lessons o'er,
And treasured as fine gold the instructive lore ;
Who judge, not without purpose, in the plan
Of animated nature, but on man
Propitious Heaven the immortal soul bestows,
Which with desire to know incessant glows :
Or gives, with memory, an intellect
Can follow to its cause each known effect ;
This cause and consequence with those compare,
And, to the world, the truths thus gleaned declare.

The busy ants, their streets the earth below,
Build, as they built a thousand years ago ;
And now as then, on fluttering pinions gay,
Myriads of insects sport their lives away :
With the same twigs, the fowls their nests contrive ;
On the same moss, the hardy reindeer thrive :
The insects learn not from the prudent ants
To guard 'gainst coming cold or hunger's wants ;
The reindeer learn not from the soaring fowls
The way to lands where winter never howls ;
Nor seek the ants to know, why o'er their heads
The arching roof they make in safety spreads ;
Nor ask the wandering fowls, why constant move
The waves beneath them, and the clouds above.

Man marks the magnet tremble to the pole,
And in the darkness sails where oceans roll :
The heated water sees in vapor rise ;
A giant force its subject aid supplies :
For one rule known, he theorises ten ;
Finds some are true, and builds on them again ;
And thus his pile of science grows apace,
The structure firm though narrowest at the base.

Can he who thus progressively improves
His knowledge of the world which round him moves,
Omit to scan the workings of his mind,
Or to its wondrous faculties be blind?
And knowing them, shall he forever fail
To bid them o'er his sensual lusts prevail?
Shall selfishness forever in his heart
Be throned secure, to play the tyrant's part?
Forever shall he impotently rave
When Passion bids, or bow her abject slave?
No; the blest time approaches, sure though slow,
When these shall totter to their overthrow;
And he, from sense, and self, and passion free,
No more misguiding error's fool shall be.

In the dark ages, now forever passed,
In cloistered halls were learning's stores amassed:
The bigot monk, within his darkened cell,
Pondered the tomes the warrior could not spell;
And left his useless emendations there,
To be the future antiquary's care:
The curious arts were spent in conjuring tricks,
Or whiled his hours who scorned with men to mix;
And, but the fearful mariner on the main,
Or false astrologer, watched the starry train:
Doomed for his thriftless life a slave to plod,
The bondman trembled at his chieftain's nod,
Or, where War stalked, a god in glittering vest,
With Desolation, in his footsteps pressed;
His morning toil, to practice ruthless deeds;
His evening task, to count again his beads:
And all were bound together by the band
By Superstition and Ambition planned—
A band which galled, the while it firmly held
Some jealous hearts by hate of tyrants swelled.

Affection then, fore'er the friend of man,
Her noblest triumphs, and her last, began:
Still had she comforted his stricken soul,
And o'er its fires in kindness held control.
But now, when round his board his nestlings drew,
She sought his rugged nature to subdue;
And bade him contemplate their coming lot,
When from the precincts of his humble cot
They would be torn, and their young blood be poured,
To aggrandise a mercenary lord.
Then with a flushing brow, and fiery eye,
And lip compressed, the oppressor to defy
He learned, and marching on with form erect,
Made Tyranny his offspring's rights respect,
And yield, though grudgingly, the fulcrum law
Whereon late ages Freedom's lever saw.

Affection hailed the deed; but man, enchained
By Ignorance still, knew not how much he had gained;
And active as her followers now should be,
She hastened on his glorious destiny:
From the oppressed her ministers she chose,
And told the secret treacheries of her foes:
Then, for the mighty work 'twas their's to do,
Prepared themselves the stalwart, chosen few,
By days of study, and by nights of thought,
Till wrestling prayer the strength they needed brought.

As when the earthquake, in his caverned halls
Convulsive elements around him calls,

And bids them arm them for the dread affray,
Dark vapors dim the blessed light of day;
While not a sound upon the dying air
Disturbs the fixedness of man's despair:
So still—so dark—too paralysed, to hope
Heaven would again its dazzling portals ope,
The moral world reposed; the light to guide
The uncertain step, and cheer the heart, denied.

But soon low distant murmurings are heard,
As of a forest by the night-winds stirred;
And meteor flashes from the holy fire
Which smouldered long, but could not all expire—
The fire of Truth—appal the red conclave
Who long claimed learning for their proper slave:
While, like the thunderpeals that rend the skies,
The cry of multitudes their power defies;
And bursts the second dawning of the day
Whose all-pervading beams nor kings, nor popes, can
stay.

Then might the ear of Faith have heard again
The loud, the joyful, the triumphant strain,
Which once before through Heaven's high arches rang
When "Glory to the Highest!" angels sang;
And, conscious of redeeming mercy's plan,
They shouted "Peace on earth—good will toward man!"

Then came the deadly struggle—then the foes
Of Knowledge, Freedom, Truth, in power arose:
Affection's followers willing victims died;
But growing hosts each martyr's place supplied.
Hark! even now the sound of clashing arms,
The despot on his tottering throne alarms;
Now, 'neath his walls the assailing force appears,
Their cheering war-cry thundering in his ears.
For still Oppression reigns from where the Czar
Makes thousands pine beneath the polar star,
To where the sable African delights
In human immolation's horrid rites—
From the far east, where stupid tyrants sway
Their iron rods, and cringing slaves obey,
To Europe's realms, where tyrants more refined,
Make free the body, and enslave the mind.
And here, where sundered is her brittle chain,
Where jealous laws the lowliest's rights maintain,
Where all acknowledge all have right to claim
What men in other lands must trembling name—
Here, o'er men's hearts dominion still she holds,
And to her purposes opinion moulds.
For even here, the men who make the law,
Are prone as she directs the bill to draw;
And petty tyrants strive to make a great,
That, for their profit, he may rule the state.

My countrymen! well may your hearts rejoice
Your lot is in the land should be your choice:
And, not unwisely, while the historic page
You ponder, may exultingly presage
Our country's loftier fame, when hastening years
Have perfected the work which so endears
The names we have from earliest childhood known—
Their names and his—his friends and Washington.
But oh! forget not we have much to do,
If to their memory we would be true.

Secured in their enjoyment, all must know
 The happiness Affection can bestow ;
 All, all must learn to love their fellow men,
 Nor be too proud to seek their love again ;
 The legislator, narrowness of soul
 Must cast aside, and mindful of the whole
 He represents and serves, must look beyond
 Self-interest, or a district's narrow bound ;
 Must bid thy sacred temples, Knowledge, stand
 On every eminence throughout the land,
 And, while Corinthian halls the approved receive,
 To all the Doric base must entrance give :
 For all in vain the elect of science, pore
 O'er garnered tomes of concentrated lore,
 If to themselves the advantage is confined,
 And Ignorance still a myriad host can blind.
 Oh ! spread the blessing ! Let the poor man's son,
 Child of the state, strong armor buckle on ;
 And, having proved it, bear it where the foes
 Of Knowledge now her onward course oppose :
 Then for a sterner struggle claim his arm,
 And bid him shout Oppression's last alarm.

Purveyed by Knowledge, by Affection led,
 And Truth's broad banner flying o'er her head,
 Onward, still onward, and forever on,
 Be Freedom's march, till all the earth be won ;
 Until thy sun, oh, Truth ! shall culminate,
 And the last mists of error dissipate ;
 Until thy day's high noon, its light intense,
 Its vivifying rays, to all dispense ;
 Until is raised the whole of humankind,
 To that proud eminence, for them designed,
 When highest faculties by bounteous Heaven,
 Were unto men, as unto angels given.

BYRON AND PLAGIARISM.

A writer in the Messenger for March last, quotes Byron and Madame de Stael, and places the English bard in no very enviable light, by making use of the sentiments of others to attain that fame for which he had an inordinate ambition. In my readings I have met with the following passages, shewing his reasonings on the principle. I will introduce the quotations by the following extract from his *Life*, by Lake, in which it will be seen he takes a broad ground: "Byron was a great admirer of the Waverley novels, and never travelled without them. 'They are,' said he, to Captain Medwin, one day, 'a library in themselves—a perfect literary treasure. I could read them once a year with new pleasure.' During that morning he had been reading one of Sir Walter Scott's novels, and delivered, according to Medwin, the following criticism: 'How difficult it is to say any thing new! . . . Perhaps all nature and art could not supply a new idea.'" And in the "Conversations of an American with Lord Byron," quoted into the London New Monthly Magazine,* it is said, "He allowed frankly that he was indebted to the hints of others for some of the most esteemed passages in his poetry. 'I never,' said he, 'considered myself interdicted from helping myself to another man's stray ideas. I have Pope to countenance me in this: '*Solemne quis dicere falsum audeat*?' Pope was a great hunter up of grains of wheat in bushels of chaff; but I have been no more scrupulous than he in making use of whatever fell in my way. Mankind have been writing books so long, that an author may be excused for offering no thoughts absolutely new. We must select, and call that invention. A writer at the present day has hardly any other re-

* See Littell's Museum for December, 1835.

source than to take the thoughts of others and cast them into new forms of associations and contrast. Plagiarism, to be sure, is branded of old, but it is never criminal, except when done in a clumsy way, like stealing among the Spartans. A good thought is often far better expressed at second hand than at the first utterance. If a rich material has fallen into incompetent hands, it would be the height of injustice to debar a more skillful artist from taking possession of it and working it up. Commend me to a good pilferer—you may laugh at it as a paradox, but I assure you the most original writers are the greatest thieves."

Lady Blessington also observes, in her "Journal of Conversations with Lord Byron," "As Byron had said that his own position had led to his writing 'The Deformed Transformed,' I ventured to remind him, that in the advertisement to that drama he had stated it to have been founded on the novel of 'The Three Brothers.' He said that both statements were correct, and then changed the subject, without giving me an opportunity of questioning him on the unacknowledged but visible resemblances between other of his works and that extraordinary production. It is possible that he is unconscious of the plagiarism of ideas he has committed; for his reading is so desultory, that he seizes thoughts, which, in passing through the glowing alembic of his mind, become so embellished as to lose all identity with the original crude embryos he has adopted."

I submit these extracts without comment, not doubting but every intelligent reader will admit Byron's transcendent poetical genius, notwithstanding these frank admissions on his part.

Washington City, May, 1838.

S. F. G.

GEORGIA SCENES, CHARACTERS, AND INCIDENTS.*

NEW SERIES.—NUMBER I.

LITTLE BEN.

There are some who delight in tales of torment—to such this sketch is respectfully dedicated. And as a writer in the Southern Literary Messenger says, I feel half inclined "to perpetrate a little philosophy" upon this unamiable trait in the human character. I yield to the temptation, however, no farther, than barely to remark, that I believe it is a trait common in some measure to all men. This may be proved *phrenologically*. I know a man, who, by the concurring testimony of two phrenologists, is remarkable for his benevolence; and I have the authority of that gentleman for saying, that he found no pleasure in reading Horace, until he came to the ninth satire. In that, the poet tells us, as the classic reader knows, that in one of his rambles, he encountered a fellow, who fastened upon him like a leech, who would be dismissed by no hint, and who talked him into an agony, that threatened to stop his breathing through all time. He who could find nothing pleasing in the works of Horace, except in this satire, must have derived his gratification from the torments of the bard alone, not from the poetry in which they were recounted. If an uncommonly benevolent man, can delight in the suffering of a fellow being, all men must. Q. E. D.

Relying upon the truth just established, I venture to lay before the public a history of my troubles from garrulity; premising, that those who find in themselves a refutation of my logic had better follow me no farther; for they will find this, the dullest and most insipid narrative, that ever was committed to paper.

If Horace has truly depicted his sufferings from the stranger who joined him in the Via Sacra, then I have no scruples in saying, that I once had an acquaintance who would have killed him stone dead, before he reached Vesta's temple. His tormentor talked chiefly of himself—so did mine; and here ends the parallel. His, was a man of letters—he was a poet, a dancer, and

* The readers of the Messenger, cannot have forgotten the rich treat we gave them from the first volume of the "Georgia Scenes," about two years ago. We are rejoiced to perceive that the very talented author has determined to come out with a new series of them,—the first of which, "Uncle Ben," we transfer to our columns from the "Augusta Mirror," a very neatly printed and well edited periodical, just started in Augusta, Georgia.

[Ed. Mess.]

a singer, of note—mine was an obscure farmer, who could hardly read and write. His, was a man who knew much of the world; mine, had hardly ever travelled beyond the visible horizon, that encircled his native domicil. With the first, therefore, self, was a subject of agreeable variety—with the last, self, was a dead monotony. The one passed rapidly from subject to subject; the other never quit a subject until he carried it through the most minute, circumstantial, dry, tantalizing details that ever afflicted a patient ear. When Horace once got rid of his man, he was rid of him forever: but I was constrained to visit mine weekly, and sometimes oftener, for about two years. The native Venusian enjoyed the poor privilege of writhing under his tortures; but even this privilege was denied to the native Georgian. I would not be rude to my oppressor, first, from a principle of courtesy, and secondly from a principle of personal security; for he was of the best fighting blood in the country. Now let the reader imagine me thus circumstanced, and listening by the hour to story after story, like those below, and if he can laugh, or even smile at my tortures, I do not envy him his philanthropy, flattered as I may be, by his testimony to my ethics.

The name of my *thera* was Benjamin Grinnolds; but he was usually called Little Ben, to distinguish him from an uncle of the same name; and only for this purpose; for he was not diminutive in stature. Little Ben never used his upper lip in talking; he transferred its office to his upper teeth. If he was not driven to this expedient from necessity, it was certainly a kindness to both lips; for his upper teeth protruded so far forward, as to make it a positive labor for his lips to salute each other. Some of his friends used to say that he could not blow out a candle without dislocating his neck, or burning his chin; but I do not believe that.

This little deformity had the effect of changing all the b's and p's in Ben's narratives to v's and f's: nevertheless Ben delivered himself with great fluency. His sentences were uniformly short, and distinguished only by the semicolon pause, save when he recounted some wonderful achievement, or astounding witicism of his hero: then indeed he took a semibreve rest; during which, he assumed a look of self-complaisance, an arch cut of the eye, and a velled smile that would hardly have been tolerated in Bonaparte, after the battle of Lodi. He did not always, however, use his favorite stop to divide distinct sentences, but sometimes made it usurp the comma's place; and very often ran from sentence to sentence without any pause between them. All other stops were dismissed from his discourses. He almost invariably threw the emphasis on the first word in a sentence, and upon no other word. His delivery was naturally quick; and either from this cause, or from an irrepressible desire to pass from story to story, he dealt largely in the ellipse. The reader has doubtless often listened to drops of rain descending from the eaves of a house, upon a platform some twelve or fifteen feet long, just after a shower. One big drop, and four or five little ones, descend in rapid succession—then a momentary pause, and six or eight follow in the same order—then a like pause, and fifteen or twenty roll on the ear in like manner. So fell Little Ben's words and sentences.

I proceed to lay before the reader one or two of Ben's stories, which are quite as interesting as any that I ever heard from him. For the sake of perspicuity I frequently use stops which he did not; but that the reader may catch his prevailing style, I give the appropriate points for a few sentences.

STORY THE FIRST.

One day 'n the fall; it was pow'ful hot too for that time o' year; uncle Ven come over to our house; and s'ys he to me Ven let's go kill some squir'ls; Oh s'ys I it's too hot; Oh s'ys he you're not taller; No s'ys I nor vutter nuther; but hot's hot and sweeten 's same to me as meltin; Oh s'ys he come long come long its cool in the woods; well s'ys I you'll not kill nothin' no how this time o' day where's Trig? I don't know s'ys uncle Ven where he was when I come away. I could'nt find him. Then s'ys I I'll swar' s'oin vrank you'll kill nothin'. Why s'ys he where's Jole! and Touze? They're good for nothin' s'ys I for squir'ls but Touze trees sometimes and we can try 'em. So I call'd the dogs, s'ys I "here Jole! here Touze!" but ding the dog could I find. Call 'em again s'ys uncle Ven

* Uncle Ben's squirrel dog Trigger.

† Jowler and Touzer, Little Ben's dogs.

they're somewhere avout here. Oh no they a'n't s'ys I, they always lie avout the dairy and loom-house; they're gone off with the niggers and for my vart I'm glad of it, for it's ding nation hot. Fresently I look'd round and I saw nigger Feet (Peter) comin' over the draw-vars with a vasket o' corn on his shoulder and he had voth the dogs Jole and Touze; well s'ys I uncle Ven yander's the dogs now with Feet; I told you they'd gone off with the niggers. So we call'd the dogs and started off down the vranche round the corn-field, and fresently Touze treed. S'ys I uncle Ven Touze run that squir'l on the ground 'fore he treed I know vy his varkin, and you'll find the squir'l high uf, for he's had a scare and he'll never stof till he gits to the tif tof. We went to Touze and he'd treed uf one of the whalin'est foflers I reckon you ever seed. Go round the tree Ven says uncle Ven, to me, and shake a vush and let's see if I can't see him. Well s'ys I you need 'n look velow the very tof vunch of vushes on the tree for I know he's high. So I went round the tree and shuk a vush and fetch'd a squall—Stof! stof! says uncle Ven, I see him, and he is high uf sure enough. There s'ys I did n't I tell you so? Well s'ys I do make a sure shoot, for I swar I don't want to have vuch shakin' and squallin' to do this hot weather. Uncle Ven raised uf his rifle and cracked away and kill'd the squir'l, and down he come and sock—he lodged in the fork of the fofler. There s'ys I now you've done it. Stof s'ys he, maybe he'll kick and roll out. Kick the devil s'ys I, he looks like kickin' with a rifle vall through him and all his guts hangin' out. Well s'ys he to me Ven you cant vring down that squir'l. S'ys I uncle Ven I'll ve dod vlamed if I can't vring down the squir'l. Well s'ys he if you 'll vring down the squir'l I'll give you a trifle. Well s'ys I what 'll you give me? Oh s'ys he I don't know, I'll give you a trifle. Well s'ys I uncle Ven I don't velleve you'll gi' me any thing, vut I'll ve dod vlamed if I cant vring down the squir'l. So I flung off my hat and shoes and took a griff uson the fofler, and I tell you what, I felt like vackin' out, for it was a whaler. Vut I thought there was nothing like trying. So I set in and clum uf avout twenty foot, and got dang tired. Vut thinks I k'll never do to turn vack now, or uncle Ven 'll have the run on me. So I clung on and vlow'd a while, and fushed on and clum uf avout forty foot uf one of your vigest sort o' foflers!!! I flung down the squir'l and s'ys I to uncle Ven, where's that trifle you were going to gi' me? Oh s'ys he I do 'n know, I'll give it to you some o' these days. So I waited two weeks, and I meets uncle Ven at the muster, and s'ys I uncle Ven, where's that trifle you were going to gi' me, old feller? Oh s'ys he I do 'n know Ven, I'll give it to you some o' these days. So I waits about three weeks, and I meets uncle Ven at the Court House, and s'ys I to him uncle Ven where's that trifle you were going to gi' me old feller? Oh s'ys he I don't know I'll give it to you some o' these days, and ding the trifle have I ever seen to this day—vut I never see uncle Ven that I don't run him about that trifle, and I reckon he hates it the worst o' any thing you ever seed.

STORY THE SECOND.

Cousin John and I went one day down his mill creek a fishin', and we fished a while, and got no bites, and s'ys cousin John to me, Ven I'm going home—well s'ys I cousin John you may go, vut I'll fish a little longer. Oh s'ys he come along and lets go home, you'll catch nothin'. Well s'ys I, I dont 'spect to catch any thing vut a few horny-heads no how, vut I'll fish on a while longer. Well s'ys he I'm off, and away he went. I walks along uf the creek droffin' in here and there, vut I got nothin' vut a few nivvles, and one little horny-head. Fresently I came to a deep hole at the root of a vlg veech look'd like there might be cat in it. So I fute on a fresh long-worm, and soused in my hook and fresently, vy dad, somethin' took me; but I miss'd him. S'ys I touch me agin mate. So I haul'd the vate-gourd to me and took out another long-worm and fut it on my hook and soused in agin, and vy dad he took me agin, and I whopt out a ding great cat avout that long—(measuring about seven inches on his arm.) Well s'ys I, I v'llave I'll go home since I've caught a cat.—So I goes up to the house and meets cousin John, and s'ys he to me, Ven, where did you git that cat? S'ys I cousin John I caught the cat. Ven s'ys he I dont v'llave you, you vaught the cat. S'ys I cousin John I'll ve dod vlamed if I did'nt catch the cat; who was I to vuy cats from in the woods uf the creek? Why s'ys he from some o' the mill-voys. Why s'ys I, I reckon there was no vetter chance for mill-

voys catchin' cats than for my catchin' 'em—s'ys I if you'll go back to the creek with me, I'll show you where I caught the cat. Well vy George, says he, I will go wkh you. Well s'ys I come along. So we goes down to the creek and s'ys I to cousin John, cousin John *there's* where I caught the cat. Well s'ys he Ven, I sh'an't v'lleve you till you catch another cat. Why, s'ys I cousin John its ding'd hard if a man must catch *two* cats, fore you'll v'lleve he caught *one* cat.—Well s'ys he I sh'an't v'lleve you any how, till you catch another. Well s'ys I cousin John, there's nothin' like tryin' any how. So I clafs on another long-worm and soused in my hook, and vy dad, I whops out another ding great cat about that long. S'ys I cousin John what do you thioke o' that ?..... Well s'ys he Ven, now I v'lleve you caught the cat, and ever since that I've had the run on cousin John about that cat.

The reader is tired of this nonsense, and so is

BALDWIN.

THE WEST FIFTY YEARS SINCE.

By L. M., of Washington City.

CHAPTER III.

The recent achievement of Henry, excited in the bosoms of his companions the highest admiration of his personal prowess. They also felt for him that deep attachment which mutual privations and mutual dangers never fail to inspire. But week after week rolled away, and yet Col. B. and his family came not, nor were there any tidings of them. The time set for their departure from the landing, was often counted over. The fears of the people at the station were aroused, and at last it was agreed by all that some fatal disaster must have befallen the travellers. It was evident to Major G. that his son was disquieted and sad, and that he had become indifferent to those pursuits which had excited him to action on his first arrival.

Henry's fervid imagination sometimes pictured the object of his adoration dragging out her days in a hopeless and degrading servitude. Sometimes he beheld her swollen, disfigured and unburied corpse, drifted up and lying on the beach of the Tennessee. All hope of ever seeing Emily again was nearly abandoned. These thoughts drove him almost mad. In the bitterness of his anguish he determined to take triple vengeance upon the ferocious enemy. All his faculties seemed to be absorbed in a desperate and deadly resolution to have blood for blood. More than once he proposed to the commander of the station to raise a volunteer force which should penetrate into the towns of the Indians, lay them waste, seize upon their women and children, coerce them into terms of accommodation, and to a restoration of the captives which they held. But the cautious veteran checked this youthful impetuosity and impetuosity by alleging that they were as yet too weak to act on the offensive; that after a while they might be strengthened by new detachments of emigrants, and that until then they must bear their sufferings bravely and patiently.

Whilst Henry awaited in torturing anxiety for some developments that might enable him to ascertain the probable fate of Emily, an event occurred which had well nigh broken up the whole settlement.

One morning, about an hour after sun-rise, seven men were seen running towards the station, from the direc-

tion of the neighboring one, with their guns in their hands, and apparently in the greatest terror. Having been admitted, they stated, that they had gone out about day-light to hoe their corn and cotton—a small quantity of which latter article was raised to be spun by the women—that they had been at work but a few moments before they heard the crack of a rifle. These men, it appeared, were in that part of the field which was farthest from the station. Between them and their companions more than thirty Indian warriors, emerging from the neighboring wood, suddenly interposed. The other white men, ten or twelve in number, on the first alarm, sprung to their arms, and on the first impulse made towards the gate, the enemy being close upon their heels. The women seeing their husbands coming and hotly pursued, opened the gate, hoping to admit them, then to close it and exclude the savages. But the Indians accelerated their speed, and entered as it were upon the shoulders of the settlers. The seven men perceiving that all was lost within, had come with all possible haste to Nashville, in order to procure succor.

This thrilling detail awakened all Henry's energies into full action. His dark and cloudy brow, compressed lips, and fiery eye, shadowed forth the tempest that was raging within.

The commander proceeded with his accustomed circumspection. Having called his men together, it was decided that a small number of them should proceed to the station that had been attacked; ascertain the extent of the mischief that had been done; whether the enemy had fled, and which of the great traces leading south, they had taken. Word was sent to the other two stations, of what had happened, with orders that all who could be spared, should be sent fully equipped for an expedition.

Those who visited the scene of the late disaster, approached cautiously and silently: not the slightest noise was heard. It was evident that the enemy had come in haste, had done their bloody work in haste, and were already gone. The tracks of the ponies around, proved that they were on horseback, and that they would retreat as rapidly as possible until they believed that they were beyond the reach of pursuit.

At the entrance of the station there were four Indians and nine white men dead. On the countenances of the former the scowl of defiance and revenge still lingered. They were attired in their war dresses; their faces painted red and black. One of them was lying with his gun beside him, not having been discharged. It seemed probable that one of the whites, seeing that he must die, resolved to sell his life dearly; that he had turned suddenly upon his pursuer, and shot him through the heart. In the hand of another was a long and bloody knife, which he had used, and which he still held firmly, the muscles being yet unrelaxed. At a little distance from the gate there lay an old man tomahawked and scalped—the father of one of those who had fallen. By him sat his faithful dog gently licking his wounds. When the visitors approached, he came towards them with piteous and imploring looks, then sprung back, as if to invite them to relieve his master's distress. A few paces farther on, there was a woman lying on her face. Beside her was her child, who was just able to speak, sobbing, and shaking her mother as if she thought she was asleep. In one of the cabins there were two

children about four years old, each with a stick in its hand raking parched corn from the fire, apparently unconscious of what had happened, and absorbed in their employment. On being questioned, they stated, that hearing a noise they had crawled under the bed. Here and there were the remains of several infants, which it was evident had been taken by the heels and their brains beaten out against the walls of the station, and then thrown down. The spinning wheels, chairs and stools, were overturned. The carded cotton was flying in every direction, and that which was spun was scattered over the floors of the cabins. Some of the quilts and blankets seemed to have been dropped as the marauders were endeavoring to take them away. Every thing bore the appearance of confusion and hurry.

Towards evening all those who were to join in the proposed expedition, assembled. The party was well mounted. All night they were busied in the necessary preparations. No one thought of sleep. A small sack of corn was fastened behind each saddle, and over each was thrown a long, narrow wallet, with a small quantity of meat in the ends. All wore their summer hunting shirts. The force of the savages was about sixty; that of the whites forty. Ten of them were detailed to act as spies. John Gordon was appointed their captain; a post of great trust and peril. This precaution was indispensable, because the enemy had reduced their peculiar mode of making war to perfection. In order to decoy their victims into their power, they were accustomed, when traversing the woods, to whistle like partridges, to grunt like bears, to howl like wolves, and to gobble like the wild turkeys.

The captain of the spies was an original. His height was not more than five feet five inches, but the symmetry of his person was perfect. His bodily activity was wonderful. From mere love of romantic adventure he had wandered away from his friends and joined a small company going to the west. Not one of these friends knew whither he had gone, or when he would return, if ever. He was reckless of the world's goods. He neither asked nor cared for any thing but enough to eat and to wear, and a faithful horse, dog and rifle. All his faculties seemed to be swallowed up in a passion for action. Looking always upon the bright side of the picture of human life, he never desponded. His playful fancy was forever on the wing. He filled every one about him with delight, as though he bore the wand of a charmer. His wit was almost attic. Gordon's gifts were indeed so rare, that he was a universal favorite. In his intercourse with the gentler sex, he exhibited the greatest delicacy and generosity of sentiment. No man was braver in battle, and yet a more humane spirit never dwelt in human bosom. When he was bent on attaining any object that was dear to his heart, he was as secret and silent as the grave; still those who scanned him slightly, regarded him as a babblers, and supposed that if a single thought which he held, was pent up within him for a moment, that he must burst. The commander saw the peculiar qualities of this individual and appreciated them correctly. The new duty assigned him, required the exercise of all his talent, because on his skill and vigilance the life of each man of the party imminently depended.

All were ready at the first dawn of the morning. The women and children gathered around to bid farewell.

The parting was affecting, because it was very certain that some who were going might never return. But the emergency was pressing, and each man was anxious to meet it. The ever active wife of the commander was at hand. Although her heart was full, her fortitude never failed her. In a firm voice she said, "John, my husband, take care of yourself; but be sure that you and the boys do not suffer those murderers to escape: no, not one of them."

After the party had fairly cleared the settlements, the commander addressed them, and stated that the enemy had gotten eighteen hours the start of them; that they had probably travelled the whole of the preceding night, but that they would slacken their pace, as was their custom when they were not soon pursued and overtaken. He believed that they would cross the Tennessee on rafts, on which they would place their plunder. Although the distance was so great, the commander thought it most advisable to follow the foe to the river, attack them there, and take them by surprise. At our first fire we must cut off as many as we can. Raising himself in his stirrups, and throwing his eye fiercely around, he said then, each man must buckle to his man, and not a soul of them will be able to save himself. Passing on rapidly, the spies being half a mile ahead, the party travelled four days. On the morning of the fifth, Gordon returned back in haste upon the main body, and reported that they had come to a fire from which the enemy could not have departed more than an hour. It was manifest that the Indians had set out early with the view of passing the river by night-fall. A halt was ordered, and each man directed to pick his flint, reload, and prime anew. The horses were secured by their halters. The veteran enjoined it upon all, and particularly upon the young men, to fire deliberately and upon good aim. It was of great importance to ascertain the exact condition, position and employment of the enemy, before the fire of the whites was delivered. The captain of the spies was ordered upon this dangerous duty. If a leaf should be disturbed, these watchful sons of the forest might detect with the quickness of lightening the presence of their pursuers. In an instant they would vanish like shadows, plunge into the depths of the woods, and defeat the plan that had been laid for their total destruction. The spy proceeded fearlessly to the discharge of his perilous undertaking. When he came within twenty-five or thirty yards of the bank of the river, the bluff being not more than twelve or fifteen feet high, he laid down and drew himself along by seizing upon the grass with his right hand, and trailing his gun after him in his left. Having reached the brink, he raised his head a few inches, and peeped over. The Indians were scattered along the sandy beach. The morning was beautiful; not a breath of air disturbed the wide and placid sheet of water that was slowly moving by. Some of the enemy were picking up pieces of driftwood and carrying them on their shoulders lazily to the spot where others were constructing the rafts. Several had cut grape vines, with which to tie the logs together, and were dragging them after them. Five or six were looking idly on, and about as many were stretched out asleep. There were five young and handsome squaws with the party. These were standing in a group, each dressed in a frock and bonnet, that had been taken off at the time of the

massacre. They were in a joyous humor, and were laughing immoderately at each other. First one and then another would walk off with an air and strut, and the rest would pursue her with loud peals of merriment. Gordon returned and gave all the necessary details. Henry then offered a suggestion which was unanimously adopted; that only twenty of their men should fire from the top of the bank; that the other twenty should leap down the bluff and make at the Indians, whilst those who had discharged their guns should reload on the instant, and come to the assistance of those who would be in advance and actually engaged. All moved with the silence of death, and each took deliberate sight. When the whites delivered their fire, there arose a long and loud shriek. Those whose rifles were still loaded, fairly threw themselves down the precipice, rose to their feet, and pushed on rapidly. The enemy seized upon their arms; the women flew along the shore. The warriors were so completely surprised that they could not run without being overtaken. They resolved as it were instinctively to make battle and die desperately. Turning upon the whites, they dispersed to some extent, and each naturally selected an opponent. Henry G. preserved his self-possession, but his spirit was on fire. His attention was arrested by the saucy and defying look of a warrior, about his own age, remarkable for the elegance and admirable symmetry of his person, his great elasticity of limbs, and his free and unconstrained movements. He fled, and Henry pursued him; but after he had run about fifty yards he halted suddenly, turned, and raised his rifle, so did Henry, and both, in their anxiety and hurry, missed. On the advance of his antagonist, the young warrior again retreated, turning occasionally and watching for his foe. At last he stopped, wheeled, and in an instant threw his tomahawk with all his might, which struck Henry between his left nipple and the joint of the left shoulder. The wound was deep, and the blood streamed down, but he was now excited almost to madness. Grasping and raising his tomahawk, he aimed to strike the head of his enemy, but it glanced and took off the thumb and fore-finger of the left hand. Each of the parties then had his butcher's knife left, and both were wounded. Both drew in a twinkling and rushed at each other; but Henry dodged the blow of the Indian who raised to strike, threw himself under him, as it were, clasped him round, and attempted to throw him. At last they fell side by side, and now it seemed that the final result of the combat must depend on which should be able to turn the other. The hand of the Indian was disabled, and Henry was already exhausted by the loss of blood from his breast. Seeing that all hope of preserving his life would soon be ended, each struggled to the uttermost. Fortunately the loss of part of the hand of the young warrior, gave his antagonist a decided advantage, and at length Henry turned him and got upon top. Gathering up his knees, he placed them upon the arms of the Indian, drew his large knife across his throat, with the utmost violence, and cut it from ear to ear. The brave fellow uttered a deep groan, his muscles relaxed, and he quickly expired. Henry rolled over by his side, and wholly overcome by the desperate effort in which he had been engaged, he soon became senseless. In this condition the two were found after the battle was over.

ICELAND.

We have heretofore reviewed an epic poem from Sweden, with copious extracts. Perhaps to most readers the following paragraph, giving some hints of the literary state of Iceland, as long ago as 1819, may be even more interesting. It is extracted from Blackwood's Magazine, for April, 1819.

ICELANDIC LITERATURE.

From some interesting accounts respecting the modern literature of Iceland, we learn, that a translation has been made of Milton's *Paradise Lost*, and of the first fourteen books of Klopstock's *Messiah*, into the language of that country, by John Thorlakson, a native. This poet is a minister at Baegisa, and lives in a little hut, situated between three high mountains, and in the neighborhood of torrents and foaming cataracts. The room in which he studies and sleeps, is scarcely large enough to contain a bed, a table, and a chair, and the entrance is not four feet in height. His whole income does not exceed six guineas a year, although he serves two parishes. So little is required to support life in Iceland, that, formerly, the ministers had not more than thirty shillings for their annual stipend.

Netherlands.

An Almanack of the Muses in Dutch for 1820, to include the productions of the most celebrated living poets, is announced.

Russia.

In the Russian language, a geographical manual of the Russian Empire, in two volumes by C. M. de Broemsen, who, during twenty-five years active peregrination of this vast country, has been enabled to visit the greater part of it. The work includes particular observations on the soil; and on the industry, commerce, manners, and customs of its inhabitants.

Spain.

The Lancasterian System of Education is about to be published in Spanish, and dedicated, by permission, to king Ferdinand.

Sweden.

The literature of Iceland has lately become an object of research in Sweden and Norway; and the royal library at Stockholm possessing a great number of Iceland MSS. the Professor Lilliegren is now occupied in translating and preparing them for publication. The first volume has appeared, and a second is in great forwardness.

✂ We are reluctantly compelled to postpone several interesting bibliographical notices until our next number; in the meantime we renew the invitation to publishers and authors to forward their works without delay.

✂ ERRATA.—In the biographical sketch of General Hugh Mercer, published in the April number of the Messenger, an error occurred in the last paragraph, page 218, fifth line from the top. Instead of "Dolley," it should have been printed "Dolby," the venerable sexton's name.

FIVE DOLLARS PER ANNUM.

ANCIENT LITERATURE.

By a Virginian, now a Citizen of Ohio.

XENOPHON.

We have sometimes been led to fear that in the flood-tide of modern literature, amid the numerous works of fiction and fancy, the easy narrative, the minute display of petty passions and fine shades of character and feeling in which the writers of the present day excel, the standard works of ancient literature would fall into neglect, and be, for all practical purposes, forgotten by our reading public.

We do not entirely acquit ourselves and our reviewing fraternity of all blame in aiding the tendency to this result. We have, or are supposed to have, to do only with that which is new and fresh before the reading public. We are expected to be their tasters at the sumptuous and varied feast served up out of the fresh products of each abundant year; to invite their attention to what is savory and wholesome on the wellspread board, and to warn them against all that is noxious or insipid. Laboring in this our vocation, we seldom ourselves find leisure to look back upon the past—to revel in the rich productions of other ages and other climes—and we feel nothing of the glow of original conception, no pride as the discoverer of hidden merit, when we commend those writings of high antiquity which need not the sanction of our judgment, because they have been consecrated by time.

We do not feel a blind veneration for antiquity, however much we may admire all that is excellent in what has been transmitted to us from remote times. We cannot but be struck with the vast inferiority of the ancients in all that relates to the physical sciences; and we are advised that they had in their day and generation multitudes of trashy writers, as well as we—men who could write by the quantity for a wager—who, like Lucilius, could compose two hundred verses standing upon one leg—but their chaff has been long since given to the winds, and they have left us only the winnowed grain.

There is one point of view in which we look with delight on some of the relics of antiquity, which would else, perhaps, in our eyes have but

common merit. It is that they show us, both in great and in little things, in the highest aspirations of thought and feeling, as well as in the most common amusements and frivolity, the absolute identity of our race, and that man is now just what he was in the earliest age to which we can trace him, even in the very dawn of his history. Greatly as the circumstances in which he is placed are changed, and though the external man be moulded and modified to adapt itself to that which surrounds him, yet in all that goes to make up the being, in the unity of character, in his actions arising out of any given condition in which we find or place him, we see him to have been then just that which under like conditions we feel that he is now. Thus through the long lapse of ages, in remote lands and in different climes, in the first dawn of history, in the earliest poem and in the oldest proverb, we recognize the developments of the same nature which is still our own, and instinctively claim fellowship with the shadowy memories of the past.

We do not propose to write a dissertation upon ancient literature, or to institute a comparison between ancient and modern writers; but, led by the reflections which we have sketched, and with them for our apology, we invite our readers to sit down with us for one short hour, and renew his schoolboy acquaintance with one of the most beautiful writers and one of the most adventurous and generous spirits of antiquity—the bold, the simple, the elegant and classic Xenophon.

We do not write for scholars, but for ourselves and for the reading public. We refer to no Greek text, but to an excellent translation of the works of our author, which is to be found in any of our bookstores, and which may be read as a recreation by those who found it in the original a labor and a task, and with equal profit by those to whom in that original it was a sealed book.

Xenophon was one of the scholars of Socrates, and imbibed deeply the opinions and philosophy of that extraordinary man. He lived at the time when Athens had fallen under the dominion of Sparta, and that iron power ruled in Greece—when the Persian Empire under Darius and Artaxerxes, his son, was in all its glory, and the Emperor was known among the States of Ionia and Greece as “the Great King”—when the Carthaginians ruled in Western Africa and Spain and were conquerors in Sicily, and when

Rome, which has since slowly risen, spread wide its empire, lived out its appointed day, and crumbled to pieces and fell, so as to be itself among the remembrances of the long past, was an inconsiderable city of a rude and barbarous people, almost unknown and unnoticed by its more polished neighbors. Yet in searching the papers of this accomplished author, we enter into his thoughts and feelings as if he were of our own time—we sympathize with him as a friend whom we know and love, and feel that we could with him, or such as he was, pass a convivial hour very happily and much at our ease, and (all conventional forms aside) find him a gentleman, well fitted to adorn the social circle, to improve by his intelligence and delight by his wit; and we almost forget the mighty chasm of ages on ages of perishable States and Empires, and still more perishable man, which separates him from us.

The first thing that strikes us in the writings of Xenophon, indicative of his character, is the love and veneration which he bears to the person and memory of Socrates, and his care and attention to all that remains of him. While Xenophon lived in his native city, in his youth and early manhood, he was a constant follower of Socrates, devoted to his person and obedient to his counsels. During this period occurred most of those conversations which he has given in his "Memoirs of Socrates." They are narrated with much spirit, and contain in them, as we have reason to suppose, much more of the "father sage" than do similar notices from the pen of his other celebrated pupil, Plato. Xenophon indeed intimates in one of his epistles, that there is more of poetry than truth in Plato's account of the sayings of that philosopher, though he seems to speak, not without some slight tincture of rivalry. Writing to Lamprocles, son of Socrates, he says:

"I have a design to collect the sayings and actions of Socrates, which will be his best apology, both now and for the future, not in the court where the Athenians are judges, but to all who consider the virtue of the man. If we should not write this freely, it were a sin against friendship and truth. Even now there fell into my hands a piece of Plato's to that effect, wherein is the name of Socrates, and some discourses of his not unpleasant. But we must profess that we heard not, nor can commit to writing any in that kind, for we are not poets as he is, though he renounce poetry."

And in writing to Cebes and Simmias, he says:

"Plato, though absent, is much admired throughout Italy and Sicily for his treatises; but

we cannot be persuaded they deserve any study. I am not only careful of losing the honor due to learning, but tender also of Socrates, lest his virtue should incur any prejudice by my ill relation of it."

Yet it is just to suppose that he was jealous of the honor of his master, rather than of the comparative success of his own and Plato's treatise concerning him. His declared purpose was to appeal in behalf of Socrates, to the tribunal, "not where the Athenians were judges, but to all who consider the virtue of the man;" and he was unwilling that his stern virtue and practical wisdom should be discolored or tinged by even a glow of poetic fancy.

In the first book of his Memoirs, he incidentally details a conversation between Pericles and Alcibiades, in which we find, in substance, Sir William Blackstone's definition of law. Alcibiades, then a youth, having requested Pericles to explain to him "what a law is," Pericles replies:

"Your request, my Alcibiades, is not difficult to be complied with; for that is a law which the people agree upon in their public assemblies, and afterwards cause to be promulgated in a proper manner, ordaining what ought, and what ought not, to be done."

"And what do they ordain; good, or evil?"

"Not evil, surely, my young friend."

"But what do you call that," said Alcibiades, "which in states where the people have no rule, is advised and ordained by the few who may be in power?"

"I call that likewise a law," replied Pericles; "for laws are nothing but the injunctions of such men as are in possession of the sovereign authority."

But the young inquirer led the experienced statesman into those intricate mazes of social and political obligation, in which so many have been bewildered in our own times, and through difficulties inherent in the nature of government, for which a written constitution is the only remedy, and that, perhaps, not always effectual.

"But," said Alcibiades, "when a tyrant is possessed of this sovereign authority, are the things he ordains to be received as laws?"

"As laws," returned Pericles.

"What then is violence and injustice?" said Alcibiades. "Is it not when the strong compel the weak, not by mildness and persuasion, but by force, to obey them?"

"I think it is."

"Will it not then follow, that what a tyrant decrees, and compels the observance of, contrary to the will of the people, is not law, but violence?"

"I believe it may," answered Pericles; "for I cannot admit that as a law, which a tyrant enacts, contrary to the will of the people."

"And when the few impose their decrees upon the many, not by persuasion, but by force, are we to call this also violence?"

"We are: and truly, I think," said Pericles, "that whatever is decreed and enforced without the consent of those who are to obey, is not law, but violence."

"Then ought that which is decreed by the people contrary to the will of the nobles, to be deemed violence, rather than law?"

"No doubt of it," replied Pericles. "But, my Alcibiades, at your age we were somewhat more acute in these nice subtleties, when we made it our business to consider them."

In the same book, in a conversation with Aristodemus, an atheist, Socrates gives a brief but striking outline of that view of natural theology which Mr. Paley has so fully elaborated in his work on that subject.

"Tell me," said he, "Aristodemus, is there any man whom you admire on account of his merit?"

Aristodemus having answered, "Many"—

"Name some of them," said Socrates, "I pray you."

"I admire," said Aristodemus, "Homer for his epic poetry, Melanippides for his dithyrambics, Sophocles for his tragedy, Polycletes for statuary, and Xeuxis for painting."

"But which seems to you most worthy of admiration, Aristodemus; the artist who forms images void of motion and intelligence, or one who hath the skill to produce animals that are endued not only with activity, but understanding?"

"The latter, there can be no doubt," replied Aristodemus, "provided the production be not the effect of chance, but of wisdom and contrivance."

"But since there are many things, some of which we can easily see the use of, while we cannot say of others, to what purpose they were produced, which of these, Aristodemus, do you suppose the work of wisdom?"

"It would seem the most reasonable to affirm it of those whose fitness and utility is so evidently apparent."

"But," replied Socrates, "it is evidently apparent, that He who made man endued him with senses because they were good for him; eyes wherewith to behold whatever was visible, and ears to hear whatever was to be heard. And say, Aristodemus, to what purpose should odors be prepared, if the sense of smelling were denied? or why the distinctions of bitter and sweet,

savory and unsavory, unless a palate had been given, conveniently placed to arbitrate between them and declare the difference? Is not that Providence in a most eminent manner conspicuous, which, because the eye of man is so delicate in its contexture, hath therefore prepared eyelids like doors, whereby to secure it, which extend of themselves whenever it is needful, and again close when sleep approaches? Are not the eyelids provided, as it were, with a fence on the edge of them, to keep off the wind and guard the eye? Even the eyebrow itself is not without its office, but as a pent-house, is prepared to turn off the sweat falling from the forehead, which might enter and annoy that no less tender than astonishing part of us. Is it not to be admired that the ears should take in sounds of every sort, and yet are not too much filled by them? That the fore teeth of the animal should be formed in such a manner as is evidently best suited for cutting of its food, as those on the side for grinding it in pieces? That the mouth, through which the food is conveyed, is placed so near the nose and eyes, as to prevent the passing unnoticed, whatsoever is unfit for nourishment? And canst thou still doubt, Aristodemus, whether a disposition of parts like these should be the work of chance, or of wisdom and contrivance?"

How strong his argument and how beautiful his illustrations! We must not forget that the light of Revelation was not yet upon the earth; and the Creator of the universe could be known only by his works.

Xenophon says of Socrates, that "when he prayed, his petition was only this: 'that the gods would give to him those things that were good;' and this he did forasmuch as they only knew what was good for man." The same with the prayer commended to us by Doctor Johnson in the conclusion of his beautiful poem on the Vanity of Human Wishes:

"Still raise for good the supplicating voice,
But leave to Heaven the measure and the choice."

In the feast of Callias, we are made present almost in very deed, at a fine scene of ancient conviviality. To this we will take leave to introduce our readers.

"During the feast of Minerva, there was a solemn tournament, whither Callias, who tenderly loved Autolicus, carried him, which was soon after the victory which that youth had obtained at the Olympic games. When the shows were over, Callias taking Autolicus and his father with him, went down from the city to his house in the Pireum, with Nicerates, the son

of Nicias. But upon the way meeting Socrates, Hermogenes, Critobulus, Antisthenes and Carmides, discoursing together, he gave orders to one of his people to conduct Autolicus and those of his company to his house; and addressing himself to Socrates and those who were with him, "I could not," said he, "have met with you more opportunely: I treat to-day Autolicus and his father; and, if I am not deceived, persons like you, who have their souls purified by refined contemplations, would do much more honor to our assembly, than your colonels of horse, captains of foot, and other gentlemen of business, who are full of nothing but their offices and employments." "You are always upon the banter," said Socrates; "for, since you gave so much money to Protagoras, Georgias and Prodicus, to be instructed in wisdom, you make but little account of us, who have no other assistance but ourselves to acquire knowledge." "'Tis true," said Callias, "hitherto I have concealed from you a thousand fine things I learned in the conversation of those gentlemen; but if you will sup with me this evening, I will teach you all I know, and after that I do not doubt you will say I am a man of consequence."

Socrates and his party accepted the invitation, and we soon find them seated at the supper table, which, like all other entertainments, whether called supper or dinner, was at the beginning dull enough. "A profound silence was observed, as though it had been enjoined." By-and-by, a buffoon entered, who tried to raise a laugh, but failed. After the first course, and they had made "effusion of wine in honor of the gods, a certain Syracusan entered, leading in a handsome girl, who played on the flute, another that danced and showed very nimble feats of activity, and a beautiful little boy, who danced, and played perfectly well on the guitar." Socrates became talkative. He complimented Callias on the liberality and good taste displayed in the entertainment; said some happy things in praise of the wives of Critobulus and Nicerates, two married gentlemen of the party; he recited some poetry, and the dancing girl's elegant performance drew from him some fine observations on the comparative beauty of objects at rest and in motion, together with a whimsical declaration that he himself was determined to learn to dance. The Amphytrion, Callias, called out all his guests, by requiring each to tell what he most valued himself for; and, as an interlude to this, Socrates bantered Carmides, a young man of the party, about his excessive fondness for his mistress, Amandra, and taxes him with having snatched a kiss from her in his presence; and he sagely advises Carmides, if he would preserve the liberty of his

soul, to abstain from kissing handsome women. Carmides retorts, and effectually turns the tables upon the old philosopher.

"What," said Carmides, "must I be afraid of coming near a handsome woman? Nevertheless, I remember very well, and I believe you do too, Socrates, that being one day in company with Critobulus's beautiful sister, who resembles him so much, as we were searching for a passage in some author, you held your head very close to that beautiful virgin, and I thought you seemed to take pleasure in touching her naked shoulder with yours."

Then follows a humorous contest between Socrates and Critobulus for the prize of beauty. Socrates gives the challenge.

Critob. "Come, I will not refuse to enter the lists for once with you: pray then use all your eloquence, and let us know how you prove yourself to be handsomer than I."

Socrates. "That shall be done presently: bring but a light, and the thing is done."

Crit. "But, in order to state the question, will you allow me to ask you a few questions?"

Soc. "I will."

Crit. "But, on second thought, I will give you leave to ask what questions you please first."

Soc. "Agreed. Do you believe beauty is nowhere to be found but in man?"

Crit. "Yes, certainly, in other creatures too, whether animate, as a horse or bull, or inanimate things, as we say, that is a handsome sword, a fine shield, &c."

Soc. "But how comes it then, that things so very different as these, should yet all of them be handsome?"

Crit. "Because they are well made, either by art or nature, for the purposes they are employed in."

Soc. "Do you know the use of eyes?"

Crit. "To see."

Soc. "Well! it is for that very reason mine are handsomer than yours."

Crit. "Your reason."

Soc. "Yours see only in a direct line; but, as for mine, I can look not only directly forward, as you, but sideways too, they being seated on a kind of ridge on my face, and staring out."

Crit. "At that rate, a crab has the advantage of all other animals in matter of eyes."

Soc. "Certainly; for theirs are incomparably more solid and better situated than any other creature's."

Crit. "Be it so as to eyes; but as to your nose, would you make me believe yours is better shaped than mine?"

Soc. "There is no room to doubt, if it be granted that the nose was made for the sense of

smelling; for, your nostrils are turned downward, but mine are wide, and turned up toward heaven, to receive smells that come from every part," &c.

And thus for some time in detail taking off the uncouthness of his own person, in a better vein than it was ever done by his bitter satirist, Aristophanes. The world is not ready to admit that a man when he is once dubbed a philosopher, can ever after say any thing in sport; but we make him, whether he will or not, always speak oracles. So it has fared with many of the ludicrous paradoxes of Socrates, uttered in the humor of the moment, by way of parrying a jest, or of showing the skill with which he could handle the light weapons of the sophist. At the banquet he was rallied by one of the guests upon the intolerable temper of his wife, Xantippe; and his pleasant reply has induced half the world to believe that he really married a vixen by way of improving his own temper.

The concluding incident of the banquet is referred to by Mr. Addison in one of his Spectators, (No. 500,) but he attributes to the eloquence of Socrates, in a discourse on marriage, the effect which was produced by a scene between Bacchus and Ariadne, as exhibited by the party of the Syracusan.

Xenophon's account of the Expedition of Cyrus and the Retreat of the Ten Thousand, is, in our opinion, a most perfect specimen of historic writing, containing also much of the interest of personal narrative. Upon this we must touch but briefly; premising, however, a general outline of the condition of the parties engaged in that enterprise, and the causes which involved them in its perils.

The ascendancy which Sparta held in Greece at the time of this expedition, was partly acquired by the alliance and aid of the rich and voluptuous court of Persia. At the same time the Persian held a doubtful empire over the maritime states and cities on the borders of the Hellespont, the eastern coast and many of the islands of the Archipelago, and the adjacent shore of the Mediterranean sea. Darius Ochus died: Artaxerxes, his son, ascended the throne, and Cyrus, brother of Artaxerxes by the same mother, became satrap of the western portion of the empire and "general of all the people assembled in the plain of Castolus." In the wars which the Persians were constantly waging with their half-conquered provinces in the west, large bodies of Greek adventurers, won by Persian gold, formed their most effective troops. These naturally fell under the command of Cyrus, who seems to have formed a high estimate of their military skill and prowess; and he kept for many years a large

number of these mercenary troops in his pay, with a view of employing them in an attempt which he had long meditated upon his brother's crown and throne. Affairs being at last ripe for action, he collected at Sardis his Grecian force, about thirteen thousand strong, where they were joined by about a hundred thousand Asiatics, with the ostensible purpose of marching against the Pisidians, a mountain race not yet subjected to the Persian yoke. Xenophon, in his third book, explains the manner in which he was drawn into this enterprise.

"There was in the army an Athenian, by name Xenophon, who, without being a general, a captain or a soldier, served as a volunteer; for, having been long attached to Proxenus by the rights of hospitality, the latter sent for him from home, with a promise, if he came, to recommend him to Cyrus; from whom, he said, he expected greater advantages than from his own country. Xenophon having read the letter, consulted Socrates, the Athenian, concerning the voyage, who fearing lest his country might look upon his attachment to Cyrus as criminal, because that prince was thought to have espoused the interest of the Lacedemonians against the Athenians with great warmth, advised Xenophon to go to Delphos, and consult the oracle concerning the matter. Xenophon went thither accordingly, and asked Apollo to which of the gods he should offer sacrifice and address his prayers, to the end that he might perform the voyage in the best and most reputable manner, and, after a happy issue of it, return in safety. Apollo answered, that he should sacrifice to the proper gods. At his return, he acquainted Socrates with this answer, who blamed him because he had not asked Apollo whether it were better for him to undertake the voyage, in the first place, than to stay at home; but, having himself first determined to undertake it, he had consulted him on the most proper means of performing it with success; but since, said he, you have asked this, you ought to do what the god commanded. Xenophon, therefore, having offered sacrifice to the gods, according to the direction of the oracle, set sail, and found Proxenus and Cyrus at Sardis, ready to march towards the upper Asia. Here he was presented to Cyrus, and Proxenus pressing him to stay, Cyrus was no less earnest in persuading him, and assured him, as soon as the expedition was at an end, he would dismiss him; this he pretended was against the Pisidians."

The Greeks, all except Clearchus, the Lacedemonian general, who was no doubt from the first in the counsels of Cyrus, were led on by various artifices, until it became more dangerous to return than to go forward; then they at last

consented to move forward on the actual expedition against the Great King.

His narrative of the march is brief, but full of interest; but our limits will not permit us to touch upon any of its incidents. At length the army of Artaxerxes appeared, covering, with its locust swarms, an immense plain between the Euphrates and Tigris, about one hundred miles above the city of Babylon. The battle was joined, and the account which Xenophon gives of it calls to our recollection forcibly the remarks of M. Cousin, of the myriads of men who meet and contend in battle in Asia, and of whom and of whose deeds the history of their country retains no trace. There, indeed, the individuality of man is swallowed up and lost in the mighty ocean of being, and they therefore have no history. At the first onset Cyrus fell; but the Greeks drove the enemy opposed to them from the field: they encamped on the battle-ground, and made fires to dress their food of the darts and arrows of the Persians and the wooden shields of the Egyptians; and for two days they believed Cyrus to be alive and conqueror.

The conduct of the Persians subsequent to the battle, satisfies us that their first object was to get the Greeks in their power, by any artifice, and make such fearful example of them as would prevent the future march of their armies into Persia; but if this were impracticable, to lead them where they could find their way, through many difficulties, out of the kingdom, and to harass, but not cut off, their retreat. For this purpose they first negotiated: they furnished the Greeks provisions, and led them down the Tigris many days' march out of their route, partly that they might see the numerous army which was marching from Susa and Ecbatana, to the aid of the Great King, and partly that, on failing to ensnare them, they might dismiss them by the shortest way out of the kingdom into the mountains of the Carduchians, where they would probably perish by the rigor of the climate and by the swords of that warlike people.

The night after the commander, Clearchus, and the other principal officers of the Greeks were taken by treachery and put to death, and when the Greeks lay disheartened in their camp, without officers and without order, not knowing what to do, expecting an attack and unprepared for defence, Xenophon says he "was of the number, had his share in the general sorrow, and was unable to rest."

"However, getting a little sleep, he dreamed: he thought it thundered and a flash of lightning fell upon his paternal house, which, upon that, was all in a blaze. Immediately he woke in a fright, and looked upon his dream as happy in

this respect, because while he was engaged in difficulties, he saw a great light proceeding from Jupiter."

That the sleep of Xenophon on that fearful night should be short and troubled, we can well believe. That the young wanderer, (for we are satisfied he was then a youth, though this is disputed by the learned; and what will not the learned dispute?) that the young wanderer, on such a night, should dream or think of his paternal house, and that his dream or reverie should be tinged with the dark hue of all around him, is perfectly consistent with the philosophy of the human mind; and his firm and courageous spirit, the buoyancy of youth and hope, might well dictate the happy interpretation to his troubled dream. Then follows a council of officers and men—the choice of generals, in which Xenophon was chosen on the part of the Athenians—the march, and the means taken by the Persians to force the Greeks into the Carduchian mountains.

The snow, two fathoms deep, which they encountered in this inhospitable region, has caused much discussion and some doubt, but we do not perceive that it is at all wonderful. It was in the midst of winter—they had approached the latitude of 43°—those mountains are the most elevated part of western Asia, for they give rise to the Euphrates and Tigris, and the rivers which flow northward into the Caspian and the Euxine seas, and the climate, which throughout nearly all Europe is insular, rendered mild by the western breezes from the Atlantic, is here far removed from their influence, and corresponds with the same parallel of latitude and the same elevation in the interior of the American continent.

The army suffered much; but they felt their capacity to overcome every difficulty, and face every danger that awaited them; and they met them cheerfully. One encounter of wit between Xenophon and Cheirosophus, the Lacedemonian general, is worthy of notice.

While they were marching through the country of the Chalybians, they saw the natives in great force posted on a hill to dispute their passage. Cheirosophus proposed to attack them—Xenophon objected, and advised that they should "*steal a march*" on them under cover of the night, and take possession of a hill which commanded that on which the enemy was posted.

"But why," said he, "do I mention stealing? since I am informed that among you Lacedemonians, those of the first rank practise it from their childhood, and that instead of being a dishonor, it is your duty to steal those things which the law has not forbidden; and, to the end that you may learn to steal with the greatest dexterity

and secrecy imaginable, your laws have provided that those who are taken in theft shall be whipped. This is the time for you to show how far your education has improved you, and to take care that in stealing this march we are not discovered, lest we suffer severely."

Cheirosophus answered, "I am also informed that you Athenians are very expert in stealing the public money, notwithstanding the danger you are exposed to, and that your best men are the most expert at it; that is, if you choose your best men for your magistrates—so this is a proper time for *you* to show the effects of *your* education."

In passing through the country of the Taochians, a wild mountain race, who inhabited fastnesses, into which they had conveyed all their provisions, the Greeks suffered much with hunger.

"At last the army arrived at a strong place, which had neither city nor houses upon it, but where great numbers of men and women, with their cattle, were assembled: this place Cheirosophus ordered to be attacked the moment he came before it."

At length the fastness was stormed.

"And here followed a dreadful spectacle indeed; for the women first threw their children down the precipices and then themselves; the men did the same. And here Æneas the Stymphalian, a captain, seeing one of the barbarians, who was richly dressed, running with a design to throw himself off, caught hold of him, and the other drawing him after, they both fell down the precipice together, and were dashed to pieces."

It does not appear, that Xenophon kept a regular journal of his marches and the incidents which occurred on either the Expedition or Retreat. It is probable the account was written many years after from memory, and that hence some geographical errors crept in, which have so much puzzled his commentators. But his general accuracy is confirmed by modern travellers; and ancients, as well as moderns, from the age of Marcus Crassus and Mark Anthony down to the present time, concur in fixing the same character to the wild and primitive, and it would seem unchanging, inhabitants of the mountain regions through which he passed.

Perpetual occupancy appears to belong to a mountain race. Their barren hills, which are fruitful in no product

"But man and steel, the soldier and the sword,"

seldom invite the inroads of the conqueror, while the passionate love of the mountaineer for his wild fastnesses and still wilder freedom, forbids him to wander in search of fairer lands and

milder climes. Hence the unmixed and primitive Britons are still found, after so many ages, (conquered but not expelled) in the mountains of Wales. A kindred people of the Celtic race, in spite of Gothic and Moorish conquests, still occupy the mountains of Biscay in Spain, and the Pyrennean portion of Catalonia is held by a still more ancient people, who are believed to have occupied it before the Phenician navigators pushed their discoveries to the shores of the Peninsula. So it is universally, whenever a mountain region of great extent is once possessed by a people far enough advanced in civilization to provide for their own sustenance and to know the arts of war, they and their posterity hold it forever.

But we must hasten to a conclusion. We cannot even refer to the various other productions of our author; but we earnestly recommend him to our young readers, as one whose works are full of interest, and as the master of a style which for neatness, perspicuity and beauty, has never been excelled.

INFLUENCE OF MORALS.

By a Native of Petersburg, Va.

There is, perhaps, no branch of literature, which is less likely to attract public attention than moral essays; and yet there is no subject which, in this age of superficial reading, is more beautifully instructive. To throw around the sublime truths of morality the attractions of a graceful style, and to commend the cup of bitter ingredients to the diseased palate, by touching its brim with earthly sweets, is a task, which the writer of these essays has rashly assumed and imperfectly executed. Leading errors which have long been assumed as unquestionable dogmas, have been rudely assailed; time-honored prejudices, which have been intricately interwoven with the fibres of our heart, however repulsive to our cooler judgments, have been combatted; and notwithstanding the novelty of the positions, which have been hardily assumed, and as confidently maintained on this unpopular theme, we have been well pleased to observe the tolerance of the public in the calm perusal of strictures upon received opinions hitherto unquestioned, and deemed to be indisputable. But that the patience of our readers may not be abused by frequent disquisitions upon a subject so apparently unattractive in itself, we propose turning aside for a season from the paths of severe disquisition, to tread the flowery and enchanting regions of the marvellous.* We propose in the present number to discuss the influence of Romance on Morals, and to estimate the merits of works of fiction by the dictates of a liberal but sound judgment, and not by the austere rules of

* It is proper to state, that in the discussion of this interesting question, we have borrowed largely from a manuscript placed in our hands by an intelligent friend, whose genius beautifully illustrates whatever it touches.

morality. To judge thus harshly, would be to strip them of all their beauty; for, these sportive creations of the fancy, like the wings of the butterfly, when pressed too closely by the hand of the admiring naturalist, lose that flower of beauty, which seems to have been woven of air and light. We are slow to imitate the eagerness of the child of fortune, in the Eastern tale, who, not content with the brilliant prospect around him, rashly applied the mystical unguent to both eyes, whereby the fountain of light was sealed forever. There have been, and are stern moralists, who utterly repudiate all works of fiction, and we can readily appreciate the purity of their design; there are others, no less virtuous, to whom they are a perennial fount of delights. And it is somewhat strange, that the skeptic Bayle, who rashly questioned the sublime truths of revelation, fearful of the demoralizing tendency of these works, forbade their perusal, while the pious Francis of Sales, declared that they were his greatest delight. But in the present state of society, we very much doubt, whether any salutary effect would flow from the sweeping denunciation of the philosopher; and we are strongly inclined to suspect that the fervent spirit of the Saint infused much of its ardor into his admiration.

Truth is the supreme good, the first aliment of the soul. To search after truth is the only employment correspondent with the high destinies of man. But, like the Egyptian Isis, truth is a mystic divinity covered with a veil, which we will endeavor to raise, but which no one can entirely remove. Is then the love of the marvellous—is fiction—is a wandering from the formal paths of severe truth, of the essence of man? Who shall solve the mystery of man, or explain his propensity for the marvellous? Why is he now the kneaded clod, and presently filled with celestial fire, too proud to crawl upon the earth, and too feeble to soar to the skies? Before his fall, the understanding, the imagination, and all the faculties of his mind, were harmoniously blended, and all was light; but since his disobedience, those faculties are disturbed and confounded. Wherefore then should not the imagination be indulged within the limits of innocent amusement, where there is no intention to deceive in fact? To seek for truth is the travail of life. But who would ask of mortal man, whose life begins in tears and ends in sighs, to suspend the action of that enchanting faculty which imagines and creates? The future life, which most interests us, is veiled in mystery, and it is only by the aid of the imagination that we can frame a salutary conjecture of the world beyond the grave. In forming a correct opinion of the influence of the marvellous upon mortals, we must take man as we find him in his social condition. It may be, that in some of those stars that shine with divine magnificence in the firmament, there is a people so enlightened, so happy, so virtuous, as to require no exertion of the imagination; who, unlike ourselves, do not wander in the dusky twilight, but bask in the meridian splendor of truth. And if this state of things prevailed on our globe; if that pure and enlightened reason, which the poet of philosophers imagined, in his lofty dreams, were the possession of the children of Eve, there would no longer be any necessity for such entertainment, and they should be strictly prohibited. Some sublime moralist, venerable for his age and virtues, might arise among us, and with a stern

countenance, expel Homer, Walter Scott, and the whole regiment of romancers. But while thus discharging a solemn duty, he would pour out perfumes upon their heads, and entwine their brows with garlands of flowers. He might be supposed thus to address them:

"Here o'er our minds stern reason holds her sway. Here the law commands and regulates our action. We are happy, because we are just; we are just, because our imaginations are quiet, and the violent passions tamed or driven from our hearts. You cannot, sublime enchanters, add one item to our felicity, but you may render fastidious our placid mediocrity. Depart then, amid the acclamations and applauses of those who banish you. Depart from among us, and search for a world in which this sacred power of custom and laws does not exist. There, perhaps, you may be useful—there, perhaps, you may be necessary; here, your allurements would be vain or injurious. Away—there is such witchery in your presence, that were it suffered any longer, it would render your departure useless or impossible." Such are the sentiments which Plato entertained, when he banished the poets from his happy republic. Let the sentence be pronounced when the dreams of the philosopher shall have been realized. But where is that favored people, that virtuous assembly of men, that renders it possible to put in execution this brilliant chimera? If it were in any of those bright stars of which we have spoken, to what other place than our earth could the romancers and poets come, when expelled from those blissful seats? Is it not here, that as soon as truth presents itself we shut our eyes, that are unable to bear its vivid light? When Moses strode down from the mount of God, clothed with the power and radiance of celestial truth, did not the Israelites bow down, and pray that they might no more be oppressed with its overpowering manifestation? And when the blaze of truth was thrown upon the path of the persecuting Saul, in his journey to Damascus, was he not overthrown and subdued in the pride of his rebellious heart? Frail descendants of the erring man, to allure us in the thorny paths of truth they must be strewn with flowers. The cup of virtue is dashed from our indignant lips, unless the edges be rubbed with earthly sweets. Let us not be presumptuous, since to believe ourselves better than we are, we become still worse than we really are. Let us be careful—for, in our present condition, if it could be proved that romances are of themselves bad, it would still be a question worthy of investigation, whether they are not a necessary evil. It becomes necessary oftentimes to prescribe the use of one poison to counteract the force of another. We should be careful, however, to mix them in such a manner that the noxious qualities may destroy each other. How often, even in morals, does one passion gain that triumph over another, which no force of reasoning could obtain? Whilst, for example, anger impels us to take signal vengeance of our vile enemies, pride exclaims that the offence could not ascend from such baseness to our dignified breasts. So that we think we pardon, when, in fact, we despise; and the voice of ungovernable pride we style philosophy.

It is also worthy of inquiry, whether romances be not a useful vent to the unbridled curiosity of man, who is always hunting after new things, caring little about a selection, and generally embracing more eagerly

those which will drag him to ruin? Nor should it be forgotten, that it is no easy matter to find a better remedy for the evils of idleness, in which every virtue dies, and every vice acquires renovated vigor. It might also be well, before deciding so dogmatically, as some persons do, that all romances ought to be proscribed for their intrinsic malice, to reflect profoundly on this severe sentence, because something may perhaps be found in the condition of our souls, that may make us hesitate before we pronounce a judgment so rigid. It really appears to us, that if there were nothing else, a sufficient reason to hold us in suspense might be found in the universality of romances at all times, and among all nations. It is an axiom, as certain as if it were in Euclid, that an opinion, generally believed to be true in every age and by every people, must be true. And it is unquestionably true that all nations have agreed in considering romances as one of their dearest delights. In speaking of romances, we do not confine ourselves to the vulgar acceptance of the term, because at present that term is restricted to too narrow a signification, which originally comprehended every narration of a fact, that had not actually happened.

And in fact if we wish to consider romance in all its bearings upon moral and civil life, we must still enlarge this idea, and extend it to all the creations of fancy, which present us with a world different from the real world, or which show us the real world itself through a prism that totally transforms it into joyous colors. We have neither strength nor courage to throw ourselves into the immense fields of erudition, and to mount up through the different ages to the first origin of romances. But wherever we cast our eyes, we find them in favor with the mass of the people; and in this respect there is no distinction between the mysterious wisdom of the Egyptians and the credulous ignorance of our own savages. At the base of the pyramids, and on the borders of lake Meoria, a crowd sitting with legs across still listens to the tales of the Arab camel-driver, with the same anxiety that the other group on the banks of lake Superior, and in the midst of their bears and beavers, drinks with delighted ears the stories of the cunning juggler who entertains them. And if the delightful gardens of Ionia frequently beheld their myrtles carved with fabulous remembrances, so do the rugged rocks of Scandinavia present at every step the deformed runic characters, which recount similar fictions. Every country appears to have equally inspired its inhabitants with this genius, and it is only when we wish to come nearer to the present conceived idea of romances, that our eyes are involuntarily turned to the east.

From the east we have received, with the sun, every ray of light; and beholding how those once happy regions are now buried in barbarism, one might be tempted to think it a punishment similar to that of Prometheus for having communicated the divine spark to the nations of the earth.

The Egyptians and the Arabians, the Assyrians and the Persians, are the first whose romantic narratives are recorded by tradition. Nor did this people apply themselves to the sole task of confounding and enveloping real events in imaginary histories: but morality, politics, and religion, were all wrapped up in allegories and fictions, so that one of the sacred prophets formerly gave the Arabians the name of fabulous, and Strabo

complains that the love of the marvellous rendered uncertain the history of these nations.

That incessant wheel, which turns time and manners, has placed at the bottom those who once stood at the top of civilization; still the flight of ages has not been able to cancel the primitive character which the powerful hand of nature has impressed upon them. That air and that sun are still the same. Lying fame will no longer say that even Homer robbed from the altars of Memphis the poems of his virgin fancy, and sung them for his own at the tables of the Grecian chiefs. But in that very place, where those temples reared their lofty heads, flows a crystal fountain, called the fountain of the lovers, which furnishes a sweet argument of continual romancing to those inhabitants, who, in this alone, have not degenerated from the prowess of their forefathers. And the Koran itself, which is the base of all their belief, is it not for the greater part a romance, which, in the midst of the soundest precepts of morality, recounts the strangest follies that ever entered the dreams of a feverish brain? Every thing in these countries launches beyond the limits of verisimilitude, because the warm imagination of this people is always in search of the marvellous.

The Persians themselves, who were always so observant of truth, and are on that account highly praised by ancient writers, are no longer the same when there is a question of inventing a narrative. They let their geniuses loose to the wildest deliriums, and you seem to be listening to the brilliant fictions of the Arabians. These last, however, excel, in this respect, all the people of the east; nor could it be otherwise with a nation, which is said to possess alone more poets than all other nations put together. The poet and the romancer are brothers, and we shall consider them in the same light.

In all nations, a state of repose seems to have been necessary to the indulgence of this propensity for the marvellous. In India, the climate is so romantic and poetical, and has so powerful an influence over the people, that modern institutions wither away on that continent and never take root. How is it possible that in a life so indolent and careless as that of the Indians, men could refrain from following the impulse of that faculty which imagines and creates? In the ease and idleness of the bodily members, when the necessities of positive existence are abundantly provided, the spirit redoubles its action, and boldly launches into the ideal world. But when a nation is coming out of a state of primitive barbarism, and is approaching a state of ordinary civilization, it feels what it wants in order to equal other great and illustrious nations. Hence it rouses itself, as from a sleep, and in the real objects which surrounds it, seeks for strength and splendor. Then its activity and repose are divided between battles and the formation of laws; the name of country and glory are blended together, and the ambition to satisfy its pride, searches for power and riches, things altogether real, and which cannot be contented with vain and empty illusions. In a word, when a nation is composing, with actions, its history, there is little room for romance, which only acquires favor when victory or defeat has introduced the peace of triumph or the peace of slavery. No praise can certainly be derived to romances, from the consideration that in times of power and glory, they are little esteemed by the nations of the earth. But we do not wish to

praise romances for any intrinsic merit; on the contrary, we have always said, that it would be beneficial to banish them, provided we could secure the perfect government of civilized manners and customs. The principles with which we started are still untouched. But, if nations in the midst of their career of glory and renown, little affect romances, we should remember that the time at which a people attains its highest pitch of grandeur, is not always that at which it is most virtuous and happy. On the contrary, a philosopher styled those nations happy, whose history is always disgusting and tedious. Crimes were sometimes protected by fortune, but the delicate mind never measures virtue by strength and power. We may be deceived, but it appears to us, that if the love of the marvellous be extinguished in a people, simultaneously and irrevocably will also be quenched the enthusiasm for noble actions. And should we be so unfortunate as to fall in with a society bent on the sober realities of life, and entirely occupied with loss and gain, every hour would appear an age, until we could fly from this disgusting company.

What has hitherto been said of nations, may be applied with equal truth to individuals. Philosophers and statistes have frequently instituted comparisons between them, and have discovered wonderful resemblance, but perhaps in nothing is the analogy so striking as in relation to romances. With individuals, as with nations, the periods most delighted with romances are youth and old age. Robust manhood finds other occupations, and is alternately agitated by ambition and avarice. By this assertion, we do not wish to insinuate, that in this melancholy journey from the tears of the cradle to the obscurity of the tomb, there is a time, which, for the generality of men, is void of illusion. This opinion would indeed be gross, because the activity of life may indeed weaken the impulse in search of the marvellous, but it can never suppress it, except in a few beings, who seem to have rejected the inheritance of Adam, and who, by the different affections of their hearts, seem to be strangers in the midst of the human family. Some haughty geniuses have vainly endeavored, by the sole aid of reason, to explain the sublime mystery of man, and to tell us whence comes this insatiable love of the marvellous. There is, however, a great book, of which our impotent pride sees nothing but the external, inviolable seal, but which religion willingly opens to those who humble their hearts and minds. In it every thing is explained; and whenever in literature, in morals, or in science, the ordinary rules are not sufficient; whenever you must have recourse to the intrinsic nature of man, without these pages, there is nothing but error and confusion. It may seem strange that we use such language in speaking of romances, that the book of truth should be borrowed to illustrate the ravages of fiction; but is it our fault that by abandoning this principle, the whole intellectual world becomes an enigma beyond the powers of solution? Are we to blame if the tendency of man to the marvellous cannot be explained but by following man, who is in himself so marvellous, to the very origin of his being? Philosophers may fabricate, at their pleasure, systems of the progressive perfectibility of mankind, and number the years after which it will be permitted to God to behold his work less imperfect. They may animate the statue of Condillae, and slowly, by the miserable road of the senses, provide it with

some ideas, and then join together this new species of machinery, and let it go on by little and little until it arrive to the wisdom of the beaver and the monkey, in order that it may finally comprehend the universe, and judge Him who makes Justice.

Who can restrain the pride of an immortal soul when it abuses its sublime gifts. But this immense pride, in the eyes of a true sage, is mere folly, and those systems, like the towers of sand raised by children on the sea shore, the higher they are the nearer to ruin, and already fall. All nations register a primitive time of felicity, and a terrestrial paradise; an age of gold that, alas! too soon has passed away. What are systems, in presence of this universal consent of nations confronted with this solemn protest of mankind? Here within our bosoms, we have a secure guide; and if man wish to follow it, in the silence of the passions, and sincerely interrogate himself, he will discover two forces at war within him, one of which binds him to this life, as if it embraced the end of his being; the other lifts him up to an ideal world, filled with distant reminiscences of a better state, and a new hope of more joyful and enlightened times. Man too is a fallen angel, and although the creature of a few days, has within his soul a secret revelation, unfolding to him the lot for which he was originally destined. Hence the propensity of man to throw himself beyond the limits of real life. Remove this infallible doctrine, and the mystery of man is insoluble. Man, however a frozen and desperate science may endeavor to resolve him into an automaton, man will never be able to unhumanise himself. The seal has been stamped upon him by a hand whose characters are eternal; they may be covered for a season, but can never be entirely cancelled. Where is the man who will deny that he hears the voice of the marvellous speak within him—that he feels the necessity of awakening himself to a true and more animated existence? Who has not, in the course of his life, made a romance? All romances are not written. Hope—the last of the virtues that lingered with man—hope, human hope, was the first romancer. What are the first thoughts of man, when he beholds the future through a magic veil, transforming the whole appearance of things? He will love the singular, the new, the marvellous propensity of romances. In the ecstasy of youth, the golden limit of his life will promise to meet him serene and covered with celestial smiles. Who will then wrench from him the romance, in which he seems to read his own future history, in which his fancy finds the world for which he seeks? Philosophy cries, break that false and fatal enchantment; but let the philosopher take care. Perhaps this is the only moment in which that young man will be truly happy. The sleep of life is slept upon a bed of thorns. Why will you awake that blessed being who dreams of flowers and gardens, and under a shower of roses holds converse of joy with angels? Alas! experience, that mournful mistress, will come too soon to arouse him. Remove the illusion too hastily, and he runs to the opposite excess. He demands a reason for every thing, reduces feelings to axioms, and imitating the blasphemy of Brutus, asks if virtue be any thing but a name.

But when the tempest of the passions shall have subsided into a calm that announces the nearness of the port, when we linger on that verge which unites the past

with the future, hope still lingers to cheer the winter of human life. To old age still remains *intellectual* romance. Because if you abandon hope, hope does not therefore abandon man, whose soul, arrived at the confines of time, disdains all measured limits, and esteems as nothing every thing which does not breathe of immortality. He knew little of human nature who said that the old man lives by memory alone. For if the past be chequered or rife with iniquity, there is no pleasure, but pain in the retrospect. And if the flowers of virtue had sprung up in the path which he had trodden, though it would be delicious to abandon himself to the sensations of conscience, how much purer would be that fragrance if it won him to contemplate and to foretaste the blessings which futurity unfolds to his view. Pindar felt this truth, when he sung in opposition to vulgar opinion that hope is the nurse of old age. Romance is the child of *Hope*, and with it old age, as we have already observed, is extremely delighted. However unfortunate a man may have been, there are always some lucid points scattered over his youthful years. He gathers these around him, and forms a novel far dearer to him than the history of the whole world. The setting sun, the rising moon, the leaf of the periwinkle, the sound of a flute, places before his eyes his buoyant youth. In the excitement of the moment, the past and the future are surrounded with that splendid tint of gold, which, in the tameness of middle age, he thought had vanished forever. No matter if his garland of roses wither before the odoriferous buds have burst into bloom. He takes it as it is, and places it on his head, because he is going very soon to a garden where every thing flourishes again, and where the fragrance will be divine and immortal. Is it objected to us that we have only spoken of the good, who unfortunately are by far the smaller portion of the human family? We have already declared that we do not intend to extend our remarks to any other class. The poet Saâdi prayed that there might be sent upon the wicked a long and tranquil sleep, so that while they slept at least, they might not molest the virtuous. We will dismiss them with a hope that they may read romances, for if this be an evil, it is certainly less than calumny and treachery. But among the noble and the good there are many to whom the very name of romance is repugnant, either because their tranquil hearts and quiet imaginations, leave them content with simple truth, or because their delicate consciences make them detest a thing, which is often horribly abused. Happy indeed is he whose mind and fortune are so tempered, that he never has a desire to create a present or future, different from that prepared for him in the world. In the human family he stands a rare exception. But if the day of trial should ever come for him, he will then feel what a comfort it is to be able to fly from the realities of this vale of tears to the flowery fields of fancy.

But with those who would reject all romance because it has been abused, we would unite in imposing every wholesome restraint upon productions offering the most distant injury to the laws of morality, religion, or sound politics. Wo, if free sway should be given to the drunken imagination of the wicked! The facility with which romances approach every class of the community, and their winning influence over the heart, while the judgment is asleep, would justify the highest

and most rigorous restriction. THE ROMANCING WHICH WAS BORN OF THE FRENCH REVOLUTION, AND WHICH THE AUTHOR OF FALKLAND, PELHAM, AND MALTRAVERS, SEEKS TO REVIVE, SEEMS TO US TO HAVE BEEN THE MOST OBSCENE CRIME OF HUMAN THOUGHT, AND UNFOLDED A SECRET REVELATION OF HELL. But what thing is there within the reach of man not susceptible of abuse, when religion itself has been sometimes used to veil, nay more, to consecrate crime? We have already proved that romance is so inherent in our nature, that it can be extirpated by no human agency. But let us adopt for a moment the vain hypothesis that all written romances could be abolished, the imaginary ones would still remain, which, freed from all restraint, would probably be the more dangerous of the two. But in the name of the sternest morality, can there be any objection that romances written in a pleasing and honest strain, should, by their novelty and merit, eclipse the fame of others that have attained an unfortunate celebrity. Can austerity beneath its darkest cowl, object to the multiplication of such romances as those of Miss Edgeworth? They are surely preferable to certain histories, which, under pretext of honoring truth, have become instruments of corruption. Every branch of literature may be prostituted to the most flagitious purposes, because he who approaches the tree of science, without an humble and religious heart, gathers no other fruit but sin and death. But romance renders the mind fastidious of truth, which, when confronted with it, seems too poor and unadorned. This is a grave charge, and should be fairly met. Let us distinguish between falsehood and fiction, and reflect that there are two kinds of truth embraced in works of art, to wit, historical truth, or the truth of facts, and moral truth, or the truth of the affections. When history deviates from its sacred function, to become the narrator of fables, we call it false; but we never give this title to a romance, although it accumulate a series of impossible events. It cannot deceive, because it forewarns us that all is a fiction. It is only false when the picture of the passions is not copied from the heart; it deviates from truth when every affection is not exhibited in its own language, and in its proper action.

There are two effects that every romance should have in view: to keep our mind pure and free from the vile passions, and to unfold to our view the rigorous and costly lessons of experience. But in fact those narrations are very rare, that can be praised for the union of these two qualities; insomuch that it appears to be agreed upon among the writers of romances, that to gain the one you must lose the other. Hence springs a very general division of romances into two great classes: the first contains those in which the writer represents men as they ought to be, the second contains those which exhibit men as they really are. Augustus La Fontaine may be styled, at least for the multiplicity of his works, the head of the first school, and Le Sage and Fielding, are pre-eminent in the second. But none of them have been able to guard sufficiently against the defects which naturally flow from their having restricted their works to a single intention. La Fontaine is almost always in a state of enthusiasm, and walks with a voluptuous complacency through the fields of the passions, purifying them all. But if the heart be ennobled by receiving the inspiration of the good and beau-

tiful, the loss of the *estimator* faculty is excessive, which too rarely finds corresponding images in the world—too rarely meets with those perfect models of every virtue. Besides, almost all his romances breathe an inexplicable effeminacy, which tends to unman genius; and the dangerous passion presents itself under such enticing colors, that it appears something like a crime not to enjoy it to satiety. It is true that the danger of these pictures is diminished by the predominating idea that religion and duty must go before every thing; but really we have great reason to fear lest the severe precept of morality come too late, or importunately, when the heart has been already disposed to receive the lively impressions of the most powerful of all the passions.

By this we do not wish to condemn totally all the works of La Fontaine; on the contrary, by a judicious selection, they may be usefully placed in the hands of youth, and may produce noble and generous sentiments. Many writers before La Fontaine, have had the same intention, and some have put it into execution with better success. It would be too tedious to mention them all here. We will, however, for the sake of gratitude, name the "Missionary" of Miss Owenson, the "Sir Andrew Wyllie" of Galt, and the "Scottish Chiefs" of Miss Porter, in which the ideal of human virtue appears to be carried to the last perfection. There are many others, but the marvellous, scattered through their productions, seems too bold, and we feel that after having read them, the whole narrative melts away in the mind like the vestiges of a dream which had occupied it a long time before the dawn of day.

The other school, which is conducted, as we have said, by Le Sage and Fielding, runs a still greater risk. It is true, indeed, that in their books we learn to know society, and we there find lessons by which we may guard ourselves against the snares of the malevolent and wicked; but to obtain this knowledge the diffident heart loses its most lovely impulses, deprived of which, virtue is nothing but a cold calculation. In order that such romances should attain the effect they have in view, it is necessary that they describe vice and vicious persons, and the description to hold the place of experience must be lively and true, and place in bold relief the evil arts, and tortuous ways, by which perversity, is accustomed to make scandalous profit. But who can be sure that young persons, seeing as it were a perfect armor, will, in the heat of their blood, select rather the helm and shield than the sword and spear? Who can be sure, that instead of instructing themselves in prudence, they do not become proficient in malice?

We say nothing of the romances in which Fielding related the adventures of Jonathan Wild and Amelia Booth. An almost cynic liberty defiles them, and the first particularly, on account of that perpetual, and sometimes hidden irony, deserves to be ranked amongst the worst of books. But who will say to an inexperienced and innocent youth, we may give without fear of injury the two master pieces, which with respect to art, may be considered as models not to be surpassed? "Gil Blas" and "Tom Jones" are faithful pictures, in which society is generally presented under the worst aspect, and the heroes themselves frequently swerve from the path of virtue and honor. But why in ro-

mance should our benevolence be invoked for men of vacillating probity? Constancy in virtue ought to be the first lesson; nor is it proper that we should confide in a man, who can abandon the thorny path of duty, and enter it again at pleasure. Besides, some of the pictures, particularly, in Tom Jones, are so naked, that modesty, the loveliest gem of youth, shrinks from their contemplation.

To this latter school belongs EDWARD LYTTON BULWER, the most gifted and the most remorseless, the most imaginative and the most seductive of novelists. To corrupt without remorse, and to entertain without profit, are at once the characteristic and condemnation of this bold, bad man. To the corrupt class, pre-eminently belong, "Falkland" and "Maltravers," and to the other, "Leila" and the "Pilgrims of the Rhine." By what we have already said, it will be perceived that we feel little inclination to judge works of fiction by the austere rules of morality; but we are the fast friends of virtue, and entertain unmeasured respect for the decencies and proprieties of life. Other bad men have boldly defied the opinions of their contemporaries; but in the introduction to Bulwer's last work, he invokes the aid of the public, and claims their suffrage. He has openly preferred an issue which is to decide the morals of the age; and that issue is, whether the sequel to Ernest Maltravers is a satisfactory expiation of the corrupting licentiousness of the introductory novel. He wishes the verdict of public opinion to be rendered upon the two productions as an integral work. "To the many," he says, "who have complained of the incompleteness, to the few [are they indeed few?] who have questioned the moral of the former portion of this work, I give these volumes as an answer. My task is now concluded; and I consign to the final judgment of the gentle reader the most matured and comprehensive of those works of fiction, to which hitherto he has accorded an encouraging and generous approbation. I grant that the hero of this narrative is far from perfect; and had his principal faults been corrected in the course of the preceding volumes, the reader would have been spared the sequel. It is because his errors of action and of judgment were not yet counterbalanced or amended; it is because his opinions were often morbid and unsound; it is because his sentiments were nobler than his actions, and his pride too lofty for his virtue, that these volumes were necessary to the completion of his trials, and the consummation of my design." And to that public he appeals upon this question, "not for favor, or indulgence, but for a candid judgment and an impartial decision." The question is one of transcendent importance to the present and to future generations; and it is to be deeply regretted, for the sake of the immature of intellect, that the masterly hand which has sketched the prominent character, has, with the seductive art of Mokanna, thrown around him a silvery veil which conceals or subdues his hideous deformity. The history of this dangerous writer is an instructive commentary upon the controlling influence of public opinion, and of the powerful action of genius upon the taste and morals of a people. When that libel upon the morality and virtue of the age, Falkland, was first published to the world, we had been too long accustomed to admire the staid sobriety and chastity of Walter Scott, to tolerate the nuisance. It was purged

forth as a leper from the social circle, and if we have been correctly informed, its author, to redeem his character, labored to suppress it. He was rebuked, but not reformed. Unlike Montesquieu or Chateaubriand, he possessed none of that moral courage, or sense of retributive justice, which induced these distinguished men to confess their dangerous errors, and labor to correct them; unlike the lascivious Moore, he has failed to display the tardy repentance, which sought, by vindicating the religion of his country and of his fathers, to redeem the follies of his early youth; and just like Henry St. John, Viscount Bolingbroke, his first and his last works, as richly merited signal public reprobation, as did the revolting attacks of the English nobleman upon christianity deserve the presentment of a grand jury of Englishmen, as subversive of religion, social order, and morality. Rendered more cautious by the indignation provoked by the publication of Falkland, he labors with a perverted genius, to excite our admiration for Pelham and Eugene Aram—men, who are constantly swerving from the line of rectitude, and who seem to recede from the thorny paths of virtue at every light seducement, and to return without an effort when palled with satiety of pleasure. The attractive and seductive exaltation of intellect, the high personal attributes of heroism, the lofty sentiments, so frequently mingled with the vicious philosophy and loose morals of his characters, the charms of a glowing classical style, well calculated to fascinate and bewilder the unguarded reader; these are the formidable weapons with which this wonderful writer has assailed the firmest foundation of morals, and has extorted, from a weak and giddy world, admiration for the most profligate of heroes.

Even in the meridian splendor of his progress, there were sedate men, there were cool moralists, who, regardless of the drunken enthusiasm of the day, gazed with a stern and eagle eye upon this luminary, and, un-seduced by the glare which encircled them, pointed out the dark spots which seemed to gather and spread with frightful rapidity over his surface. Some had thought, (we were not so sanguine,) that as his judgment ripened to maturity, he would discard his morbid philosophy and impure imaginings; but we clearly foresaw, that instead of bending down before the influence of public opinion, he was laboring to control and to corrupt it. He had been driven back from the cold and systematic debauchery of Falkland, only to collect his scattered energies, and armed with the popularity acquired by the less dangerous works of Devereux, and Riazzi, to return once more to assail the morals of the age. This has been done in Ernest Maltravers, that high crime of thought, that sodomy of the intellect, which has no parallel among a christian people. The lewd hypocrite Sterne, the wretch Crebillon, would be startled at the impudent profligacy of Ernest Maltravers. And as for Alice, we regard it as a reluctant and crafty apology for the previous outrage upon public morals and public decency.

The great error of Bulwer, and one which furnishes conclusive evidence of the looseness of his principles, is the starved notion, that all we require of a writer is what is called the **DRAMATIC MORAL**; that is to say, that virtue should finally be rewarded, and vice punished or reformed. In the conclusion of Alice, or the Apology for Maltravers, we find this idea distinctly expressed:

"And Alice! Will the world blame us if you are left happy at last? It is time that we should apply to the social code the wisdom we recognise in legislation; it is time that we should do away with the punishment of death for inadequate offences even in books; it is time that we should allow the morality of atonement, and permit to error the right to hope, as the reward of submission to its sufferings. Nor let it be thought that the close of Alice's career can offer temptation to the offence of its commencement. Eighteen years of sadness,—a youth consumed in silent sadness over the grave of joy—are images that throw over these pages a dark and warning shadow that will haunt the young long after they turn from the tale that is about to close. If Alice had died of a broken heart; if her punishment had been more than she could bear, then, as in real life, you would have justly condemned my *moral*; and the human heart, in its pity for the victim, would have lost all recollection of the error." And this is the reparation for the disgusting profligacy of Maltravers, through every variety of vice, for eighteen years; this is the antidote for all the poison which has been poured forth through four lengthened volumes of the *most matured* of the author's productions; this is the consummation, which is to purge the heart and the understanding of all the morbid sentimentalism and false philosophy with which a gifted genius has been able to gild a tale of lewdness. But we will suspend our remarks to consider the philosophic calmness with which this mischievous and misguided writer consoles himself for the immoral tendency of his fictions. "It is a consolation," he says, "to know that nothing really immoral is ever permanently popular, or ever, therefore, long deleterious; what is dangerous in a work of genius, cures itself in a few years. We can now read Werter, and instruct our hearts by its exposition of weakness and passion; our taste, by its exquisite and unrivalled simplicity of construction and detail, without any fear that we shall shoot ourselves in top-boots! We can feel ourselves elevated by the noble sentiments of 'The Robbers,' and our penetration sharpened as to the wholesome immorality of conventional cant and hypocrisy, without any danger of turning banditti and becoming cut-throats from the love of virtue. Providence, that has made the genius of the few, in all times and countries, the guide and prophet of the many, and appointed literature as the sublime agent of civilization, of opinion, and of law, has endowed the elements it employs with the divine power of self purification. The stream settles of itself by rest and time; the impure particles fly off, or are neutralized by the healthful. It is only fools that call the works of a master spirit immortal. There does not exist in the literature of the world one *popular* book, that is immoral two centuries after it is produced. For, in the heart of nations, the false does not live so long; and the true is the ethical to the end of time." Except in the novels of this writer, there is not perhaps a passage in English literature containing so many unfounded and dangerous assertions. Is the Koran of the Arabian camel-driver an unpopular work among the Moslem? Is it not essentially sensual and licentious in its tendency? And has it not survived the span of life extended to immoral works in the passage quoted? Is it true that "what is dangerous in works of genius cures

itself in a few years," when those works yet survive and still are read, which shook the foundations of christianity, and subverted governments in the century which preceded ours, and which have so corrupted the public morals of the present age, that the writer of Falkland is enabled to extend his sway over the hearts of this intellectual generation? Is it an apology to the world—can it yield consolation to the immoral writer—that productions will not be read two hundred years hence, which, in one tithe of the time have corrupted the morals of a people and shaken the pillars of the social edifice with the fatal energy of the strong man in the temple of Dagon? What avails it to the victims whose blood choked the sewers of Paris, in the reign of terror, or to the slaughtered myriads trampled beneath the iron heel of ambition, in the purple triumphs of the French republic, that the works of lewdness and of atheism, which are of the inspiration of hell, and which overthrew religion, morals, and government, will not be read in the twentieth century? But "truth is immortal"—and this is the only truth in the passage we have copied. But while in the merciful dispensations of Providence, truth, like the pillar of flame in the wilderness, lifts its sublime head above the clouds of falsehood which gather and thicken around it; yet, while man is perverse and rebellious, error is undying, though variable, and will flourish with unwonted vigor as long as such productions as that which now provokes our censure, are tolerated by a deluded people. We are not of the tame school that can surrender the high prerogative of free thought, nor is our judgment to be warped by the towering genius or blazoned reputation of the master-spirit of the world of fiction. Morality, like truth, is pure and simple. And while he who shakes the foundations of morals, without alarming the virtue of a people, requires the exertions of exalted genius, strangely perverted; to repel the assault, little more is required than the calm self-possession which is inspired by virtue, and that independence of thought and opinion, which, following the light of divine truth, is not to be induced to bow down before the false lights that are set up in the land, how numerous soever may be the votaries, whom human respect, the mode of the day, the fashion of the age, credulity, simplicity, or folly, may seduce or bewilder for a season. From the days of the archangel ruined in heaven, to the present generation of the children of men on earth, there has been no dangerous or destructive error, which has not been adorned by those high powers of intellect, which are withdrawn from the service of the munificent Creator, to destroy his deluded creatures. We have neither leisure nor space to expose severally the dangerous tendency of the publications of this author. Falkland has long since been outlawed; Eugene Aram and Pelham have been condemned for their false philosophy, their bad moral, and their strained and unnatural sentiment. Devereux and Paul Clifford were written upon a false theory, and with all the graces of inimitable style have long since been censured as clever extravagances. Nor is his drama purer than his fiction; for "The Duchess de la Valiere" was hissed from the boards at its first appearance, and has been appropriately ranked with Jane Shore and the Orphan. We are aware that because of the severity of our censure we shall be accused of injus-

tice, but in proportion to the delusion of the giddy and unthinking multitude, over whom this sublime enchanter seems to wave a wand of resistless power, is our settled design to lay bare the wretched state of the morals of the man, whose transcendent brilliancy of talents has only been exerted from boyhood upward, from Falkland to Maltravers, to pamper every unwholesome and unhallowed feeling, as a token and characteristic of exuberance of genius. His moral conformation is essentially and radically corrupt, and his last work is but the crisis, the development of a long contracted malady of mind, of passions morbidly indulged, of a philosophy seductively sensual, of a reasoning faculty obstinately and dangerously perverted. The productions of this writer are peculiarly dangerous to youth, in consequence of the subtle art with which he blends vice with exalted intellect, profligacy with mock-heroic sentiment, and the fatal and irreparable errors of women with promises of reformation and happiness. How many have been seduced by the finery and bewildered by the philosophy of Pelham? What sober and rational being can patiently listen to one, who even in early youth mingled the wildest follies and drivelling twaddle with the deep thought, the impassioned eloquence, the worldly wisdom, and the withering sarcasm of maturity; one who presents himself before them chained, and ringed, and curled, and encased, to break off from some enchanting narrative or profound reasoning into some light or subtle digression, discussing with the finical precision of foppery the mysteries of the table or the toilet? Is the head or the heart to be improved, are the morals and the taste of the rising generation to be framed upon this mixture of the old man and the boy, this confusion of wisdom and petulance, of expanded benevolence and frigid philosophy, this sound reasoning and overmastering passion, this deep research and gilded coxcombry?

We have much cause to apprehend that the taste of the age is already lamentably perverted, and that fiction, guided no longer by reason and morality and nature, now walks the earth as another Mephistopheles—a tempter, and not a teacher. There is but one consolation remaining, and that is, that the oracles of untruth were struck dumb in their sanctuaries, in the pride and fulness of their sway; and that the age of Iconoclasm has always trodden upon the heels of the age of idolatry. But what is the whole story of Alice and Maltravers? In the vicinity of a manufacturing town in populous England, a strolling student of eighteen, meets in the midst of a desolate moor with a beautiful girl of fifteen years of age, who has all the capacities for high intellectual and moral improvement, yet has never framed the slightest idea of a Supreme Being, and who knows nothing of a church but what has been taught by her father, that in it "one man talks nonsense, and the other folk listen to him." And the history of this unfortunate girl is said to be taken from the life, because the writer thinks he has seen something of the kind in a newspaper. The father is represented as a fend, who impatiently awaits the maturity of his daughter and only child, to sacrifice her virtue to his love of lucre, and eat his bread by the wages of his child's iniquity. In this benevolent design, though for the gratification of a baser passion, he is, however, anticipated by Maltravers. He fits up apartments with oriental luxury

for her entertainment—himself becomes her instructor ; and with a benevolence which would have shamed the philanthropic Howard, he redeems this child of misfortune and ignorance from the horrors of her situation. He watches, with delighted gaze, her blossoming beauties ; he beholds with rapture the development of her lovely form ; and when she is chastened and purified, and perfect in soul and body ; when she had been reared as a lamb for the sacrifice, and a meet victim she was, for she was without stain or blemish, but before she yet knows the iniquity of sin, amidst the luxurious seductions of music, poetry, and perfumed pastils, he rifles this virgin casket of all its sweets, and then commences the profligate and reckless career of the gifted libertine, and the long suffering and extraordinary life of his innocently sinning victim. And as if this unnatural and revolting picture were indistinctly sketched, he proceeds with frightful accuracy and particularity of delineation, to paint in vivid colors the loathsome consummation of a crime, which on the part of Maltravers, is dignified with the name of resistless love, and on hers, is excused on the score of invincible ignorance. It seems that in his labored course of instruction, he had failed to teach her either the first lesson of virtue to woman, or the existence of a Supreme Being ; her ignorance upon which latter subject had so shocked him at their first meeting, and to remove which, appears to have been the main inducement for her instruction. But these fundamental truths were necessarily omitted in order to attain the melancholy end. We have not the heart to follow Alice in her beggarly wanderings, with her infant in her arms ; we will not stop to discuss the propriety or the motive of her quasi marriage with Lord Vargrave, whose extorted vow seems only to have been broken in the wish ; we cannot kneel with Alice in her lone and motherless widowhood, by the grave of her infant, cut off in the blossom. And we turn with disgust from the cool and deliberate treachery of Maltravers, who, beneath the roof tree, beside the hearth, in the midst of the hospitality, and in the very presence of the confiding husband, whispers his infernal passion in the ear of Valarie de St. Ventadour. Perhaps the most dangerous passages of this writer, are those which speak with utter contempt of the husband of a pretty woman, whose personal charms attract the attention, or excite the unruly and unbridled passions of his heroes, who endowed with all the graces of refined and cultivated intellect, highborn and wealthy, seem to be absolved from those restraints of the decalogue, which control all but themselves. Even in the sequel, Alice, the labored and chastened apology for its vile forerunner, we are again introduced to Valarie de St. Ventadour, who is still virtuous, still beautiful, still attractive ; but Monsieur de St. Ventadour, the husband, “ has not altered, except that his nose is longer, and that he now wore a peruque in full curl, instead of his own straight hair ; by the mere charm of custom he had grown more pleasing in Valarie’s eyes—habit had reconciled her to his foibles, deficiencies and faults.” Such are the morals which this deluded writer inculcates in a christian land for the edification—it may be for the imitation—of our wives and daughters. The wife who has been corrupted in her heart and affections, and who has narrowly escaped infamy, is painted in glowing colors ; while the confiding and estimable, but unpretending

husband, is ridiculously caricatured. We have no time to dwell upon the strange susceptibility of that hard man, Maltravers, of his questionable and philosophical love for Florence Lascelles, and of its awful termination.

The sudden and strange attachment of Maltravers to Evelyn, is another of the mysterious circumstances of this Book of Mysteries. And the harrowing suspicion that he was upon the eve of wedding his own daughter is cruelly protracted, although entirely unnecessary, to the full development of the plot, and rather diminishing than increasing its interest. And the flat inconsistency with which she turns so ardently to reciprocate the affections of a youthful soldier, after the oft repeated declaration, that she must look up with reverence to the man she loves, is not the smallest blemish in this tale of fiction. Alice, is at length, after eighteen years of intense suffering, restored to her erring lover, who seems to transfer his affections from Evelyn to Alice, as readily as they had been transferred from Alice to Florence, and from Florence to Evelyn. But our business is with the moral, not with the mechanism of Bulwer. And if it be asked why we so loudly condemn one whom all the world so warmly admires, we reply, in the language of a sound and judicious writer, whose remarks are worthy of serious consideration : “ That Mr. Bulwer possesses a talent for composition of the highest order, we have always been willing to admit, nor have we denied that his style, although too inflated and turgid to please our own taste, was well calculated to gratify that of a great portion of his readers. But instead of being a recommendation to us, these endowments, when coupled with the immorality he inculcates, are the very causes of our opposition. It is the attractive and seductive form in which this writer clothes his dangerous sentiments, that imparts to them their mischievous power. Were the morality and philosophy of Mr. Bulwer exposed to view, in their true colors, divested of all adventitious ornament, their own hideousness would be their best corrective ; but when they are set forth, arrayed in all the charms of a glowing imagination, and conveyed in a style, the glitter and glory of which fascinate and bewilder the reader, it is then that they become eminently hurtful. Were the stories which he presents to the world descriptive of habits, subversive of all the established notions of society, and setting at defiance institutions civil and religious, which we are taught from our cradles to venerate, written in the vulgar style of many of the authors of the day, they would be harmless, because they would remain unnoticed. When, however, these subjects are presented to the minds of the young and enthusiastic, decked out in the gorgeous trappings of highly cultivated classical taste and exuberant fancy, they seduce the thoughtless and unsuspecting, before the dictates of ripened judgment can advance to the rescue. Before the heedless victim of a false and ruinous philosophy is advertised of his danger, the deadly poison is infused, and the fountains of thought and action are polluted. Strip the narratives of Mr. Bulwer of the splendor of his style and imagery, and nothing will be found but a loathsome desecration of all the observances so vitally connected, in the opinion of every moral being, with the welfare of society. It is for these reasons that we have felt impelled to raise our voice in opposition to works, which, however beautiful, are, in our opinion, eminently mis-

chievous. We do not hesitate to say, that the parent who permits his children to become fascinated with the wild abstractions and ruinous metaphysical sophistries of this writer, has no right to complain of any results, however destructive." In this manly exposition of these corrupting fictions we heartily concur. And unless we greatly misconceive the virtues of our countrymen; unless we appreciate too highly the morals of the age, the period rapidly approaches, when it will be said of this demoralizing writer, as was said of a better man:

*"Floruit sine fructu,
Defloruit sine luctu."*

He entertained without profit,
He corrupted without remorse.

In the view which we have taken of romances, as entertainments, to be cautiously tolerated, because of the propensity of man for the marvellous—as a salutary escape for his unbridled curiosity—as a remedy or antidote for the greater evil of idleness, and not because of their intrinsic merit, we have been irresistibly led to the conclusion, that no fictions can be safely introduced which offer the "*most distant injury to the laws of morality, religion, or sound politics.*" Wo, we have already exclaimed—wo, if free sway should be given to the drunken imaginations of the wicked! And the facility, we have further insisted, with which romances approach every class of the community, and their winning influence over the heart, while the judgment sleeps, would justify the most rigorous restriction. To unfold to our view, with severe fidelity, the costly lessons of experience, and to keep our mind pure and free from the contamination of the vile passions, are the normal rules of this class of productions. And it is because Mr. Bulwer deliberately violates all these salutary rules; it is because he has given free sway to his impure imaginings; because he proposes for our admiration men of loose principles and profligate morals, and claims our approval of these characters, on account of their eminent talents; it is because the lessons he proposes are not the lessons of true experience, but the perilous illusions of a false philosophy; it is for such convincing reasons, that we feel impelled to class his works with those which were born of the French Revolution, the most obscene crimes of human thought. It is not constancy in virtue, but vacillating probity which challenges our admiration in the creations of his fancy. He constantly inculcates the false and dangerous theory, that men of exalted genius may throw themselves securely into the whirl of sensual indulgences, and when overtaken by satiety or disgust, quietly and instantly return to the paths of rectitude. He seems content with the dramatic moral, and appears to think that justice is satisfied, and virtue placated, by the ultimate chastisement or reformation of the offender. And this tardy and reluctant retribution appears to him a satisfactory apology, for leading the chaste mind of the reader through all the corrupting purlieus of vice, and for throwing around the most vivid and glowing descriptions of obscene crime all the seductive witchery of his attractive and classical manner. Who can calculate the frightful mischief which is effected by such uncleanness and immorality, in the delirious progress of the youthful enthusiast through this mystic circle of

the passions? And who will pretend that the formal moral, hastily appended to the last ten lines of the fiction, will erase from the susceptible heart the vivid impressions which have been graven with the practiced style of the writer. The passions have all been kindled into a consuming flame, which some men would fain persuade us may be subdued by a frigid lesson of formal morality, which seems to be appended only to disgust the bewildered reader, or to operate as a salvo for the reputation of the author. How many have perished by the way side, who never lived to reach the goal? How many have gone down in the midst of the tempest of the passions, whose frail bark could not, by the aid of the dim light in the far distant haven, survive the perils of the deep? We are aware of the controlling force of public opinion, and of the indomitable, though fleeting sway of literary fame; we well know how many are enchained by the fashionable celebrity of this attractive writer; we even anticipate the severity of those strictures which, in the midst of popular delusion, our remarks will necessarily provoke; but if, in the labor we have bestowed upon the effort to create a just standard of morals, we have succeeded in awakening the attention of a single reader to the demoralizing tendency of the fashionable literature of the age, we are well content to bear all the censure, which those invariably encounter, who devote their time and energies to counteract an evil, whose extent is only measured by its destructive tendency. We still adhere to the stern rule, that IT IS THE FIRST DUTY OF EVERY CHRISTIAN AND OF EVERY PATRIOT, TO OPPOSE EVERYTHING WHICH TENDS TO CORRUPT PUBLIC MORALS, OR TO PROMOTE LICENTIOUSNESS OF OPINION. It is by this sublime standard, that we have judged the writings of THE AUTHOR OF FAULKLAND AND MALTRAVERS. The question which will determine the morality of Bulwer's productions is, "CAN GENIUS CONSECRATE CRIME?" Let a kindred spirit announce his condemnation:

"Not all that heralds rake from coffin'd clay,
Nor florid prose, nor honied lies of rhyme,
Can blazon evil deeds, or consecrate a crime!"

Byron.

THE WARRIOR'S WREATH.

The warrior's wreath—its dark green leaves
Are twined around a lofty brow;—
The laurel crown which Glory weaves,
Adorns her warlike votary now:
His dark eye casts a brighter beam;
Earth trembles at his haughty tread;
His mien and gestures proudly seem
To tell how oft he's fought and bled.

But lo! that laurel bears a stain—
A blood red stain defiles its leaf;
A stain which tells of death and pain;
Of ruin, wo, and human grief;
Of cities razed; of shattered fanes;
Of desolation, rage and wiles;
Of prostrate thrones; of kings in chains—
And yet, behold! the warrior smiles!

DELTA.

MORNING IN THE FOREST.

By the author of "Atalanta."

I.

The voices of the forest! Hear the tale,
Whispered at moments by the fitful breeze,
That, sighing with a sweet and soothing wail,
Maketh soft music with the tall old trees;
And blends, with feeling of the dawning hour,
Musings of solemn thought and saddest power.

II.

Such was the birth, the mother-birth, which sung
The morning of creation:—even so strange,
The first, fresh accents of the infant tongue,
Of nature, moaning through her varied range,
Wild in her desert loneliness of place,
Ere yet she knew her last and noblest race.

III.

Thus moan'd the winds among the giant trees
That had no other homage—thus, from far,
Came the deep voices of the sullen seas,
Surviving 'gainst earth, and with themselves at war;—
Night craved the sun, and chaos from her keep
Groan'd with the feeling of her growing sleep.

IV.

And in the language of their infant lack,
They tell their story with each rising dawn;
You hear them when the hour is cold and black,
Ere yet the feet of day imprint the lawn;
When the faint streakings of the light are seen,
O'er eastern heights, through darkest groves of green.

V.

Each day renews the birth of thousand days
Even from the dawn of time:—even now I see,
Amid the gloom that gathers on my gaze,
Grey distant gleams that shoot up momentarily—
And hark! a sudden voice—the voice of might,
That hail'd, from infant life, the blessing birth of light.

VI.

The morning grows around me! Shafts of grey,
Like sudden arrows from the eastern bow,
Rise, through the distant forests, to a ray,
And light the heavens, and waken earth, below;—
The rill that murmur'd sadly, now sings out,
Leaping, through trembling leaves, with free and glad-
some shout.

VII.

I see a glitter on yon glossy leaf
Where hangs a silent dew-drop. Hark! a bird,
Shrieks out, as if he felt some sudden grief,
His sleep, perchance, by dream of danger, stirr'd:
Wings rustle in the thicket—other eyes,
Behold, where ray on ray, the wings of morning rise.

VIII.

And now the dawn, with eye of glancing grey,
Comes singing into sight. The trees stand forth,
As singly striving for her brightest ray;
And countless voices from the awak'ning earth,
Clamor full-throated joys:—a flapping wing,
Prepares, in yonder copse, to take his morning spring.

IX.

A sudden life is round me with the light,
Voices and wings are in the woods and air;
Broad vistas open to my travelling sight,
And hills arise, and vallies, wondrous fair—
Even while I gaze, a sudden shaft of fire,
Makes yon tall pine blaze up, like some proud city
spire.

X.

Oh, beautiful! most beautiful!—the things
I see around me;—lovelier still to thought,
The fancies, welling from a thousand springs,
The presence of these images hath brought;

The visions of the past were mine this hour,
And in my heart the pride of an o'ermastering power—

XI.

A power that could create, and from the dead
Draw life and gather accents. There are spells,
Known to the unerring thought, which freely shed
Light round the groping footstep, when rebels
The o'er-cautious reason, and the instinct fear,
Shrinks from its own huge shadow—they are here!

XII.

This is a spot—if there have ever been,
As ancient story tells in legends sooth,
Such forms as are not earthly, earthward seen,
Having strange shapes of beauty and of youth,
Then do I ween that this should be the spot
Where they should come,—and yet I see them not.

XIII.

Yet have I prayed their presence with a tongue
Of song, and a warm fancy that could take,
From many-voiced expression, as she sung,
Her winged words of music, and awake,
True echoes of her strain to win my quest,
And woo the coming of such spirit-guest.

XIV.

Yet have they come not, though my willing thought,
Grew captive to my wild and vain desire;
And in my heart meet pliancy was wrought,
To raise the forms, in seeming, I require;—
And in this truant worship I bow'd down,
Since first night's shadows fell and made the forests
brown.

XV.

And sure no fitter spot had spirit sought,
For the soft-falling of star-pacing feet;
This is the holiest wood, with flowers inwrought,
Having fresh odors of most heavenly sweet;
Nor in the daylight's coming, then, do these,
Cathedral shadows fly, that lurk behind the trees.

XVI.

The wild-beast burrows not beneath our hill,
Nor hide these leaves one serpent. Gentlest doves
Brood in the pines at evening, seldom still,
With murmur through the night, of innocent loves:
And I have shaken, with no boyish trust,
From my own human feet, the base and selfish dust.

XVII.

And fancy hath been with me, to beguile,
The stubborn reason into faith, and show
The subtle shapes from fairy-land that while,
In gamesome dance, the wasted hours below;
Meest lawn of green and purple, here, is spread,
By Nature's liberal hand, for fay's fantastic tread.

XVIII.

And memories of old song, the solemn strains
Of bards that gave themselves to holiest thought,
And gloried in their wild, poetic-pains,
Were in my heart, and my wrapt soul was fraught
With faith in what they feigned, until my blood,
Grew tremulously-strong beneath my hopeful mood.

XIX.

And when the dark hours came, the twirling stars,
Seem'd eyes, that darted on me keenest fires;
Earth had her voice, and promised, through her bars,
To burst the bondage set on free desires—
And not a breath that stirr'd the flowers, but seem'd,
The shadowy whispers from some shape I dreamed.

XX.

Yet vainly have I waited!—not in vain!
What though no fairy won me with her song,
And beckoning finger—'twas a nobler strain
That struck the ear of thought, and fill'd it long:
A mightier presence yet, my soul o'erawed,
He was beside me:—I had been with God!

W. G. S.

EVERETT'S ADDRESS

AT WILLIAMS COLLEGE.

In August, 1837, Governor EVERETT delivered an address before a Literary Society of Williams College, in Berkshire, the westernmost county of Massachusetts. Were we disposed to heap needless praises, this performance would afford abundant occasion for eulogy. It is in all respects worthy of its author: and to those who know the full import of *that* assertion, it is tribute enough for almost any man. What induces us now to notice this Address, however, is much less a wish to honor him for this new effort in the cause of human improvement—that noble cause, of which he has long been so illustrious a champion—than a desire to present some interesting discussions which we find here, of several important questions.

But before we come to those discussions, let us, by way of making the reader enter more vividly into the spirit of the Address, give him some additional idea of its locality.

'The pleasant village where we are assembled,' says Mr. Everett, 'contains, within view of the spot where we stand, the site of Fort Hoosack, and a mile or two east of us stood Fort Massachusetts. The plough has passed over its rude lines; but what scenes of humble heroism and almost forgotten valor are associated with its name! It was the bulwark of the frontier in the days of its infancy. The trembling mother on the banks of the Connecticut,—in the heart of Worcester,—clasped her babes closer, at an idle rumor that Fort Massachusetts had given way. A hundred villages reposed in the strength of this stout guardian of New England's Thermopylae, through which, for two generations, the French and Canadian foe strove to burst into the colonies. These are recollections of an earlier day. A few miles to the north of us lies that famous field of Bennington, to which, sixty years ago, this day and this hour, your fathers poured from every village in the neighborhood, at the summons of Stark.'

It is impossible not to be struck with the following impressive display of the importance of education:

'If I wished to express most forcibly the importance, the dignity, and the obligation of the great work of education, I believe it might best be done by taking our stand at once on the simple enunciation of the spiritual and immortal nature of the thing to be educated;—the mind of man. Then if we wished to give life and distinctness to the ideas of the importance of education, which result from this contemplation, we might do so by a single glance at the number and importance of the branches of knowledge, to which education furnishes the key. I might allude to the admirable properties of language, which it is the first business of education to impart; the wonders of the written and spoken tongue as the instrument of thought,—wonders which daily use scarcely divests of their almost miraculous character. I might glance at that which is usually next taught to the unfolding mind, the astonishing power of the science of numbers, with which on the one hand we regulate the humblest details of domestic economy, and on the other compute the swiftness of the solar beam, and survey, and as it were, stake out from constellation to constellation the great railroad of the heavens, on which the comet comes blazing upward from the depths of the universe. I might proceed with the branches of knowledge to which education introduces us, and ask of geography

to marshal before us the living nations; and of history to rouse the generations of the elder world from their pompous mausoleums or humble graves to rehearse their fortunes. I might call on natural science to open the volumes in which she has not merely written down the names, the forms, and the qualities of the various subjects of the animal, vegetable, and mineral world now in existence,—the vast census, if I may so express it, of the three kingdoms of nature; but where she has also recorded the catalogues of her perished children,—races of the animal and vegetable world buried by the deluge beneath the everlasting rocks. Yea, winged creatures twenty feet in height, whose footsteps have lately been discovered imprinted in sand-stone on the banks of Connecticut river; enormous mammoths and mastodons, of which no living type has existed since the flood, brought to light from blocks of Siberian ice or dug up in the morasses of our own continent; petrified skeletons of portentous crocodiles and megatheria seventy feet in length, covered with scales like the armadillo,—and which for ages on ages have been extinct,—have by the creative power of educated mind been made to start out of the solid rock. Sand-stone and gypsum have opened their ponderous and marble jaws, and a host of monstrous forms have risen into day;—the recovered monuments of a world of lost giants.'

'But leaving with these transient glances all attempt to magnify the work of education, by pointing out the astonishing results to which it guides the well-trained mind, a much shorter method might be pursued with one who needed to be impressed with its importance. I would take such an one to a place of instruction, to a school, yes, to a child's school,—(for there is no step in the process more important than the first,) and I would say,—in those faint sparks of intelligence, just brightening over the rudiments of learning, you behold the germ of so many rational and immortal spirits. In a few years, you, and I, and all now on the stage shall have passed away, and there on those little seats, primer in hand, are arranged our successors. Yea, when the volume of natural science, and nature with it, shall have vanished;—when the longest periods of human history shall have run together to a point;—when the loud, clear voices of genius, and the multitudinous tongues of nations, shall alike be hushed forever, those infant children will have ripened into immortal beings, looking back from the mansions of eternity with joy or sorrow, on the direction given to their intellectual and moral natures, in the dawn of their existence! If there is any one not deeply impressed by this single reflection with the importance of education, he is beyond the reach of anything that can be urged, by way either of illustration or argument.'

It is a prevailing opinion, that an early stage of society, when civilization is but little advanced, is the time of highest poetic excellence. The philosophical poet, Imlac, in *Rasselas*, seems to espouse this opinion, and gives the reasons for it—namely, that the first poetry of every nation gave the bent to public taste, and retained by consent the credit which it had acquired by accident; and moreover, that the earliest bards seized upon the best subjects of description and the most probable events for fiction, leaving to their successors nothing but transcriptions of the same incidents, new namings of the same characters, and new combinations of the same images.* When to these reasonings is added the influence of the venerable saying—'A poet is *born*—not *made*,'—the point seems clear to most minds, that an advanced state of cultivation is unfriendly, or at least not at all conducive, to

* We give this account of Imlac's reasoning from memory—not having *Rasselas* before us.

the highest effusions of poetry. This opinion, so discouraging to those who hope highly of man's progress, through the instrumentality of his continued efforts,—this opinion, so mischievous in repressing the efforts which that hope inspires,—is combatted by Mr. Everett with unanswerable power. Let not the length of the extract deter any reader:

'I deem the notion, that the first age was necessarily the best, to be a mere prejudice; and the idea that a partially improved age and a limited degree of knowledge are in themselves and essentially more favorable to the exercise of original genius, in any form, appears to me to be a proposition as degrading as it is unsound.

'On the contrary, I believe that truth is the great inspirer;—the knowledge of truth the aliment and the instrument of mind; the material of thought, feeling, and fancy. I do not mean that there is no beauty in poetical language founded on scientific error;—that it is not, for instance, consistent with poetry to speak of the rising sun or the arch of heaven. Poetry delights in these sensible images and assimilations of ideas in themselves distinct. From the imperfection of human language, it will perhaps always be necessary to describe many things in the material, and still more in the moral and metaphysical world, under similitudes which fall greatly beneath their reality:

'Thus in Shakespeare,

the floor of Heaven
Is thick inlaid with patines of bright gold.

'In Spenser's Faery Queen,

The sacred fire, which burneth mightily
In living breasts, was kindled first above,
Among the eternal spheres and lampy Heavens.

'In Paradise Lost, the moon divides her empire

With thousand thousand stars, that then appeared
Spangling the universe.

'Now, though these images, separately weighed at the present day, may seem beneath the dignity of the subject to which they are applied, they are poetical and pleasing, (with the exception possibly of *lampy*;) nor do I know that in any state of science, however advanced, such language will cease to please.

'But the point I maintain is this, that, as knowledge extends, the range of all imagery is enlarged, poetical language is drawn from a wider circle, and, what is far more important, that the conception kindles by the contemplation of higher objects.

'Let us illustrate this point still further, in reference to the effect on poetry of the sublime discoveries of modern astronomy. The ancients, as we all know, formed but humble conceptions of the material universe. The earth was the centre; the sun, moon, and five planets were shining bodies revolving about it, to give it light, and the stars were luminaries hung up as lamps in a vaulted sky. This philosophy not only lies at the foundation of the imagery, under which Homer represents the heavens, but it prevailed so long, and falls in so entirely with the impressions made upon the eye, that it has given a character to the traditional language of poetry even to the present day. Shakespeare, and Spenser, and Milton, as we have just seen, in this respect, draw their images from the same source as Virgil, Homer, and Hesiod.

'Now I cannot but think, that, when the sublime discoveries of modern astronomy shall have become as thoroughly wrought into the vocabulary and the intelligence of the community, as the humble and erroneous conceptions of the ancients, the great and creative minds will derive from them, a vastly grander range of poetical illustration. I cannot but think, that, by the study of this one science alone,—thought, speech, and literature will be wonderfully exalted. It is not in reference to poetry, a mere matter of poetical imagery. The ideas formed of divine wisdom and power,—of infinite space,—of stupendous magnitude and force,—of the grandeur and harmony of the material universe,—are among the highest materials of thought and the most

prolific elements of poetical conception. For this reason, in the same proportion in which the apparent circuit of the heavens has been enlarged and the science of astronomy extended by the telescope, the province of imagination and thought must be immeasurably extended also. The soul becomes great by the habitual contemplation of great objects. As the discovery of a new continent, upon the surface of the globe by Columbus, gave a most powerful impulse to the minds of men in every department, it is impossible that the discovery of worlds and systems of worlds, in the immensity of space, should not wonderfully quicken the well instructed genius. As the ambition, the avarice, the adventure, the legion host of human passions rushed out from the old world upon the new, so the fancy must wing its way, with unwonted boldness, into the new-found universe,

Beyond the solar walk or milky way.

'In Paradise Lost, there is a struggle between the old and new philosophy. The telescope was known, but had not yet revolutionized the science of astronomy. Even Lord Bacon did not adopt the Copernican system, and Galileo's wonderful instrument had produced scarce any result, beyond a more distinct conception of the magnitudes of the bodies, which compose the solar system. But it is pleasing to remark, with what promptness Milton seizes upon this new topic of poetical illustration. In his very first description of the arch-fiend, we are told of

his ponderous shield,
Ethereal temper, massy, large, and round,
Behind him cast; the broad circumference
Hung on his shoulders, like the moon, whose orb,
Through optic glass, the Tuscan artist views,
At evening from the top of Fesolè,
Or in Valdarno, to descry new lands,
Rivers, or mountains, in her spotty globe.

'Grand and sublime as is this imagery, it is borrowed from the lowest order of the wonders unfolded by the telescope. I cannot but think, if the whole circle of modern astronomy had been disclosed to the mind of Milton, that it would have filled his soul with still brighter visions. Could he have learned, from the lips of its great discoverer, the organic law which regulates the entire motions of the heavens;—could he have witnessed the predicted return of a comet, and been taught that of these mysterious bodies, seven millions are supposed to run their wild career within the orbit of the planet Uranus; and that, by estimation, one hundred millions of stars, each probably the centre of a system as vast as our own,—multitudes of them combined into mighty systems of suns wondrously complicated with each other—are distributed throughout space, would these stupendous views have been lost on his mind? I can never believe that truth, the great quickener and inspirer, revealed in such majestic glimpses, would have fallen inoperative on such an intellect. He would have awoke to a new existence in the light of such a philosophy. Escaping from the wholly false, and the partly false, the "utter and the middle darkness" of the Ptolemaic system, he would have felt the "sovereign vital lamp" of pure science in his inmost soul. He would have borrowed from La Place the wings of the boldest analysis, and would have flown to the uttermost parts of creation, where he could have seen through the telescope the bands of Orion loosened, and the gems of his glittering belt blazing out into empyreal suns;—while crowded galaxies, "powdered with stars" rushed asunder into illimitable systems. He would have soared with the Herschells, father and son, to the outer regions of space, and embalmed the whole Newtonian philosophy in his immortal verse.'

Of a similar cheering tendency, and pertinent to the same argument, is the following passage, from a different part of the Address. We can hardly say, whether it is more suited to charm by its beauty, or to exalt by the ethereal sublimity of the views it presents:

'A continued progress in the intellectual world is consistent with all that we know of the laws that govern

it, and with all experience. A presentiment of it lies deep in the soul of man, spark as it is of the divine nature. The craving after excellence, the thirst for truth and beauty, has never been,—never can be,—fully slaked at the fountains, which have flowed beneath the touch of the enchanter's wand. Man listens to the heavenly strain, and straightway becomes desirous of still loftier melodies. It has nourished and strengthened instead of satiating his taste. Fed by the divine aliment he can enjoy more, he can conceive more, he can himself perform more.'

In the subjoined extracts, are some enlightened criticisms upon the four greatest poets of the world. We place the name of each poet as a *head* to the observations upon him.

SHAKSPEARE.

'With a reverence as deep as honesty or manliness permits for the master geniuses of our race,—a reverence nourished by the fond and never intermitted study of their works,—I may say that I catch, from this very study of their writings and characters, a conception, that, high as they rose, they might have risen higher. I can sometimes behold the soil of the world upon their snow-white robes, and the rust of human passion upon the glittering edge of their wit. It was long ago said by the great Roman critic, that the good Homer sometimes nods;—and Shakspeare, the most brilliant example unquestionably of a triumph over the defects of education,—mental and moral,—too often exhibits traces of both. As he floats on eagle's wings along what he nobly calls "the brightest heaven of invention," he is sometimes borne, by an unchastened taste, into a misty region, where the understanding endeavors in vain to follow him; and sometimes, as he skims with the swallow's ease and swiftness along the ground, too confident of his power to soar when he will up to the rosy gates of the morning,—he stoops, and stoops, and stoops, till the tips of his graceful pinions are sadly daggled in the mire.'

HOMER.

'Not a ray of pure spiritual illumination shines through the sweet visions of the father of poetry. The light of his genius, like that of the moon as he describes it in the eighth Iliad,* is serene, transparent, and heavenly fair; it streams into the deepest glades and settles on the mountain tops of the material and social world; but for all that concerns the spiritual nature, it is cold, watery, and unquickening. The great test of the elevation of the poet's mind, and of the refinement of the age in which he lives, is the distinctness, power, and purity with which he conceives the spiritual world. In all else he may be the observer, the recorder, the painter; but in this dread sphere he must assume the province, which his name imports; he must be the *maker*:—creating his own spiritual world by the highest action of his mind, upon all the external and internal materials of thought. If ever there was a poetical vision, calculated not to purify, and to exalt, but to abase and to sadden, it is the visit of Ulysses to the lower regions.† The ghosts of the illustrious departed are drawn before him by the reeking fumes of the recent sacrifice; and the hero stands guard with his drawn sword, to drive away the shade of his own mother from the gory trench, over which she hovers, hankering after the raw blood. Does it require an essay on the laws of the human mind to shew, that the intellect which contemplates the great mystery of our being, under this ghastly and frivolous imagery, has never been born to a spiritual life, nor caught a glimpse of the highest heaven of poetry?'

DANTE.

'In Dante, for the first time in an uninspired bard, the dawn of a spiritual day breaks upon us. Although the shadows of superstition rest upon him, yet the strains of the prophets were in his ears, and the light of divine truth—strong though clouded—was in his soul. As we stand with him on the threshold of the world of sorrows, and read the awful inscription over

the portal,* a chill from the dark valley of the shadow of death comes over the heart. The compass of poetry contains no image which surpasses this dismal inscription in solemn grandeur;—nor is there anywhere a more delicious strain of tender poetic beauty, than that of the distant vesper bell, which seems to mourn for the departing day, as it is heard by the traveller just leaving his home.† But Dante lived in an age, when Christianity—if I may so speak—was paganized. Much of his poem, substance as well as ornament, is heathen. Too much of his inspiration is drawn from the stormy passions of life. The warmth with which he glowed is too often the kindling of scorn and indignation, burning under a sense of intolerable wrong. The holiest muse may string his lyre, but it is too often the incensed partizan that sweeps the strings. The divine comedy, as he calls his wonderful work, is much of it mere mortal satire.'

MILTON.

'In *Paradise Lost*, we feel as if we were admitted to the outer courts of the Infinite. In that all-glorious temple of genius inspired by truth, we catch the full diapason of the heavenly organ. With its first choral swell the soul is lifted from the earth. In the *Divina Commedia*, the man, the Florentine, the exiled Ghibelline, stands out from first to last breathing defiance and revenge. Milton in some of his prose works, betrays the partizan also,—but in his poetry we see him in the white robes of the minstrel, with upturned though sightless eyes, rapt in meditation at the feet of the heavenly muse. Dante in his dark vision descends to the depths of the world of perdition, and, homeless fugitive as he is, drags his proud and prosperous enemies down with him, and buries them—doubly destroyed—in the flaming sepulchres of the lowest hell.‡ Milton, on the other hand, seems almost to have purged off the dross of humanity. Blind, poor, friendless, in solitude and sorrow, with quite as much reason as his Italian rival to repine at his fortune and war against mankind, how calm and unimpassioned is he in all that concerns his own personality! He deemed too highly of his divine gift to make it the instrument of immortalizing his hatreds. One cry alone of sorrow at his blindness, one pathetic lamentation over the evil days on which he had fallen, bursts from his full heart.¶ There is not a flash of human wrath in all his pictures of woe. Hating nothing but evil spirits, in the childlike simplicity of his heart, his pure hands undefiled with the pitch of the political intrigues in which he had lived, he breaths forth his inexpressibly majestic strains,—the poetry not so much of earth as of heaven.

'Can it be hoped that, under the operation of the influences to which we have alluded, any thing superior to *Paradise Lost* will ever be produced by man? It requires a courageous faith in general principles to believe it. I dare not call it a probable event; but can we say it is impossible? If out of the wretched intellectual and moral elements of the commonwealth in England,—imparting as they did at times too much of their contagion to Milton's mind,—a poem like *Paradise Lost* could spring forth, shall no corresponding fruit of excellence be produced, when knowledge shall be universally diffused, society enlightened, elevated, and equalized; and the standard of moral and religious principle in public and private affairs, raised far above its present level? A continued progress in the intellectual world is consistent with all that we know of the laws that govern it, and with all experience. A presentiment of it lies deep in the soul of man, spark as it is of the divine nature. The craving after excellence, the thirst for truth and beauty, has never been,—never can be,—fully slaked at the fountains, which have flowed beneath the touch of the enchanter's wand. Man listens to the heavenly strain, and straightway becomes desirous of still loftier melodies. It has nourished and strengthened instead of satiating his taste. Fed by the divine aliment he can enjoy more, he can conceive more, he can himself perform more.

'Should a poet of loftier muse than Milton, hereafter appear, or to speak more reverently, when the Milton of

† *Odys. XI.*

a better age shall arise, there is remaining yet one subject worthy his powers;—the complement of *Paradise Lost*. In the conception of this subject by Milton, then mature in the experience of his great poem, we have the highest human judgment that this is the one remaining theme. In his uncompleted attempt to achieve it, we have the greatest cause for the doubt, whether it be not beyond the grasp of the human mind, in its present state of cultivation. But I am unwilling to think that this theme, immeasurably the grandest which can be contemplated by the mind of man, will never receive a poetical illustration, proportioned to its sublimity. It seems to me impossible that the time,—doubtless far distant,—should not eventually arrive, when another Milton, divorcing his heart from the delights of life;—purifying his bosom from its angry and its selfish passions;—relieved by happier fortunes from care and sorrow;—pluming the wings of his spirit in solitude, by abstinence and prayer, will address himself to this only remaining theme of a great christian epic.'

Two or three more extracts, and we shall have done: though full fain would we copy the whole Address.

The following is germane to what we have before quoted, upon the dignity and importance of education. Can the thought fail to strike a Southern reader,—if the defects of instruction, complained of in the second paragraph below, exist in Massachusetts, where not one man in a thousand is unable to read, what adequate terms of self-reproach can be found for Virginia and her neighboring sisters, of whose adult white population a full FIFTH cannot read?

'It is at once melancholy and fearful to reflect, how much intellect is daily perishing from inaction; or worse than perishing from the false direction given it in the morning of life. I fear we do not yet fully realize what is meant, when we speak of the improvement of the mind. I fear it is not yet enough considered by legislators or parents, that there dwells, in every rational being, an intellect endowed with a portion of the faculties, which form the glory and happiness of our nature, and which, developed and exerted, are the source of all that makes man to differ essentially from the clod of the valley. Neglected and uncultivated, deprived of its appropriate nourishment, denied the discipline which is necessary to its healthy growth, this divine principle all but expires, and the man whom it was sent to enlighten sinks down before his natural death, to his kindred dust. Trained and instructed, strengthened by wise discipline, and guided by pure principle, it ripens into an intelligence but a little lower than the angels. This is the work of education. The early years of life are the period when it must commonly be obtained; and, if this opportunity is lost, it is too often a loss which nothing can repair. It is usual to compare the culture of the mind to the culture of the earth. If the husbandman relax his labors, and his field be left untilld this year or the next, although a crop or two be lost, the evil may be remedied. The land with its productive qualities remains. If not ploughed and planted this year, it may be the year after. But if the mind be wholly neglected during the period most proper for its cultivation, if it be suffered to remain dark and uninformed, its vital power perishes;—for all the purposes of an intellectual nature it is lost. It is as if an earthquake had swallowed up the uncultivated fallows; it is as if a swollen river had washed away, not merely the standing crop, but the bank on which it was growing. When the time for education has gone by, the man must, in ordinary cases, be launched upon the world a benighted being, scarcely elevated above the beasts that perish; and all that he could have been and done for society, for himself, is wholly lost.

'Although this utter sacrifice of the intellectual nature is rarely made in this part of the country, I fear there exists even here, a woful waste of mental power

through neglect of education. Taking our population as a whole, I fear, that there is not nearly time enough passed at school;—that many of those employed in the business of instruction, are incompetent to the work;—and that our best teachers are not sufficiently furnished with literary apparatus, particularly with school libraries. If these defects could be supplied, I believe a few years would witness a wonderful effect upon the community; that an impulse not easily conceived beforehand, would be given to individual and social character.'

How powerfully must the subjoined passages thrill upon the sensibilities of a Massachusetts hearer or reader!

'I am strongly convinced, that it behoves our ancient Commonwealth, to look anxiously to this subject, if she wishes to maintain her honorable standing in this Union of States. I am not grieved, when I behold on the map the enormous dimensions of some of the new states in the west, as contrasted with the narrow little strip which comprises the good old Bay State. They are bone of our bone and flesh of our flesh; their welfare is closely interwoven with ours; in every thing that can promote their solid prosperity, I bid them God speed with all my heart. I hear without discontent the astonishing accounts of their fertility;—that their vast prairies are covered with more feet of rich vegetable mould, than our soil on an average can boast of inches; and I can bear to hear it said, without envy, that their Missouri and Mississippi, the Mighty Abana and Pharphar of the west, are better than all the waters of our poor old New England Israel.

'All this I can bear; but I cannot bear that our beloved native state, whose corner-stone was laid upon an intellectual and moral basis, should deprive itself, by its own neglect, of the great counterpoise to these physical advantages. Give the sons of Massachusetts, —small and comparatively unfertile as she is,—the means of a good education, and they will stand against the world. Give me the means of educating my children, and I will not exchange its thirstiest sands nor its barest peak, for the most fertile spot on earth, deprived of those blessings. I had rather occupy the bleakest nook of the mountain that towers above us,* with the wild wolf and rattlesnake for my nearest neighbors, and a snug little school-house, well kept, at the bottom of the hill, than dwell in a paradise of fertility, if I must bring up my children in lazy, pampered, self-sufficient ignorance. A man may protect himself against the rattle and the venom, but if he unnecessarily leaves the mind of his offspring a prey to ignorance and the vices that too often follow in its train, he may find too late for remedy,

How sharper than a serpent's tooth it is,
To have a thankless child.

'A thankless child? No, I will not wrong even him. He may be anything else that's bad, but he cannot be a *thankless* child. What has he to be thankful for? No. The man who unnecessarily deprives his son of education, and thus knowingly trains him up in the way he should not go, may have a perverse, an intractable, a prodigal child, one who will bring down, aye, drag down his grey hairs with sorrow to the grave, but a thankless child he cannot have.'

In the next and last quotation, an evil is pointed out—the regard for *cheapness* more than for *qualification* in teachers—which is widely prevalent in Virginia. So numerous are those parents who prefer always the cheapest teacher, without looking to his mind or morals,—that, to a very considerable extent, the sacred office of instruction is a mere *sink* or drain, filled with the refuse of other pursuits. The latter part of the extract exhibits, most impressively, the irreconcilableness of war with the best interests of man.

* Saddle Mountain, between Williamstown and Adams.

'If the all-important duty of *leading out* the mental powers of the young, is entrusted to the cheapest hand, that can be hired to do the work;—to one who is barely able to pass a nominal examination, by a committee sometimes more ignorant than himself, in the modicum of learning prescribed by law; and slender as the privilege of such instruction is, if it be enjoyed by our children but for ten or twelve weeks in the year,—as is the case in too many towns in the Commonwealth,—it is plain to see, that they are deprived of the best part of their birth-right. I know it is said, that these few weeks, in the depth of winter, are all of his children's time, that the frugal husbandman can spare. But can it be so? Can the labors of the field, or any other labors be so hotly pressed among us, that ten or twelve weeks are all the time, for which the labor of the youth of both sexes can be dispensed with for five or six hours a day? I speak with diffidence on the subject, but such I apprehend cannot be the case. I cannot but think, that a majority of the citizens of Massachusetts of all pursuits and callings, might, without the least detriment to their interests, send their children steadily to a good school, seven months in the year, and more or less of the time the other five. Without detriment did I say? Nay, with incalculable advantage to their children, to themselves, and to the state. It would be more rational to talk about not affording seed-corn, than to talk about not affording our children as much of their time as is necessary for their education. What! shall a man plant his field and allow his child's intellect to run to weeds? It would be as wise to eat up all the wheat, and sow the husks and the chaff for next year's crop, as on a principle of thrift, to sow ignorance and its attendant helplessness and prejudices in your children's minds, and expect to reap an honorable and a happy manhood. It would be better husbandry, to go in the summer, and clatter with a hoe in the bare gravel, where nothing was ever sown but the feathered seed of the Canada thistle, which the west wind drops from its sweeping wings, and come back in autumn and expect to find a field of yellow grain nodding to the sickle, than to allow your son to grow up without useful knowledge, and expect that he will sustain himself with respectability in life, or, (if consideration must be had of self-interest,) prop and comfort your decline. Not spare our children's time? Spare it I might ask you from what? Is anything more important? Spare it for what? Can it be better employed, than in that cultivation of the mind, which will vastly increase the value of every subsequent hour of life? And to confine them, in the morning of their days, to a round of labor for the meat that perisheth, is it not when our children ask for bread to give them a stone; when they ask for a fish to give them a serpent, which will sting our bosoms as well as theirs?

'Our governments as well as individuals have, I must needs say, a duty to discharge to the cause of education. Something has been done,—by some of the state governments, much has been done, for this cause; but too much I fear remains undone. In the main, in appropriating the public funds, we tread too much in the footsteps of European precedents. I could wish our legislators might be animated with a purer ambition. In other parts of the world, the resources of the state, too often wrung from their rightful possessors, are squandered on the luxury of governments,—built up into the walls of stately palaces, or massy fortifications,—devoured by mighty armies,—sunk by overgrown navies to the bottom of the sea,—swallowed up in the eternal wars of state policy. *The treasure expended in a grand campaign of the armies of the leading states of Europe, would send a schoolmaster to every hamlet from Archangel to Lisbon.* The annual expense of supporting the armies and navies of Great Britain and France, if applied to the relief and education of the poor in those countries, would change the character of the age in which we live. Perhaps it is too much to hope, that, in the present condition of the politics of Europe, this system can be departed from. It seems to be admitted, as a fundamental maxim of international law among its governments, that the whole energy of their civilization must be exhausted in preventing them from destroying each other. With us, on the contrary, while the union of the states

is preserved, (and heaven grant it may be perpetual,) no obstacle exists to the appropriation to moral and intellectual objects of a great part of those resources, which are elsewhere lavished on luxury and war.

'How devoutly is it not to be wished, that we could feel the beauty and dignity of such a policy, and aim at a new development of national character! From the earliest period of history, the mighty power of the association of millions of men into a people, moved by one political will, has been applied to objects at which humanity weeps, and which, were they not written on every page of the world's experience, would be absolutely incredible. From time to time, a personal gathering is witnessed; mighty numbers of the population assemble *en masse*. Doubtless it is some noble work which they are going to achieve. Marshalled beneath gay and joyous banners, cheered with the soul-stirring strains of music,—honored, admired,—behold how they move forward, the flower of the community,—clothed, fed, and paid at the public expense,—to some grand undertaking. They go not empty-handed;—their approach is discerned afar, by a forest of glittering steel above their heads, and the earth groans beneath their trains of enginery, of strange form and superhuman power. What errand of love has called them out,—the elected host,—to go in person,—side by side, and unite the mighty mass of their physical powers in one vast effort? Let the sharp volley that rings along the lines,—let the scarcely mimic thunder which rends the sky;—let the agonizing shrieks which rise from torn and trampled thousands, return the answer. Their errand is death. They go not to create, but to destroy; to waste and to slay,—to blast the works of civilization and peace,—to wrap cities in flames, and to cover fertile fields with bloody ashes.

'I cannot, will not believe that social man can rise no higher than this;—that reason and experience,—self-interest and humanity,—the light of nature,—the progress of knowledge, and the word of God will forever prove too feeble for this monstrous perversion of human energy. I must believe, that the day will yet dawn, when the great efforts of individual and social man will be turned to the promotion of the welfare of his brother man. If this hope is to be realized, it must be by the joint action of enlightened reason, elevated morals, and pure religion,—brought home by a liberal and efficient system of education, and the aid of heaven, to every fireside, and every heart.'

POLITICAL PROPHECY.

A REMARKABLE ONE.

The sagacity of Mr. Wirt has been much and deservedly admired, in his auguring, so early as 1805 or '6, in the *British Spy*, that Mr. Monroe would one day be President of the United States. But that augury was not comparable for distinctness, nor for apparent unlikelihood of fulfilment, to the following prediction, made fifteen years in advance, that *Louis Philippe would one day be King of France*. It is found in the *Edinburg Review*, for October, 1815, in an able dissertation upon French politics. Looking to the clearness with which it foretells that this prince would be the constitutional and limited monarch of his country; to the extreme improbability of such an event at the time; and to the literal exactness with which the prophecy was verified by the revolution of 1830;—we are at a loss to find any instance of perspicacity, on so important a subject, approaching to this.

THE PREDICTION.

[From the *Edinburg Review*, for October, 1815.]

'At present we are inclined to think, that the general voice of the discontented would be for the *Duke of Orleans*; and that his appointment to a limited monarchy would satisfy a greater ma-

jerk of all parties, and appease far more jealousies and alarms, than any other measure that could be suggested. Such a choice would ensure these three great advantages to the nation. In the first place, they would have a king who owed his crown unequivocally to the will of the country, and consequently could claim nothing as his right by birth, nor dispute the legitimacy of any of the conditions under which it was given. In the second place, they would have a king connected with the revolution by his parentage and early education, and therefore not liable to be tempted by family affection, or to be suspected of being tempted, to look upon those concerned in the revolution with feelings of hatred or revenge;—and, finally, they would have a king so near in blood to the lineal successor to the throne, and so little entitled to the dignity for his personal services or exertions, as to mark a considerable veneration for the principle of hereditary succession,—to conciliate the moderate royalists on the one hand, and to prevent this limited exercise of choice, in an emergency so new and important, from affording any encouragement to the perilous experiment of an elective monarchy; or, in other words, a crown set up as a prize to be fought for by all the daring and ambitious spirits in the country.

'These considerations are so forcible, and, at the same time, so obvious, that we cannot help believing, that if things do not mend greatly before the death of the king, whose health and habits do not promise a long course of existence;—or if, even during his life, discontents should rise so high as to produce another subversion of the government; by far the most likely, and, upon the whole, the most desirable issue, will be the transference of the sceptre to the *Duke of Orleans*, upon conditions more favorable to general liberty than have yet been admitted by a French sovereign.

'We are far from intending to insinuate, that that illustrious person has actually taken any measures to bring about such a consummation, or that he is even suspected of caballing against the throne of his kinsman. On the contrary, it is generally understood, that he has carefully kept himself aloof from the hazard of all such imputations; and that, though his partizans may conjecture that he will not refuse the greatness that may be put upon him, they are perfectly aware that he himself will do nothing to bring it to him, nor use any other arts to strengthen his interest, than a scrupulous adherence to the principles of the constitutional charter, which the whole nation is now bound to observe. His character, as far as we can gather, is that of much good sense and moderation.'

ROBERT WHITE.

BY A CITIZEN OF FREDERICKTOWN, MARYLAND.*

The memory of joys that are past, like the music of carol, is pleasant, but mournful to the soul.—*Ossian*.

Virginia ranks among her distinguished sons **ROBERT WHITE**, late judge of the general court, who was gathered to his fathers in March, 1831. He was born in the neighborhood of Winchester, March 29, 1759, and received but an imperfect education at a grammar school, near Marsh Creek, Pennsylvania, under the direction of the Rev. Mr. Craighead, a Presbyterian minister. In his seventeenth year, he volunteered as a private in a company commanded by captain Hugh Stevenson, and marched on the 20th of June, 1775, from Morgan's Spring, in Berkeley county, to Boston, where the British army was now closely besieged by Washington. Engaging with youthful ardor and zeal in the various and eventful scenes of that well conducted enterprise, he soon arrested the attention of the commander in chief, by his chivalric bearing. His discerning eye saw in the boy the germ of that remarkable de-

* Our Maryland friend deserves, and will no doubt receive the thanks of every Virginian, for this interesting sketch of one of her gallant sons and revolutionary heroes. We doubt not that it will be acceptable to our readers generally.

cision of character, which, in after years, sustained him in numberless appalling trials. He once told me that but for the pious impressions made on his heart, by the study of the Scriptures, when at school, he would then have been borne down and carried away in the vortex of dissipation and vice in which he was now involved. The light of the Star of Bethlehem beamed on his path, and he reached the haven in safety.

On the 17th of March, 1776, the city was evacuated; the enemy spread their canvass for a more fortunate station; and White saw his beloved chief triumphantly occupying the position of a cruel and imperious foe. Following the standard of his country, he shared the dangers and sufferings of the disastrous campaign of the following summer, when he was made an ensign. We next find him at Germantown, on the fourth of October, 1777, where he fought as a lieutenant, under major William Darke, of Berkeley county, Virginia, his intimate friend through life, who, on this occasion, displayed an intrepidity unsurpassed by "the bravest of the brave." As the column of the enemy advanced near our line, the lieutenant noticed an elegant and daring young British officer, animating his troops, by his own example, to press forward into the conflict. Darke aimed at him a fatal shot, with his fuzee, and seeing him fall, laconically remarked, "White, I have given that fellow his tobacco."

After this engagement, which resulted unfavorably to our arms, the lieutenant was constantly employed in harassing detached parties of the enemy, in the spring of 1778; and by a vigilance which knew no bounds, and a courage yielding to no danger, he often protected the main body of our army from surprise and loss. During one of these perilous partizan enterprises, in the month of June, of this year, at Short Hill, New Jersey, in the act of crossing a fence, his thigh bone was broken by a musket ball, and nearly at the same moment, he received another severe wound in the head from a British grenadier. He fell senseless to the earth—bleeding profusely. He found himself, when somewhat recovered, a prisoner of war, in the tent of an amiable and accomplished officer, who had rescued him from death, and who now treated him with distinguished humanity and politeness. In the autumn, after being exchanged, he at last reached Winchester, by slow and painful efforts, exceedingly lame, weak, and emaciated, by acute and protracted suffering. His body was a mere shadow, but his noble spirit, yet unsubdued, still panted to avenge the wrongs of his country. By this time Frederick and Berkeley counties had in the field some of the best officers in our army. Morgan, with his riflemen, had already scaled the walls of Quebec, amid the storms and snows of winter. Darke was then in the prison-ship, near New York, enduring all the complicated severities of rigorous confinement; but the laurels he had won were yet fresh. Swearingen was courting danger in every form; and the patriotism of White, elevating him above the severe torments he endured, urged him again "once more to the breach," before his wounds were sufficiently healed. In 1779 he was commissioned a captain of cavalry. For some time he was employed in recruiting and training his troop in Philadelphia, but was compelled, from bodily inability, to retire from service. His military career now closed in the twentieth year of his age, but never for a moment

did he withdraw his eagle eye from the thrilling events which afterwards illustrated our struggle for liberty, and often regretted that he was prevented from mingling again in the glorious contest. His maxim was, "What a pity 'tis that a man can die but once to save his country." In this year he commenced the study of law in the office of his uncle, Alexander White, one of the most profound lawyers in the valley of Virginia. While here he was compelled to read Blackstone, Coke, and other books, for nearly four years, either lying on his back, or propped up on a couch. In this forlorn condition, he pursued his weary way along the path of science, until he appeared at the Winchester bar, December, 1783. His health was now restored, and he was quickly cheered with an extensive and profitable practice. He was an able lawyer; clear and cogent in argument, but not eloquent; his voice rather harsh and shrill; and in the impetuosity of debate, his enunciation was sometimes affected even to stammering. For ten years he maintained a lofty eminence at the Frederick bar, during which period he was frequently elected to represent his county in the house of delegates. Here he mingled in debate with some of the most prominent characters of the commonwealth, and sustained a high reputation as an honest statesman. He heard the celebrated Patrick Henry deliver his wonderful argument against the British debts. He declared that no language could describe the splendor and grandeur of the scene. Immense clouds of anxious spectators thronged the court: the members of both houses left their seats, notwithstanding the commands of their speaker: the windows were raised that the multitude might at least catch the inspiring sound of the orator's voice: dead silence reigned, except when broken by the silver tones of his eloquence: for some days the delighted assembly was transported with the mighty efforts of that pupil of nature, whom Lord Byron styles "Demosthenes forest born." As he related the event, at my fireside in 1821, judge White seemed to be inspired with the same feeling which filled the bosom of Henry on that occasion: his eye kindled, his breast heaved with strong emotion. "True" said he, "success did not crown his efforts; but it might well have been said in the language of Chief Justice Marshall, when speaking of Pinkney in the case of the Nereid, 'so exquisite was the skill of the artist, so dazzling the garb in which the figure was presented, that it required the exercise of that cold, investigating faculty, which ought always to belong to those who sit on this bench, to discern its only imperfection, its want of resemblance.'"

On the sixteenth of November, 1793, Mr. White was appointed judge of the general court of Virginia, which office he held until his death.

Until 1825, this amiable and excellent judge was not only ever indefatigable in discharging the high trusts of his station at Richmond, in June and November of each year; but in each successive spring and fall, (whatever might be the state of the roads and weather) you would see him wending his way, in his gig, through five counties, of which the tenth judicial district was composed, at the appointed time, for the very small salary of \$1600 per annum. Like the great Alfred he carried justice to every man's door. As a *visi prius* judge, he had no superior in the United States. Prompt,

energetic, firm and resolute, he always commanded the profound respect of all who entered the court. So jealous was he of the encroachment of military power, that during the war of 1812, when Winchester was filled with recruits, he would not permit the officers to appear before him with their swords by their sides. His reported opinions in the case of Myers, who was tried for murder, and Preston's case, on a question of estoppel, are universally acknowledged to be powerful specimens of sound learning and extensive research.

When Judge White, was in the social circle, the sternness of his official character was thrown aside, and the soft, insinuating manners of the polished cavalier, made him the delight and admiration of all. Abounding in interesting anecdote, he would bear away your whole feelings, when relating the stirring events of the battlefield, or the more mild incidents of his long professional career. Scipio Africanus himself did not possess a more entire admiration of the female sex, and insensibly this high and holy principle would appear to insinuate itself into his judgment, where inflexible justice did not forbid it. Brave and intrepid as he surely was, the prayer of virtuous woman never reached his ear in vain. I remember a case—a miserable and depraved man was convicted by a jury of Loudoun, for some offence, and the court pronounced sentence of imprisonment; but during the term, the punishment might of course be commuted. Various persons besought him, in vain, in behalf of the law's victim. At length, the wife of the offender, poor, humble, broken-hearted, appeared a suppliant before him. He was unable to resist, and amidst the tears which flowed down his cheek, bade her to be comforted and depart in peace.

He kept on steadily in his high career of usefulness to the community, until the spring of 1825, when in coming to court in Loudoun, he halted for the night at a tavern on the bank of the Shenandoah. He retired to his room at an early hour, and was found by the landlord, at bedtime, sitting by the fireside, stricken with paralysis. He remained in this situation for several weeks, and was then borne, in a litter, to Winchester. Here I saw him in the latter part of '27, and never shall I forget the interview. Nature had put on her winter garment; the leaves of the forest were swept off by every gale, reminding us of the several generations successively passing away: the wind sighed mournfully amidst the venerable oaks surrounding his mansion: night had cast her gloomy mantle over the earth—I approached the patriarch, for the first time since his affliction. Alas, how changed! His dark and brilliant eye no more flashed with the lightning of genius: those lips, which once were vocal in the discharge of his official duties, and in establishing the rights of his fellow-citizens, were now almost powerless: the intellect prostrated: his noble form in ruins: all was desolate and sorrowful. "What shadows we are, and what shadows we pursue," said Burke, on a melancholy occasion, and the sentiment rushed into my mind, as I beheld the emaciated frame of him who sat before me. Often, but in vain, did I strive to suppress the rising sigh, and check the flowing tear—I wrung the hand of the patriot, and bade him adieu forever. He died a christian; and rests near the tomb of Morgan, in Winchester. Gallant soldier, fare thee well!

NEW VIEWS OF THE SOLAR SYSTEM.

The heading of this article will no doubt strike many of your readers as not only presumptuous, but extremely ridiculous. To suppose that a new view of the solar system can be presented to the learned, and such a view as will deserve the attention, the examination of the philosopher and mathematician, will appear rather a strange undertaking, to many, who would think well of any effort, claiming less pretensions. I had proposed publishing my view of the solar system, with the appropriate diagrams; but being advised by a few learned friends to present to the public, through the Messenger, my view of the distances of the planets from the Sun, their velocity in their paths, and the kind of orbits they describe round the Sun, *he* being a *progressing body*, I now comply with that advice.

It will be admitted by both the philosopher and mathematician, that if the Sun is a *progressive body*, then the planets cannot describe round him orbits returning into themselves, as now taught by astronomers. It will be also admitted, that our systems of astronomy, as they now exist, and are taught in the schools, had their foundation in the *supposition* that the Sun is a stationary body, and that the orbits of the planets were drawn in pursuance of this supposition. It is now, I believe, generally admitted by astronomers in England, France and Germany, that the Sun is not a stationary body; but moving on in his grand orbit, and carrying his planets as Jupiter carries his moons. Then, if we admit this fact, and it must be admitted, as the whole phenomena of the heavens tend directly to prove it, consequently, there is not a diagram in any of our systems of astronomy, which represents the solar system as it is: they represent a system which has no reality in creation. I have no hesitation in saying, that this single fact, the *progressing motion* of the Sun, proves clearly that the whole system, as it now exists, requires recasting—and such a recasting as will furnish a substitute representing the system as it is, and not as it has heretofore been supposed to be.

Before I advert to the probable distances of the planets from the Sun, I will bring into view the rotatory phenomena of the Earth. It has been supposed that the Moon was furnished by the Creator for the purpose of giving light to this globe during the absence of the sun. But the object of this creation was for a very different purpose. We see that the Moon revolves on her axis once only during her revolution round the Earth. This would have been the case in relation to the Earth, if she had not been supplied with this agent; she would have revolved once only on her axis during her revolution round the Sun, as is the fact, in relation to the Moon. To give quick successions of day and night, suited to the well-being of vegetable and animated nature on this Earth, the Moon was given. That this is the fact, the agency of the Moon, in raising the tides, abundantly proves. I will, however, now, only say, that the planets give rotatory motion to the Sun, and the moons to the planets; and that I have here noticed this agency of the Moon, for a purpose which will hereafter appear, hoping that the great difference between the rotations of the Earth and Moon, may excite the attention of your learned readers.

In thus proposing to show to the learned world, that our *physical systems* of astronomy are not true, either in the distances of the planets from the Sun—their velocities in their paths—the kind of orbits they describe—the forces by which they are impelled through the heavens—the cause of their perturbations, and the entire insufficiency of that something called the *attraction of gravitation*, though presented to us in a full suit of mathematical problems and demonstrations, to produce the phenomena we observe among the planets and their satellites—I hope I shall not be considered as attacking systems idly, and without just grounds for the attack. I am well aware of the force of educational impressions, and that there are men who cannot brook the questioning of the truth of such impressions.

Every theory or system must be consistent with itself. If it is not—if it involves inconsistencies—it cannot be accepted as true. Astronomers have been long engaged in efforts to discover the magnitude of the Sun, of the planets, and their distances from one another; but with what success, a few of their supposed discoveries will show. It is universally admitted, I believe, that the magnitude of a body diminishes as the distance increases. Then, at the distance of the Sun from the Earth, whatever it may be, he presents an apparent diameter, I will say, of about thirty inches; but they have, in retracing the distance of the Sun from the Earth, brought up that apparent diameter to a real one of 780,000 miles. Now suppose the Sun to be 95,000,000 of miles from the Earth, with an apparent diameter of 30 inches, and then suppose him removed 95,000,000 of miles further off, what would be his apparent diameter at that distance? We might see him, perhaps, as we now see the light of some distant star. They give to Jupiter a measurable apparent disk, and say that his nearest approach to this Earth is about 390,000,000 of miles; but in tracing back that distance, more than four times the distance of the Sun, they give to him a real diameter of only 90,000,000 miles. Then taking into view the distances given the two bodies, the real diameter of Jupiter ought to be much greater than that of the Sun. Now what can be said in favor of a mathematical theory involving such discrepancies—a theory, too, pretending to infallibility? It is, however, not to be considered very extraordinary that such errors should exist theoretically, and continue to exist, as neither distances, magnitude, nor velocity, are required in the labors of the practical astronomer. The distances of the planets from the Sun, and the velocity they have in their orbits, must be ascertained from *physical data* very different from the means now employed. The mathematicians have been, also, too much employed, and uselessly so, in attempts to prove that their gravitation, their attraction and projection, alone wields the planets in their courses. It is, for us, equally easy to conceive the Deity creating elastic materials, and specifically applying them, as to conceive the creation of our globe; and we see, and feel, that they do exist, and exist formidably. Can such materials be without agency in the fields they occupy? Do we not see that this globe would be a barren waste without them? Philosophers have at all times paid too little attention to the use, the agency, and indeed the necessity of such *matériel* in the vast ranges of creation; but if we can succeed in ascertaining the true distances of the planets from the Sun,

and I have no doubt this can be done with great accuracy—if we can by any means arrive at the exact distance of the Moon from the Earth—there will be but little difficulty in arranging the *electro-magnetic machinery* of the Sun and planets, so that the whole of the phenomena presented to us in the solar system may be readily accounted for, even that anomaly discovered in the motions of the four bodies between the orbits of Mars and Jupiter.

Now, our physical systems of astronomy teach us, that the Moon makes one revolution round the Earth in 29 days, at the distance of 240,000 miles from her primary. They also teach us, that Mercury makes one revolution round the Sun in 87 days. Then three revolutions of the Moon round the Earth, will be performed in the same time, (97 days,) that Mercury performed one round the Sun, leaving out fractions in both cases. Suppose then, for convenience, we place the Moon three times her supposed distance from the Earth, which will be 720,000 miles, and give Mercury his supposed distance from the Sun, 37,000,000 of miles, and use their several velocities as given by the mathematicians, the Moon 70,000 miles an hour, and Mercury 110,000 only. Then so far as time is concerned, the Moon, at 720,000 miles distance from the Earth, would make one revolution round the Earth, while Mercury makes one, at the distance of 37,000,000 of miles, as supposed, from the Sun. The Moon moving 70,000 miles an hour, and Mercury 110,000 only. Here then mathematical astronomers have blundered most extraordinarily. But this question having been submitted for the consideration of a distinguished mathematical professor, he at once dismissed it, by saying it was “an incorrect principle to compare a body moving round one, with a body moving round another,” without giving any reason why it was so. I will admit, that if the two bodies belonged to different systems, and existed under different circumstances, that then it might be considered an incorrect principle. If, “to compare a body moving round one, with a body moving round another,” be an incorrect principle, it must be, because the bodies compared, belonged to different systems. But in this case, the Sun, Mercury, the Earth, and the Moon, belong to the same system,—they move in the same direction, never vary in their times, and are indissolubly bound together. Mercury moves round the Sun—the Earth moves round the same body, and so does the Moon. Then if the Moon is 240,000 miles from the Earth, and moves 70,000 miles an hour, and three periods of the Moon are equal to one of Mercury, it is evident, that, if there is any truth in figures, in mathematics, or in anything else, Mercury cannot be 37,000,000 of miles from the Sun. Then, if the comparison here made, is made upon correct principles—and I see no defect—what is the probable distance of Mercury from his luminous leader? The question may be thus stated:

Moon's velocity.	Distance.	Mercury's velocity.
70,000	720,000	110,000
	110,000	
	7(0,000)79,200,00(0,000	
	1,131,428,4-7 miles.	

Now if the distance and velocity of the Moon are rightly

given in our physical systems of astronomy, then the distance and velocity of Mercury cannot be. This discrepancy or inconsistency, would, however, very naturally grow out of the discoveries of Galileo, and Copernicus. Copernicus assumed that the Sun was a stationary body, and he whirled the planets round him, in paths returning into themselves. This led his followers to suppose, from the times or periods of the planets, that they must have different velocities. Now it is very evident, that the Sun being a *progressive body*, that that progression must limit the progression of the planets—none can advance ahead—none can be left behind; they must all have the same velocity. The Moon will make twelve revolutions round the Earth, while Mercury makes four round the Sun; Mercury describing precisely the same kind of orbit round the Sun, that the Moon describes round the Earth; the Earth and Mercury having the same velocity. This opens the field fully to our view, and we see evidently from the nature of the orbit described by the Moon, that she must move faster in her path than either the Earth or Mercury; and, therefore, the distance of Mercury from the Sun cannot be, if we assume the distance of the Moon to be rightly given, 37,000,000 of miles. No one will deny that the Moon moves round the Sun with the same certainty, the same exactitude, that Mercury does; and the Sun being a *progressive body*, Mercury must describe round him the same kind of orbit the Moon describes round the Earth.

Respecting the action of the Moon upon this Earth, and the nature of that action, I feel confident I shall be able to demonstrate, that the same force which raises the tides, gives to the Earth axillary or rotatory motion, and if that force was *attractive*, it would reverse the whole phenomena of the tides, and give to the Earth rotation upon its axis from east to west, instead of from west to east. But what would be much worse it would bring the Earth and Moon together at the point where the Moon passes the orbit of the Earth, in her descent towards the Sun. But my principal object now, is to excite a full examination of the correctness or incorrectness of the principle of comparing the distance and velocity of the Moon, with the distance and velocity of Mercury, as they are presented to us by the astronomical mathematician. There can be no stationary worlds,—no stationary systems—the whole universe is in motion, and that description of force which moves a feather, moves a world. The natural gravitation of all systems must be counteracted, not by a *projectile* force in a direct line, and a *drawing off* from that line, but by a force quite of a different nature: such a force as we discover in the action of one magnet upon another. The magnetic phenomena will develop to us the true nature of the planetary gravitation, and, also, the true nature of the counteracting forces.

I shall probably offer you for your next number my view of the tides, which will bring before your readers an entirely original theory, founded upon the real facts as they exist, and not as they have been said to exist. The whole of the oceanic phenomena produced by the action of the Moon, have been altogether misrepresented. In thus speaking, I hope I shall not be considered as intending to give offence to any one; my object is revolutionary, so far as our physical systems of astronomy are concerned.

A very distinguished European mathematician seems to be not altogether convinced that the primary object in the creation of the Moon, was to give light to this Earth during the absence of the Sun. Now if he had attended more particularly to dynamical principles, and the nature of the force producing rotatory motion, he would have discovered that there was evidently a force applied to the Earth, which was not applied to the Moon. Then the inquiry would have been, whence this force? He would have seen, and clearly too, that the force which could drive the Earth 68,000 miles an hour in her path, could not be the force that gave her such a slow rotatory motion compared with the motion given her in her orbit. He seems to have had no idea of the true office of the Moon, and which will be shown, in showing the true cause of the tides. I know that the office or agency I give to the satellite, is new—is original. But this, so far from constituting an objection, ought rather to excite inquiry, and a thorough investigation of the question. I say that the original design of the Creator, in the creation of the Moon, was the rotatory motion of this Earth. The light she gives is truly of some importance, but this rotatory motion is still of more importance, and indeed is absolutely necessary to animated nature as it exists here. It may be said that the Moon has still a slower rotatory motion than the Earth, and which is true, and just such a rotation as the Earth would have had, if she had been left without the agency of her Moon. The projectile force of astronomers must strike the planet equally, and therefore could not give rotatory motion; and their gravitation must also affect or act upon the planet equally, and of course neither force could give axillary motion;—to give axillary or rotatory motion, the planet must be acted upon unequally and obliquely. Then, as the projection and gravitation of our physical astronomers, can neither of them act both equally and unequally at the same time, they can have no agency in producing rotatory or axillary motion. It may be replied to this, however, that the Moon has herself this axillary motion, and that she has no agent to give her such a motion independent of the projection and gravitation of our physical astronomers. To show how this is effected, the *electro magnetic machinery*, which wields the planets in their courses, must be brought into view. This, however, will require diagrams showing how this *material* is applied, and which cannot here be given.

But my principal object in offering for the Messenger this paper, is to have the question, whether the distance of the Moon from the Earth, and her velocity in her path, furnishes "correct" data for ascertaining the probable distance of Mercury from the Sun; Mercury making one revolution round the Sun, in the same time that the Moon makes three round the Earth. If I am correct in this, the distances and velocities of the planets, as heretofore given, cannot be true; and I will show that the Earth itself is not more than 5,000,000 of miles from the Sun, instead of 95,000,000; and that Jupiter is not more than 55,000,000 from the same body, and that he moves with the same velocity that Mercury, Venus, the Earth and Mars do. This will bring the field occupied by our solar system within reasonable bounds. I will conclude this paper by remarking that because the practical astronomer predicts transits, eclipses, &c. many suppose that he is

really indebted to the *physical astronomer* for this art; and that gravitation, attraction, and projection, are necessary; and that he could not get on without such supposed forces. But this art was brought into practice thousands of years before Copernicus had an existence, or such forces were even thought of by our modern astronomers. In fact the practical astronomer derives no advantage whatever from what is now called the physical department of the science.

MEMORY, FANCY, AND LOVE.

'Tis to Mem'ry and Fancy that mortals most owe
The good or the evil they meet with below :
For Memory's mirror reflects back again
The image of every past pleasure or pain ;
And in Fancy's strange prism the future appears,
As color'd and shaped by our hopes and our fears ;
From the first dawn of thought to life's latest hour,
What mortal has felt not their magical power ?

Near those fountains where Pleasure and Fashion bear sway,
Two beautiful sisters chanced lately to stray ;
Though the damsels were equal in beauty and grace,
They differed in stature, in form, and in face.
The one who seem'd eldest was larger and taller,
And so sober and staid you a matron would call her :
Her robe was all chequer'd and pale in its hue ;
On her arm she exhibits a mirror to view,
The reflection of which she so managed to cast,
One sees imaged there all the scenes she has past.

The one who was younger, with form light and airy,
Displays all the grace of a sylph or a fairy :
Than her vest you could nothing more splendid behold,
'Twas crimson and azure, embroider'd with gold.
A prism of crystal her bosom displays,
Through which she would often in ecstasy gaze ;
But at times after seeming entranc'd with delight,
From the shapes that she sees she will turn with affright.

As they rambled along, in a pathway they found
A child lying naked and sick on the ground ;
Though now he was friendless, neglected, forlorn,
To happier fortunes he seem'd to be born.
His eye, altho' hollow, emitted such rays,
As only can flash from passion's strong blaze ;
And his cheeks, though so sunken, in color still show'd
Where beauty and health in one current had flow'd.

Awakened to pity, the sisters employ
All their cares to revive and to cherish the boy :
By turns to their bosoms the infant they press,
When they saw that their efforts were promis'd success.
So prudent their nursery, so ceaseless their pains,
The boy all his beauty completely regains ;
His limbs became plump, and his cheeks now disclose
Both joy's laughing dimple and health's blooming rose.
Then so quick was his step, so elastic his bound,
His feet hardly seem'd to alight on the ground ;
But the archness and slyness that lurk'd in his eyes,
Show'd a temper for mischief the sisters surmise.

The urchin, ungrateful their cares to requite,
Soon tasks the two sisters from morning till night :
In the mirror first looks—through the prism then gazes,
As his object's the past or the future's bright phases :
Each by-gone delight now with rapture beholds ;
Then hope's lovely hues, which the prism unfolds,
If some frightful shape should here meet his sight,
To the mirror he turns for remembered delight ;
Or if some clouded spot in the mirror arise,
To the beautiful tints of the prism he flies.
These signs were together sufficient to prove
To the sisters the child they had cherish'd was Love :
As the symbols they wore had in like manner show'd
'Twas to Fancy and Mem'ry his life he had owed.
Thus, if they nurse the Passions, the Passions again
Over Fancy and Memory triumphantly reign.

LUCILE:

A NOVELETTE.

By the Authoress of "The Curse."

CHAPTER I.

It is the hour when from the boughs
The nightingale's high note is heard;
It is the hour when lover's vows
Seem sweet in every whispered word;
And gentle winds, and waters near
Make music to the lonely ear.

Byron.

The evening was closing in, and the mysterious twilight was beginning to envelope every object in its misty veil. The hour most dear to the dreaming and poetic mind, is that between sunset and the falling of night: the indistinct and imperfect outlines suggest a thousand visions as fitting and unreal as the shadows before us. The happy love that hour, for then fancy has full sway, and bright and gorgeous is the future which she pictures forth: the wretched love it, because the quiet and dream-like repose of nature allows them leisure to brood over the past, and recall the image of the being whose presence was the sunshine of their existence—to remember a bright and happy face, or the tones of a glad voice which once was the music of their home.

The day had been intensely hot; a slight breeze was just beginning to crisp the surface of the ocean, and the murmur of the waves as they broke in ripples on the beach, came with a lulling sound to the ear of Lucile Montessor, as she leaned from the balcony in front of her window. A servant entered the chamber, and lit the crystal-lamp, which stood on a table in the centre of the room. Lucile turned and exclaimed—

"Ah! Agnes, why did you bring that odious light? It has destroyed the brightest dream that ever moon-struck fancy mirrored forth."

"Deed, Miss Lucile," said the girl; "if de dream made you so pale and ghost-like, it could'nt be such a one as is very pleasin' for a young lady like you. Look at yourself in de glass, and see if you isn't more like a corpse than a livin' lady."

Lucile threw herself on a sofa, and motioned her attendant to leave her. "Let me know," said she, "when my father returns—I wish to see him immediately."

"Yes, ma'am," responded Agnes, and in another instant Miss Montessor was alone. Starting up, and pressing her hands on her temples, she exclaimed—

"Ah, if he should not consent! This suspense is horrible: I can hear the pulsations of my own heart in this still and silent hour: yet he must—he will sanction our engagement: he is my father, and I his only child—he will not refuse me happi-

ness—his pride must yield. Ah! my beloved Sidney," she continued, unclosing a miniature case, and gazing fondly on the picture which it contained, "Heaven has stamped upon that brow its own seal of nobility, and who shall dare to say that thou art not a match for the envied heiress."

As Lucile stood with her earnest gaze fixed on the face which had become to her young heart its beau-ideal, her lovely features borrowed an additional charm from the pensive expression which stole over them. The massy folds of raven hair were parted over a low, broad brow, and knotted at the back of the head, so as to display the whole of a beautiful face and throat. The features were of the purest Grecian mould, but the exquisitely curved lips and large lustrous eyes, gave more expression to the countenance than is usually found in the most perfect copies of the loveliness of the far famed daughters of Greece.

"My own Lucile," murmured a low voice at her elbow; and her pale face flushed even to the temples, as she met the eyes of the original of that picture, on which she had been so abstractedly gazing. And never did woman yield her love to one whose outward form was better calculated to win it. A tall, stately figure, with a face whose every feature was strictly beautiful; yet no one would have thought of calling it effeminate: the large clear eyes were filled with light from the spirit within, and the intellectual brow redeemed it from the possibility of having such an epithet applied to it. It was a face which breathed of genius—passion—truth.

Quickly recovering from her confusion, Lucile exclaimed—

"Have you seen my father? Tell me in a word what he says. Methinks your face speaks not of failure."

"I have seen him, dearest, but will you—can you forgive me, for again leaving his presence without speaking of my hopes—my wishes? When I approach the subject, my tongue falters, and my heart faints within me; for how can I, the object of his bounty, ask him to give me his gifted, lovely child. I, who would gladly give my life for her, yet dare not hope to win from her proud father the consent to call her mine. I have lingered around you, dear Lucile, until I fear that if I breathe my presumptuous hopes, I shall be banished from my paradise, without the Eve whose companionship could lighten every toil—make dear every privation endured for her sake."

Lucile waved her hand impatiently.

"No, Sidney—no! I would not be the means of bringing sorrow on you; for if my father were to refuse his consent to our marriage, and I should elope with you, what would become of your hopes of future greatness! In struggling with the wearing cares of life, the fire would be extinguished—the enthusiasm of genius fade from your soul; and

I—even I—fondly as you say you love me, would be dearly purchased at such a price.”

“Lucile—no price, save that, can be too dear to me for the possession of your love—the right to claim you as my own forever; for if the glory depart from my mind, I should be unworthy of you, and could not hope to retain your affection. But the history of genius has no such record: it is in sorrow and poverty that the brightest spirits have been nursed; and many—many, gifted beyond myself, have been lost to the world and posterity, by the inglorious love of ease which the possession of wealth allowed them. Thus you see, dearest, that even if Gen. Montessor should refuse to sanction our love, it may be to my advantage in the end. ’Tis true, I lose the opportunity of visiting Italy, and studying the master-pieces of my art, but with thy form before me as a model, and the beauties of nature in such a clime as ours spread around me, I shall be inspired with such visions as never before visited the brain of dreaming painter or poet. Oh! Lucile, promise me that you will hold sacred the pledge which you have given, that no other influence shall destroy your love for me.”

“Sidney, Sidney,” said Lucile, reproachfully, “have I ever given you cause to doubt the stability of my affection? Have I not turned coldly away from the proffers of love? Have I not even offended my father by the indifference with which I received the attentions of others, and yet you can suffer a doubt to dim your trust in me? Alas! this should not be.”

“Forgive me, Lucile—I have no doubts of your truth; but when I view the vast disparity in our situations, I cannot prevent a chill from creeping over my heart. You are bright, beautiful and happy, while I am poor, lonely, and nearly friendless; the gift—perhaps the fatal gift of genius—my only claim to the consideration of others. What then can I offer to your haughty father that he will consider worthy the acceptance of his cherished heiress? Ah! Lucile, would that your lot had been cast among those to whom I durst aspire, and how proudly would I have shown that love was all to me; but I cannot ask you to leave your own proud halls to become a wanderer on the face of the earth with me. Blindly presumptuous, I have, like the godlike Tasso, raised my eyes to one so far above me that I dare not hope for a happy termination to our love: though more fortunate than him, I am not scorned by the object of my idolatry.”

“Scorned! Ah no, dear Sidney—deeply, truly loved; and believe me when I say that I am prouder far of being the chosen of thy noble heart than——”

“Pooh! pehaw! what is all this waste of sentiment about?” said a voice from the door. “Here I’ve been listening for the last two minutes, and

can make nothing out of it; and you both look as melancholy as if you had just lost the best friend you have in the world. Been reading Tasso’s Lament, perhaps, and are sympathizing with his woes. Well, there’s no harm in that, for there’s genius in that poem; that fellow Byron had ‘a soul of fire, and a heart of ice,’ as somebody said of him, but I am proud that he is my countryman nevertheless.”

As this was uttered, the speaker advanced in the room. He was a middle-aged man, with a fine noble countenance, and an expression of firmness in his thin compressed lips, which might well deter one from confiding to his decision the happiness of a life.

“I am happy, dear father,” said Lucile, “that you have a soul to appreciate and admire talent. But for that——”

“But for that! well, what next, girl? Is it anything new to you to learn that I have soul enough to admire the beautiful? Is it a discovery to my daughter that I am not ‘as dull as the fat weed that rots on Lethe’s brink?’ Pooh—nonsense—what are you thinking of? I sought you, Lucile, to have a little private conversation with you. We can dispense with ceremony with Sidney, for he is one of ourselves. Come with me, love, to my library.”

CHAPTER II.

Love! summer flower, how soon thou art decayed,
Opening amid a paradise of sweets,
Dying with withered leaves and cankered stem;
The very memory of thy happiness,
Departed with thy beauty; breath and bloom
Gone, and the trusting heart which thou hast made
So green, so lovely, for thy dwelling-place,
Left but a desolation.

L. E. L.

“Lucile,” said Gen. Montessor, after a pause, “I heard that boy making love to you, though I pretended not to understand the scene; and what surprised me more, heard you, *my* daughter, the last descendant of my ancient house, reply some nonsense about love and faith and all such foolishness.”

“Foolishness! nonsense! Oh, father, are all my hopes of happiness in life to be thus termed?”

“Lucile Montessor!” said her father sternly, “what is this I hear? Do you hope to win my consent to see you the bride of one so far beneath you? If I thought that you had so far descended from your high estate, as to look with the eyes of favor on this boy, I would cast you from me forever—disown you, and sink to my grave a lonely, blighted man, without an interest in life. What, *he*—the orphan son of my overseer—my hired servant—*he* wed my daughter?”

“He has wooed and won the love of your daughter,” said Lucile, with a pale cheek, but unfaltering voice, “and she acknowledges in him

the scorned—the contemned—her equal; nay, more—her superior; for if heaven has denied him fortune, it has gifted him with the mind to soar far, far above those whose only greatness is their pride of birth, or, more ignoble still—of gold. I love him, father, with that love which wanes not, dims not with time, absence, or even neglect.”

“This—this, to me! How dare you thus boldly avow your disgraceful passion for one whom it is impossible you shall ever wed? Nay, speak not—I will not hear you; on this point I am inflexible. Oh, Lucile—Lucile! is it by you in whom I have garnered my heart,—in whom is bound up the scattered fragments of hopes that were early wrecked?—is it by you that new wretchedness must be inflicted on me? Ungrateful girl! Is this the reward of all my fondness, my blind indulgence?”

Lucile threw herself on his bosom, and spite of his anger, Gen. Montessor clasped her to his heart, and covered her brow with kisses.

“My sweet child, you will not persevere in this silly choice. You will act as becomes my daughter. Love does not last, believe me; not even such love as yours. I know it does not. Listen, my child, to my history, and profit by my experience. Come, sit beside me, love, and I will commit my heart’s treasured secret to your keeping.”

She placed herself on an ottoman at his feet, and as the brilliant glare of the lamp fell on her person, her father gazed admiringly on her.

“I wonder not at this presumptuous boy,” thought he. “I should have foreseen this; for she has the dangerous gift of loveliness, and he possesses that genius which worships beauty in every form. Where could he find a being that would more nearly realize his ideal?”

There was a pause of some moments. At length Gen. Montessor spoke in a low, hoarse tone.

“It is many years since my lips have breathed the name of Marion Walters. Among men I dared not syllable it, fearing they might see the inward struggle which the sound of her name, who has long since mouldered into dust, caused me. In solitude I dared not breathe it, fearing that I might, when alone, be tempted to curse the being whom I had once loved with that utter devotion of feeling, mind and heart, which some natures are formed to experience. Oh, Lucile! better be one who is content to ‘dwell in decencies forever,’ than give your highest, holiest feelings to another, to have them crushed as mine have been. You possess that gift most dangerous to your sex, a proud, sensitive, yet affectionate heart. You are one to shrink from a breath of unkindness—to return not the bitter word—to turn with a wrung spirit from a cold glance, and yet speak not of the agony that is wasting your heart. Then why

would you leave the father who has loved you, as only an old, doating heart can love the being it has watched over from infancy?”

“I need not leave you, dearest father,” said Lucile, in a low voice. “In giving me to Sidney, you would but gain a son instead of losing your daughter. He is not one to slight or wound the being that loves him.”

“Ah! child, you know not what he may become. I once trusted, as you do now, and was deceived. Lucile, I was young, thoughtless and gay. Reckless of the future—forgetful of the past, I alone lived for the present moment. I was rich, and much sought after in the gay circles in which I moved. One evening I received an invitation to dine the following week with an elderly lady who professed to have been an intimate friend of my mother. I accepted the invitation without hesitation, as any one who had been a friend to my dear and sainted mother, was sure to find an interested listener in her son. On the day appointed I went—I found a small, quiet looking woman, who spoke in a soft, lady-like manner, but not even her anecdotes of the youth of my mother could long confine my attention to her discourse. In the recess of a window, half hid by the falling drape, was a young girl plucking the withered leaves from some geraniums. Her beauty was of a high and noble order; there was no radiance about it; she looked as if the clouds of life had thrown their shadows over her spirit at an age when hope is our most familiar companion. I inquired in a low tone who she was? ‘An orphan dependent of mine,’ was the reply of Mrs. Wilson. An orphan, and dependent? I no longer wondered at her sad countenance.

“Mrs. Wilson called her to her side, and we were introduced. I loved Marion—won, and won her. We were married, and never was lover more devoted than I; her slightest wish was to me a law. I have sat for hours beside her, drinking in the music of her tones, and I have kissed the flowers that her hand had touched, or the page which her eye had dwelt on, when she was not observing me; for so utter was my devotion, that I was ashamed to betray it to my idol—and she—she seemed to love me! All this while that I was lavishing on her my heart’s wealth, she was ever gentle, kind, and I thought that she regarded me with the affection of a grateful heart, which was incapable of any deeper feeling. Deep—deep dissembler, that she was! I believed not the power was in human nature to act with such consummate duplicity!

“She lived but two years: she faded slowly from my side, and I watched over her with that hope which is born of despair, until I could hope no more. I refused to believe that she could die, until I felt the head pillowed on my bosom grow cold, and saw those still features stiffen into their mar-

ble-like repose. In her last moments, she looked into my eyes, and said—'Forgive me, Montessor, and be kind to my memory.'

"'I have nothing to forgive, dearest Marion,' I whispered; 'I who have been so blessed in your affection.'

"An expression of anguish passed over her features. 'Ah! 'tis that—'tis that, which haunts me now; forgive me, when you know all.' I believed her to be delirious then, and thought not of attaching any meaning to her words.

"It was not until the sods were laid upon her grave, and I knelt above them, that I felt how utter and hopeless was my bereavement. The worshipped one was gone forever, and henceforth I was alone—alone in my desolation. Oh! the agony of that hour, when we see the lip pale, and the eye, in whose beams we have lived, grow sightless! Who in their anguish can *then* say, 'Not my will, oh! God, but thine be done?' Yet with all its intensity of suffering, it is not in that hour that we most feel the extent of our loss. It is not while the angel of death is casting the shadow of his wings over the home once the abode of happiness, that we can feel how heavy is the bereavement; it is the daily, hourly missing of a dear, familiar face, and the pining of the heart for the sound of that voice which is now only for our dreams.

"I yielded myself to the indulgence of the wildest sorrow, secluded myself from all companionship, to recall that past whose brightness only made the present more intolerable. I usually sat in her room—it continued just as she had left it—there was the book from which she had last read, with a few scattered rose leaves on the page; the work-stand open with her needle-work where she had last thrown it; it was a robe she had been embroidering for her infant. In one corner was her writing desk; she had confided to me the key, and requested me to look over her papers, and burn the correspondence with some of her early friends which it contained. I had been so absorbed in grief, that the request had faded from my mind, until one day I accidentally found the key. I shrank from the task, for I knew it would revive the first bitterness of sorrow with which I had bent over her lifeless form, and felt that we were to meet no more. *No more!* Oh, what agony can be conveyed in those brief words!

"I drew the desk near a window, and seated myself to perform the harrowing task of looking over the memorials which spoke so forcibly of my lost Marion. The different packages of letters were tied up with colored ribbons, and labelled with the names of the writers. I hastily took them out, and beneath them was a parcel addressed to myself. I broke the seals, and a number of letters, worn, and looking as if many tears had been shed over them, met my sight. As I raised one, a

miniature fell from it. I instantly recognized the likeness of a young man whom I had met once at Mrs. Wilson's previous to my marriage. The truth flashed on me at once—she had loved him—and I had been accepted because I had wealth.

"There was a letter in the package for me: here it is—I will read it to you—it has never left me since that night."

He took a sheet of paper from his pocket book, unfolded it, and in a husky voice, read the following words:

"'Montessor, can you forgive me for the life of duplicity I have led since I became your wife? If misery, such as rarely falls to the lot of woman, be an atonement, I surely have some claim on your pity. I never have loved you. All this while that I have tried to act as though my heart appreciated your kindness, I have felt what a wretch I am, unworthy of the devoted love which it has been my misfortune to inspire.

"'From childhood I was dependent, and bitterly was I made to feel it. I grew up with the belief that the worst of ills was poverty, and I resolved to marry for wealth. Alas! had I known you before I ever loved, my heart would have been yours; but ere we met, I became acquainted with him whose picture you will find in the packet, with these lines: need I say that we loved? loved as 'youth—passion—genius loves.' He was poor, yet until I was sought by you, I suffered him to hope.

"'Mrs. Wilson pointed out to me the advantages of an union with you, and I listened with a calm brow and a heart torn with conflicting emotions; she enumerated all the benefits she had conferred on me, and ended by saying, that if I was silly enough to refuse so unexceptionable an offer, her protection would henceforth be withdrawn from me forever. I married you, and sealed my own wretchedness. I believed that gratitude would be the parent of love—but I knew not my own heart. Your affection was so trusting, so devoted, that I felt myself the veriest wretch on earth. Often—often have my lips unclosed to reveal all that my heart experienced, but the conviction would come to me, that you, at least, were happy in the delusion, and why should I destroy it?

"'I saw *him* once after our marriage; he came to upbraid me; and never to my dying hour will the memory of his words leave me. He reproached me with the fury of a maniac, and left me fainting on the grass. When I recovered, I returned to your house, to wear a smiling brow, and to appear to listen to your voice breathing the words of tender affection, while the frenzied accents of another were ever ringing in my ears. Oh! how did I sustain the unutterable wretchedness of the many weary days that passed, before I heard from him? I wonder even now that my wan face and tearful eyes did not unfold the secret unhap-

piness that was destroying me. I at last heard that he had entered the navy, and the news speedily came that he had fallen a victim to the climate of the West Indies, on which station his ship was. He wrote to me in his last moments: read that letter Montessor, and wonder not that I am dying with a broken heart. Physicians call it consumption. Ah! how often is that name given to the rending apart of all the ties we have cherished, and with them life itself.

"I cannot die as I have lived, a deceiver, and of him who has been the best and truest friend I have ever known; perhaps you had been happier had this revelation not been made, but when I leave you I know that you will yield to the indulgence of a grief, which may unfit you for all intercourse with the world. Learn how unworthy I am of that grief, and return to the sphere which you are fitted to adorn. Bury the memory of our past in the grave, with the frail, weak being, whose last prayer is for forgiveness, and let not the faults of the mother alienate your heart from her child."

CHAPTER III.

All other loves were in this love,
She gave back all death swept away,
The only fruit upon the bough
Left by a long and stormy day. *La Martine.*

"Such were the words addressed to me," continued Montessor, in a deep, stern tone. "Such the reward of my confidence—my devotion. I read the letter to which she referred me, and even amid my own sufferings, I could sympathize with the deserted, forsaken writer—I had no forgiveness for her—true, she had died the victim of her own mistaken estimate of happiness; but he, whose noble heart she had wrung with anguish, had preceded her to the tomb, and I lived to feel my trust in human nature forever destroyed.

"I became a wanderer on the face of the earth; for years I travelled over the fairest countries of the east, and became familiar with their habits, as though I had been a native of the clime. I then visited the Western world, and spent some years in the republic of the United States, which was then in its infancy. In the interim, an uncle of my mother, who had settled in the island of Cuba, died and bequeathed this estate to me. I visited it, and was so much pleased with the situation, that I abandoned my paternal halls and settled here for life. Here it was that I met with a young Creole, a perfect child of nature—she had never been taught to veil her feelings by the conventional etiquette of society—she loved me with truth and fervor—I married her—you, my child, can well remember your mother."

"Ah, yes! but the child of Marion—what became of it?"

"He died in infancy; he was placed with an Irish nurse, who was devotedly attached to him, but he survived his ill-fated mother only a few months. That was another blow which fell with stunning force; for the boy was dear to me as my own soul, and I never look around me that I do not sigh to think, that the only scion of my house is a feeble girl, whose name will even pass away when she marries, without she fulfils the contract I have made for her."

"Contract! father!" exclaimed Lucile, with a blanched cheek; "to what do you allude?"

"Listen to me, calmly, Lucile, and do not look so unnecessarily alarmed. You have often heard of your cousin Victor—nay, have corresponded with him. He is my nephew—the son of my only brother, and bears my name. He is your destined husband; a few more weeks, and he will arrive at Havana; by that time you will be ready to receive him as your betrothed."

Lucile arose calmly—"Father, I cannot—you have my confidence; how then can you ask me to receive Victor as my future husband, when my whole soul is devoted to another? Would you have me act the part you have so deeply condemned your lost Marion for?"

"Girl! no!—but I would have you withdraw your affections from this pauper, on whom you have condescended to look with the eyes of favor. Marion was my equal in everything save fortune, while he—pshaw! I have not patience to argue with you. Come hither, child." He drew her to the window—a full unclouded moon was pouring its floods of light on the scene before her. "Look around you—see those broad lands stretching as far as the eye can reach, covered with my wealth, which hundreds of hands are employed to gather. All these and more are mine, and if you obey me, they will become yours."

"Father," said Lucile, solemnly, "if many times the amount of your wealth were placed on one hand, and a competence offered me on the other, with Sidney to share it, I could not hesitate a moment in my choice. What, without him, would be to me all the splendor that gold can purchase?"

"Aye, if competence were his to offer; but 'tis not—he is dependent on me for the very bread he eats, and think you I shall ever be wrought on to consider him a fitting match for my daughter? Insolent aspirant that he is, in offering to look so far above his sphere; and how know you that he is not mercenary? seeking the heiress for her wealth, and trusting to the blind idolatry of her old father to forgive the misalliance, and receive him as his son?"

Lucile raised her form to its utmost height, as she replied—

"To you who have known him from childhood, I need not defend him from such suspicion. Ah,

no! too long have I seen his struggles to overcome his attachment, lest such a charge should be brought against him. I am loved for myself—I feel and know it. Were I this hour alone, friendless, fortuneless, he would be to me the same that he now is, only more kind—more tender. Poor he is, and low-born, according to your standard, but the day will come, when the lustre of his genius shall cast a halo of glory around his name, as imperishable as the light of yonder stars which shine above us.” And her face was radiant with the enthusiasm of affection, proud of its object, and shrinking not from avowing that pride.

“Lucile,” said her father, in a softened tone, “you are the last tie that binds me to earth, but much as I love you, I will never consent to so disgraceful an union. All that I have loved or cherished, have, one by one, been ‘blotted from life’s page,’ until you are all that is left to me. You know me well—know me to be inflexible—then hear me swear, that with my consent, you *never* shall wed Sidney: if you rebel against my wishes, you go forth to the world, a portionless, helpless creature; and your desertion of your father in his old age, shall harden his heart against you. The hour that sees you his wife, sees my face turned from you forever: my feelings steeled into forgetfulness, you shall become to me as nothing. You know my history, how I have suffered from the ingratitude of her I loved; I forgave her not, though she is now but dust and ashes; the memory of her duplicity is as green and fresh in my heart, as though only a day had passed since the wound was inflicted. I forgive not injury, neither do I forget. Remember all I have said, and if you decide to go forth from my roof, it will be without my blessing, and the portals are henceforth closed on you forever.”

He turned to hear her answer, but his daughter had fainted at his feet. In great alarm, he raised her, and sprinkled water over her pale features; yet even when she lay in his arms, without sign of life, there was in his heart no relenting.

In a few moments she recovered, and requested to be taken to her own apartment, there to recall her father’s words, and to weep over the hopeless task of winning his consent to sanction her choice.

(To be continued.)

The wife is ay welcome that comes wi’ a crooked oxter.

That is to say, with a present under her arm. This proverb has a griping, selfish sound, and is by no means complimentary to “the wife with the crooked oxter.” It plainly intimates what sort of reception she would get if she came like the servant sent forth by Timon of Athens, with an empty box under his cloak instead of a gift; and which box produces so much astonishment among his friends.

[Allen Ramsay.]

FATE OF THE GIFTED.

NO. II

“As the body wastes,
The spirit gathers strength, and sheds
On the admiring world supernal light.
Alas! that eloquence will soon be mute—
That harp unstrung, shall lose its loveliness,
Nor know its own sweet sound again!”

The first number of our sketches was devoted to the literary writings of Chester A. Griswold. The subject of our present sketch, from advantages of situation, was better known to fame. Many familiar memories will be revived, and many hearts will respond to our own, when we mention the name of the lamented poet,

JAMES OTIS ROCKWELL.

“His life was the rainbow that’s seen on the cloud,
And his foes were the gloom that surrounds it!”

We regret exceedingly our inability to do justice to the memory of Rockwell. We never enjoyed his acquaintance, but knew him, only as a great majority of readers knew him—*by reputation*. His articles were always highly prized by us, and from this circumstance, aided by an unusual interest we felt in him from some slight knowledge we possessed of his circumstances, we have been led to many inquiries of his early history and fate. These we shall endeavor to give the reader, according to the best of our ability. If our imperfect tribute shall meet the eye of any one of Rockwell’s literary cotemporaries and friends, and provoke him to do better justice to his memory, we shall not regret our work.

James Otis Rockwell was a native of Lebanon, Connecticut. His parents were in humble circumstances, and his advantages for education extremely limited. Indeed, we feel safe in the assertion, that he did not receive what might properly be called “an education.” While a boy, he went to reside at Patterson, New Jersey, (if we have been rightly informed,) and worked for some time in a cotton factory. When he had reached the fourteenth or fifteenth year of his age, his family removed to Manlius, New York, or vicinity, and Rockwell was apprenticed to Merrell & Hastings, printers, at Utica.

It was here, amidst congenial pursuits, that Rockwell’s mind began to expand, and his peculiar poetical talents to develop themselves. He felt “the divinity” within him, and yielded to its sway. Very soon, (doubtless too soon,) while only a boy, he commenced writing for the press. The reception his articles met, only served to incite still more his ambition—and while he seemed, to those around him, only the poor apprentice, the midnight saw the devoted student at his toil. This, we think, marked his genius. That one who has enjoyed every opportunity for learning, that time and wealth can afford, can write respectably, is what every one expects. But to see a boy, who has been emphatically “cradled in the lap of poverty,” almost immediately on coming in contact with books and periodicals, delighting literary readers with the genius and brilliancy of his productions, is indeed wonderful! Our author’s poems, even at this early time, were in a good degree remarkable for the striking originality of

thought and easy versification, (though at times faulty,) which afterward so peculiarly distinguished them.

At eighteen years of age, Rockwell left Utica, having already acquired, what is technically termed, "a newspaper reputation." He made a temporary residence in New York, still contributing to our periodical literature, and soon removed to Boston. Here he worked for a time as a journeyman printer, while his contributions to the press were received in the most flattering manner, and gave him unusual popularity. Kettell was then publishing his "Specimens of American Poetry," and Rockwell was allowed a place in the work, with one "specimen poem." Soon after this, he was employed as an assistant editor of the "Boston STATESMAN," and the star of his fortune was rapidly on the ascendant. How long he remained in the office of the "STATESMAN," we know not: in the autumn of 1829 he removed to Providence, Rhode Island, to take the senior (and we believe the sole) charge of the "PROVIDENCE PATRIOT."

This was an important, and in many respects an unhappy era in our author's life. He was now fully embarked under his own flag, in the political strife—a warfare not at all congenial to his feelings. With a constitutional sensitiveness, which amounted almost to a fault, and made him shrink instinctively from the rough contact of every-day life, he now found himself involved in the jarring perplexities of political turmoil. With the accustomed recklessness of partizan belligerents, his opponents did not scruple to assail his private character; and, finding no other vulnerable point, meanly taunted him with his low birth, education, and former occupation. This, to a spirit like Rockwell's, was too severe strife. Still it was but the accustomed partizan abuse, and did not in the least affect his literary reputation abroad. This was constantly increasing—and as proof of the amiability of our author's disposition, we may add, that many of his warmest personal friends were of opposing political sentiments.

For a time—we know not precisely how long—Rockwell continued his editorial course with honor, and his name was every day gaining new renown—when, in the summer of 1831, with scarcely a note of warning, his friends were startled with news of his death. The last article he ever wrote was the following, in keeping with his wild and eccentric disposition:

"THE CARD APOLOGETIC.

"The editor of this paper has been accused of ill health—tried—found guilty—and condemned over to the physicians for punishment. When he shall have recovered his health, he will throw physic to the dogs, and resume his duties."

Alas! his hope was never realized. The same paper that contained his singular "card," or the next one succeeding it, was dressed in mourning for its editor! Respecting the cause of his death, there has always been some mystery. True, he was ill; but this by no means clears the matter. It has been said, that he was troubled at the thought of some paltry obligation for two or three hundred dollars, which, from not receiving his own honest dues, he was unable to meet; and his too sensitive spirit shrunk from the gloomy prospect of a "Debtor's Prison." Again, it has been said, that disappointed affection had a part in the event. But, whatever may have been the immediate

cause or causes, Rockwell died suddenly at the early age of twenty-four years.

From the press, only one sentiment was expressed—that of heartfelt sympathy for his sufferings, and sorrow for his loss. His friends and admirers, regardless of partizan feelings, seemed to rally like a band of bereaved brothers around his bier, and many and grateful were the sentiments of esteem and manly regret universally expressed. We have ourselves *accidentally* met with a large number of poetical tributes to his memory, (from one of which we selected the sentiment that accompanies his name, at the head of our article,) many of which were sung by stranger bards, to whom his name and song had become dear.

We cannot better conclude our brief biographical sketch, than by quoting an article written at the time by the editor of the "New England Weekly Review," an opposing political journal.

" 'Oh how it seemeth idle
To talk about the dead,
When praise availleth only
To tell us they have fled.' "

"The last number of the Providence Patriot announces, by its mourning columns, the death of its editor, James O. Rockwell. He was but twenty-four years of age, and had seen little of the world. The finer faculties of his soul had not been matured into a perfect development. Yet he has left a name behind him which will be heard of hereafter—a self-established reputation of genius—which will linger over his grave, and bless it. We speak not so much of what he has done, as a poet, as of the evidence which he gave of high and noble capacities. He wrote always hastily, and without pruning away the superabundant fancies which sometimes marred the symmetry of his productions. His conceptions were always imbued with the same wild spirit of poetry—vivid, original, and sometimes very powerful—but they needed the polish of a disciplined intellect. They were the rough ore of the mine—full of intrinsic worth, but unshapely, and unprepared by the ordeal of severe reflection and extensive learning. And how could it be otherwise? Instead of treading his way to fame over flowers and greenness—instead of reclining in studious ease in the halls of learning—Rockwell was compelled to win his way upward through a thousand difficulties. He was a poor, unlearned boy—unhackneyed in the ways of the world—and with no friends to urge him onward in the career of ambition. Nor were there wanting those who were ready to oppose his early efforts to stand in the aristocracy of their learning, and haughtily gesture back the young aspirant. And one—a miserable hackney scribbler—an unread, unreadable author—not long since attacked him in a witless but malignant satire, the venom of whose shaft was counteracted by the weakness of the bow which propelled it. Let him now breathe his loathsome malignity over the green grave of Rockwell with what satisfaction he may.

"We knew Rockwell personally. He was our friend. We loved him for his enthusiasm—his generosity—his singleness of heart. For some time past he has been the editor of a paper directly opposed, in a political point of view, to our own sentiments. But Rockwell was not formed by nature for the strife and

bitterness of politics. We knew that he loathed the task which necessity had imposed upon him—that his spirit shrank from communion with the ruder ones of those who surrounded him—that he longed for the still waters of quiet contemplation—and for the beautiful flowers of poetry, with a thirst ardent and unceasing. To a mind like that of Rockwell's, nothing is more uncongenial than the stormy strife of party. With him that strife is now over—and the political enemies of the living will weep over the grave of the dead. The fame which he longed for while living, shall flourish greenly over his quiet tombstone. And while the gay will laugh as before, and each one of the busy world continue to 'chase his favorite phantom,' one heart at least will cherish his memory, and breathe in sincerity the prayer of Halleck over the grave of his companion—

"Green be the turf above thee,
Friend of my better days."

We very much regret that Rockwell's poems have never been published in a connected form. But they never have been, and probably many of them are lost. We shall present the reader a few of them, from the small collection of articles which we have been enabled to make; and if among them he recognizes any familiar ones, we trust he will not regret a re-perusal.

We first select his beautiful and much admired stanza—

"TO A WAVE.

"List! thou child of wind and sea,
Tell me of the far off deep,
Where the tempest's wind is free,
And the waters never sleep!
Thou perchance the storm hast aided,
In its work of stern despair,
Or perchance thy hand hath braided,
In deep caves, the mermaid's hair.

"Wave! now on the golden sands,
Silent as thou art, and broken,
Bear'st thou not from distant strands
To my heart some pleasant token?
Tales of mountains of the south,
Spangles of the ore of silver;
Which with playful singing mouth,
Thou hast leaped on high to pilfer?

"Mournful Wave! I deemed thy song
Was telling of a mournful prison,
Which when tempests sweep along,
And the mighty winds were risen,
Foundered in the ocean's grasp,
While the brave and fair were dying.
Wave! didst mark a white hand clasp
In thy folds as thou wert flying?

"Hast thou seen the hallowed rock
Where the pride of kings reposes,
Crowned with many a misty lock,
Wreathed with sapphire green and roses?
Or with joyous playful leap,
Hast thou been a tribute flinging,
Up that bold and jutting steep,
Pearls upon the south wind stringing.

"Faded Wave! a joy to thee,
Now thy flight and toil are over!
O may my departure be
Calm as thine, thou ocean rover!
When this soul's last joy or mirth
On the shore of time is driven—
Be its lot like thine, on earth,
To be lost away in heaven!"

The following lines—of nearly the same style of verse with the former—are decidedly superior. The third and fourth stanzas, particularly, exhibit a most happy flight of fancy, while the whole article is remarkable for harmony and melody:

"THE LOST AT SEA.

"Wife, who in thy deep devotion
Puttest up a prayer for one
Sailing on the stormy ocean,—
Hope no more—his course is done.
Dream not, when upon thy pillow,
That he slumbers by thy side,
For his corse, beneath the billow,
Heaveth with the restless tide.

"Children, who, as sweet flowers growing,
Laugh amid the sorrowing rains—
Know ye not that clouds are throwing
Shadows on your sire's remains?
Where the hoarse gray surge is rolling,
With a mountain's motion on,
Dream ye that its voice is tolling
For your father, lost and gone?

"When the sun looked on the water,
As a hero on his grave—
Tinging with the hue of slaughter
Every blue and leaping wave,—
Under the majestic ocean,
Where the giant currents rolled,
Slept thy sire, without emotion,
Sweetly by a beam of gold.

"And the violet sunbeams slanted,
Wavering through the crystal deep,
'Till their wonted splendors haunted
Those shut eyelids in their sleep:
Sands, like crumbled silver gleaming,
Sparkled in his raven hair—
But the sleep that knows no dreaming,
Bound him in its silence there!

"So we left him; and to tell thee
Of our sorrow and thine own,—
Of the woe that there befel thee,
Come we weary and alone.

* * * * *

"Children, whose meek eyes, inquiring,
Linger on your mother's face,
Know ye that she is expiring—
That ye are an orphan race?
God be with you on the morrow—
Father, mother, both no more!
One within a grave of sorrow,
One upon the ocean's floor!"

There is pleasant preaching in the following "discourse," and withal somewhat practical, to a certain class of hearers. The article, as a whole, is too long for our purpose, but we shall take the liberty to select some stanzas :

"SERMON TO ANN.

"When I saw thee first, I loved thee
As an eagle loves the sun ;
But I found thee out, and proved thee
For a false and heartless one :
I have traced thee from thy glory,
From the zenith to the west,
And will tell thy treacherous story
As a warning to the rest.

"Thou wast born a thing of passion,
Which a smile to flame could turn ;
Thou wast moulded in a fashion
Angels might look on and learn ;
With an eye as blue as heaven,
In its utmost beauty spread,
And a lip like sunset riven
When the sunset is most red.

"Pure I thought thee—so I found thee,
And I left thee all as pure,
Thou hadst fickle hearts around thee
Bowing to a heart no truer ;
Yes—thy passion was an altar
Where the adorer made the flame,
Which, unfanned by him, would falter,
And be vanished with his name.

"Thou wast as a lake that lieth
In a bright and sunny way—
I was as a bird that flieth
O'er thee of a pleasant day ;
When I looked upon thy feature,
Presence then a semblance lent ;
But thou knowest, thou fickle creature,
With the form the image went.

* * * * *

"With a kiss my vow was greeted,
As I knelt before thy shrine ;
But I saw that kiss repeated
On another lip than mine ;
And a binding vow was spoken
That thy heart should not be changed ;
But that binding vow was broken,
And thy spirit was estranged.

* * * * *

"I might call a blight upon thee,
But I only let it come ;
I might curse the hour that won thee,
But again my tongue is dumb ;
I will pass thee till thy sorrow
Overruns its trembling cup,
And another worship borrow
For the love by thee called up.

"I could blame thee for awaking
Thoughts the world will but deride—
Calling out, and then forsaking
Flowers the winter wind will chide ;

Guiling to the midway ocean
Barques that tremble by the shore ;
But I hush the dark emotion
And would punish thee no more.

"Can I bless thee ? Doth a blessing
Lighten from the hall of death ?
Is the tomb a power possessing
To give kindly thoughts a breath ?
Can a heart, despoiled and broken,
Yield an incense as before ?—
But I leave thee with a token,
I will trouble thee no more."

The following article was evidently hastily written, yet there are many beautiful passages in it, and the opening stanza is peculiarly bold and imposing :

"A battle-gun on the mighty sea—
A tone to shake the main !
Slow rolls it on to the sleeping sky,
And thunders back again !
The bannery blaze that lightened from
The cannon's mouth is o'er,—
And the smoke, like incense, goes away
To slumber on the shore.

"The setting sun looks goldenly,
Upon the ocean's breast,
And the waters leap like living things
To meet their burning guest ;
But where the melancholy north
Uprises blue and steep,
A snow-white sail is coming forth,
And dancing o'er the deep.

"And ever as a moving surge
Its form before her flings,
She stoops and rises gracefully,
As one of living wings ;
But as she clears that shadowy isle,
And sails toward the sun,
That crimson belt that girdles her
Is seen—the fearful one !

"And now each sailor's eye is bent
Toward that threatening form,
Which neareth to them, as a pent
And sudden coming storm :
And every cannon teems with death,
And every flag unfurled,
As they would waste in but a breath
The strength of half the world !

* * * * *

"The hungry waves are climbing up
The ship's o'er-leaning deck,
And for the hardy seaman's form
They seem to look and beck.
The sun is gone ? the twilight sky
Is prodigal of cloud,
And the war-star glimmers fitfully
Beyond its misty shroud.

"But where was he—the Rover,
Who had held such fearful reign ?

When the thunder's tone was over,
 He was travelling on the main ;
 And the moon came out—the stars were bright,
 And gemmed the whole blue sky—
 And he went upon his way that night
 As 'one not born to die.' ”

Among the many “welcomes” of the returning Spring, we rarely meet with one more beautiful than the following :

“ SPRING.

“Again upon the grateful earth,
 Thou mother of the flowers,
 The singing birds, the singing streams,
 The rainbow and the showers :
 And what a gift is thine !—thou mak'st
 A world to welcome thee ;
 And the mountains in their glory smile,
 And the wild and changeful sea.

“Thou gentle Spring !—the brooding sky
 Looks welcome all around ;
 The moon looks down with a milder eye,
 And the stars with joy abound ;
 And the clouds come up with softer glow,
 Up to the zenith blown,
 And float in pride o'er the earth below,
 Like banners o'er a throne.

“Thou smiling Spring !—again thy praise
 Is on the lip of streams ;
 And the water-falls loud anthems raise,
 By day, and in their dreams ;
 The lakes that glitter on the plain,
 Sing with the stirring breeze ;
 And the voice of welcome sounds again
 From the surge upon the seas.

“Adorning Spring ! the earth to thee
 Spreads out its hidden love ;
 The ivy climbs the cedar tree,
 The tallest in the grove ;
 And on the moss-grown rock, the rose
 Is opening to the sun,
 And the forest trees are putting forth
 Their green leaves, one by one.

“As thou to earth, so to the soul
 Shall after glories be,—
 When the grave's winter yields control,
 And the spirit's wings are free :
 And then, as yonder opening flower
 Smiles to the smiling sun,—
 Be mine the fate to smile in heaven,
 When my weary race is run.”

The reader may have observed, in our quoted article above, on Rockwell's death, an allusion to one who had attacked him “in witless, but malignant satire.” The reference is to a work entitled “Truth—a Gift for Scribblers,” in which Rockwell is abused shamefully, and in a note accompanying his scurrility, the author says, “This writer [R.] has an article commencing

“When life is gone, death hastens on.”

This statement is true, so far as it goes. In justice to our author, however, we will quote part of the article in question, that the reader may see what Rockwell does say. The first line is an unfortunate one, though appearing much worse when separated from its connection with the stanza.

“LIFE AND DEATH.

“When Life is gone, Death hastens on
 As evening when the sun is set ;
 But to the sun there is a dawn,
 Then wherefore should our life forget,
 Though dim in death, to rise again ?
 If alway on death's silent plain
 The parted soul be left—
 Whence come those generations forth,
 That grow and wane upon the earth,
 Successively bereft ?

* * * * *

“Life is a year—a changeful year,
 Its bland and spring-time hour of youth,
 Its early loves in feeling dear,
 Its passion for the shrine of truth ;
 At such a time, how hope steals on,
 With freshened wing from being's dawn,
 Far down through distant years,
 Nor thinks the brightness in that gloom
 Is scattered from her own fair plume,
 And that all else is—tears !

“Then comes life's autumn-season—and
 Fade all the glories of all things ;
 A sallow hue pervades the land,
 And frozen are the sea's blue wings :
 The glories of the forest fall,
 And cluster over nature's pall—
 While in life's western sky,
 The gathering mists come up to shed
 Oblivion on the weary head
 Of him who wished to die !”

Rockwell has written better lines than the following—but, to our mind, the article has some very good stanzas. They possess a tenderness, too, not always characteristic of our author's poems :

“MARY.

“I saw a tear run down her fading cheek,
 Like to a dew-drop from the red-rose shaken ;
 It seemed a pearl of sorrow's own, to speak
 What yet her tongue could not—‘I am forsaken !’

“I saw her in that dreary lapse of doubt,
 When shades of wo and night were spread above her,
 When every gleam of hope was prisoned out,
 And none but me was left on earth to love her.

“I would not own that she had ever sinned,
 That heaven's pure veil had there been rent and broken.
 I gave those dreamings to the idle wind,
 And the sad girl my trusting heart in token.

“Heaven blessed the thought ; her spirit's dimness went,
 Like evening shadows from the sun's adorning ;
 And smiles and tears were in her blue eyes blent,
 Like sun and dew on violets in the morning.

* * * * *

"And she was nearer than a mother's love :
If but my slightest feature told dejection,
She hovered by me like a summer dove,
And clad me in the sunlight of affection.

"Two swift and sunny years she lingered here,
As a light flower on autumn's withering bosom ;
And then she drooped without a pang, a fear,
And slept in earth—a seed for heaven's pure blossom.

"Sleep, Mary, for the summer dews lie soft,
In the bright turf above thy lonely pillow ;
The summer winds blow sweetly there, and oft
And long their grass waves, like a sea-green billow.

"Angel—for now thou art—if ever thou
Among the stars art one—in distance trembling—
Let thy sweet radiance fall upon my brow,
Like a bright drop—thy joyous tear resembling.

"Come, and be near me in my evening dreams,
Around my heart-strings, like faint music, hover—
Flit not away in morning's golden beams,
But alway light the bosom of thy lover!"

The following *wild* article, for vivid conception, faithful description, and thrilling versification, merits all praise, though some would doubtless deem the first stanza too rough.

"THE INTEMPERATE.

"Pray, Mr. Dramdrinker, how do you do !
What in perdition's the matter with you !
How did you come by that bruise on the head !
Why are your eyes so infernally red !
Why do you mutter that infidel hymn !
Why do you tremble in every limb !
Who has done this—let the reason be shown,
And let the offender be pelted with stone !
And the Dramdrinker said, if you listen to me
You shall hear what you hear, and shall see what you see.

"I had a father—the grave is his bed :
I had a mother—she sleeps with the dead :
Freely I wept when they left me alone—
But I shed all my tears on their grave and their stone :
I planted a willow—I planted a yew—
And I left them to sleep till the last trumpet blew !

"Fortune was mine, and I mounted her car—
Pleasure from virtue had beckoned me far :
Onward I went, like an avalanche down,
And the sunshine of fortune was changed to a frown.

"Fortune was gone, and I took to my side
A young, and a lovely, and beautiful bride !
Her I entreated with coldness and scorn,
Tarrying back till the break of the morn ;
Slighting her kindness, and mocking her fears—
Casting a blight on her tenderest years ;
Sad and neglected and weary I left her—
Sorrow and care of her reason bereft her—
Till, like a star, when it falls from its pride,
She sunk on the bosom of misery, and died !

"I had a child, and it grew like a vine—
Fair as the rose of Damascus, was mine ;
Fair—and I watched o'er her innocent youth,
As an angel from heaven would watch over truth.
She grew like her mother, in feature and form—
Her blue eye was languid, her cheek was too warm :
Seventeen summers had shone on her brow—
The seventeenth winter beheld her laid low !
Yonder they sleep in their graves, side by side,
A father—a mother—a daughter—a bride !

"When they had left me I stood here alone—
None of my race or my kindred were known !
Friends all forsaken, and hope all departed—
Sad and despairing, and desolate-hearted—
Feeling no kindness for aught that was human—
Hated by man, and detested by woman—
Bankrupt in fortune and ruined in name—
Onward I kept in the pathway of shame !
And till this hour, since my father went down,
My brow has but known a continual frown !

"Go to your children, and tell them the tale :
Tell them his cheek, too, was lividly pale :
Tell them his eye was all bloodshot and cold :
Tell them his purse was a stranger to gold :
Tell them he passed through the world they are in,
The victim of sorrow and misery and sin :
Tell them when life's shameful conflicts were past,
In horror and anguish he perished at last !"

"*The Prisoner for Debt*" we have never seen. But in an editorial notice of Willis's old "*Monthly Magazine*," we find the following extracts :

"When the summer sun was in the west,
Its crimson radiance fell,
Some on the blue and changeful sea,
And some in the prisoner's cell.
And then his eye with a smile would beam,
And the blood would leave his brain,
And the verdure of his soul return,
Like sere grass after rain !

"But when the tempest wreathed and spread
A mantle o'er the sun,
He gathered back his woes again,
And brooded thereupon :
And thus he lived, till time one day
Led death to break his chain :
And then the prisoner went away,
And he was free again !"

We must pass by the "*CONVERSATION WITH THE CLOUDS*," and address "*TO THE COMET*," &c. &c. though there are fine things in each of them. But we cannot leave the "*ICEBERG*" so hastily. Though it has faults, we think its many beauties fully compensate for them.

"THE ICEBERG.

"'Twas night—our anchor'd vessel slept
Out on the glassy sea ;
And still as heaven the waters kept,
And golden bright—as he,
The setting sun, went sinking slow
Beneath the eternal wave :

And the ocean seemed a pail to throw
Over the monarch's grave!

"There was no motion of the air
To raise the sleeper's tress,
And no wave-building winds were there,
On ocean's loveliness;
But ocean mingled with the sky
With such an equal hue,
That vainly strove the 'wilder'd eye
To part their gold and blue.

"And ne'er a ripple of the sea
Came on our steady gaze,
Save when some timorous fish stole out,
To bathe in the woven blaze,—
When flouting in the light that played
All over the resting main,
He would sink beneath the wave, and dart
To his deep blue home again.

"Yet while we gazed, that sunny eve,
Across the twinkling deep,
A form came ploughing the golden wave,
And rending his holy sleep:
It blushed bright red, while growing on
Our fixed, half-fearful gaze;
But it wandered down, with its golden crown,
And its robe of sunny rays.

"It seemed like molten silver, thrown
Together in floating flame;
And as we looked, we named it then,
The fount whence colors came:
There were rainbows, furled with a careless grace,
And the brightest red that glows;
The purple amethyst there had place,
And the hues of the full blown rose;

"And the vivid green, as the sunlit grass,
Where the pleasant rain hath been;
And the ideal hues that thought-like pass
Through the minds of fanciful men;
They beamed full clear—and that form moved on,
Like one from a burning grave;
And we dared not think it a real thing,
But for the rustling wave.

"The sun just lingered in our view,
From the burning edge of ocean,
When by our barque that bright one passed,
With a deep, disturbing motion:
The far down waters shrank away,
With a gurgling rush upheaving,
And the lifted waves grew wildly pale,
The ocean's bosom leaving.

"Yet as it passed our bending stern,
In its throne-like glory going,
It crushed on a hidden rock, and turned,
Like an empire's overthrowing!
The upturn waves rolled hoar,—and huge
The far-thrown undulations
Swelled out in the sun's last, lingering smile,
And fell, like battling nations!"

The following is one of Rockwell's most popular effusions, and one with which, perhaps, the reader is already familiar.

"THE SUM OF LIFE.

"Searcher of gold, whose days and nights
All waste away in anxious care,
Estranged from all of life's delights,
Unlearned in all that is most fair,
Who sailest not with easy glide,
But delvest in the depths of tide,
And strugglest in the foam—
Oh! come and view this land of graves—
Death's northern sea of frozen waves—
And mark thee out thy home.

"Lover of woman, whose sad heart
Wastes like a fountain in the sun,
Clings most where most its pain does start,
Dies by the light it lives upon—
Come to the land of graves—for here
Are beauty's smile, and beauty's tear,
Gathered in holy trust;
Here slumber forms as fair as those
Whose cheeks, now living, shame the rose,
Their glory turned to dust.

"Lover of fame, whose foolish thought
Steals onward from the wave of time—
Tell me—what goodness hath it brought,
Atoning for that restless crime?
The spirit-mansion desolate,
And opens to the storms of fate,
The absent soul in fear—
Bring home thy thoughts, and come with me,
And see where all thy pride must be—
Searcher of fame, look here!

"And warrior, thou with snowy plume,
That goest to the bugle's call—
Come and look down—this lonely tomb
Shall hold thee and thy glories all:
The haughty brow—the manly frame—
The daring deeds—the sounding fame—
Are trophies but for death!
And millions who have toiled like thee
Are stayed, and here they sleep; and see,
Does glory lend them breath?"

Our last selection is from the "*Specimens of American Poetry*," before referred to. There is more originality of thought in the first line of the article, than in many self-styled "poems" which daily meet our eyes:

"TO THE ICE MOUNTAIN.

"Grave of waters gone to rest!
Jewel, dazzling all the main!
Father of the silver crest!
Wandering on the trackless plain,
Sleeping 'mid the wavy roar,
Sailing 'mid the angry storm,
Ploughing ocean's oozy floor,
Piling to the clouds thy form!

"Wandering monument of rain
Prisoned by the sullen north!

But to melt thy hated chain,
Is it that thou comest forth?
Wend thee to the sunny south,
To the glassy summer sea—
And the breathings of her mouth
Shall unchain and gladden thee!

“Roamer in the hidden path,
’Neath the green and clouded wave!
Trampling, in thy reckless wrath,
On the lost, but cherished brave;
Parting love’s death-linked embrace,
Crushing beauty’s skeleton—
Tell us what the hidden race,
With our mourned lost have done!

“Floating steep! who in the sun,
Art an icy coronal—
And beneath the viewless dun,
Throw’st o’er barques a wavy pall!
Shining death upon the sea!
Wend thee to the southern main:
Bend to God thy melting knee—
Mingle with the wave again!”

We shall conclude our “Sketch,” already protracted beyond its designed limits, with a feeling tribute to Rockwell’s memory, from the pen of J. G. WHITTIER, Esq., at the time editor of the “*New England Weekly Review*,” from which we made an extract above.

“TO THE MEMORY OF J. O. ROCKWELL.”

“The turf is smooth above him! and this rain
Will moisten the rent roots, and summon back
The perishing life of its green-bladed grass:
And the crushed flower will lift its head again
Smilingly unto heaven, as if it kept
No vigil with the dead!

Well! it is meet

That the green grass should tremble, and the flowers
Blow wild about his resting-place. His mind
Was in itself a flower, but half disclosed—
A bud of blessed promise, which the storm
Visited rudely, and the passer by
Smote down in wantonness. But we may trust
That it hath found a dwelling where the sun
Of a more holy clime will visit it,
And the pure dews of mercy will descend
Through heaven’s own atmosphere upon its head.

“His form is now before me, with no trace
Of death in his fine lineaments, and there
Is a faint crimson on his youthful cheek,
And his free lip is softening with the smile,
Which in his eye is kindling; and the veins
Upon his ample forehead wear the sign
Of healthful energy. And I can feel
The parting pressure of his hand, and hear
His last “God bless you!”—Strange—that he is there,
Distinct before me, like a breathing thing,
Even when I know that he is dead,
And that the damp earth hides him. I would not
Think of him otherwise—his image lives
Within my memory, as he seemed, before
The curse of blighted feeling, and the toil

And fever of an uncongenial strife, had left
Their traces on his aspect!

Peace to him!—

He wrestled nobly with the weariness
And trials of our being—smiling on,
While poison mingled with his springs of life,
Anguish was resting, like a hand of fire—
Until at last the agony of thought
Grew insupportable, and madness came
Darkly upon him,—and the sufferer died!

“Nor died he unlamented! To his grave
The beautiful and gifted shall go up,
And muse upon the sleeper. And young lips
Shall murmur, in the broken tones of grief,
His own sweet melodies. And if the ear
Of the freed spirit heedeth aught beneath
The brightness of its new inheritance,
It may be joyful to the parted one,
To feel that earth remembers him in love!”

The poet, in his plaintive dirge, has said all that can be said, of praise and of sorrow. We can only respond, in the prayer which the pious catholic breathes over the grave of his sleeping friend—*requiescat in pace*.

C. W. E.

NOTES AND ANECDOTES,

Political and Miscellaneous—from 1798 to 1830.—Drawn from the Portfolio of an Officer of the Empire—and translated from the French for the Messenger, by a gentleman in Paris.

AN ESCAPE.

I have stated that the Court of Peers condemned five of the prisoners to imprisonment; it had afterwards to assemble for the trial of one of the accused, who had suffered himself to be arrested after having been condemned to death for contumacy. This person was the old lieutenant-colonel of the imperial guard, who was to have directed the movement at Cambray. Thanks to the *provoking agents*, and the open intervention of the police in the conspiracy, the penalty of death was reduced to an imprisonment for five years.

The principal result of the trial of the lieutenant-colonel, was to procure the escape of one of those previously condemned. This evasion was accompanied by circumstances truly original. The individual who had been condemned, was the captain of infantry, Lamoignon, a talented, bold and handsome fellow. He was confined in the prison of Sainte-Pélagie, where he was to remain five years. He had been treated with great kindness. The trial of the lieutenant-colonel lasted four days, and on each day, the captain, who had been summoned as a witness, was taken from his prison, by an officer of the Court of Peers, for the purpose of being conducted to the Luxembourg, in a carriage, and under the guard of a *gendarme*.

The captain devoted the three first trips to securing the good will of the officer of the court and of the *gendarme*. He appeared gay and communicative—related anecdotes of the garrison, praised the proceedings of the Court of Peers towards him, declared that he had never been happier than he was since his confinement

in Sainte-Pélagie, and showed himself so anxious each day to return to his prison, that one would have thought Sainte-Pélagie had a particular attraction for him.

The last day he appeared even more gay than usual. The judgment was pronounced towards evening. He had got into the carriage with the officer and the *gendarme*, and it had already stopped before the door of Sainte-Pélagie. Suddenly the captain put his head out of the coach-door—he had observed a girl who brought him his meals from a little *restaurant* near the prison. "Make haste, and bring me my dinner immediately," he exclaimed; "I am dying of hunger." At this moment the driver opened the coach-door and lowered the steps. The captain, for the purpose of speaking to the servant of the *restaurant*, had placed himself so as to get out first; and since he was so much attached to the prison, the officer and the *gendarme* watched him with little attention. To leap from the coach—to turn quickly round—to raise with a blow of the foot the carriage steps—to close the door, and to save himself by running at full speed, was the work of less time than that necessary to read these four lines. He had, already, a start of fifty paces, when the officer of the court and the *gendarme*, whose boots and large sword embarrassed him not a little, were enabled to commence the pursuit. The guard of the prison, the officer and the *gendarme*, made the neighborhood resound with their cries of "Stop him!" "Stop him!" The captain had good legs, and it was not until full five minutes had elapsed, and owing to the intervention of some well intentioned individuals, that the *gendarme* succeeded in arresting the officer, who had regularly run on before him, and whose black dress resembled that of the prisoner!

The police could never succeed in discovering the captain, who, however, remained several days in Paris. He was in Spain in 1823, and towards the year 1828 he obtained leave to return into France. He is now a chief of battalion.

TWO LATIN WORDS.

Louis XVIII was fond of quoting Latin. The favor of this prince has been often secured by a happy quotation from his favorite, Horace.

Louis XVIII had just recomposed his cabinet, and was receiving the first visit of his new ministers, among whom was Marshal Victor, Duke of Belluno. The Marshal never pretended to any acquaintance with Latin, but he knew how to write, and to *paint* with perfection; and whenever he had a letter to despatch, he spent several minutes in practising his flourishes, for the purpose of tracing rapidly and lightly the first stroke of the *M* in the word *Monsieur*.

After some recommendations to his ministers, Louis XVIII discharged them, with these words: "Adieu, gentlemen; we will proceed *macte animo*." As soon as he was out of the cabinet, the Marshal stopped with a stupefied air, and retaining his colleagues, said to them:

"Well, gentlemen, this is agreeable."

"What is?"

"I have had violent scenes with the Emperor, but he never spoke to me in such a way."

"But what has been said to you?"

"Did you not hear it?"

"Absolutely nothing."

"You may be very sure that we will not long remain in office."

"Why not?"

"What! Did't you hear what the king said on taking leave of us?"

"He said, 'Adieu, gentlemen.'"

"Not at all; he said, '*partez animaux*,' (go animals.) If that is his manner, it is not very polished."

The same Marshal one day reproached an officer for having come to Paris without leave, and interrogated him sharply on the motives of his journey.

The officer had no very good reason to allege in his defence.

"What would you have, Marshal," said he: "*amour, tu purdis Troie*."*

"Ah, well!" replied the marshal quickly, "be on your guard lest you be the *fourth*."

A PETITION.

There are still many persons in France who believe the place of *exécuteur des hautes œuvres*, or to speak more clearly, of executioner, is hereditary; and that the eldest son of the regular incumbent is irrevocably called to succeed to the place of his father. It is not so. The son of an executioner succeeds his father because he may desire to do so, because he may find the place a comfortable one, or because he has been accustomed from infancy to the species of reprobation which attaches itself here, as in almost all countries, to that profession.

Should the executioner of Paris, or of any of the departments, happen to die without male descendants, it will not be necessary to have recourse to arbitrary means to find a successor. There will be no occasion to take one condemned to death, and to pardon a malefactor for the purpose of securing an executioner.

In 1822 the executioner of Versailles, or *Monsieur de Versailles*, as these functionaries style themselves, was arrested on suspicion of his having been engaged in a robbery; and it became necessary to find a substitute. The minister of justice, who presents for the choice of the king the candidates for all places in the magistracy, and who names directly to that of executioner, received, in the space of ten days, more than seventy applications for the place of executioner of Versailles.

One of these petitions was received on the day of the king's fête. It commenced with these words:

"My Lord—on a day when the king is pleased to dispense his benefits, may I be permitted to hope," &c.

Here followed a long list of the services of the petitioner, as an aid of the second class, aid of the first class, &c. He added, that his political opinions had been always constitutional, monarchical and religious.

The emoluments attached to the place of executioner are not so great as it might be supposed. The executioner of Paris enjoys a salary of 12,000 francs, neither more nor less than a councillor of state. He has, for executions and expositions, fees which amount to 40 francs for the former, and 30 for the latter. But these

* Mistaken by the Marshal for the French word *trois*, three.

sums are consumed in the necessary expenses attending the erection of the scaffold, and the preservation of the instruments.

A fee of 15 francs was the compensation for every case of branding. The legislature, on suppressing the use of this species of punishment, owed a compensation to the executioners, which they have not yet dreamed of discharging.

THE SPANISH WAR OF 1823.

The Spanish war of 1823, is another proof of the truth, that the greatest effects are often produced by the most insignificant causes.

Subsequently to the arrangement of the national rights of Europe, at Vienna, in 1815, four revolutions had broken out on the continent. Spain, Portugal, the kingdom of Naples and Piedmont had successively thrown off the yoke of absolutism, and replaced an oligarchy by a constitutional government. Two of these four revolutions had been promptly suppressed. Piedmont and the kingdom of Naples were too near to Prussia and Austria to resist very long. Exile and other heavy penalties soon punished these attempts at liberty, with which even some princes had pretended to associate themselves.

Spain and Portugal remained. Ferdinand VII had sworn to the constitution, and like Louis XVI, he conspired against it. Like Louis XVI, he called foreigners to his aid; he exhibited his broken sceptre to the powers engaged in the negotiations of Vienna.

Good will was as abundant then as now; but, as at this moment, all trembled at the idea of a partial war, which might bring about a general struggle. The sovereigns had failed to comply with too many of their promises, to rely with much certainty on their people; and all calculated, with alarm, the dangers of a war which might any day change its theatre. The ground did not appear sufficiently firm to allow them to absent themselves from home without danger.

In 1823 all these sovereigns desired a war with Spain, but no one dared to undertake, not even to propose it. Louis XVIII perfectly comprehended this situation of things; he was the only person of his court who had faith in the institutions of which he was called the *august author*. In his opinion, the destinies of the monarchy were allied to those of the institutions of the country, and the war appeared, in his eyes, an equal danger for both.

Louis XVIII did not desire a war with Spain. His principal minister was as little anxious for it. M. de Villèle had ideas of order and stability, which any war would have deranged. He was meditating certain financial projects, the execution of which, any difficulties would have necessarily deferred.

Under these circumstances, were opened the preliminaries of Vienna, followed shortly afterwards by the congress of Verona.

The ambassador of France, M. Mathieu de Montmorency, and M. de Chateaubriand, who had been associated with him, were instructed not to propose a war with Spain; and in the event of its being necessary to submit to one, to obtain from all the contracting par-

ties an effective co-operation in men or subsidies. The part then of the foreign and of the French plenipotentiaries, was to wait to see what would turn up. The foreign plenipotentiaries rigorously pursued this course. The French agents, committed by awkward zeal, and deceived by cunning intriguers, fell completely into a snare that was set for them.

Shortly after the revolution of 1820, a committee of refugee Spaniards was formed at Paris, (General Quésada belonged to it.) The members associated with themselves several French anti-revolutionists, among others M. Bergasse, and Count A. de J—. M. de Bergasse had been added to their number, as being a particular friend of the Emperor Alexander, and enabled to aid the committee by means of his influence with the sovereigns of the north. The committee determined to send a representative to Vienna and Verona, and M. A. de J— was chosen for this purpose.

Alexander was, as I have stated in another place, but the shadow of himself in 1823. There remained only enough of his extinguished faculties to enable him to appear a governor; and this remnant of intelligence was daily disappearing under the bigotted practices and religious mummeries of the sect into which he had been initiated by Madam Krudener. The weakness of the Emperor of Russia was perfectly known to M. Bergasse; and M. A. de J— departed, well informed of its character, and fortified by the most powerful recommendations.

The first audience that M. A. de J— obtained of Alexander, was entirely consumed by a conversation on the doctrines of the sect to which M. A. de J— was said to belong; and from that moment he obtained his most intimate confidence. The Emperor saw and conversed with no one but him. This was carried so far, that the ambassadors, reduced to play but secondary parts, uttered serious complaints, which, however, were never listened to.

M. de Chateaubriand had not been very well received at Vienna. He was not more lucky at Verona. He was still reproached with his *monarchy according to the charter*. He addressed himself to M. A. de J—.

"You are very intimate with the Emperor Alexander; ask him in what way I have displeased him, and try to reconcile me with him."

M. A. de J— expected this application; he replied:

"You say nothing on the subject of the war in Spain: it is the favorite subject of the Emperor. So long as you persevere in this course, you cannot hope for a better reception."

M. A. de J—, without any political title, had yet, as a privileged talker with the Emperor Alexander, been invited to all the fêtes. He was at a grand *soirée* given by M. de Metternich. There, the Emperor Alexander having perceived M. A. de J—, drew him into the embrasure of a window, and detained him a long time. The subject of the conversation was, as usual, religion.

As soon as M. A. de J— reappeared in the saloon, he was stopped by M. de Montmorency, who, addressing him as French Ambassador, to a subject of the king of France, begged him to inform him what political matter had been the subject of these long conferences with the Emperor.

M. A. de J—— perceived that the favorable moment had arrived, and replied without hesitation:

"The Emperor never ceases to declare his surprise, that M. de Montmorency, the first christian baron, has not yet proposed a crusade against Spain."

After these words—*first christian baron* and *crusade*—M. de Montmorency could no longer restrain himself; and after exchanging some words with M. de Chateaubriand, he retired home, followed by M. A. de J——, and passed the night in preparing a note, in which he demanded permission from the congress, for France to undertake a war against Spain. M. de Montmorency spoke in his note of the assistance and subsidies that France would hope to receive from her allies; but the congress, without taking any notice of this second part of the note, hastened to acquiesce in the demand contained in the first.

This was the whole secret of the war with Spain. M. de Villèle found it necessary to make the best of the misfortune, and he declared to the chamber: *That if we had not attacked Spain, it would have been necessary to think of defending our northern frontiers.*

M. A. de J—— was recompensed for the mission which he had so well conducted, by the grant of a loan, which afterwards became the Guébbard loan, as if it was not sufficient for France to have suffered one such bloody mystification, but necessary that she should pay the expenses of a second.

THE OUVRARD AFFAIR.

The Marshal, Duke of Belluno, was minister of war in 1823. The Duke could never have been regarded as an officer of the highest talents; but important commands were entrusted to him during the long wars of the empire. Upon several occasions, he commanded detached corps of the army; and consequently he must have known the precautions necessary to secure the subsistence and transportation of an army during a campaign.

In the same year, 1823, an officer of the highest merit was director-general of military subsistence.

The Spanish war had been proclaimed several months in advance, and everything should have been ready at the moment of the army's passing the Bidasoa, otherwise the minister of war, and Lieutenant-General Count Andreossy, director-general of military subsistences, must have been guilty of a negligence that might, without much scruple, be denounced as treason.

The period within which the provisions were to be collected at head-quarters, had been so regulated as to allow the military intendence to avoid the necessity of making forced purchases, at high prices, in the event of any delays on the part of any of the contractors.

These forced purchases were not to be the cause of any injury to the public treasury, it having been arranged that the difference of price was to be covered by the security required of the contractors.

Never was any affair more clear. There could be but two hypotheses, either everything had been provided, or those who ought to have done so should have been tried for treason.

The army was assembled; the Duke d'Angoulême had

arrived at head-quarters; the *intendant en chef* of the army had visited the magazines, and found them filled.

The order of departure was about to be given, when a rumor suddenly spread through the army that no precautions had been taken; that the magazines were empty; and that, in the event of the war assuming a serious character, in consequence of resistance from the population, the army would, in a few days, be exposed to want of provisions.

Some *well disposed* generals received and propagated these rumors, and, without further examination, a forced purchase, at an exorbitant price, was contracted with *le sieur Ouvrard*, by the same intendant, who had a few days before testified to the existence in the magazines of all necessary provisions.

M. Ouvrard found himself, *by accident*, at this time in the environs of Bayonne; and also, *by accident*—thanks to his prodigious activity—he found himself prepared to execute, in a few days, what the minister of war and the director-general of military subsistence had been unable to accomplish in several months.

The Duke of Belluno had caused himself to be named major-general of the army; but the Duke d'Angoulême, on his side, had chosen lieutenant-general Guillemot, for his major-general. The Duke of Belluno proceeded to his post; he arrived at Bayonne, and without having received any of the reproaches which his *negligence* merited, was invited to return by post to Paris. The campaign commenced, and everything marched as by enchantment.

According to this very simple exposition, it will be seen, that three persons were designated for public vengeance; the marshal minister of war, lieutenant-general Count Andreossy, and the *intendant en chef* of the army. What was the consequence? The Duke of Belluno remained minister of war, General Andreossy remained director-general of military subsistence, and was only afterwards dismissed because he began to defend himself when not attacked. It appeared strange, that a general enjoying the highest public esteem, should set to work to prove that he was neither a fool, nor a rogue, nor a traitor. The *intendant en chef* alone was forced to retire.

How great was afterwards the surprise of all men, in the least acquainted with business, when the forced purchase was rendered public; when it was known that by one of the articles of his agreement, Ouvrard had reserved to himself the right of taking whatever provisions were to be found in the magazines of the state, at a regular valuation, and afterwards selling them to the army at the price fixed by his contract for a forced purchase!

Fortunes were to be made or restored to our ancient or new generals; the persons about the court also desired to have their part. Nothing could be gained from a war supplied by the government; a commissary was wanted—one was necessary at any price; a marshal of France was found willing to permit his reputation to be sacrificed; and afterwards deputies were found complaisant enough to suffer themselves to be contented by the magnificent reason that "the mantle of glory (the glory of the war of Spain) had covered all the little irregularities of that affair."

Thus passed, unpunished, the most barefaced piece of robbery ever committed. Under the directory (and

they robbed at that time) an affair like that of Ouvrard's would have appeared so monstrous, that ten persons at least would have been shot. Under the empire (and the Emperor overlooked some things in behalf of those who washed their faults with a baptism of blood,) the Duke of Belluno, General Andréossy, the intendant-general Sicard, and some others, would have figured before a council of war, or indeed all the contractors for the army, including the generals who had become contractors, would have been put to death. Under the restoration, things were arranged in the happiest way in the world; the *mantle of glory* was a phrase that wound up the whole affair. It is twelve years since these things happened, and they are now forgotten. The court of assizes daily condemns to hard labor, robbers, who, compared with the contractors of the Ouvrard bargain, deserve to be canonized.

A very handsome Duchess, whose husband, *born a Lieutenant-general*, served in the staff of the Duke d'Angoulême, said, with the stupidity that characterizes her noble family, and that of her husband—

"I do not comprehend the complaints made by all the generals who served in the war of Spain. They pretend to be ruined; my husband has paid his debts, and brought away 800,000 francs."

Thus it appears, at least, that Ouvrard did not keep everything himself.

BIOGRAPHICAL SKETCHES

OF LIVING AMERICAN POETS AND NOVELISTS.

NO. III.

WILLIAM D. GALLAGHER, ESQ.

It is the fashion to affect an admiration for poetry; but comparatively few really read, and still fewer appreciate it. Who reads newspaper poetry, or the lyrics and polished lines of the annuals? or, who buys a volume of poems? All, nevertheless, who wish to be thought people of taste, pretend an admiration, and not unfrequently a passion for it. This affectation may be traced to causes assimilated to those which often lead individuals to confess a fondness for music, when, at the same time, they are ready to cry out—

"How sour sweet music is:"

causes originating in a desire to elude the anathema, that consigns the wight who has "no music in his soul," to "treasons, stratagems, and spoils."

The very existence of this affectation, attests the excellence of the wares which all would fain imitate. We will not encroach on the province of the essayist or reviewer, by giving an analysis of the circumstances that militate against the popular reception of poetry, and which the "march of improvement" has a tendency rather to increase than to diminish, but confine our observations within the limits prescribed by the nature of these sketches.

The gentleman whose name we have placed at the head of this article, and whose poetical compositions suggested the foregoing remarks, is a native of Ohio, and has for several years past been a resident of Cincinnati. As the able editor of the "Cincinnati Mirror," a literary periodical of great merit; as a contributor to the western magazines, and the editor of the "Western Literary Journal," Mr. Gallagher has been long before the public, and his name honorably associated with the periodical literature of the West. As a critic, he was at once fearless, just, and acute; and his reviews were characterized by a concise energy, and an unusual elegance of diction, for compositions of this nature.

It is as a poet, however, we must view Mr. Gallagher. The west, although the land of romance and poesy, has yet contributed but little to imaginative literature. Mr. Gallagher is at present one of her brightest representatives at the court of the muses. "ERATO," the name of the muse, who presided over lyric poetry, and tastefully selected by the poet to designate the nature of his work, is the title of a thin volume of poems, dedicated to the Rev. Timothy Flint, and published in Cincinnati in 1835, through which he first appeared openly before the public as a poet. Previous to this time, he had written and published, anonymously, several fugitive pieces, which obtained great popularity. One of these, entitled "The Wreck of the Hornet," was universally admired, and won for the writer an enviable reputation. At the time, it was attributed to the pen of a distinguished literary gentleman of New York city.

It was probably the success of this fugitive piece that gave the youthful poet confidence; for, we find beautiful lyrics afterwards going the rounds of the press, and although anonymous, bearing intrinsic evidence of the inspiration of the author of the above mentioned stanzas. The leading poem in the ERATO, is entitled, "The Penitent, a Metrical Tale." It is a story founded on certain extraordinary events that attracted public curiosity, and created universal horror a number of years since. It is a thrilling tale, but as a poem, is imperfect, and bears few marks of the accurate taste and genius pervading other pieces by the same author. It is crude in conception, and betrays evident signs of having been written at an early period of life. However it might then have been idolized by the young aspirant for Parnassian laurels, he will, no doubt, like Campbell, when his poem, "The Pleasures of Hope," is alluded to, (a noble production, nevertheless,) shake his head at it. The Penitent, with all its looseness of versification; the inappropriateness of its subject, and its numerous blemishes, contains many fine passages: but they are not sufficiently numerous to redeem its grosser deformities. This

poem is divided into two parts, and is nineteen pages, or about eight hundred lines in length.

The next article in the volume is a fragment, entitled, "The Neglected," the subject of which is explained in the following lines from Percival, which are placed at its head:

"He comes not—I have watched the moon go down,
And yet he comes not."—*The Wife.*

It is one of those gentle and touching pictures, which the poet delights to paint. In his delineation of the deeper emotions of the heart, Mr. Gallagher is eminently happy. After eloquently picturing the sufferings of the fair young wife, neglected by him "who had won the richness of her early love," and had now

"Bowed him down
At the shrine of drunkenness,"

the poet thus speaks of woman with great truth and feeling:

"Woman hath that within
Which will not brook neglect: but either turn
With a fell purpose on her injurer,
And deeply be avenged—or brood in dread
And harrowing silentness, on the intense
And burning sense of wrong she hath endured,
Until her proud heart breaketh of its weight
Of cherished agony!"

A short poem addressed "To my Mother," and an "Ode for Independence Day," the first, beautiful for the filial sensibility breathing in every line; the last marked by a degree of vigor, equally partaking of the enthusiasm of the patriot, and the inspiration of the poet; a fragment called "The Usurer's Death," drawn with a masterly hand; "Eve's Banishment," the gem of the volume; "May-Day Morning;" "The Bridal;" "The Revellers," and an Elegiac Lyric, written upon the death of an eminent artist, comprise, with "The Wreck of the Hornet," already named, the remainder of the volume. "The Usurer's Death" is remarkably graphic. We have room only for two brief extracts from its commencement and close.

"He was a man of curious workmanship:
His skeleton hand so firmly clenched a key,
It seemed the fleshless bone would burst. His hair
Was gray, and cut unevenly; for he
Had shorn himself for years, to save the mite,
The barber would have charged him."

"The hand of death was on him. He recoiled,
And drew his bony knees up to his chin;
And pressed his sallow hands upon his eyes,
And shuddered at the summons of the chill
And conquering king. His door, long closed, was forced;
The noise aroused him; and with frantic rage,
He sprang upon the chest, and seized the key,
And hoarsely shrieking—"Rob me not!"—he died."

"May-Day Morning" is lively, fanciful and rich, with appropriate similes and beautiful imagery; but it is carelessly written, and evi-

dently the production of an earlier period. The "Bridal," is a fragment which bears all the distinguishing marks of the poet's happiest manner. The succeeding extract will convey but an imperfect idea of the graceful and touching picture he has ably sketched.

"And she, the loved, the beautiful, stood up
Beside the chosen one; and meekly bent
Her half-closed eyes upon her swelling breast:
And on her temples slept a raven tress,
Shading the beautiful veins that melted through,
Like amethyst half-hidden in the snow;
And loveliness hung round her, like a soft
And silver drapery. And pain, and sin,
And sorrow's discipline, on her fair brow
Had no abiding place. The various shades
Of sorrow and of gladness, came and went
With almost every pulse, like the uncertain
And silent memory of forgotten dreams.
They stood together—and their hearts were proud,—
His, of its nobleness—and hers of him!"

"The Revellers," is a short ballad in the wild German vein. A party of revellers are at their cups and a toast "To Life," is drunk:

"Cheer, comrades, cheer! we drink to Life!
And we do not fear to die!
Just then a rushing sound was heard,
As of spirits sweeping by—
And presently the latch flew up
And the door swung open wide,
And a stranger strode within the hall
With an air of martial pride."

This intruder is not well received by the Bacchanals. He is assailed, and

"The stranger's guise fell off,
And a phantom form stood there,
A grinning, and ghastly, and horrible thing,
With rotten and mildewed hair."

He proves to be DEATH, who breathes upon the first speaker, who dies. It is a spirited poem, but bears the marks of hasty composition, is occasionally prosaic, and its unity and keeping is lost in one or two instances by the use of common-place phraseologies. The following line combines both of these defects:

"This was too much for the Bacchanal."

Mr. Gallagher's reputation as a poet, is not based, however, upon this volume, which appears to be the sheaf in which he has collected and bound up the earlier fruits of his muse. Early in the fall of 1835, he issued a volume which he called "ERATO No. II." It is on this book Mr. Gallagher's claims as a poet are to be founded. This volume contains sixty pages, and was likewise published in Cincinnati; but it is much superior to the first in typographical appearance. It is to be regretted, that in justice to the poet, this volume was not published in one of the Atlantic cities, inasmuch, as it would have extended the reputation of the author, and given a currency to his works which a western press cannot secure to

them. The Atlantic side of the Alleghanies is sufficiently controlled by that kind of prejudice in relation to ultra montane literature, that led one, some two thousand years ago, to say, "Can any good thing come out of Nazareth?" These prejudices, which we are glad to find are gradually subsiding, should not be neglected or despised by western writers. The names of the Messrs. "Harper and Brothers," or "Carey, Lea and Blanchard," on the title page of many a book, has often proved a better endorsement to the public eye than the author's. How natural it is to condemn a book unread, when it bears the imprint of a country town! A circumstance apparently so trivial, has stifled, it is well known to the literary world, many books of merit in their birth. There is the same kind of faith extended to an unknown book, as to an unknown bank note; if it bears city names, and is of a city bank, it is received with confidence; if it is a country bill, it is taken with hesitation and suspicion. Extensive publishers have also an opportunity, by their widespread agencies, of circulating a new work over a vast extent of country; whereas, a book published without these advantages, has to make its way slowly and with difficulty into notice. It must therefore be an evidence of its intrinsic merit, for a book to win, without these adventitious aids, in the short period of two years, extensive and permanent popularity for its author. The laurels which Mr. Gallagher has won, are, therefore, solely due to his genius.

The nucleus, or leading poem of "ERATO No. II," is entitled, "The Conqueror." It is twenty pages, or six hundred and sixty lines in length. The subject is Napoleon. The poet is represented as having fallen into a deep sleep over a volume, that records the history of his hero's deeds, during which, the remarkable events of the "Conqueror's" career pass before his mind in a succession of visions. Each vision is narrated, after the exordium, in a separate part or canto, which are twelve in number. This poem is in part modelled upon a fragment of Schiller; but the study of a model does not necessarily imply imitation. In the structure of its verse, there is apparent a slight resemblance to the "Thalaba" of Southey; the likeness is not marked by any prominent outlines, but is rather a coincidence of thought and unity of tastes. This is the more apparent when we learn that the author had planned "The Conqueror" several years before he had seen the "Thalaba" of the poet-laureate.

The similitude lies in the choice of rhythm, not in imitation; and, although the poet in his preface modestly deprecates, in any shape whatsoever, any allusion to that "unsurpassed achievement of the human mind, and imperishable monument of human genius," yet he has unconsciously lighted his torch at the same altar; and although he may

not tread in the same path, is guided to the temple of fame by the same light.

Considered as an entire poem, the "Conqueror" is of unequal merit. Its defects, nevertheless, are few—its excellences many. Agreeable harmony of versification, and a lyrical grace and elegance, is united, in this poem, with great boldness, daring imagery, and kindling enthusiasm. The changes of verse are adapted to the variety of the subject; now stirring the blood with its martial vigor, and "the hurrying march of its words;" now delighting the taste with its polished and graceful versification; or now elevating the mind with its philosophy.

After narrating in lofty verse the political events that preceded the appearance of Bonaparte on the European stage, he describes the "Child of Destiny," arising from the universal chaos, the magician, who is to control the elements. A short extract will convey some idea of the mode in which the poet has treated his subject, and also show the peculiarity of the rhythm he has adopted.

III.

"Soon the strange vision changed,
And one with dazzling powers,
A bright creation of th' events and times,
Midst the confusion, dire, arose,
The great disorder to adjust.
The elements were separated soon;
And then,
Upon a model different from the old,
New institutions framed: and Liberty,
A dangerous word when wrongly understood—
Was shouted through the land, and blazon'd high
Upon their banners; but the characters
Were traced with human blood! He who had risen
In beauty from the wild disorder, moved
The master spirit of the eventful time;
Deep penetration throned upon his brow,
And strong determination on his lip.
Riding upon the tide of great events,
He rose superior to the current's force;
And digging channels where he listed, said,
'This way!' and it was so."

The scene of the vision changes in the fourth canto to the land of the Ptolemies. After narrating the effects following the ravages of an invading army—the cities sacked, churches profaned, and scorched plains, fertilized with human blood, and dotted with human bones—

"Heap'd up like pyramids!"

he paints in the following vigorous lines, the mysterious influence which the mind of Napoleon exercised over his soldiers—

"And he, who late
Had won the admiration of the world,
In Italy the bright, led on his host;
Him had they followed o'er the trackless sea;
And him they followed now—a tarnish'd star—
And yet they faltered not: but clung to him
With that strong faithfulness Abaddon knew
From his fallen myriads."

Again a change comes o'er the spirit of the

poet's dream, and Napoleon is exhibited in a new light; his eyes directed towards a statue of liberty, while his hands are extended to grasp the Bourbon crown.

"Which he could almost seize, but seem'd to fear
Detection of his base hypocrisy."

There is great power in the following lines, especially the last, with which the poet, after describing the tortures inflicted upon the conqueror's breast, by "the never slumbering fiend" ambition, concludes the fifth canto:

"Whose nights are passed in some unknown recess,
With the world's chart before his greedy eyes,
Marking off lands to conquer!"

At length, emboldened by a brilliant series of successes, unprecedented in the history of mankind, the conqueror in a hundred fields, now "feared detection less,"

"And seized the glittering crown
With careless air, and tried the bauble on,
To see how it would suit his laurel'd brow.
None murmur'd, but none cheer'd him; and he fear'd
The time unripe, and put it off again."

At length, urged onward by ambition, to wield the imperial sceptres and wear the crown of purple,

"He cast
Disimulation off, and seized once more
That crown, and fix'd it firmly on his brow,
And sat in gloomy grandeur on the throne!
And then I recognised the 'conqueror
Of Pharaoh's ancient land.'"

VI.

"Again the vision changed.
The Emperors of Europe, and the kings,
Each trembling for his throne,
United to depose the conqueror,
And tear his ill-got diadem away.
Their legions poured into the field of war;
The Austrian Cæsars, and Imperial Cæsars
Of Russia, counsel'd on the field of fight;
But he, whom they opposed, stood all alone—
Sublime in his great confidence and strength!
And ere the 'sun of Austerlitz,' which rose
Cloudless upon the serried hosts, the flow'r
And chivalry of three imperial crowns,
Had set, the seeming man of destiny
Had Europe's haughtiest monarch at his feet,
And here he stood and parcell'd kingdoms out."

The seventh canto is distinguished by unusual power, abounds in vivid descriptions, sublime and often wild imagery. It contains a picture of a battle field drawn with appalling force and truth. In the following strong passage from the eighth canto, we have the reality vividly presented before us; and do not so much read of the fierce encounter of opposing hosts, as we hear the shouts of the combatants, and the earth tremble beneath the shock of encountering phalanxes:

"On rush the legions of the conqueror—
Potent—impetuous:—but like the surge
That rolls with force tremendous 'gainst the rock
Immovable, which rises from the sea,
Were they received, and back recoiled apace,
In dire confusion; then, to either side
Wheeling, the master spirit form'd again

The solid phalanx: and with gathered force,
And desperate fury, shouting to the charge,
He rushed upon a single point, and broke
The lines compact, and won the gory field."

Our limits will not admit of a much longer notice of this poem. It is, throughout, stamped with genius. Its versification, although of an exceedingly difficult kind, is characterised by regularity and harmony. In some of the more stirring scenes, there is a glowing rapidity and passionate energy of expression; the words seeming to flow from an irresistible impulse, as if the poet had deserted the trained, yet spirited jennet of his muse, to bestride, as more befitting his theme, a stately war-horse. In "The Conqueror," there is observable a prodigality, or rather opulence of imagery, drawn from the sterner scenes of nature. Aside from the character of his subject, which calls for stern thought and cold conception, the poet has, in this poem, betrayed the peculiar cast of his mind, which is perhaps impressed rather by the grand and terrific, than the picturesque and beautiful; although the uncommon sweetness of his lyrics, and the delicate beauty of the thoughts they embody, and the tranquil ease and grace which pervades all his minor poems, and the sparkling gaiety of his fancy, show that he loves to contemplate the gentler features of nature, as well as the more austere, and delights to connect the tranquil scenes of life with those of a sterner character.

Mr. Gallagher's poetry is an accurate transcript of his mind. He is a poet that reminds us of "the blue sky, and green earth; of the babbling brooks; of the singing waterfalls; of the quiet hamlet, embowered in trees and covered with vines; of the peaceful landscape; of the velvet valley, and of the rock-ribbed mountain;" who enchants as with nature's magnificent repose, and stirs the blood with her awful awakenings to earthquake and tempest. His muse does not haunt the crowded city, the gorgeous palace, or the artificial bower. Unlike many of the ephemera of the muse who flourish in modern times, he can find something else beautiful besides "the face of woman; something else worth apostrophizing besides a pencilled eyebrow; something symmetrical besides a female form; something worth praising besides a well turned ancle; something that floats upon the heart besides *dishevelled tresses*; and something whose touch thrills us besides the soft white hand."

The second poem in this volume, is entitled, "OUR WESTERN LAND," and breathes, throughout, the thoughts "that come of inspiration," and the patriotism of one who loves his native land; it is everywhere marked with the devotion of the poet, and the pride of the patriot. It is divided into seven short cantos, and its subject is sufficiently indicated by its title. It takes a retrospective glance of the early history of the West is;

enriched by enchanting descriptions of the scenery on the Ohio river, which, in the poem is termed traditionally and poetically OHIO-PE-HE-LE; is varied by episode; abounds in traditionary allusions; and, for beauty and variety of imagery, lyric grace of thought and expression, united with conciseness, touching pathos, and manly vigor of style, it is one of those productions which will withstand successfully the test of candid criticism, and perpetuate the fame of the poet. We find our pencil has been drawn around several passages of great beauty. One of these can only be selected. It is in allusion to the meeting of the waters of the Alleghany and Monongahela rivers, and is in a vein that reminds us of Chaucer:

"Behold the clear stream's coquetry!
The more 'tis woo'd and press'd, the more
It feigns to love its pebbly shore;
Retreating still, but still so shy,
Much may the wooing water dare,
That the self-same bed may share.
Still strives she, that it may not be;
And still threats, th' embrace to flee
Of the dark wooer: but anon
They mingle, and together run.
Thus ye may see a bashful bride,
Consenting half, and half denying;
Now looking love, and now aside
Turning her melting eyes; now flying
Away, all loveliness and grace;
But careful still her blushing face
To turn to him she hath forsaken—
Full willing soon to be o'ertaken;
And when she is pursued and caught,
A thread will hold her—as it ought!
Now, modest maiden struggles vain,
She blushing yields until the twain
Are one, even as these mingled waves,
Which part but at their ocean graves."

The remainder of the volume consists of "Miscellaneous Poems" and "Lyrics." The first of the miscellaneous pieces, is "The Old Soldier," a martial and spirited poem, of about 180 lines. The second is called "A Simile." A cloud, breaking into many fragments, which sail away in different directions, but gradually fading into the sky as they move, until all disappear, as if received into the heavens, forms the subject, which the poet has used with great taste, poetical truth, and religious feeling. He paints a family circle, "knowing no bosom's storm," but who are at length

"Wind-driven forth,
Guided by no fixed star:
Some roam the earth---some sail the billowy main---
Severed too widely to unite again.
But as the ample space
Receiv'd, and all absorb'd that scattered cloud,
So, when the mortal race
Ends with the pall and shroud,
Shall they by infinite space receiv'd, ascend,
And have new being, without change or end!"

"Elegiac Verses," occasioned by the death of the late Thomas S. Grimke, which are of a lofty, grave, and highly poetical cast; "The Music of the Heart;" "The Mountain Path;" addresses

to an "Early Spring Flower," and to a "Late Fall Flower;" a spirited and energetic poem, entitled "Childe Harold," founded on Byron's wish in his conversations with Capt. Parry, "I long to be again among the mountains;" a short poem called "August," and some stanzas suggested by the cholera of 1832, complete the division of the "Miscellaneous Poema." Of these, "August" is thought by some of Mr. Gallagher's reviewers to be superior to anything else from his pen. We must refer the reader to this beautiful ode; the brief extract for which only we have room, would mutilate, without conveying a just idea of its merits. There is a similarity of imagery between some portions of this poem and Mr. Bryant's "Noon Scene," but only such as would naturally occur to minds of similar tastes and bias, contemplating the same features of a subject. We will extract a stanza of Mr. Bryant's poem, and the second stanza of "August," in which this resemblance may be slightly traced. It should be remarked here, that Mr. Gallagher had both written and published his poem before he met with the "Noon Scene."

BRYANT.

The quiet August noon is come:
A slumb'rous silence fills the sky;
The winds are still---the trees are dumb---
In glassy sleep the waters lie.

GALLAGHER.

Thee, 'hath the August sun,
Looked on with hot and fierce and brassy face;
And still and lazily run,
Scarce whispering in their pace,
The half-dried rivulets, that lately sent
A shout of gladness up, as on they went.

There is an epigrammatic turn in the following stanza from "The Mountain Path," throughout which poem there is a peculiar joyousness of manner, and an uplifting of the heart that is refreshing.

"Gloriously comes he there!
Morn on the hills! One hour of life like this,
Pays for whole weeks of care;
Earth scarce hath greater bliss!
Yet 'angel's visits' are almost as many
As visits to the hills---they turn no penny!"

In lyric composition Mr. Gallagher is evidently at home; although it has already been shown his poetical powers are widely varied; to whatever subject he devotes his muse, he invests it with its own peculiar spirit. His later compositions evince a dignity and beauty of thought; a richness of imagination; a devout love for and a close communion with nature; sympathy with the nobler attributes of mankind, and an intimate acquaintance with the human heart. A striking feature in Mr. Gallagher's poetry, particularly his loftier verse, is its concise vigor. He has the power of condensing his thoughts in a degree, that eminently cha-

* Summer, personified, is here addressed.

acterises his compositions, when, at the present day, one idea, well diffused over a page, is frequently deemed an ample expenditure. The following lines are examples of this vigor of style:

"He rush'd upon a single point, and broke
The lines compact."

* * * *

"And here he stood and parcelled kingdoms out."

* * * *

"But there was yet a star he had not reached,
And even yet, his eye was fixed upon it."

* * * *

"With the world's chart before his greedy eyes,
Marking off lands to conquer."

* * * *

"And on that little isle,
The heart which had so long convulsed the world,
Was still'd forever."

The lyrics in this volume are five in number. The first entitled and commencing with,

"They told me not to love him!"

is characterized with that liquid ease and graceful simplicity in which consist the prominent features of his lyrical compositions. It has been set to music, and is extensively popular, and will no doubt be recognized as an old and familiar acquaintance by many fair readers. The "Day Dream," and "The Rose is on thy Cheek," are both set to music; and are sparkling and epigrammatic. The "Zephyr and the Rose Bud," a fanciful allegory; and "The Tears of Youth," conclude the volume.* Several tales of great merit, have occasionally appeared in the periodicals which he has edited: judging from these productions, Mr. Gallagher has only to apply his talents to prose composition to rank high as a novel writer; but he is, doubtless, content with the poet's wreath, which is not only more dazzling than the novelist's, but likewise more difficult of attainment; "for many strive, but few there be that gain it."

Mr. Gallagher, during the fall of 1836, retired from the editorship of the Literary Journal, which even in the "literary emporium of the west," sunk for the want of support, and accepted the co-editorship of a political paper in Louisville, where he now resides.† But, like all men of a poetic temperament, Mr. Gallagher has but little taste for the "wordy war of politics," and will no doubt sigh for the retirement more congenial to his disposition. In this country poets cannot live by their muse, who often frowns upon her children, as she finds them wallowing amid a sea of newspapers;

* Mr. Gallagher has very recently published a third volume of poems, "Erato No. III," which the writer has not yet seen. It was published in Louisville, and will, consequently, we fear, be limited in its circulation on this side of the mountains.

† Mr. Gallagher has removed to Columbus, Ohio, since this sketch was penned, and there edits a new Literary Monthly Magazine.—*Editor S. Lit. Mes.*

pouring over ledgers; or disbursing bank notes across a counter. The well known fact that all American poets depend on other than literary pursuits, for the means and comforts of life, is a strong attestation of the truth of the remarks with which the writer commenced this sketch.

Mr. Gallagher is a married man: he possesses a manly figure, tall and well proportioned, with a lofty and somewhat haughty carriage. His complexion is very fair and ruddy; and his face exhibits a remarkably youthful appearance as if but nineteen, and not twenty-eight years had passed over his head. In conversation, he is animated and energetic, evincing the man of quick sensibility, the bold thinker, the acute critic, and severe satirist. His eyes are lively, and, when animated, of a piercing blue. His forehead is fair and open, uniting intellectual strength, with softness of outline, and is the index of the graceful character of his mind.

FRANCIS ARMINE,

A ROMANCE.

BY A NOVICE.

CHAPTER FIRST.

Earth grows shadowy,
And through its stony throngs I go alone,
Even with the heart I cannot turn to stone.

Bird.

What have we here?
A carrion death!

Shakspeare.

It was a spell-touched hour.

L. E. L.

Beautifully along the trembling wave did the light of day wander to its golden couch.

It was the sunset hour. The music of the breeze, and the voice of the birds, as they

"Turned to the sun their waved coats, dropt with gold,"

floated along the sparkling waters, and mingled, as they floated, with the gay song and the merry shout of life from cot and villa, on the banks of the Seine. The rich landscape—the broad champaign—the verdant forests—the distant hills—the glassy river, were bathed in the mellowed crimson and purple tints of sunset, as they glittered along the heights of heaven. The air was calm and tranquil, and scarcely moved the leaf of the dim and distant mountain, or the spray of the river. The Seine was motionless as the willows that hung upon its golden bosom. On its either shore arose groves and alleys of tall poplars, winding above which could be seen the curling smoke of distant cottages, and on its smooth, unrippled surface was the large and

heavy river craft, creeping along with snail-like pace, or the white sailed pleasure-boat ploughing the waters amidst the gushes of music and song from its gay passengers. In the distance arose the domes, towers, temples and palaces of voluptuous Paris, on whose turrets and spires gleamed the rays of the sun, as it slowly sank beneath the western wave.

Thus appeared the scene, as a solitary horseman slowly wended through it. He was in the opening, rather than the prime of manhood. His form was slender, and somewhat above the common height, yet very symmetrical, and the whole appearance of his person strikingly noble, so much so, that at first sight, you could not be drawn from the general appearance to scrutinize each particular feature that had drawn forth your admiration when blended. His countenance was open and frank, as well as eminently handsome. His forehead was broad and high, over which floated in a careless and unstudied manner clusters of deep black hair, contrasting strongly with the paleness of the temples. His cheek was slightly flushed, and the blood could almost be seen gliding beneath it. His eye seemed thoughtfully wandering to other scenes than the one through which he now wended, which by some would have been interpreted to want of taste, in not appreciating one among the brightest landscapes in the land of vineyards; others, of deeper penetration, would have placed it, and perchance more truly, to a wish to forget the present in the events of the past, and the melancholy expression of his countenance betrayed those events as dark and embittering.

The observer, unacquainted though he might be with the withering commerce of the world, and viewing, though he might, its stern realities of deceit and discord through the eyes of youth, could easily have traced in the sadness of the traveller a sorrow which can never be concealed in the dim and silent chambers of the human heart. The past is a harp, and memory a sybil, whose finger will stray upon its silent chords, whether its tones are sickening to the soul, or refreshing as the dew of evening to the withered flower. The most trivial event will remove the lava and the dust, and array before the sufferer the grimlike thoughts of former years, which had been thought deeply buried—or, perchance, in the decay of the cheek, in the reckless laughter of the lip, or in the ruin of the eye, may be traced the gloomy thoughts that rise, like spectre-shapes, from the voiceless urn of buried hope. Sweetest of England's mighty writers! loveliest of the daughters of song! beautifully hast thou said, and true as beautiful,

"The heart may be a dark and closed-up tomb;
But memory stands a ghost amid the gloom!"*

As the traveller rode along, from a neighboring chapel the vesper song of evening, borne over the calm waters and mellowed by the distance, reached his ears. The words, twined into a somewhat solemn rhyme, and sang by voices of peculiar sweetness, accompanied with the chime of convent bells, well befitted the hour, and threw our horseman into a train of reflections at once sweet and sad. As the hymn ceased, and he recommenced his journey, he spied, on a high rock at the mouth of a cave by the roadside, a tall and ghost-like form. It was above the human height, and more resembled the heathen's conception of that of one of

the Titans who besieged Olympus than any he had ever seen. His hair, of a grayish color, floated almost to his feet, and the long nails and tattered condition of his dress bespoke him the hermit of the cave. His eye was stretched over the wide plain beneath, and it was some moments before it rested on the horseman: as it did, it was lighted up suddenly, like a torch flashing amid the tomb. His lips parted, and these were the strange words he uttered:

"On, on, to Paris! for there thou art now expected"—and he turned, as he did so, lifting his thin bony finger to something gleaming in the distance like sapphire columns from the sparkling Seine. "Lo! through the dim mists its thousand palaces! On, on!"

And the hermit disappeared in the mouth of the cave, and the wanderer pondered over the strange words, "Thou art now expected:" they were mysterious; but he paused not until he reached the capital of France. Before him was the tower of Saint Sulpice; in the distance, and almost obscured by the mists that hovered around them, arose the blackened walls of Notre Dame; at his side were dismal and dirty huts, and the street through which he rode, was so crowded, that it was with difficulty to himself and danger to the passengers, that he forced his way along. Just as he passed the arch of l'Etoile, the cry of a beggar startled his spirited horse, which, taking affright, suddenly sprang to one side. So quick and so unlooked for was the motion, that the rider, almost thrown from his seat, could not give the alarm before the horse trod on a little child that was heedlessly playing in the street. As it leaped away, the girl, for such it was, fell to the earth greatly mangled, the blood flowing from its nose and lips. The horseman, discovering the accident, sprang from his saddle, but reached the child as it was caught in an old woman's arms, an already stiffening corpse. Terrified by the sudden death of the child, with its bloody form in her withered arms, the old nurse gazed one moment on its pale, hueless countenance, the features calm and smiling even in death, and shrieked "Murder!" which swept, amid the din and noise of the street, like a thunderbolt. One moment, an appalling silence, like that of the grave, hovered around, and in the next, all was commotion and disorder. Windows flew up, doors sprang open, and the terror-stricken citizens leaped forth, reiterating with maniac gestures the demon cry. It was all the work of a moment, and swam before the eyes of our traveller like some distempered vision. Ere he could put spurs to his horse, his retreat was impossible, for he was surrounded on every side. As far as his eye could reach, the street was completely crowded with beings more like ghosts or spectres than human. That some dreadful and premeditated assassination had been committed, every one believed. The simple event, as usual in moments of deep excitement, was greatly increased and exaggerated, gathering at every move a fresh inhumanity.

"She was so young and beautiful," whimpered a fellow who never had seen her.

"And so innocent," said another.

"She would not have remained so long," muttered between his teeth a cowardly, sleek-haired gallant, as he gazed at the noble horseman, and thought of his own pretty lass; "virtue and purity are as naught beneath the libertine's glance."

Just at this moment he made a second attempt at flight.

"Stop the murderer," cried a weak voice—it was that of the old nurse.

"Blood is upon his skirts," shouted another, who had heard her version of the event.

"Down with him," screamed a little ruffian.

"To the trial with him," suggested a peaceable citizen. Not a voice reiterated it.

"Life for life!" "Blood for blood!" echoed a hundred voices at once, as the voice of a single man. It was caught up in the distance, and now it burst from every lip like the response of a thousand demons, rolling from earth to heaven, and dying away but in the thick willows of the distant Seine: "Blood for blood!"

The curses, the yells, the shouts from lips that knew nothing of the affair, were deafening. Action, from a hasty impulse, guided that lawless mob, who had dethroned their monarch, and erected above the ruin a power withering in its aims, and blighting in its deepening despotism the hopes and aspirations of a brave and noble people; to whom the very name of LIBERTY has been, and ever will remain, a nucleus around which clusters all that is beautiful in their natures; but who, alas! for their blood-stained vineyards and desecrated temples, have never worshipped aught save the semblance of the pure gold of the shrine, adulterated by human passion and unholy ambition!

A body of guards were soon on the ground, with burnished arms and floating plumes, and martial accoutrements; but, alas for their untried valor! alas for their chivalry! they towered with a giant's strength in peace, and shrank to their cowardly bosoms before the glances of a ruffian mob.

The friendless horseman saw his danger. He knew that his life hung upon a brittle thread, which might in the next second be severed. Yet he was undaunted. His form seemed to increase; and his face, generally so calm and passionless, assumed a deeper flush than its wont, as the danger became more imminent. He looked abroad upon that vast crowd, who had not as yet committed any violence, but rocked to and fro like the waves of an ocean yawning for the fragile barque that was to be engulfed there; and his glance breathed of defiance, and the smile that lingered for a moment about his lip was one of derision.

At this juncture a voice whispered in his ear, "Despair not!" Turning in surprise, he beheld in the speaker a young man of singular appearance, whom he had never seen before. He had scarce whispered the words ere he disappeared. He could have been seen threading his way through the dense crowd towards a chapel near at hand, of ancient but blackened architecture. Near its door, from which (attracted by the noise without) he had just emerged, stood a venerable priest.

"Mother of God! what a spectacle!" cried the reverend father, as his attention was directed to the populace who surrounded the horseman. Well did he know the voice of that mob—it had frozen his own blood by its appalling tones before. "People of Paris, what would ye? What inhumanity is this, and to a stranger? Beware of your actions, lest ye bring down the anathemas of the holy faith and the denunciations of the church?"

The people moved towards him—as they did so, he heard not, or did not notice, their murmurs. Elated with the prospect of awing them, he turned towards the chapel, in appropriate parts of which could be seen

many statues of the great and illustrious ones of the church. Surmounted in a niche, at the centre of the chapel, towered the colossal shape of its patron saint. It was of the purest marble and the nicest sculpture. It had stood there for years and years, the silent witness of changes and crimes. Wave had chased wave upon the ocean-tide of despotism—armies had swept by it, and beneath it had been heard the shock of battles—yet there had it stood, dark and solemn, upon its silent and unmoved throne, a relic from the abyss of past ages.

Even as the priest gazed in adoration upon it, lo! the statue came toppling down, and fell at his feet crushed into a thousand atoms. The cause was never known; but, from what followed, it is presumed that it was the work of an unseen hand. A loud laugh drew his attention to a very young man, the same who had cheered the horseman, and who now scorned the priest. He rushed towards the one whom he supposed the offender. His eyes flashed, his cheek scorched, and his whole face was lit up with a holy enthusiasm. The secret cloister and the silent cell had failed to cool, and had but smothered his passions—they leaped forth now with a new life and vigor. He approached the young man—was near him—stood before him: in one moment more, and lo! the torch was lit that flashed upon his funeral pyre!

"Down with priestcraft!" shouted a single voice, so thrilling that it touched every heart and was echoed by every lip. The young revolutionist had by one cry nerved a hundred arms. The priest was hurled to the earth—the uplifted dagger was sheathed in his heart—and in a few moments, as the crowd swept over it, that form had been trodden to the clay from whence it sprang. This was but the *beginning of the end*; for his death was the signal for an attack on the neighboring chapels by the bloodthirsty mob.

As the moon rose above the distant mountains on that evening, the chaunt of priests had ceased—the consecrated lights were out—the solemn chime of holy bells was no longer heard. The sacred temples had been plundered of their statues and divinities—the loud laugh echoed in the holy of holies, and the blood-stained flag of infidelity floated in triumph from their turrets and spires. The eternal faith had been hurled from its throne of ages!

A moment after the assassination, the mad shout of the revolutionists still ringing in his ears, our traveller turned and found himself alone. In another moment the young stranger was at his side. "Fly, fly, or I know not who may be the next victim," exclaimed he. The mob, the cheering words, the stranger, the murder, all rushed before him. The veil was torn from the mystery. The truth flashed upon him. To save him, the unknown young man had drawn the attention of the populace to another point.

"To whom do I owe my safety?" asked he—but on turning to where the stranger stood, he could not see him. He moved not, he spoke not, he breathed not. Was it not all a dream, a vision? Suddenly he recovered. The cry of the mob scarcely heard, the street cleared, despair nerved him. His mission to Paris was not attained. The shout of the mob neared him; but he was far distant when they returned.

Thus entered Francis Armine into Paris. When the mantle of night was cast upon the earth, he was sitting in a small room in the suburbs of that city. His mind was unusually gloomy and abstracted. He moved to

the window—all without was still. The blue heavens were sparkling with the light of many stars, and the young moon, "regent of the night," reflected its beams upon the quiet Parisian city. As he retired, he opened a delicate locket, which contained some rich and jetty hair, and as he gazed upon it a strain of music from a distant band of serenaders swept along. And sad and melancholy were his musings as he listened; for they were of the past. Before him appeared his youthful sister, the beautiful and lost—his distant home—the green earth and sparkling streams of that home—and, glowing above all, was the violet sky of his own beautiful Italy!

CHAPTER II.

Genius! the god of earth,
The child of heaven!

Fairfield.

Life had to her been sweet as music measures
That steal forth from a lute on some faint breeze!

Amelia.

Light after light the glorious visions fade.

Hemans.

Francis Armine was an Italian, possessing all that birth and wealth could accumulate. He was born on the western shore of Lake Como, whose sparkling waters and picturesque landscapes are linked with the most beautiful scenery in the world. Europe has many a Maggiore and Lemano, and but one

"Como, with its crystal face."

The unrivalled climate, the rainbow tinted skies, the transparent waters, the white walled villas that rise on its golden banks, combine to render its "peaceful hermitage" a most desirable retreat. And it was there that the poet touched his heaven-strung lyre, and awoke strains more immortal than the warrior's blood-bought name. It is there that amid the green groves played the glittering waters of Pliny's cooling fountain, and there stands the terrace where he gazed upon the sun as it peered above the blue and misty hills or sank beneath the distant horizon. It is there that the rich music and the graceful poetry of Italy come like hallowed dreams to the wandering pilgrim.

At an early age Armine's parents died, leaving himself and his sister alone, though not friendless, upon the world. His boyhood had been a mixture of pleasure and study; not too much of the former to unfit his mind for the intense study of after years, nor too much of study to nauseate the taste and vitiate the youthful intellect, rendering the object unprepared and unwilling to prosecute the higher and more tedious branches of education. It was a nice blending of the two, such as is to be observed in that of the opposite colors of the rainbow, distinct in shade, but not so in the mingled and delicate pencilling of each rich hue.

When I said that he was an Italian, a description of the gradual development of his intellect might be deemed a superfluous waste of words. For there is a something in the air, and earth and sky of that lovely clime, that kindles, elevates and refines the mind. When the veil of twilight is cast over the earth, with its deep valleys, its fragrant groves and its luxuriant

gardens, to wander forth and breathe the perfumed air, should it fail to draw from the recesses of the mind all that is beautiful or vivid there, they will remain dormant forever. Whether this may be attributed to the sky, with its shifting and fleecy clouds that even melt into the deep azure as we gaze upon them—to the air, pregnant with the perfume of flowers—or to the verdant earth—or to a transfusion of the whole, the mind is elevated to a brighter sphere than its wont—to a dreamlike enchantment, where it can revel in all that is exquisite or passionate in that Elysium receptacle, the imagination.

Armine's education was simple, not complicated. He had studied well the writings of his own countrymen, before he sought those of other lands. He did not dive into the sea of classic learning ere he had skimmed over the calmer stream of a common education. He well knew the present, before he ventured into the dim regions of the past. What to the untutored mind are the lessons of the bygone? What Egypt's mystic and venerated learning? What the classic literature of Greece, or the untouched shelves of oriental Persia? The eagle, if he would soar to the clouds or bathe his plumage in the dew of heaven, must strengthen his wing upon the earth ere he succeeds; and the mind, too, with all its gigantic powers, must slowly unfold them, at first the cradle, and then the unfettered tread, so closely does the mind resemble the body.

He travelled; for though Italy was once illustrious, once mistress of learning, she was then but the phantom of her former self. He travelled into other lands, and he penetrated still farther into the inner temple of intelligence. At last the lightning burst from its imprisoning cloud—chaos disappeared—he possessed the great gift,

"That ocean to the rivers of the mind."

His mind was peopled with the star-bright fancies, the seraph-winged thoughts, the "moving delicate" creations of the poet, with no obstacle to his wanderings, no pinion to his conceptions. The pure and holy fires of genius were kindled, and threw abroad their animating and inspiring rays.

And fame, though it is but the foam that glitters a moment upon the wave and then dissolves, clustered around his name and promised to it immortality. Little did he then imagine the impenetrable mystery that would cloud his life and moulder away the dreams and visions that youth and poetry had consecrated. What are the eagle-plumed hopes, the golden aspirations of the human heart, that, like the snow-flake, a single breath can melt?

His sister's love was as the first rosy star that beamed upon his path. She was very beautiful—a dowry which to some is accompanied with innocence and happiness, and to others the fatal companion of vice and shame. To which of these Genevieve Armine was destined, the after events of these pages will serve to delineate.

Her brother loved her. She was to him as a gentle spirit from another world sent to cheer him on his pathway—so pure, so chaste, so lovely, so like an angel—in form so symmetrical, in mind so rare and chaste. When pondering over the musty volume in his study, or delineating on his page the beautiful creations that thronged his brain, her light tap could be heard at the door, and her soft voice would ask to gain admittance there. And then she would bound in, and on his lap would be

then breathe into her mind the divinity that hovered around his own, watching its dawn and development with a miser's care.

Her every action was as a spell to him. Her form seemed rather the animation of a dream, and her rich and musical voice sweeter than the first spring gale. Together they had often wandered along the level campaign and climbed the neighboring hills. At morning's freshest hour, they could be seen in the shady grove above the tombs of their parents, perchance to drop a tear or breathe a prayer to the memory of the departed; and at evening they were sailing on the crystal bosom of Como, when along its waters were mirrored the light of many stars or the beams of the crescent moon; and later, when all was calm and still around, they were at their door watching the deep blue heavens or singling from the stars a harbinger for the future. At such moments, as his arm was twined around her waist and her head was nestled on his bosom, he would gaze upon her beautiful countenance, so bright, so innocent in youthful beauty, at that time so emblematic of the pure heavens she looked upon.

The present was all to him; for he knew not of the deep, silent, fathomless future that awaited him—that, above every hope of the past, a spectre form would darkly hover, pointing to the dreams and visions swept from the earth forever.

One morning—it was as bright as his love—Armine arose to take the accustomed walk with his sister: it was later than usual; the sun was high in the heavens, and its rays had almost dried the dews of night from the long grass that waved upon the earth; yet she was not up. He went to her chamber door and called her name, but no one answered. He called again and again, but all was silent. The suspense became intolerable: he burst the door open. Her bed had not been pressed on that night—all in the room was the same as on yesterday—but his sister, where was she? The spirit of the place had departed. As he was retiring, a packet on the table attracted his attention. It was directed in her own writing to his address. He tore it open, and found there a small locket presented by him to her many years previous: he touched the spring, and as it flew open a ringlet of her own hair floated on the table. How often, amid the dreariness of after years, was that slight memento bathed in his overgushing tears.

A few days before this, she had been unusually gloomy and depressed. She went often to her usual haunts, and returned home sad and silent. On the previous evening she was sitting over a fountain which for years had been a favorite retreat; while there, her brother, who had been strolling through the woods, came near her unnoticed, and discovered that she was in tears: as silently as he came he stole away, and had almost forgotten the circumstance, until the morning of her sudden and mysterious disappearance. It then flashed upon him. An old servant, in passing near her window, about midnight, discovered lights in her chamber, and imagined that he could see forms flit by. He went to his own room, and in a short time thought that he heard strange noises. Some one was crying. As he lay perfectly still, it ceased, and was succeeded by whisperings so faint that he could but hear the sound—a hurried tread as of two persons, and again all was silence. As he was dozing into a second sleep he heard the sound of carriage wheels along the road, but attributed all to superstitious misgivings, until his slumbers were broken on the next morning with the noise of the searchers.

Hours, days, weeks, months and years elapsed, and she was not heard from. All was deep mystery. Messengers were scattered over the continent, and wealth exhausted, but the least clue had not been found to solve the mystery. Such measures appeared to have been taken as to render the search in vain.

Her brother could not move a step without thinking of her—he could not remain where she had been—he longed for an escape from thought; for it was a pain to think, to live. He closed his villa on the Como, and travelled, where he knew not, he cared not. The same to him were clouds and sunshine, day and night, peace and turmoil. A dim and sepulchral void was in his heart. The

“Beauty of the grass and splendor of the flowers”

was unnoticed by him. The storm and the tempest, when the demons of the cloud shook their shroud upon the earth, were his element. He was driven like a blighted leaf before the wind, and in the darkness of his despair longed for the strife and the red flash of swords.

He looked upon the world, and cried in the bitterness of his grief, “I am alone.” For his parents had departed, and his sister had left him. He was alone, and he asked not for sympathy, and he dreamed not of love. The bright earth was yet beautiful: the glittering dew heralded its morn and shadowy twilight its eve, and at night the moon shed its mystic beams, and the stars, the eternal sentinels of time, spangled the heavens. Yet the sadness that pervaded his being, was blent with them, and darkened the face of nature. Link by link had been sundered of the chain that bound him to earth—cloud by cloud had arisen upon his hopes, and all was dreary and desolate. *The sunshine of his youth had passed.* In his meditations he would cling to the hope that Genevieve yet lived. Fame's eagle pinions lured him not—ambition's syren hopes were forgotten—that lyre, the sound of which people heard entranced, was untouched, and the beautiful visions of the poet were beaten back to their sad and silent chambers.

Five years of suspense had passed, and she was unheard of. He resolved to make one more effort to penetrate the mystery. Wandering along the Seine, he at length reached Paris. Of his entrance into that city—of his danger and of his rescue, we have already recounted in the preceding chapter. Having exhausted the patience of the gentle reader, we hasten now from the retrospect to the events of the present. Reader, we abominate all comparisons, but we trust that you will find our narrative like a river, whose fountain is dull and lazy, but which, as its banks widen and its waters increase, will be found pleasant to the sight. You have lingered thus far with us to pluck the flower from the roadside; go on, and hand in hand we will open to your vision the wide landscape: perchance in the forests and groves, and by the murmuring waters, something may be found that will cheat existence for a moment of its palling realities and its sickening anxieties.

Armine in his slumbers had sent through the untrod vista of the future, a brightening dream; for although darkness and gloom rest upon the shrine, the spirit and the divinity still hover there, and seraph-winged and fresh-breathing hope descends like the dove on the waters of the past, and brightens, as with an Eden spell, the dim clouds of the future.

THE WEST FIFTY YEARS SINCE.

By L. M., of Washington Cky.

(Concluded.)

CHAPTER IV.

The Indians, perceiving that they would not be able to escape by flight, resolved to sell their lives at a dear price to the victors.

Their loaded arms were stacked near the spot where they were constructing their rafts. On the first alarm, those who were not injured by the sudden fire from the top of the river bank, sprung to their rifles and stood on the defensive. They separated partially, and retreated slowly backwards along the beach, selecting at the same time the antagonists with whom they intended to grapple, and try the fate of war. The settlers pressed on vigorously, not at all forgetting the injunction of their commander, that "each man must buckle to his man," or the enemy would escape with only a trifling loss.

The fire from the bluff had been deadly, but still a sufficient number of the enemy remained to give full employment to the assailants. The savages discharged their pieces with effect, wounding five of the settlers so that they could render no assistance to their comrades. Those who had fired first, having reloaded, came to the succor of those who were in front. The commander led the van, giving his orders in a loud and animated tone. He seemed to have lost his usual coolness, and to have been wrought up, by the conviction of the deep stake which was to be won or lost in this game of life and death, to a pitch of enthusiasm bordering on madness. His whole countenance was full of desperate fury. His eye was lighted up by the feeling of revenge that was burning within him. The watchword was "no quarters." Selecting the largest and fiercest of the enemy, the dauntless veteran gave him to understand by his movements upon him, that he had selected him as the object of his attack. He then made a sudden run at him, as though he sought an individual encounter with him, hand to hand, which threw the chief off his guard, and operated as a momentary surprize. At that instant the commander halted. As quick as thought, he raised his rifle, applied his long practised eye to the sight, fired, and the Indian fell, who had scarcely reached the earth before his adversary buried his tomahawk in his brains, drew out his knife, took the scalp, and put it into his leather shot pouch. As the parties fought along the edge of the water, the warriors, according to custom, kept up a loud yelling to encourage each other. But it became fainter and fainter, until at last their number was so much diminished, that they saw that they must all be cut off, unless they saved themselves by a desperate effort to fly. Eight of them threw their arms behind them, and plunged head foremost into the river, two or three of whom were already badly wounded. The victorious party, with their pieces ready, waited till they should rise to take breath, and then fired. One who came up, was pouring out blood from his mouth in a stream, but he was instantly wounded again, and rolling over and over, he at last, after a desperate struggle, sunk to rise no more. These unerring marksmen killed off all who had fled but two, who being expert swimmers, made their way safely to the opposite shore, a distance of nearly a mile. The settlers stood and watched

them with intense interest, hoping that they were wounded, and that at last they would go down. But, after a long time, they were espied slowly ascending the bank. After they had reached the bluff, they sat down to rest themselves, when the whites raised a loud cry after them, to which they replied in defying tones and ejaculations.

The hatred of these emigrants to the west towards the unlettered and uncivilized sons of the forest, was without any limit, and was met in a corresponding temper. The state of North Carolina claimed all the territory from the sea to the eastern bank of the Mississippi. She had invited all, who were sufficiently daring and brave to form settlements on her western boundary, to do so; and had promised to each head of a family, a preemption right to six hundred and forty acres of land. After the termination of our revolutionary war, the same state had allotted to the officers and soldiers of her continental line, large parcels of soil over which the Indians were then roaming, as rewards for their persevering zeal and signal bravery, in defending the rights of the colonies against the usurpations of the mother country. Whenever the boundaries of the new settlements were enlarged, the men, women and children, were set upon by the savages and slaughtered. It was forever uncertain when or where they would make their attacks. They came suddenly, perpetrated the meditated mischief, then disappeared, and buried themselves in their fastnesses and hiding places. The hostility between these parties was unappeasable. The one was resolved to hold the property which had been allotted to it under the sanction of the law; the other adhered with unrelenting tenacity to the land which had been given them by the Great Spirit. The war which had so long depended between these combatants, and which had been prosecuted with such disastrous fortunes to both, was bloody and ferocious to the last degree. Every other consideration was finally swallowed up in the gratification of personal revenge. The white man hated the Indian, and the Indian hated the white man. Both saw that nothing less than the most daring acts of personal courage could save them from total extermination.

Those of the whites who had gone into the recent conflict, had parted from their families, with a resolution regardless of all consequences, under the conviction that although their lot was a hard one, it must be met with a courage equal to the exigent circumstances in which they were placed. After this bloody battle or rather massacre was over, the conquerors turned their attention to the condition of their associates. Four of them had been killed, and nine of them wounded. The former were hastily buried in the sand. But the situation of the latter, awakened all the generous sympathies of those who had escaped unhurt. They cried constantly for water to slake their burning thirst. One poor fellow who was desperately hurt, implored them to put an end to his misery, by shooting him through the head; for he was certain, he said, that he could not live. Some, in their agonies, prayed earnestly that their sufferings might be quickly ended in death. This party had gone on their expedition suddenly. They possessed no means to heal the sick or wounded, even if there had been time to collect them. What was to be done with these unfortunate men? They could not be

left to die. There were no vehicles on which to transport them, and it seemed impossible to get them along over a rough and narrow trace, every where crossed by fallen timber, and at many points covered with large loose rocks; this difficulty seemed to baffle all the devices of the commander and his comrades, and to fill them with distress. At length, a simple contrivance was suggested and adopted. Round pieces of timber were procured, which were flattened at the ends, that were to rest on the ground. These pieces were connected by broad flat slips that were inserted and extended from side to side. The poles were raised to the shoulders of the horse, and a blanket thrown over his back. Then a broad string, like a breast-band, was drawn round the breast of the animal. On these vehicles, resembling hand-barrows, these poor fellows were laid. One man led the horse carefully and slowly, and two others followed behind, occasionally lifting up these contrivances, and easing them over the bad places and rocky obstructions that lay in the way. It was impossible for the party to make more than ten miles a day. The distance from the Tennessee to Nashville was one hundred and thirty miles. On the march, the sufferings of those who had been shot were indescribable. On the fifth day, one of the men grew rapidly worse, and it was obvious that he must die, for the ball had penetrated the groin and could not be extracted. Orders were given that the whole party should halt and await the result of the struggle which the dying man was maintaining against the rapid approaches of death. His courage, however, was unshaken. When night set in, fires were kindled and the guard mounted. The sufferer beckoned to the commander to come near him. Having done so, he said that he could not live till morning; that he wished to say a few words to him, his old friend and companion in arms. He then requested the veteran, down whose weather-beaten cheek tears were stealing, to tell his wife that he had fought and fallen as became a brave soldier. To tell the same to his children, when they became old enough to understand, how, when and why he had given up his life in their defence, and that they must never lose any opportunity of avenging his blood. He further desired that the place where he might be buried should be carefully marked, so that when the savages were driven from the country, his bones might be collected, and laid along side of those of his elder brother, who had but a few months before likewise fallen heroically in a desperate encounter with the enemy. Finally, he wished to bid farewell to all who were present. They came around him, and clasped his feeble hand. Not a word was spoken, but all were melted into tears.

It was one of the many striking characteristics of these early emigrants, that amidst the roughest scenes and most appalling dangers, they were forever united to one another by the most devoted affection. About an hour before day-light the patient expired. When the day dawned, the dead body was taken to a rocky nook about fifty yards from the trace, and there laid. The party gathered up the stones which were lying round on the surface of the ground, and erected a kind of rude mausoleum on the top of which they placed pieces of fallen timber, in compliance with the dying man's request. This simple monument is known to this hour, and the melancholy history which is connect-

ed with it, is still recited by the descendants of the unfortunate victim. After this pious labor was performed, the weary march was resumed. The wound which had been inflicted upon Henry was in itself not dangerous. But the weather was excessively hot—there was nothing that could be applied to it, to cleanse it, but cold water. Fatigue, want of proper sustenance, bodily and mental irritation, brought on him a slow and insidious fever which exhausted all his strength. No longer able to sit in his saddle, he was placed upon the vehicle which had been occupied by his dead companion. On the evening of the fourteenth day the party arrived within seven miles of the station. An early start was made in the morning, and at about four o'clock in the evening the caravan appeared on the top of the lofty hill that overlooked Nashville. The commander and the spy rode together in front, the latter carrying a slender hickory pole in his hand, with all the scalps that had been taken strung upon it. Some of the children who were near the gate first descried the returning party, and gave the word. All who were within instantly rushed out and gathered up close together, seeming to be afraid to advance and meet the fatal news which might be brought. That the late encounter had made widows of some and orphans of others, the train of wounded which followed in the rear, rendered almost certain. Behind all, came the five young squaws who had been taken prisoners, for the commander treated them with the greatest humanity, as it was one of his truisms that no brave man would ever lay his hand upon a woman in anger. At length there was a halt. The wife of the commander, as usual, was in front. When the veteran alighted, her oldest children being around her feet, she embraced him. But each of the wives of those who had been killed, cried out, "Great God! is my husband dead?" "Is he killed?" No replies were made. These women did not shed tears or shriek, but they set up the wild howl of maniacs—the result of utter despair. No one was yet prepared to give the stirring details of the recent battle. The wife of the commander first rallied and gave directions to have the widowed women taken away and placed in their cabins, whilst the friends of those who were lying on their litters were engaged in lifting them up in their blankets, and carrying them along slowly to their beds. But all were astonished and grieved at the spectral appearance of Henry. Only a little while before, he had gone forth to the battle broil, full of health and life and joy. His commander cherished for him a paternal attachment. His courage, energy, and noble bearing, had won the regards of all around him. The wife of the commander gave him her unceasing personal care. She administered to him those simples that were at hand, and best calculated to abate and finally to remove his fever, and those tonics which could be procured in the woods. She would not permit any one to wash and cleanse his wound, but performed this duty herself. Seeing that he was despondent—that there was something within him that weighed upon his heart—this generous woman endeavored to revive his hopes by every appliance and suggestion within her power. After many weeks of suffering, Henry became perceptibly better. The five prisoners rode on their Indian ponies. They were dressed in the clothes that had been taken from the neighboring station. On their

first arrival no one noticed them. They sat on their horses with their heads bent down, nor did they dare to look up. At last the women suggested that some disposition should be made of these unfortunate beings, who they alleged must be worn out by their tedious march. Signs were made to them to dismount. Having done so, they were directed to pass the gate into the station, where they halted and stood up in a cluster, their eyes directed to the earth and their long coal-black hair floating over their shoulders. They did not appear to be dejected, but prepared, with the characteristic fortitude of the savage, for any fate, however disastrous, that might await them. The wife of the commander approached them—halted—viewed them intently, and walked several times round them. At last she exclaimed, "I suppose these poor creatures had nothing to do with murdering our people. We must do something for them, as they are, like ourselves, human!" A man who resided in the station, who spoke Cherokee, and who had been three years a prisoner in the nation, was then called up, who addressed the squaws in their native tongue. They appeared to be overwhelmed with surprise. After recovering a little, they threw up their eyes, their countenances beaming with joy. Without daring to make any reply to what was said, they obeyed a command that was given them to retire to a cabin where something was set for them to eat.

CHAPTER V.

Mrs. B. was taken to a town, distant about three miles from the place where the murder of her husband and his companions had been perpetrated. On her arrival all the inhabitants gathered around her. Many aged warriors and squaws came limping along with the crowd, who viewed her with intense and eager curiosity. They talked earnestly and incessantly with the chief, who held her as his prisoner, and who appeared to be giving to his audience copious details of the events of the recent capture. When he drew out his tomahawk, and exhibited with it the manner of the assault upon Col. B., and the young white men, the rest testified their gratification by loud shouts. Towards Mrs. B. there were no manifestations of compassion in a single individual of this mass of savages.

When she had reached the hut of her master, she was given to understand that she must go out every day and hunt for such loose pieces of wood, as she might be able to carry upon her head or in her arms, and bring them to the hut to be used in cooking. This was nearly all that she was required to do. The two boys of the squaw accompanied her on these expeditions, and after awhile became so much attached to her that they could not be kept away from her. The caresses of Mrs. B. seemed to gratify both them and the mother.

Towards the middle of the summer, many of the Indians fell sick with fever, and were utterly neglected by the rest. The humane feelings of Mrs. B. were aroused in behalf of the sufferers. Her residence in Carolina had made her familiar with the treatment of those inflammatory diseases that are common in southern latitudes. She administered so successfully those simple remedies, which were found in the woods, that many who were ill recovered. Perceiving the effects of

her skill, the whole of the population began to look upon her with a kind of superstitious reverence. Wherever she went they paid her a voluntary homage, as though she bore about her the wand of a charmer. All who were diseased, came to her, confidently expecting relief. If she could not cure them, still she was often able, and always anxious to mitigate their sufferings. These employments diverted her attention in some degree, from her own misfortunes, and filled up hours which would otherwise have been given to despondency.

Mrs. B. earnestly desired to revisit the boat, which she presumed might still be at the place where it had been captured. An application having been made through the squaw to the chief, permission was granted her to do so. Taking the oldest boy with her, she set out early one morning, and on her arrival at the river, found the vessel fastened to a large tree. The water had fallen, and had left her on the dry beach. The heat of the sun had warped the planks, that were green when they were put on, and already a general decay had commenced. Looking on this scene of the overwhelming calamity that had befallen herself and her family, Mrs. B. burst into tears, and delivered herself up to her sorrows.

Her poignant recollections of the past were suddenly awakened into new life and energy. Seating herself upon a log, she asked herself, "Shall I ever return to the enjoyments of civilized life? or am I doomed to spend the rest of my days amidst the haunts of the savage? What has become of my children? My daughter—my manly boy—my little girls? my numerous relatives and friends, whom I left behind me when I entered upon this hazardous and disastrous journey to these western wilds?" Engrossed by these gloomy thoughts Mrs. B. sat a long time, and unconsciously sobbed aloud in all the bitterness of her grief. At length, she summoned enough of courage to venture on board the boat, the upper deck of which she reached with great difficulty. Descending from it, she entered her own apartment. The plunderers had left one bed, three or four stools, and several smaller articles of little value, together with the few books which she had brought along with her. Amongst these was the large family Bible in which the ages of her children had been set down in the hand-writing of her husband. He had purchased it immediately after their marriage. At the sight of this well known volume the heart of Mrs. B. leaped with joy. Springing forward, and hastily seizing it, she found that it was not materially injured. The sudden and unexpected recovery of this precious record, was a subject of unspeakable gratification to one imbued with such deep religious feelings as this widowed woman. She bore it back with her to the town, and reperused its contents with increasing fondness and interest. She often declared, afterwards, that she read it so constantly during her protracted exile, that she committed every word of it to memory. She also stated, that it had continually strengthened her faith—revived her drooping spirits—reanimated her hopes, and fortified her patience. Mrs. B. did not take a last adieu of this frail barque without a pang. She had first entered it with a thousand anticipated pleasures. It had borne her over the placid stream with all her once prosperous, but now calamitous worldly fortunes. Like everything

else that is merely physical, it must soon be broken up by the great destroyer, Time, and its fragments drifted away into the deep ocean. This rude structure had once been her domicil, where she had worshipped her household gods—had loved her husband and her children. The memory of these endearments is too pleasant and mournful to the soul of woman, ever to be forgotten!

The little girls who had been taken off by the old Indian woman, whose name was Luggi, were too young long to remember their mother. Their protector caressed them with more than maternal assiduity and tenderness. Although these children had been nursed in the lap of indulgence, yet they were soon reconciled to lie down upon the dirt floor of this Indian woman's hut, and to fall away into sleep in her arms. She gave almost all her time, and certainly all her affections, to them. She followed them, and participated in their plays and amusements, subdued their aversion to her mighty exterior, by her incessant kindnesses and extravagant attachment. They called her, and regarded her, as their mother.

The son of Mrs. B. was carried about seventy miles south into the interior of the country. He was employed in beating corn into a kind of coarse meal, for the use of the family in which he was domiciliated.

Emily, as has been stated, was allotted to serve a haughty young chieftain. He lived about thirty miles from the river; he did not speak to her, and scarcely ever looked at her. She viewed him with horror. He was one of those younger men whose passions were still turbulent, who loved the bloody strife of war, and who hated every human being in whose veins there was a single drop of the white man's blood. Perhaps it was this detestation that protected Emily from ill usage by this ferocious savage. He had participated in all the bold marauds of his tribe into the settlements of the whites—had assisted in burning some of his prisoners alive—had danced around them, and exulted in their frightful screams. His wild and penetrating glance indicated the storming and unrelenting passions that revelled within him. No helpless and unresisting captive could behold him without involuntarily shuddering.

After two days' march, Emily's master reached the town over which he exercised unlimited dominion. It contained between four and five hundred persons. The sun was about two hours high. She was overcome by excessive fatigue; her feet were blistered and swollen. Nothing but that love of life, which dwells in every human bosom, sustained her. When the party reached the town-square it was halted. The eyes of the assembled inhabitants were fixed on Emily. Her lofty pride and maiden modesty, shrunk before the eager and intrusive gaze of these rejoicing savages. She was unable to utter a word that any one of the throng around her could understand, or to ask for mercy from a human being amongst them. Whether she was to remain under the control of him in whose custody she now was; whether she was to be turned over to some other master; or what was to be her fate, were questions which she asked herself, but which it was impossible for her to resolve. Whilst she stood in this agitated and anxious state of mind, her eyes bent to the earth, and her cheek of a deadly paleness, an Indian girl approached her, and attracted her notice. Looking

at Emily, with an eye full of compassion, she smiled graciously, and as if all her sympathies were aroused in her behalf. The girl was of unrivalled beauty, and appeared to be about seventeen. Her person was tall, and straight as an arrow; her eye was jet black, like most of her race; her hair long and glossy, and her chest round and full. There was an uncommon sweetness in the expression of her countenance, and in her movements a surpassing natural grace and elegance. Her complacency shadowed forth the gentleness and humanity of her nature. The dress of this young beauty, and the deference paid to her by those of her sex, who were around her, indicated that she was of exalted rank. She wore a loose garment, made of calico of glaring colors, which had been brought into the nation by the French and Spanish traders. There was bound around her forehead a band of broad silver lace, and in her ears she had no less than four sets of silver ear-drops. Her step was quick and buoyant. Extending her hand sily, she seized that of Emily, and pressed it gently. This simple token of a secret regard, was the more affecting, because it could not be expressed openly for fear of danger, and fell on the heart of the desolate stranger like a message of mercy borne by an angel of light.

Emily's emotions were unutterable; a delicious hope sprung up in her bosom, and revived her. Perceiving that she was faint and exhausted, the girl, of her own motion, flew with the speed and elasticity of a deer, and quickly returning, handed Emily some water in a small gourd, of which she drank. About sundown the chief moved towards his cabin, his prisoner following, and the Indian girl lingering behind. Having reached it, the plunder was unloaded from the backs of the ponies. The squaw seemed to be much delighted. Emily, unable to stand any longer, sunk down upon a log that lay near the door. Instantly the young Indian girl came, and seated herself beside her, and spoke to her softly in Cherokee. Emily could only reply by looks expressive of her gratitude and pleasure. The girl raised her hand, and felt Emily's hair, neck, arms and hands, then smiled. At last the squaw beckoned to Emily to come into the hut. The chief threw himself carelessly upon the floor, and spoke to those about him roughly and authoritatively.

Early the next morning, the girl came in search of her new acquaintance. The two were soon united by the warmest attachment. Emily began to learn the Cherokee, and made rapid progress in acquiring a knowledge of it. Her monotonous existence was relieved and cheered by a constant association with this innocent and beautiful child of nature.

When the summer heat had ripened the crop, notice was given to the surrounding towns, that the chiefs would celebrate the green corn dance. This is the carnival of the savages. The day before that of the celebration, every householder extinguished the fire in his cabin, and set out with all his family to the general rendezvous. The chiefs were placed within a circular piece of ground. The dance was commenced; being led off to the sound of a rude kind of music, by the young warriors and squaws. If any culprits had been lying out, and entered within this circle, without being apprehended, they were absolved from all punishment for their crimes.

Towards the close of this annual festival, all those who were discontented with their wives, brought them up to the chiefs, and delivered them over, declaring that they could not find them in meat any longer. This was equivalent to a dissolution of the marriage. The squaws, in this condition, submitted without a murmur, and in many cases, were selected by other warriors as their wives. When the assembly was about to be dissolved, the most venerable of the chiefs taking two dry sticks and rubbing them together, till they became ignited, kindled up a large fire, each householder taking with him to his home, however distant, a live chunk. During the period of this celebration, all was gladness and hilarity. The passions of these savages were lulled into rest, as if by enchantment. The depending hostilities with the whites were forgotten, as well as all personal difficulties amongst themselves. Even the children participated in the general joy. The good-natured joke, so common with all the Indian tribes, was passed round by the veteran chiefs, whose vigorous muscles were often relaxed into a general laughter.

Not long after this event, a warrior, whose exploits in the field had acquired for him a great name, was taken sick. He lived near the residence of Emily's master. During his protracted illness, she often went with her associate to see him. Neither his children nor his brother chiefs paid him much attention. He lay week after week, without uttering a single groan or complaint. At last he died. No one shed a tear or manifested any sorrow. But the warriors assembled, and held a short council. Towards night, several of the men came to the place where the body was lying. One of them set to work upon a piece of wood, which he soon fashioned into the form of a bow, and which he rendered as smooth and light as he judged necessary. To it he attached a long and strong sinew taken from a stag that had been killed, and the whole was made ready for use. The other men were engaged in making arrows out of slender pieces of cane, into the ends of which feathers were nicely inserted.

During the night, the wife of the deceased was earnestly employed in baking bread made of Indian meal. Three or four were digging the grave. Towards daylight, the moon shining brightly, the dead body was borne to its last resting place. After being laid down, one of the party stepped forward, and placed the bow and arrows along side of the deceased—then he added a pipe—a parcel of tobacco—a shot pouch—buckskin leggings—a tomahawk and scalping knife—a light gourd, and a dozen loaves of the bread. The corpse was then hastily covered over—the family of the deceased looking on apparently with deep interest. Very soon the whole party returned to their homes in profound silence.

When the corn became ripe and sufficiently dried, and the weather somewhat cool, Emily observed that the warriors were often assembled in their council house, and that others came from the adjacent towns. On more than one occasion, they were overheard debating angrily. Some who were called the Red-Sticks, were in favor of a further prosecution of the war, whilst others were for peace. The voices of the former, being mostly young men, prevailed. In a little while all seemed to be busily engaged. The more active were moving in different directions, gathering up their pow-

der—examining their rifles—picking their flints, and running their bullets and buckshot.

A large party went out upon the hunt, and returned quickly, loaded with game. It was manifest to Emily that an expedition into the white settlements was on foot. The thought that these savages might make another successful incursion, and cut off many in the tragical manner in which her father had fallen, filled her bosom with anxiety and distress. One evening a universal excitement prevailed amongst the population. All were gathered in the town square: the chiefs were equipped in their warlike costumes—their faces painted—their guns by their sides, and feathers in their turbans. They sat in silence a long time. At last, about eight o'clock, all the warriors joined in a low murmuring kind of lament. But in a short time, their voices were pitched to a higher key, and they sung louder. The whole, rising suddenly, commenced dancing; they moved along in a creeping attitude, as though they were approaching, in the dead of the night, the resting place of the white man—then they halted, as if they had fired—then they broke forth in violent screams and yellings—drew their tomahawks and scalping knives—then advanced upon the foe, and represented the killing of the victims—the taking of their scalps—the groans and cries of the wounded—the seizing of the plunder—and wound up with the loud shouts of victory! This scene, which Emily witnessed—lingering near it as she did, unobserved—aroused all her sympathies. Unconscious of its effects upon her at the moment, she found herself, at the close, suffused in tears; she imagined that she again saw the victorious chieftains slaying her father, and butchering his young companions. The next morning she saw this war party take the trace, and commence their journey; she watched it until it disappeared—then returned, to bewail in silence her hard and protracted separation from all she held dear upon earth.

CHAPTER VI.

Many weeks elapsed before Henry became convalescent. His recovery was retarded by incessant anxiety about the fate of Emily, whose absence increased the violence of that passion with which her worth and beauty had inspired him. There were no means by which he could hear from her, if living; or of her, if dead. At last he confided his secret to the wife of the commander, who was keenly alive to whatever concerned his interests and happiness. She consoled and amused him by all those attentions which charming woman pays so successfully to the despondent and afflicted.

Both the Indians and the settlers had become tired of the war. The fires that were continually kindled by the former around the humble dwellings of the latter—the murder of the men, and the capture of the women and their children—had made the whites anxious for peace. They knew, also, that there were crowds of persons in the Carolinas who wished to make their way to the new land of promise, and who were deterred from doing so by the numerous dangers that lay before them. A large emigration would soon render the present possessors of the Indian country invincible.

The more sagacious of the Indian chiefs perceived that if hostilities were continued, they must at last be exterminated. They, therefore, believed it to be better to save a portion of their lands for themselves and tribe, than to lose all. There were many, however, and especially the young and fiery warriors, who were vehemently opposed to these counsels. But at last it was agreed, that a prisoner who was held by the savages, should be sent with proposals for a reconciliation. After a delay of several months, it was stipulated that the representatives of the Cherokee tribe, and commissioners on the part of the United States, should meet at a point on the Holston, for the purpose of making a treaty. In order to provide against any possible danger, it was understood that the parties should appear on the ground without arms; and that if a pacification could not be effected, both were to return to their homes without molestation.

The commissioners arrived the evening before the day of the appointed meeting. The next morning, the chiefs, being more than a hundred in number, made their appearance, accompanied by their interpreter. A rude circular structure, made of stakes and poles, and covered over with bushes, had been hastily put up, for the accommodation of the company. All were introduced to the commissioners in a formal manner. The first was the chief of the whole nation, the illustrious Tuskenehaw. He bore his gigantic form proudly—looked intently at the white men around, and with all that settled malice which he had inherited from his departed ancestors. It was evident that he was driven by a stern necessity to engage in the work before him, and that he loved his people and his fame far better than his life. The leading commissioner was a man of rare natural gifts, and perfectly acquainted with the Indian character. He spoke to the soured and unrelenting chieftain, in a tone well calculated to soothe his wounded pride, and dispose him to conciliation. After a while he agreed to smoke the pipe of peace. The rest of the warriors were amongst the stoutest and bravest of the tribe. Some of them were scarred over with wounds; others were young, impetuous, and still anxious for the bloody strife of battle. The recent events which had deprived them of many of their daring comrades, were still fresh in their recollection. The love of revenge was only slumbering in their bosoms—not extinguished. The next morning the terms of a treaty were specifically announced. When they were perfectly understood by Tuskenehaw, he said that they would be considered—but it was manifest that he looked on them with deep displeasure. They were those which the victor prescribes to the vanquished. All the Indians retired, walking slowly in single file, with their heads bent down, to a thick wood half a mile from the encampment. Here they continued in solemn council till deep in the night, when they kindled up their fires and lay down to rest. At about 10 o'clock the next day they returned, and very soon the negotiations were renewed. After some efforts were made to draw out a reply from Tuskenehaw, he rose; it seemed as if his bosom would burst, so tumultuous were the thoughts that were within. Subduing his emotions, and assuming all that self-collection which marks his race, he said, in substance, "When I was a boy, not much higher than my father's knee, I followed him in the hunt. He and his nation then lived

far away, beyond those mountains, towards the rising sun. There was then no war. The red man then caught his fish, and killed his deer, and hoed his corn in peace. One day the white man came, and told my father that he and his people must give up their cabins and their springs, and go away. But they would not. And there was war. For a great many moons the ground soaked up the blood of the red and white men. At last there was peace. My father, and his people, and women and children, left the bones of their fathers far behind, and came on this side the mountains. When I grew up to be a warrior, the whites came again, and told my father that they wanted some more Indian country, for that they had become as thick as the leaves on the trees. Again we went to war, and my father and many of his people have been killed by your rifles. Now you want me to go away with my squaws and people and children. We have kindled fires around your cabins; we have buried our tomahawks in the brains of your men, and have taken their scalps; we have captured your women, and have done you a great deal of harm; but you have killed our bravest warriors; you are getting strong, and we weak: I will not speak with a forked tongue: my voice is for peace." Towards the close of this speech, the countenance of the orator became solemn and sad. As soon as he was seated, a young man about eight and twenty arose. His eye was full of passion, which it seemed impossible for him to repress. Several minutes elapsed before he could utter a word. At length he said, "My voice is for war. I have killed all the whites I could find. They came and said they must have my mother's corn-field—she was not troubling these white people, but was living in her own cabin, with me and the rest of her children. They said if she did not go, they would drive her away. Where was she to go, without bread or meat? But they made her come to this far distant country, and now we must go away again. I, and all the brave warriors of my town, will die and be buried alongside of their fathers. Those who are afraid, like squaws, will let the white man come and drive them off. My voice is for war." The orator was excited to fury. What he said was followed by a long and low murmur of disapprobation. The chiefs again retired, and were long engaged in council. The next day Tuskenehaw reported that his red brothers were divided in opinion—that he had determined to go home and consult all his people—that he hoped they would agree to a treaty—that within four moons he would send runners and let the commissioners know what he and his warriors would do.

The assembly being dissolved, Tuskenehaw and his party bid farewell, and set out on their return. The commissioners retired to one of the settlements, there to await the result of the deliberations of the chiefs and their people. In the meantime the news that peace might soon be made, flew through Virginia and the Carolinas with the speed of the wind. Hundreds of families commenced preparations for a removal to the far west. As might have been expected, every heart at the Nashville and contiguous stations, was overjoyed at the rumor that a reconciliation would be effected between the hostile parties. They had poured out their blood like water in a long, desperate, and, often times, doubtful conflict. The veteran commander said that he was tired, and felt that he was growing old. He desired, for

the remainder of his days, to cultivate his fields in peace. Henry gathered strength and hopes rapidly. Very soon he was on his feet. His person quickly swelled out into its former fulness and manliness; but, a cloud now and then settled upon his brow; the fate of her to whom he ardently desired to unite his fortunes, and who had long possessed his purest affections, was as yet unknown—but rumors came that Emily's father had been murdered, and his family saved. After a painful and protracted suspense, news was brought to the commissioners that the terms prescribed to Tuskenhaw and his tribe were accepted. It went by express to the east, and to the west, and soon reached all who were interested in this glorious and joyful event. It was arranged that an exchange of prisoners should be effected as quickly as possible.

A large company had set out from western Virginia, immediately after the meeting of the commissioners and Indians, and had arrived at a landing on the Holston before the conclusion of the peace. They were already nearly prepared to descend the river (having constructed boats) for Nashville, the point to which all emigrants first directed their attention. Henry was informed of the intended movement of this party. Fired with the thought of ascertaining the fate of Emily and her family—of restoring them to liberty and to their friends—he prepared to make a rapid journey to East Tennessee, and to descend the river with the emigrants. In aid of these views, several persons, whose relations were held in captivity, proposed to go over-land to the nation, and aid in collecting all the prisoners at Nicojack, whence they might be taken on board the boats. After a hasty preparation, Henry and his servant were ready to set out. Going to the wife of the commander, to bid her farewell, she said that she had packed up with his baggage some bundles for Mrs. B. and her family, which she desired might be sent to them before he saw them. She knew, she said, that they must be in need of every thing. There was so much delicacy in this precaution of this admirable and ever thoughtful woman, that Henry was deeply affected. Pursuing the trace through the wilderness, with all the speed that was practicable, Henry reached the landing just in time to embark with the emigrating party. There were seventeen boats in company, and more than four hundred persons on board. The hopes and spirits of the party were elevated to the greatest degree, for they no longer feared that cunning and lurking foe, who had been the terror for so many years of every enterprising settler.

When this little fleet was drawn up to the shore, as it was sometimes, in the journey, the young men, with their dogs and fowling pieces, penetrated the thick contiguous woods, and shot down game, of which there was the greatest abundance. When the mornings were fine, and the boats were moving swiftly over the bosom of the swelling stream, the young men and girls ascended to the tops of the decks, and danced to the tunes of the violin. The gravity of the older people was relaxed amidst these scenes of innocent hilarity and joy. At last the voyagers came in sight of Nicojack. The heart of Henry was filled with tumultuous emotions. The conflict between the hopes and anxieties and fears that raged within him, almost overpowered him. As the vessels neared the shore, more than a dozen squaws, with their children following them,

whom they had been teaching to swim at the river-side, were seen rapidly ascending to the top of the bluff. In a little time a number of chiefs came down, bearing a white flag. Their subdued and docile countenances assured every one that there was no danger. When they came on board, inquiries were made whether the prisoners had been collected, and where they were to be found? To which they answered that as yet none had arrived, but that runners had gone after them several days before, and that they would soon come. After considerable exertion, Henry learned where Mrs. B. was. He procured a guide to accompany him, and quickly reached the town, where his presence created a strong sensation. Making his way towards the cabin where Mrs. B. was, she espied him, and perceiving that he was a white man, she hastened to meet him. When she ascertained who he was, she was wholly overpowered, and burst into tears. With the quick discernment of a mother, she saw in an instant the cause of his coming; and she perceived as quickly, from these evidences of fidelity and devotion, on the part of him whom she loved with the greatest ardor, that her daughter's future happiness would be unspeakable. Moreover, this widowed woman would find in the husband of her child a faithful protector of herself and her family. The virtues of this gallant young man, shone forth to the view of Mrs. B., at this moment, with superadded lustre. Henry answered the anxious inquiries of Mrs. B., and detailed all the leading events that had transpired in the settlements since the capture of the boat. They were of course listened to with profound interest and emotion. After some hasty preparations, the two sat out for the town. Henry delivered the clothing which had been brought by him for Mrs. B., Emily, and the rest of the children. The next day news was brought that all the prisoners would arrive that evening or in the morning. Mrs. B. intimated to Henry that she wished to have a private interview with Emily before he saw her, and to which he readily assented. About an hour before sun-down, a long train of travellers approached the town, mounted on Indian ponies. Emily's mother was unable any longer to repress her feelings. She acknowledged aloud her gratitude to God, for the restoration of her children, after their long and perilous captivity. She walked, she at last ran to meet her. The daughter recognized her mother, and, alighting, they were in a moment locked in each other's arms. Both wept in silence—they were the tears of joy mingled with those of sorrow. Mrs. B. and Emily returned and took shelter for the night in an Indian cabin. Having somewhat adjusted her dress, Mrs. B. went in search of Henry, and directed him where to find her daughter. When he reached the door, Emily was sitting near it. Seeing her, he sprang forward, embraced her, and exclaimed, "My long lost Emily!" She extended her hand, but was unable to utter a word. Her affection and gratitude overcame her. The two little girls had not yet arrived. But they came the next morning, accompanied by the old woman, Luggi. She was the miserable personification of despair. She had evidently been weeping for a long time. The children had totally forgotten their mother. When she attempted to take them and caress them, they ran screaming to the squaw, and threw their arms around her neck—she embracing them tenderly and talking in-

cemantly and incoherently in Cherokee. At length the prisoners were collected on the river bank. The morning was beautiful. The steersmen blew their horns. The shrill sounds reverberated along the neighboring cliffs and up the vallies. The moment arrived when the little girls must be torn from their Indian mother. A young man was sent to take them away: they resisted: the old squaw clung to them in an agony; but they were brought on board. After the fleet had gained the middle of the stream, and was fairly under way, the old woman ran along the beach for nearly a mile. At length, being exhausted, she sat down. The last that was seen of her by those who were watching her from the sterns of the boats, she was sitting with her head covered with her blanket, between her knees, apparently pouring out her unavailing tears.

The way to Nashville was long and wearisome to all on board, except Henry and Emily. The dangers and sufferings which both had passed, were almost forgotten in the joyful anticipations of the future. But at last the long desired station was in the view of the travellers. The settlers flew to the water side. The boats were quickly fastened to the shore. The congratulations were mutual and heartfelt. Some laughed and many wept from excess of joy. The veteran commander and his heroic wife, whose fame had extended far and wide, were the observed of all observers. Every tongue did them reverence. Groups were collected on the decks. Gordon, the spy, was every where. The loud and long roar arose from every cluster that was gathered around him. The removal of the women and children, and the goods of the emigrants, required time; but every one assisted cheerfully. There was peace; and each one had before him "where to choose a place of residence and Providence his guide." Schools were established—temples of christian worship founded. Elegance and taste came flying on golden wings. The arts flourished: the sound of the woodman's axe was heard in a thousand directions.

A day was set for the marriage of Henry and Emily. There was a great wedding. He received a rich reward for his bravery and fidelity in the hand of her who on that day came to the altar with a countenance radiant with virtue, beauty and joy. In the course of time they became the happy progenitors of a highly gifted and honored race.

STANZAS.

FROM A LADY'S PORT-FOLIO.

Oh earth! oh earth! with thy sunny brow,
And gay, alluring smile,
I dare not trust thy radiance more,
That doth so oft beguile.
I would not, now, my years were less,
Or e'en my cheek more fair,
For time hath ever a withering blight,
And I'll not place my heart there.

Nor would I that the breath of fame
My name aloft should raise;—
For man is ever a fickle thing,
And I care not for his praise.

And wit may flash, and mirth may flow,
But flash and flow in vain,
For they ne'er can cure an aching heart,
Or cool a burning brain.

I love not pomp, I love not power,
And wealth in vain may shine,
And the banquet passes unheeded by,
For I love not rosy wine.
And love hath lost its fairy spell,
My heart forgets to sigh;
I care not now for the brightest ray,
That beams from beauty's eye.

And thanks to thee, I have learn'd to love
And trust the world no more;
For I find that but deceitful show
I deemed so true before.
My silent heart and pensive lyre
Are all I ask of earth,
Whose tears are but an empty shade,
An idle sound whose mirth.

S. P.

THE BUSY-BODY.

No. III.

Saturday, May 5th.

O what a miracle is man to man!—*Night Thoughts.*

You can scarce pay any man a greater compliment, than by commending him for his perfect *knowledge of the world*—a phrase to which custom has given two distinct meanings. It is not, in every case, easy to determine in which of these senses it is employed: sometimes, indeed, the two are partially blended, or shaded into one another, and, sometimes, they are united: but, however intended or understood, its application is always considered highly flattering. *Knowledge of the world*, in either sense, is certainly a great accomplishment—a most valuable acquirement; but this does not seem to be the main reason why it is thought so creditable:—it implies talent, and a nice discernment, and most persons, if they can establish a character for these, are content to leave the actual advantages of knowledge to more dull and plodding souls. Every one knows, that commendation of a boy's mental power is usually the signal for his throwing aside his books, and talking contemptuously of those who still labor on, because they have no kind friends to ruin them by ill-judged flattery. Most persons seem to indulge as much self-complacency, when, by a sagacious air, they can gain credit for great knowledge, as if they actually possessed the treasure. Hypocrisy is an homage paid to learning quite as often as to virtue.

But here I should take more particular notice of the two senses, in which, as I have just remarked, the phrase, *knowledge of the world*, is employed. Sometimes it is intended to signify an acquaintance with the forms and usages of fashion and polite society, of that particular rank to which the person possessing it belongs, or

more properly, of every class of the community into which he may be thrown. Used in this sense, it may be regarded as the true source of *gentility*, if from the latter we abstract the idea of high birth, so that it be considered only as the distinctive quality of a *gentleman*, and define a gentleman, as some author has well done, to be a man who is at ease in every sort of company. For this ease is always the result of self-confidence, arising from a knowledge of the principles of elegant behavior. It is true, there may be a certain boldness of demeanor, springing from a very different source—ignorance and vulgarity; but this is awkward rudeness, not graceful ease. *Knowledge of the world* also signifies knowledge of mankind—of human nature; and, either in this sense, or in one compounded from this and the former, is most frequently employed.

Different circumstances may alter, at least in appearance, the relative value of these two sorts of knowledge. They who engage in the active, arduous business of the world should lose no opportunity of gaining an insight into the principles and motives of human action. There is all the hazard of the gaming-table, in dealing with our fellow-men, if we know nothing of that moral arithmetic, by which may be calculated the chances of others' conduct. On the contrary, they who make pleasure their main object, may, consistently enough with this mode of life, prize good-breeding—a familiarity with the usages of society, the most highly. However, it is very certain that each of these, not only assists, but, in some degree is necessary to the other. No one can become a perfect gentleman, according to our borrowed definition of that character, without a considerable acquaintance with human nature. Without it, a person may go through the common forms of civility, from mere habit, but is entirely at a loss how to act in any emergency which requires a nice perception of the feelings of others, dependence on his own powers of invention, and an inherent sense of propriety. "The least variation from established precedents will totally distract and bewilder him." And, on the other hand, he who would make man his study, beside the ease which is absolutely essential to the successful study of any object, should possess that knowledge of the usages of society, which will fit him for unrestrained and refined intercourse with his fellow-men—the objects of his investigations.

But my further remarks must be confined to a single head—knowledge of human character. Even if the study of mankind were productive of no practical advantage, it would still be an interesting and dignified pursuit; and, if the only solid benefits to be derived from it were that habit of close observation and undivided attention, and that acuteness of mind, which it tends to engender or improve, it might be recommended as an exercise to strengthen the intellect, in preference to almost any other. The studies usually adopted for this purpose have one great disadvantage: they sharpen the apprehension of abstract truth and error, correct the judgment, strengthen the reason, and improve the memory; but the external senses—those which hold converse with the objects of the outer world, are enfeebled, or, at least, in no degree benefited. The student who leaves his chamber for amusement or bodily exercise, after intense application to mathematical or metaphysical investigations, his intellect having been so

invigorated that he can follow the closest chain of argument, detect the most subtle fallacy, apprehend the most intricate speculation, when he comes forth among his fellow-men, is, frequently, still wrapt up in mental abstractions—feels nothing that he handles—sees not the objects that cast their images on the mirror of vision—hears no sound however forcibly its vibrations ring upon his tympanum. Or, if he be not thus absent minded, his thoughts wander and rove about, like birds liberated from their cage, dwelling but for a moment on each object—free as air—as light, too, and empty. Nothing makes a lasting impression. The habit of attentive observation can be formed only by long practice—not in the closet, but in the busy haunts of active life. From the *penetratitia* of the study may issue proper inmates for a cloister; but he, who intends to strive for mastery in the world, can acquire, only amid the world's din and bustle, the quick eye, the sensitive ear, which no movement, no breath escapes. And the study of which we speak, while it sharpens the outward senses, will compare, to its advantage, with any other, as a mere intellectual exercise.

But it has a higher recommendation than its interesting character, or fitness to develop the mental powers—its intrinsic value. Some knowledge of the human nature must be possessed by every one who pretends to have any, even the most trivial, dealings with his fellow-men; and none, however dull the perceptions, however vacant the mind, can go through life without acquiring a certain proportion of it. Even the instinct of animals seems to give them some acquaintance with man's character; and perfect idiots often possess a moderate share of acuteness—a sort of animal cunning, which governs their intercourse with the world. But, when, to the force of habit and necessary casual observation, are added close attention and systematic study, no bounds can be assigned to our attainable knowledge of mankind. And what advantage—what power does an intimate acquaintance with the human heart confer? In every profession—in every business, they are felt, though they never can be estimated. The learning of the schools, bodily skill, energy, and courage, are of little avail, when knowledge of the world, the guide to all their noblest achievements, is wanting.

But the value of this knowledge is not greater than the difficulty of its acquirement. Few ever attain to a close familiarity with the various motives—reason, passion, fitful whim, and lasting prejudice, which operate upon the mind, and determine the will. It requires a comprehensiveness of intellect, an acuteness of perception, and a patient study, which are rarely combined. No pursuit can be more delightful, so much that is new and keenly interesting rises to the learner's view, at every step of his progress. And, then, the consciousness of each step's importance—of the advantage which it gives, enhances greatly his pleasure. But the formation of a habit of fixed attention, so necessary to any long continued intellectual effort, and, under all circumstances, demanding great energy and perseverance, here meets with peculiar difficulties. A person accustomed to the profoundest mental abstractions, in the closet, on coming out into the world, if he give himself to what is passing around, is confused by the constant hurry and noise, and the quick succession of objects, and cannot command his thoughts, or bring

them to bear upon a single point. The attention is called off at every moment. Doubtless many will remember frequent resolutions, made under a strong sense of the importance of the task, to set about the study of mankind in earnest.

Wherever these purposes have been formed—in the street, the public assembly, or the drawing-room, they have, immediately, commenced to execute them. An unpractised eye, a mind without discipline, are slow in their operations; and some, after a few glances and listless reflections, have probably concluded, that there, at least, nothing was to be learned, and given up their plan from mere sluggishness. But the greater number have been insensibly led away from the object of pursuit by the thousand forms, material and ideal, constantly flitting before them; have forgotten the task imposed, while indulging the luxuries of sight and hearing, or forming new purposes of study and amusement.

The chief difficulty, however, lies in the nature of the science itself. The mind is not like a machine acted upon by measured and regular impulses. You may determine the operation of the most complicated engine of human invention, with certainty, because the force and number of the springs or other impelling powers, may be clearly ascertained. The revolutions of planets may be calculated, notwithstanding the numerous perturbations of their orbits. But the various influences which decide human conduct cannot all be detected by the nicest scrutiny. A single disturbing cause, and that deep-hidden, often produces effects quite contrary to expectations formed from the most profound deductions. Scarcely on any two minds do the same motives operate with equal force. And, after all, he who is best acquainted with human nature, does but calculate chances, when seeking to determine what course another will take under particular circumstances. The sway of passion, as it cannot be controlled, so also cannot be estimated. But, still, though our knowledge of man's character is always an uncertain guide, and as nought compared with the omniscience of Deity, it admits of wonderful improvement; and he, who has profited most by observation and study, will calculate the chance most nearly. When results are variable, we generally approximate the truth, with the increase in the number of accurate observations compounded. This is eminently the case in regard to the investigations of which I have been speaking.

But what effect upon a person's own character does a profound knowledge of human nature produce? There is certainly danger that the power which it confers will be misdirected; and so may be any sort of knowledge or any good. No argument against a thing, drawn from its abuse, can be valid, until it is shown that its advantages are less than the evils of such abuse. A knowledge of mankind may also tend to cherish religious skepticism, and a disregard of virtue, in minds not well balanced by education and the force of principle. But this is the tendency of many branches of study—scientific study in particular—at which no one, now-a-days, pretends to rail on that account. Knowledge, universally, is power; and power, in the hands of men lacking good principles, whether such principles have never been instilled into their minds, or have been corruptly abandoned when possessed, is always prejudicial both to superiors and inferiors.

THE BUSY-BODY—No. IV.

Saturday, May 19th.

———And I dressed myself in my best suit of black, which is the color I always wear—it saves money, when relations happen to bequeath the misfortune of going into mourning.

Lawrie Todd.

The most perfect character is composed of elements the most strongly and incessantly conflicting; their violence, however, being usually imperceptible from the nice correspondence of their strength; the mind being kept in a state of equilibrium, more or less stable, by many antagonist forces. A well poised mind is, proverbially, of all, the best. The predominance of any one faculty or feeling destroys that balance of power, which is no less important in the mental than in political economy.

Thus, in every character, tender sensibility and ready emotions are opposed, and, to some degree kept in check, by a calculating spirit—a disposition to regard utility alone. All have experienced the conflict between these repugnant principles. Feeling will sometimes creep over the soul, and usurp dominion, when conscience tells us that reason should bear sway: pity warm and soften the heart, though justice dictates stern determinations. So, too, thoughts, cold, and worldly, and selfish, will oft break in upon the spirit of devotion, the glow of refined joy, the swelling sympathies of compassion and of love, and the silent musings of deep sorrow, when they seem polluting and almost sacrilegious. The extreme, in one case, is that entire subjection to impulse and emotion, which makes a man the creature of each momentary feeling: in the other, that constant and passionless regard to the suggestions of worldly prudence, which might be almost rivalled by an intricate calculating machine. The former failing, however, meets with our ready indulgence, or even our esteem: we are apt to attribute the fault to nature, that gave such a warm heart, such quick sensibility, rather than to the individual himself. But the latter excites disgust and contempt: we call it unnatural; though there seems no good reason for the accusation: Dame Nature, in her *freaks*—as some irreverently name her eccentricities—is just as likely to leave one heartless, as to make him all heart. The true reason of this difference is, that experience of the qualities, which best fit an individual for social duties, begets in us a dislike for everything akin to selfishness.

The idea of founding calculations of pecuniary profit or loss upon the possibility of events so mournful as the death of relatives and friends is repugnant to all refined and tender feeling. At least our kindred we should love as ourselves: this is much narrower than the golden rule. If then a man shrinks from the duty of framing his last will and testament, while yet in health and strength, because of the mournful thoughts and gloomy anticipations which the employment brings; because death seems nearer the more attentively it is viewed; according to this law of love, he should feel the same unwillingness to make a settlement depending for its effect upon the decease of a wife or child. These arrangements, indeed, no matter how acute his sensibilities, common prudence forbids to omit. The great evil which might result from their neglect, far outweighs every consideration of mere feeling. But it is very

clear, that he, who regulates trifling interests by a continual anticipation of those times of bereavement, which overwhelm the souls of most men with bitterness; who is willing to conjure up forms of woe, and dwell upon the thoughts which they inspire, for the least promise of gain, has not a heart warmed by the common affections of humanity. The exhibition of such unfeeling sordidness, as would lead one to provide against the risk of trivial pecuniary loss from the death of friends, by wearing, constantly, the garb of mourning, though, in fiction it may excite only a smile, must, in real life, waken feelings akin to disgust. Still more repugnant to our better nature is the intrusion of these petty considerations of selfishness, upon the consecrated gloom of sorrow; and, if they sometimes come unbidden, the mind should scarce acknowledge to itself their presence; much less should they be exposed to public view, as boasted tokens of superior worldly wisdom.

Some of my readers may have heard the story of a man, who, from motives of economy, bought a coffin for his daughter, before her decease. I will not vouch for its truth—the authority is perhaps doubtful. The child was lying dangerously ill—as he supposed, at the point of death; and even the physicians had pronounced the case hopeless, and had left her to struggle with fate. The agonized father was principally occupied with thoughts of the funeral expenses; and, as there was reason for fearing an advance in the price of boards, and a strike for higher wages among the journeymen-undertakers, he soon resolved to anticipate the rising market, and ordered a coffin to be made immediately. But nature peeping out from her retreat, and seeing no physician near, began, though timidly at first, to assert her dominion. Calm sleep once again lulled the girl's young frame, and she awoke, at length, with a brighter eye and a pulse more free. Her father, alarmed for the success of his speculation, could hardly credit the joyful intelligence; but, after assuring himself of its truth, hurried off, with palpitating heart, to countermand his former orders. But the undertaker, with a despatch suited to the supposed emergency, had already done his work—the coffin was waiting for its tenant. The parent returned, in no very enviable state of feeling, to the bed-side of his child, thinking that, perhaps, he had been too hasty in listening to the voice of hope. All doubt, however, was now dispelled. The doctors had returned in time to take to themselves the credit of a wonderful cure, and they congratulated him warmly upon this new triumph of the healing art: in short, his daughter, in due time, completely recovered. It was in vain to attempt concealment. The story had already gotten abroad, and many a joke was circulated at the poor man's expense. Such expense, however, he did not much lay to heart. But there was the coffin upon his hands—a dead loss, in all likelihood; for the town in which he lived was not very large, and was noted for its health. And then, coffins are, usually, made to order, and by exact measurement, which increased his risk to a fearful extent. For some years no tenant for this narrow lodging offered. During that period, he is said to have displayed an uncommon regard for children, particularly such as were of about the size of his daughter, surveying them attentively from head to foot, whenever he met with them, as if to judge of their proportions. Whether, at such moments, his "heart was in

the coffin," none could say. Unluckily, the same daughter at length fell into the doctor's hands again, and this time nature was outwitted: the child died. Perhaps the thought that a coffin waited for her hastened her end. To her bed of rest she was gathered, and slept not the less peacefully, for being somewhat cramped in a tenement which she had outgrown.

A few months ago I paid a visit of condolence to a friend of mine in affliction: he had lately buried one of his children—a promising boy of about eight years old. I had put off the call as long as a decent regard to the claims of friendship would permit, as I always do at such a time, unless my assistance in its sad offices be needed. The unfeeling crowd of consolers, that usually throng the house of sorrow, if ever successful in driving away grief, succeed but by harassing the mind of the afflicted mourner—by making the second woe greater than the first. Silence and retirement are the only balms that soften and purify the heart, in healing its wounds. I did not expect to find my friend overcome by the violence of his distress: he had never seemed like one who could easily be melted into tears. He is a man in moderate circumstances, and has a large household to support. Many years ago he settled in our neighborhood, then just beginning the world, and having but a single child. The family has since increased with wonderful rapidity, and the father has received my congratulations, on the accession of every new comer, with smiles growing fainter and more melancholy at each successive visitation, until, on the last occasion, when twins—a fine boy and girl—were ushered into the world, he received the friends that came to rejoice with him, with such a wry face, though striving to appear resigned, that it was evident he had been greatly startled by the magnitude of nature's present.

I have said that he was in moderate circumstances; and, without being miserly, he has always seemed fearful of being reduced to want; perhaps not without reason, since the mouths to be supplied have so rapidly increased both in capacity and number. Indeed, while the household has gathered strength, the house has been gradually falling into ruin, for want of repairs. The birth of each child has defeated some plan for painting or plastering; and the twins had like to have driven every such purpose forever from his thoughts. Several times, especially of late, I have found him, when I called, busily engaged in calculation of his "ways and means," and then it has been impossible to lead our conversation away from the subject of finance. If his spirits are at any time dejected, he seeks relief in computing the next month's debts and credits; and the indication, on his balance-sheet, of a surplus revenue always restores equanimity. So particular is he in keeping accounts, that he can tell exactly what the maintenance and education of every one of his children, for each year of its life, has cost; and has carefully computed how many more youngsters will suffice to ruin him.

On calling at my friend's house, to condole with him for the loss of his son, I found him alone, seated at his desk, and intent on a paper, which the first glance told me was covered with figures: he is trying, thought I, a new remedy for grief—the application of the rules of arithmetic. On hearing the sound of my voice, he rose,

and, extending his hand, pressed mine closely, his face wearing a mock expression of deep sorrow. But soon the cloud passed away, as we entered into easy conversation. Every mention, however, of his poor boy brought back a momentary look of sadness, which seemed put on, as if from a sense of duty, and passed away with any change of subject. So I relinquished the office of consolation as unnecessary. At length he began to ask my advice about the proper repairs for his house, and the workmen to be employed. "I know," said he, "that such considerations may appear unsuitable to a time of deep affliction; but overwhelming as my distress has been"—and here he drew a handkerchief across his eyes, and winked them, as if to force a tear—"I must bear up against it. Prudence forbids a man in my circumstances to give way to grief. I have calculated, as well as my troubles would permit—for I can't always help shedding tears when I think of him—how much my poor boy would have cost me if he had lived. He was to have gone to school next quarter, and that, you know, would have been something. Altogether, I think I shall be able to plaster the house at least. Poor fellow! I wouldn't have lost him for a thousand houses!"

I gave my advice in regard to the disposal of what he had saved by his son's death; but he afterwards spent so long a time in perfecting his calculations, that the opportunity was lost: my friend finds himself threatened with another heir!

STANZAS TO HELEN.

By F. W. Thomas, author of "Clinton Bradshaw," &c.

Lady! thou art changed indeed—

I may not love thee now,
But view thee as an idol creed,
Unworthy of a vow.

Yet once thy love was all to me:
It was a courted destiny,

Such as his day-dreams show
To the fondly trusting boy,
Whose fancy is as full of joy
As earth is full of wo.

I wooed thy love as prophets woo
The hour they've promised long,
Whose happy scenes should all be true,
And beautiful as song.

How very vain the phantasy
Of those who hope, and hope for aye,
While fickle passion lasts;
Who, like the summer's insect thing,
Flit away on careless wing,
Till comes the chilling blasts.

And then it dies, as my hope dies,
No, never to return;
Devoted, as it highest flies,
To an untimely tomb.
How often in the moonlit grove,
When we have pledged our mutual love,

You've pointed to the star,
And spoke of your unchanging soul,
The needle's truth, and of the pole,
And of the mariner.

This is love's frailest common-place,
Written oft as spoken;
It is the lover's word of grace,
Before his vows are broken.
Yet you, you spoke with such a look,
That truth, as in the sybil's book,
Seemed clothed in every word;
And I—I listened and believed:
And who may not be thus deceived,
Who feels it as he heard?

Thou queen of the voluptuous throng,
Where pleasure holds her reign,
No more I hear thy siren song,
Or court thy proffered chain.
No more the meeting hour of gladness,
No more the parting hour of sadness,
Shall light or cloud my brow:
You've broke the vow I loved the best;
I feel I have the power to jest
With any other vow.

They're like thee, in this western land,
As lovely as thou art;
But then they have a warmer hand,
And wear a truer heart.
I may not kneel at any shrine,
So soon since I arose from thine—
I might mistake the maid:
And yet, oh! for the early dream
Of her I left o'er hill and stream,
I'd be again betrayed.

Betrayed!—no, not betrayed by thee—
'Twas manhood's sober thought,
That proved the cold reality
My boyish fancy wrought
To every virtue, every bliss:
Yet who, for such a dream as this,
Who would not be a boy?
With woman for his fairy queen,
And earth as one bright gorgeous scene,
A fairy land of joy.

Yes! oft-times as I sorrowing pine
For those I've left behind me,
The friends who bound their hearts with mine,
And ever thus shall bind me;
As oft as I recall the hours
When law was left for lady bowers,
And reason left for rhyme;
I think of those who round thee hung,
The love-note of thy siren tongue,
And of our tristing time.

And when I clasp a friend's warm hand,
Who like me loves the west—
Leaving afar our father-land,
Where thou art loveliest—
'Tis sweet with him to talk of thee,
Thy smile, thy look, thy witchery,
Thy beauty, and thy art;

And when I hear it all unmoved,
I wonder if I ever loved,
So very calm's my heart.

I'm from thee many a weary mile,
Where rolls La Belle* along ;
I love its ripples, song and smile,
'Tis like thy smile and song—
So truly it reflects the scene,
The sunny ray, the changing green,
The clear, o'erhanging heaven ;
So truly, when I've looked on thee,
Thou gav'st each love-look back to me,
Till I have thought love given.

Oh, lady ! in this changing world,
Passions, strange and strong,
Bear us, like a leaf, wind-whirled,
With varying fate along.
But yester-eve this bounding river
Wore holy calm, as if forever ;
Now rolls it wildly free.
Thus I, who bid my heart be still,
Now feel it bursting 'gainst my will,
As wildly unto thee.

Alas ! I am a wanderer
From those who love me best,
Who, when it was my lot to err,
Relieved an aching breast ;
From friends who loved my lowly name,
And never heard a word of blame,
But to defend their friend ;
And here, o'er mountain and o'er flood,
I pour to them my gratitude ;
'Tis all I have to send.

Oh ! that I could my dark thoughts cast
Upon thee, lovely river !
And know, as on thy bright waves passed,
They'd pass with them forever.
Lady ! we yet may meet again,
When memory shall no longer pain,
And love no longer sigh ;
No more, no more may I adore thee ;
Enough, the world is all before me ;
My lady-love, good bye.

Banks of the Ohio, near Louisville, 1836.

YET MORE ABOUT TREES.

" Still climbing trees
With the Hesperides."

Leigh Hunt.

A few months ago I strung together a few thoughts upon this most delightful theme ; and interspersed some passages from the poets, and legends from the classics, by way of illustrating those views. A critic of the *cui bono* class piqued me to write "More about Trees," in order to show that our countrymen had a love, and were fast increasing that affection, for these beautiful creations of God's hand : and the object of the present paper is merely to cite more of those illustrations, for

* The French called the Ohio La Belle Riviere ; the beautiful river.

the readers of the Messenger, from the ancient and modern poets.

This is peculiarly the season for the resumption of this subject. How beautifully sings the wisest, when in his canticles he says :

" The winter is past : the rain is over and gone ;
The flowers appear on the earth ; the time of singing is come,
and the voice of the turtle is heard in our land :

The figtree putteth forth her green figs, and the vines, with the tender grape, give a good smell."

But few delights are there for the enjoyment of the lover of nature in the winter time,—I mean in our northern New England winter-time. My friend Brent has touchingly described the sheeny show of the sleet, lighted by the next day's sun, but that is evanescent at best, and always cold and dreary in its associations. Yet do I remember some winter days when my rambles afield have been as delightful and as free from discomfort as those of the merry summer time, or the more sober of autumn days. One in a particular manner recurs to me. It was in December. The sun rose as clear and undimmed as in May. I climbed to the top of a lovely hill in the neighborhood, to enjoy a beautiful, and, to me, a most rare spectacle. I had never before an idea of the fine effect upon a landscape of the curling of a thousand smokes, wreathing slowly and gently upwards from the cottage roofs of little villages scattered picturesquely around the base of a high hill. The atmosphere was perfectly clear, and the sun shed its short-lived warmth upon the sere grass at my feet, rendering its yellow tint more deep and golden. It dazzled my eye as it rested upon the sod. The sky was so soft and blue, and those little eddies of smoke were curling so slowly upwards to its expanse, I could almost fancy it to be their resting place, and that it was from them that it received its own azure beauty. The little river which bears the same name as the hill, was gliding on its serpentine way, forming little islands and peninsulas, all covered with the same hue of wintry desolation, yet cheered and relieved by this unwonted and almost forgotten brightness. The sunbeam played under the brown bank with the leaping wavelet, which, as if delighted with its return, sparkled and flashed like scattering diamonds, beneath its influence. The very oaks, shorn, as they had so long been, of their verdure, and standing forth, as they did, in all their gaunt and gigantic majesty, seemed glad amidst all this gladness of nature : for they gently waved their minuter branches, and looked down, methought, into their transparent mirror, to catch, from the brightness it reflected, a part of this general inspiration of nature.

But it is of summer trees, and not those of winter, that I was writing.

The whole country is now in blossom. How beautiful is Herrick, when apostrophizing these short-lived visitants !

'BLOSSOMS.

'Fair pledges of a fruitful tree,—
Why do ye fall so fast ?
Your date is not so past,
But ye may yet stay here awhile
To blush and gently smile,—
And go at last !

What! were ye born to be
An hour or half's delight,
And so to bid good night?
'Twas pity nature brought ye forth,
Merely to show your worth,
And lose you quite!

But you are lovely leaves, where we
May read, how soon things have
Their end, tho' ne'er so brave;
And after they have shown their pride,
Like you, awhile,—they glide
Into the grave!

There are those who pretend to despise the Sycamore. This tree is not likely to come to perfection, unless planted upon the banks of rivers. It is not so good a tree for lawn or city as many others. Its rapid growth is in its favor. But the sycamore-haters should see it growing upon the Connecticut river: its noble stems gracefully dipping "its broad green crown" into the waves, and forming a verdant bower, into which you may drive your skiff, and sit like a nested bird, seeing but unseen. Old *Herrick* has a pretty address to this tree, among his delightful poems.

'TO SYCAMORES.

'I'm sick with love: oh let me lie
Under your shades, to sleep or die!
Either is welcome, so I have
Or here my bed, or here my grave.
Why do ye sigh, and sob, and keep
Time with the tears that I do weep?
Say! have ye sense, and do ye prove
What sympathies there are in love?

And a modern poet has been inspired by the beauty of such a tree as I have described. He says:

'This sycamore, oft musical with bees,
Such tents the patriarchs loved! oh, long unharmed
May all its aged boughs o'er canopy
The small round basin, which this jutting stone
Keeps pure from falling leaves.
Here twilight is, and coolness; here is moss,
A soft seat, and a deep and ample shade.
Thou may'st toil far, and find no second tree.
Drink, pilgrim, here! here rest!

Coleridge.

The same poet has this pretty conceit. Who has not seen what he so tenderly describes?

'This little lime-tree bower! in which I've marked
Much that has soothed me. Pale beneath the blaze
Hung the transparent foliage: and I watched
Some broad and sunny leaf, and loved to see
The shadow of the leaf and stem above,
Dappling its sunshine!

While thinking, in our less genial clime, of such a bower as this, how natural is it for the lover of nature to exclaim, with poor *Keats*,

'Oh for a beaker full of the warm south,—
Full of the true, the blushing Hippocrene!
With beaded bubbles winking at the brim,
And purple-stained mouth!
That I might drink, and leave the world, unseen,
And fade away, into the forest dim!

Such a 'forest dim' was that of Arden, when the duke kept court, when the melancholy Jaques watched

the dappled deer, where Orlando and Rosalind loved, and where Amicus sang in strains like these:

'Under the greenwood tree,
Who loves to lie with me,
And turn his merry note
Unto the sweet bird's throat,
Come hither!
Here shall he see
No enemy
But winter and rough weather!'

And in what but such a sycamore bower as *Herrick* apostrophizes, and *Coleridge* describes, was that, in which *Precator*, that sweet poet of our own day, was fain to dwell?

'Oh I would live where rivers gaily run,
Where shady trees may screen me from the sun:
Where I may feel and breathe the fragrant air,
Where, (what'er the toil or wearying pains I bear,)
Those eyes, which look away all human ill,
May shed on me their still, sweet, constant light,
And all the hearts I love, may, day and night,
Be found beside me ever clustering still!

Berry Cornwall.

But I must close my leaf-gathering, and cannot do so more appropriately, methinks, than by transcribing for you a rare gem from old *Drayton*, (1630,) called

'THE FORESTER.

'I am the prince of sports, the forest is my fee,
He's not upon the earth who pleasure tastes like me.
The morn no sooner puts her rosy mantle on,
Than from my quiet lodge I instantly am gone,
When the melodious birds, from every bush and brier
Of the wild spacious wastes, make a continual choir.
The mottled meadows then, fresh garnish'd by the sun,
Waft up their spicy sweets, upon the winds that run
In easy ambling course, and softly seem to pace,
That we the longer may their lusciousness embrace.
I am clad in youthful green, I other colors scorn;
My silken baldric bears my bugle or my horn,
Which setting to my lips, I wind so loud and shrill,
As makes the echoes shout from every neighboring hill;
My dog-hook at my belt, to which my lyam's tied,
My sheaf of arrows by, my wood knife by my side;
My cross-bow in my hand, I by the woodman's art,
Forecast where I may spring the goodly high-palm'd hart.
To view the grazing herds, at sundry times I use,
When by the loftiest head I know my deer to choose,
And to unherd him then, I gallop o'er the ground,
Upon my well breath'd nag, and cheer my faithful hound.
Sometimes I pitch my toils the deer alive to take,
Sometimes I like the cry the deep-mouth'd kennel make.
Meanwhile the feather'd flocks that the wild forests haunt,
Their sylvan songs to me in cheerful ditties chaunt.
The shades, like ample shields, defend me from the sun,
Through which to cheer my burning brow, the gentle streamlets
run;
No little bubbling brook from any spring that falls,
But on the pebbles play for me his pretty madrigals.
At morn I climb the hills, where wholesome breezes blow,
At noon I seek the vales, and arching shades below;
At evening I again the crystal floods frequent;
In pleasure thus my life continually is spent.
As princes and great lords have palaces, so I
Have in the forests here, for hall and gallery,
The tall and stately woods, which underneath are plain;
The groves my gardens are, the heath and downs again
My wide and spacious walks. Ah! say what'er you can,
The forester is still your only happy man!

Adieu! I will yet, ere summer closes, climb more trees, with the *Hesperides*.

J. F. O.

ON HEALTH.

TO MOTHERS.

BY MRS. L. H. SIGOURNEY.

Have we not all of us seen, with pity and regret, some sickly mother, burdened with the cares of her household? Feeling that there were employments which none could discharge as well as herself—modifications of duty, in which the interest of her husband, the welfare of her children, the comfort of her family, were involved—duties which she could not depute to another, without loss—she continued to exert herself, above and beyond her strength.

Still her step is languid, and her eye joyless. The "spirit, indeed, is willing, but the flesh is weak." Her little ones observe her dejected manner, and become sad; or, they take advantage of her want of energy, and grow lawless. She, herself, cannot long persist in a course of labor that involves expense of health, without some mental sympathy. A temper the most amiable, will sometimes become irritable or complaining, when the shrinking nerves require rest, and the demands of toil, and the claims upon painful thought, are perpetual. Efforts, which to one in health, are like dew-drops shaken from the eagle's wing, seem to the invalid like the ascent of the Alps, or like heaping Pelion upon Ossa.

Admitting that a sickly woman has sufficient self-control to repel the intrusion of fretfulness, and preserve a subdued equanimity, this, though certainly deserving of praise, is falling short of what she should wish to attain. The meek look of resignation, though it may cost her much to maintain, is not all that a husband wishes, who, coming from the vexed atmosphere of business or ambition, would fain find in his home the smile of cheerfulness, the playful charm of a mind at ease.

Men, prize more than our sex are always aware, the health-beaming countenance, the elastic step, and all those demonstrations of domestic order, in which unbroken activity delights. They love to see a woman equal to her own duties, and performing them with pleasure. They do not like to have the principal theme of domestic conversation a detail of physical ills, or to be expected to question, like a physician, into the variety of symptoms which have supervened since their departure. Or if this may be occasionally done, with a good grace, where ill-health is supposed to be temporary, yet the saddening effects of an enfeebled constitution, cannot always be resisted by him who expected to find in a wife a "yoke-fellow," able to endure the rough roads and sharp ascents of life. A nature possessing great capacities of sympathy and tenderness, may doubtless be softened by the exercise of those capacities. Still, the good gained, is only from the patient, perhaps the christian endurance of a disappointment. But where those capacities do not exist, and where religious principle is absent, the perpetual influence of a sickly and mournful wife, is as a blight on those prospects which allure to matrimony. Folly, moroseness, and lapses into vice, may be often traced to those causes which robe home in gloom.

If to a father the influence of continual ill-health in

the partner of his joys, is so dispiriting, how much more oppressive is it to those little ones who are by nature allied to gladness. Childhood, whose richest heritage is its innocent joy, must hush its sportive laugh, and repress its merry footstep, as if its plays were sins. Or if the diseased nerves of the mother do not habitually impose such sacrifices, it learns, from nature's promptings, to fashion its manners, or its voice, or its countenance, after the melancholy model of the sufferer whom it loves, and so forfeits its beautiful heritage of young delight.

Those sicknesses to which the most robust are subject, by giving exercise to self-denial and offices of sympathy, from all the members of a household, are doubtless often blessed as means of improvement, and the messengers which draw more closely the bonds of true affection. But it must be sufficiently obvious, that I allude to that want of constitutional vigor, or of that confirmed feebleness of habit, which either create inability for those duties which in most parts of our country devolve upon a wife, a mother, and the mistress of a family, or else cause them to be discharged in languor and wretchedness. And I speak of them, that the attention of those who conduct the earliest physical education of females, may be quickened to search how an evil of such magnitude may be obviated.

Mothers, is there any thing we can do to acquire for our daughters, a good constitution? Is there truth in the sentiment sometimes expressed, that our sex are becoming more and more effeminate? Are we as capable of enduring fatigue as were our grandmothers? Are we as well versed in the details of house-keeping, as able to bear them without inconvenience, as our mothers? Have our daughters as much stamina of constitution, as much aptitude for domestic duty, as we ourselves possess? These questions are not interesting to us simply as individuals. They affect the welfare of the community. For the ability or inability of woman to discharge what the Almighty has committed to her, touches the equilibrium of society, and the hidden springs of existence. Tenderly interested as we are for the health of our offspring, let us devote peculiar attention to that of our daughters. Their delicate frames require more care in order to become vigorous, and are in more danger from the prevalence of fashion.

I plead for the little girl, that she may have air and exercise, as well as her brother, and that she may not be too much blamed, if in her earnest play she happen to tear or soil her apparel. I plead that she be not punished as a romp, if she keenly enjoy those active sports which city gentility proscribes. I plead that the ambition to make her accomplished, do not chain her to the piano, till the spinal column, which should consolidate the frame, starts aside like a broken reed;—nor bow her over her book, till the vital energy which ought to pervade the whole frame, mounts into the brain, and kindles the death-fever.

Surely we ought to acquaint ourselves with the outlines of the mechanism of this our clay-temple, that we interfere not, through ignorance, with those laws on which its organization depends. Rendered precious, by being the shrine of an undying spirit, our ministrations for its well-being assume an almost fearful importance. Appointed, as the mother is, to guard the harmony of its architecture, to study the arts on

which its symmetry depends, she is forced to perceive how much the mind is affected by the circumstances of its lodgment, and is incited to cherish the mortal for the sake of the immortal.

Does she attach value to the germs of intellect? Let her see that the casket which contains them, be not lightly endangered or carelessly broken. Does she pray for the welfare of the soul? Let her seek the good of its companion, who walks with it to the gates of the grave, and rushes again to its embrace on the morning of the resurrection.

Those who educate the young, should be ever awake to the evils of compression in the region of the heart and lungs. A slight ligature there, in the earlier stages of life, is fraught with danger. To disturb or impede the laborers who turn the wheels of life, both night and day, is absurd and ungrateful. Samson was bound in fetters, and ground in the prison-house, for a while, but at length he crushed the pillars of the temple, and the lords of the Philistines perished with him. Nature, though she may be long in resenting an injury, does not forget it. Against those who violate her laws, she often rises as a giant in his might, and when they least expect it, inflicts a fearful punishment. Fashion seems long enough to have oppressed and insulted health in its strong holds. She cannot even prove that she has rendered the form more graceful, as some equivalent for her ravages. In ancient Greece, to whom our painters and sculptors still look for the purest models, was not the form left untortured? the volume of the lungs allowed free play? the heart permitted, without manacles, to do the great work that the Creator assigned it?

The injuries inflicted by compression of the vital parts, are too numerous to be readily recounted. Impaired digestion, obstructed circulation, pulmonary disease, and nervous wretchedness, are in their train. A physician, distinguished by practical knowledge of the Protean forms of insanity, asserts that he gains many patients from this cause. Another medical gentleman of eminence, led by philanthropy to investigate the subject of tight-lacing, has assured the public, that multitudes annually die by the severe discipline of busk and corset. This theory is sustained by collateral proof, and illustrated by dissections.

It is not sufficient that we, mothers, protect our younger daughters, while immediately under our authority, from such hurtful practices. We should follow them until a principle is formed by which they can protect themselves from the tyranny of fashion. It is true, that no young lady acknowledges herself to be laced too tight. Habits that shun the light, and shelter themselves under subterfuge, are ever the most difficult to eradicate. A part of the energy which is essential to their reformation, must be expended in hunting them from their hiding-places. Though the sufferer from tight-lacing, may not own herself to be uncomfortable, the laborious respiration, the constrained movement, perhaps the curved spine, bring different testimony.

But in these days of diffused knowledge, of heightened education, is it possible that any female can put in jeopardy the enjoyment of health, even the duration of existence, for a circumstance of dress? Will she throw an illusion over those who try to save her? and like the Spartan culprit, conceal the destroyer that feeds

upon her vitals? *We know that it is so.* Who, that has tested the omnipotence of fashion, will doubt it? This is by no means the only sacrifice of health that she imposes. But it is a prominent one. Let us, who are mothers, look to it. Fully aware, as we must be, of the danger of stricture on the lungs and heart, during their season of development, why should we not bring up our daughters without any article of dress which could disorder the seat of vitality? Our sons hold themselves erect, without busk, or corset, or framework of whale-bone. Why should not our daughters also? Did not God make them equally upright? Yes. But they have "sought out many inventions."

Let us educate a race who shall have room to breathe. Let us promise, even in their cradle, that their hearts shall not be pinioned as in a vice, nor their spines bent like a bow, nor their ribs forced into the liver. Doubtless, the husbands and fathers of the next generation will give us thanks.

Let us leave no place in the minds of those whom we educate, for the lunatic sentiment, that the mind's healthful action, and the integrity of the organs on which it operates, are secondary to the vanities of external decoration. If they have received from their Creator a sound mind in a sound body, teach them that they are accountable to Him for both. If they deliberately permit injury to either, how shall they answer for it before the High Judge?

But how shall the mother answer it, in whose hand the soul of her child was laid, as a waxen tablet, if she suffer fashion to cover it with fantastic images, and folly to puff out her feverish breath, melting the lines that wisdom pencilled there, till what heaven would fain have polished for itself, loses the fair impression, and becomes like common earth.

Hartford, Conn.

TO A FRIEND AT PARTING.

We part—perhaps to meet no more;
And oft may I, with fond regret,
Recall the scenes we've travelled o'er:
Such scenes the heart can ne'er forget.
Long months—it may be years—will roll;
It may be (who can know the pain
With which that thought weighs down the soul?)
On earth we ne'er shall meet again.

Through distant lands and stranger climes
Our lot 'twill be to wander far,
Yet shall our hearts, like cadenced rhymes—
With friendship for their polar star—
Together flow unjarring on,
Persuading us with siren strain,
How hopes exist, till life be gone,
That we shall haply meet again.

But should such hopes delusive prove,
And ne'er again that joy we know,
While doomed, apart, alone to rove
Through life's uncertain hours of woe;
Then let this last memento be
A link in friendship's holy chain,
To prove my heart still true to thee,
Although we ne'er shall meet again!

F. G.

Bibliographical Notices.

[Publishers and authors, who wish their works noticed in this journal, are requested to forward them immediately.]

"Cromwell. An historical novel. By the author of 'The Brothers,' &c. Two volumes. New York: Harper & Brothers. 1838."

This is undoubtedly one of the ablest productions of its class, and will secure for its talented author a prominent rank among historical novelists. We have not been brought so immediately in contact with the memorable actors in those stirring times of British history, when an oppressed and insulted people rebuked the bold incursions of a heartless and vile despot; nor commingled in imagination, so familiarly with the determined and sanguinary belligerents, since the graphic pen of Scotland's dramatic historian was paralysed in death. If we view the present work as a pure novel, it presents us many points for criticism; it lacks variety of incident, originality, and *dramatis personæ*; but as an historical novel, it stands pre-eminent, bringing before the mind's eye, in the richest attire, the memorable actors in that great struggle which secured freedom to England, and whose influence will be felt to the latest posterity. The able author has succeeded admirably in sketching the character of that most extraordinary man, whose firmness of mind and energy of purpose, raised him from the humblest position in life, if not to a throne, to a sceptre more powerful; since it touched the hearts and swayed the minds of a nation.

"Mexico versus Texas. A descriptive novel. By a Texian. Philadelphia: 1838."

We are glad to find that the skilful pen of the Texian is recording many of the eventful struggles of his oppressed countrymen, in a form which will prove attractive to the general reader. The present work will afford amusement, and impart information, and while there are some objectionable points, there is much to admire and commend. Upon the whole it is a very creditable production.

"Slavery in America; being a Review of Miss Martineau on that subject. By a South Carolinian. Richmond: Thos. W. White. 1838."

This review was originally published in the Southern Literary Messenger, and attracted great attention, from the lucid and successful manner in which it confuted the gross misrepresentations in "Society in America;" and as the demand for the essay has exhausted the number of the Messenger, the editor has determined to publish it in pamphlet form. The time, we think, has been judiciously selected, since it will answer as well for a review of "Retrospect of Western Travels."

"The Lady of Lyons, or Love and Pride. A play in five acts. By E. L. Bulwer. New York: Harper & Brothers. 1838."

The intense anxiety with which "The Lady of Lyons" was awaited, and the avidity with which it has been read, is sufficient evidence of the high estimation in which its gifted author is held, notwithstanding the heavy artillery of certain soi-disant moralists.

So carefully has the present production been put together, that we honestly believe it free from all ground of cavil or criticism from the most rigid moralist; for, melancholy to relate, Bulwer, the emissary of darkness, is reading us a lesson of virtue and morals, and if we mistake not, has disarmed his adversaries, by withholding the necessary food for the fastidious taste of the temulent critics. The fountain, condemned as muddy and pestilential, is pouring forth clear waters; and for the bitter drug, has been substituted a sweet and refreshing draught. He who discovers the serpent's poison lingering on the leaflets of so fragrant a plant, must indeed be gifted with a microscopic eye.

The preface to the play sets forth Mr. Bulwer's object in stepping upon the field of dramatic composition, and his motives are alike creditable to his head and heart. To benefit a friend (Mr. Macready,) by contributing to the novelties of a theatrical season, was a sufficient incentive to Mr. Bulwer, to engage in a labor somewhat at variance with his ordinary pursuits. This, superadded to the charge of the hyper-critics, that dramatic composition was above his range, induced him to engage promptly and heartily in the effort.

To achieve entire success, and demolish the sickly opposition of a band of jealous and prejudiced adversaries, calls for an inventive, creative fancy, and a well stored mind. Of its ability as a dramatic composition, there exists not now a doubt; for although it was brought forth *sub-rosa*, in as critical a community and before as enlightened and competent an umpirage as the world can boast of, it met its unqualified applause. Its dramatic effect, richness and beauty of composition, and lofty tone, have placed it beyond the reach of a prepossessed and illiberal judicature. The following extracts from the fifth act will furnish fair specimens of the play, and as they are selected from the consummation of the plot, develop the ingenuity and power of the author:—

"SCENE II.

"A room in the house of Monsieur Deschappelles; Pauline seated in great dejection.

PAULINE.

Is it so, then. I must be false to love,
Or sacrifice a father! Oh, my Claude,
My lover, and my husband! have I lived
To pray that thou mayst find some fairer boon
Than the deep faith of this devoted heart,
Nourish'd till now, now broken?

(Enter Monsieur Deschappelles.)

MONS. DESCHAP.

My dear child,
How shall I thank, how bless thee? Thou hast saved,
I will not say my fortune—I could bear
Reverse, and shrink not—but that prouder wealth
Which merchants value most; my name, my credit,
The hard-won honors of a toilsome life:
These thou hast saved, my child!

PAULINE.

Is there no hope? No hope but this?

MONS. DESCHAP.

None. If, without the sum
Which Beauseant offers for thy hand, this day
Sinks to the west, to-morrow brings our ruin!
And hundreds, mingled in that ruin, curse
The bankrupt merchant! and the insolent herd
We feasted and made merry, cry in scorn,
"How pride has fallen! Lo, the bankrupt merchant!"
My daughter, thou hast saved us!

PAULINE.

And am lost!

MONS. DESCHAP.

Come, let me hope that Beauseant's love—

PAULINE.

His love—

Talk not of love ; love has no thought of self !
 Love buys not with the ruthless usurer's gold
 The loathsome prostitution of a hand
 Without a heart ! Love sacrifices all things
 To bless the thing it loves ! He knows not love.
 Father, his love is hate, his hope revenge !
 My tears, my anguish, my remorse for falsehood ;
 These are the joys he wrings from our despair !

MONS. DESCHAP.

If thou deem'st thus, reject him ! Shame and ruin
 Were better than thy misery ; think no more on't.
 My sand is well nigh run ; what boots it when
 The glass is broken ? We'll annul the contract.
 And if to-morrow, in the prisoner's cell
 These aged limbs are laid, why still, my child,
 I'll think thou art spared ; and wait the liberal hour
 That lays the beggar by the side of kings !

PAULINE.

No, no, forgive me ! You, my honored father ;
 You, who so loved, so cherish'd me, whose lips
 Never knew one harsh word ! I'm not ungrateful,
 I am but human ! hush ! Now, call the bridegroom ;
 You see I am prepared ; no tears ; all calm ;
 But, father, *talk no more of love !*

MONS. DESCHAP.

My child,

'Tis but one struggle ; he is young, rich, noble ;
 Thy state will rank first mid the dames of Lyons ;
 And when this heart can shelter thee no more,
 Thy youth will not be guardianless.

PAULINE.

I have set

My foot upon the ploughshare ; I will pass
 The fiery ordeal. (*Aside*) Merciful Heaven, support
 me !

And on the absent wanderer shed the light
 Of happier stars, lost evermore to me !"

The important actors in the drama have arrived, and
 are present during the following dialogue. Claude
 Melnotte in disguise :—

"PAULINE.

"Thrice have I sought to speak ; my courage fails me.
 Sir, is it true that you have known, nay, are
 The friend of Melnotte ?

MELNOTTE.

Lady, yes ! Myself

And misery know the man !

PAULINE.

And you will see him,
 And you will bear to him, ay, word for word,
 All that this heart, which breaks in parting from him,
 Would send, ere still for ever.

MELNOTTE.

He hath told me !

You have the right to choose from out the world
 A worthier bridegroom ; he foregoes all claim
 Even to murmur at his doom. Speak on !

PAULINE.

Tell him, for years I never nursed a thought
 That was not his ; that on his wandering way,
 Daily and nightly, poured a mourner's prayers.
 Tell him, ev'n now that I would rather share
 His lowliest lot, walk by his side, an outcast ;
 Work for him, beg with him ; live upon the light
 Of one kind smile from him, than wear the crown
 The Bourbon lost !

MELNOTTE (*aside*.)

Am I already mad ?

And does delirium utter such sweet words
 Into a dreamer's ear ? (*Aloud*) You love him thus,
 And yet desert him ?

PAULINE.

Say that, if his eye
 Could read this heart, its struggles, its temptations,
 His love itself would pardon that desertion !
 Look on that poor old man ; he is my father ;
 He stands upon the verge of an abyss ;
 He calls his child to save him ! Shall I shrink
 From him who gave me birth ? withhold my hand,
 And see a parent perish ? Tell him this,
 And say that we shall meet again in Heaven !

MELNOTTE. (*aside*.)

The night is past ; joy cometh with the morrow.
 (*Aloud*) Lady, I—I—what is this riddle ? what
 The nature of this sacrifice ?

PAULINE. (*pointing to Damas*.)

Go ask him !

BEAUSEANT. (*from the table*.)

The papers are prepared ; we only need
 Your hand and seal.

MELNOTTE.

Stay, lady ; one word more.

Were but your duty with your faith united,
 Would you still share the lowborn peasant's lot !

PAULINE.

Would I ? Ah, better death with him I love
 Than all the pomp, which is but as the flowers
 That crown the victim ! (*turning away*) I am ready.
 (*Melnotte rushes to Damas*.)

DAMAS.

There,

This is the schedule, this the total.

BEAUSEANT. (*to Deschappelles, showing notes*.)

These

Are yours the instant she has signed ; you are
 Still the great house of Lyons !

(*The notary is about to hand the contract to Pauline,
 when Melnotte seizes and tears it.*)

BEAUSEANT.

Are you mad ?

MONS. DESCHAP.

How, sir ! What means this insult ?

MELNOTTE.

Peace, old man !

I have a prior claim. Before the face
 Of man and Heaven I urge it ! I outbid
 Yon sordid huckster for your priceless jewel.

(*Giving a pocketbook*.)

There is the sum twice told ! Blush not to take it :
 There's not a coin that is not bought and hallow'd
 In the cause of nations with a soldier's blood !

BEAUSEANT.

Torments and death !

PAULINE.

That voice ! Thou art—

MELNOTTE.

Thy husband !

(*Pauline rushes into his arms.*)

MELNOTTE.

Look up ! Look up, Pauline ! for I can bear
 Thine eyes ! The stain is blotted from my name.
 I have redeem'd mine honor. I can call
 On France to sanction thy divine forgiveness !
 Oh, joy ! oh, rapture ! By the midnight watchfires
 Thus have I seen thee ! thus foretold this hour !
 And, mid the roar of battle, thus have heard
 The beating of thy heart against my own !

BEAUSEANT.

Fool'd, duped, and triumph'd over in the hour
 Of mine own victory ! Curses on ye both !
 May thorns be planted in the marriage bed !
 And love grow sour'd and blacken'd into hate,
 Such as the hate that gnaws me.

DAMAS.

Curse away !

And let me tell thee, Beauseant, a wise proverb
 The Arabs have : "Curses are like young chickens,
 (*Solemnly*)

And still come home to roost !"

BEAUSANT.

Their happiness

Maddens my soul! I am powerless and revengeless!

(To madame.)

I wish you joy! Ha, ha! The gardener's son! [Exit.

DAMAS. (to Glavis.)

Your friend intends to hang himself! Methinks

You ought to be his travelling companion!

GLAVIS.

Sir, you are exceedingly obliging!

[Exit.

PAULINE.

Oh! My father, you are saved, and by my husband.

Ah! blessed hour!

MELNOTTE.

Yet you weep still, Pauline!

PAULINE.

But on thy breast! these tears are sweet and holy!

MONS. DESCHAP.

You have won love and honor nobly, sir!

Take her; be happy both!

MADAME DESCHAP.

I'm all astonish'd!

Who, then, is Colonel Morier?

DAMAS.

You behold him!

MELNOTTE.

Morier no more after this happy day!

I would not bear again my father's name

Till I could deem it spotless! The hour's come!

Heaven smiled on conscience! As the soldier rose

From rank to rank, how sacred was the fame

That cancell'd crime and raised him nearer thee!

MADAME DESCHAP.

A colonel and a hero! Well, that's something!

He's wonderously improved! I wish you joy, sir!

MELNOTTE.

Ah! the same love that tempts us into sin,

If it be true love, works out its redemption;

And he who seeks repentance for the past,

Should woo the angel virtue in the future!"

"The Last Man. Petersburg: From the press of Edmund Raf-
fin. 1838."

A pamphlet of nineteen pages, written in blank
verse, with this modest title-page, has been handed to
us, and its contents have been perused with great plea-
sure. Although the fastidious or hypercritical may
find ground for criticism, yet there is in it much to ad-
mire. We look upon it not as "the ripened fruit of a
matured plant, but the blossom of a youthful vine"—
the promise of the future. Genius of a rare order is
impressed upon it.

"A Valedictory Address, delivered to the Students of the Uni-
versity of North Carolina, by William Hooper, late professor
of ancient languages in that institution, &c. Raleigh: 1838."

This is an able and eloquent appeal to the youth of
North Carolina; affectionately but cogently impressing
upon them the necessity of selecting and pursuing a
virtuous, moral, and religious life, from the even tenor
of which they must reap happiness and influence.

"Speeches of Joseph Hopkinson and Charles Chauncey, on the
Judicial Tenure. Delivered in the Convention of Pennsylva-
nia for revising the Constitution. Philadelphia: E. L. Carey
& A. Hart. 1838."

We commend these able intellectual efforts to the
statesmen of our country, assured that they will glean
from them sound political views.

"The Hawaiian Spectator, Vol. 1, No. 1; Conducted by an as-
sociation of gentlemen. January, 1838. Honolulu, Oahu,
Sandwich Islands. 1838."

An unexpected stranger is now introduced to our read-
ers, and we doubt not will meet with a cordial reception;
for who is so apathetic as to be indifferent of a people,
which has constituted an important portion of that be-
nighted race which has been illumed by the benevolent
operations of the missionary enterprises of the present
philanthropic age? By means of such a periodical,
judiciously conducted, we shall be able to obtain im-
portant information concerning the geological features
of this interesting group of islands, the climate, soil
and natural products, the moral and physical powers of
the natives, and last, though not least in importance,
the influence of the missionary scheme, whether for
weal or wo. A very interesting sketch of the Marke-
sian character occupies several pages of the present
number.

"The Hesperian; or Western Monthly Magazine. Edited by
William D. Gallagher and Otway Curry. Columbus, Ohio.
1838."

We have received the first and second numbers of
this western star, and hail it as an able co-laborer in
the field of American literature. We wish it a success
commensurate with its deserts.

"Catalogue of the Officers and Students of William and Mary
College: Session of 1837-38."

We are glad to find that this venerable institution of
learning continues to receive a considerable portion of
the students of Virginia, and trust that what is so richly
deserved, will be long continued. The present class,
one hundred and eleven, is within two of being the
largest ever assembled within her classic walls. We
copy the following summary:—

"The number of students attending the respective
departments are:

T. R. DEW, Pro-	} Junior Moral Class,..... 76	76
fessor.		
		114

J. MILLINGTON,	} Chemistry,..... 70	70
Professor.		
		96

ROB. SAUNDERS,	} Junior Mathematical..... 54	54
Professor.		
		70

B. TUCKER, Pro-	} Junior Political (National Law,) 44	44
fessor.		
		62

J. MILLINGTON, Professor of Civil Engineering,..... 14	14
D. BROWN, Professor of higher classics,..... 13	13

✂ CORRECTION.—In the biographical notice of the au-
thor of "Clinton Bradshaw," "The Emigrant," &c. in the May
number of the Messenger, the biographer has accidentally in-
serted "Francis" in the place of Frederick William Thomas.
On page 300, for the "Boothan Tree," read "The Adventure
of a Poet; a tale told in rhyme."

SOUTHERN LITERARY MESSENGER.

VOL. IV.

RICHMOND, AUGUST, 1838.

No. VIII.

T. W. WHITE, *Editor and Proprietor.*

FIVE DOLLARS PER ANNUM.

PROSE FRAGMENT.

BY A BACHELOR.

The mind, says a modern writer, must have its *appui*. Sterne had said before him that the good and feeling heart must have some object whereupon to base its deep affections. Sterne was perhaps the more heartless of the two; but his observation accords best with the gentler feelings of our nature.

The mind *must* have its *appui*—a stay on which to rest its thoughts, its hopes, its cares. Ambition that would sacrifice the liberty of nations—would chain up thought and action, and cement inglorious powers by the blood of those over whom they were acquired—has been the guiding passion of some. Thank God! the serpent's head hath been crushed in these our latter days, and the world will henceforth suffer comparatively little from irresponsible power. Wealth has been reared into an idol. Sensual license hath had no small influence in impressing and controlling the characters of men. Learning—the hidden secrets of nature—the wide volume opened by the incomprehensible incidents from an unseen cause daily exhibiting its influence before us in our very dwelling places—the air—the stars—the perfume of a flower—the innumerable mysteries of space, of time, and of existence—have called forth researches and created speculations, that have occupied the minds of thousands. Why mention other subjects which have furnished the mental food of some, to the exclusion of all the purer and lovelier feelings of our kind? And thou, calm, meek, sublime Religion! how hast thou been the hope, the sustaining power, the *appui* of many a rare and spotless spirit!

Let me not elevate the selfish pleasures of sense and the anomalous pleasures derived from scientific and speculative investigations—let me not depress the pure pleasures of religious feeling, properly directed, by comparing each or any of them with the pleasure that my heart would select for its own unmixed delight. Let me not enter into metaphysical discriminations between these different feelings more clearly to develop my idea. That is not necessary. It is the sordid mind—with a depraved moral sense—that cannot appreciate the pure charms of reciprocated affection—the unmeasured wealth that lies in a virtuous woman's love!—

* * * * *

Yea—after all, my thoughts are all of Thee!

* * * * *

How doth my spirit wander from the dull page of Science, to summon forth thy bright and gentle glance! Strangely commingled with the bold ideas of old philosophy—linked to the half framed thoughts on codes, and laws, and rights, as they rise upon the mind, steal o'er the sense those soft emotions born of Love and Faith and Thee! Gentle, yet vivid as that light which the great Creator spoke into being o'er the new-made world, is the radiant beauty of thy glorious Eye! Pure

as the first emotion of pity felt by Angel breasts, for the doom pronounced upon their fallen peers, are the aspirations of thy noble Soul! That Brow! (Who doubts, that once has seen, the character and feelings indexed by that Brow? Strange sympathy between the mind and outward form!) The wisdom of Divinity hath written there the just and gentle Heart! That queenlike step and air! I may not all portray their Dignity and Grace. Do not the tones of thy soft and flutelike Voice still linger round my memory, and haunt it with a strange, unearthly melody? When shall its breathings fall upon the ear again!

* * * * *

MECKLENBURG

DECLARATION OF INDEPENDENCE.*

The April number of the "Southern Literary Messenger" contains a spirited article, entitled "The New York Review of Mr. Jefferson Reviewed." In the course of the reviewer's remarks, allusion is made to the Mecklenburg Declaration of Independence, adopted on the 20th of May, 1775. As the issue there presented is clothed in rather a mystical garb, and as the subject is still new, and imperfectly understood by many in our common country, we have been induced to believe that a condensed view of this novel and inte-

* As this is the second notice taken in the Messenger of the Mecklenburg Declaration, and as it is, in itself, a very curious Revolutionary and Literary relic, we have thought it might gratify the curiosity of our readers, to lay it before them. The following is a copy of it, taken from Mr. G. Tucker's "Life of Thomas Jefferson," &c.

"The Mecklenburg Declaration of Independence.

(20th of May, 1775.)

"That whosoever directly or indirectly abets, or in any way, form, or manner, countenances the unchartered and dangerous invasion of our rights, as claimed by Great Britain, is an enemy to this country, to America, and to the inherent and undeniable rights of man.

"That we, the citizens of Mecklenburg county, do hereby dissolve the political bands, which have connected us with the mother country, and hereby absolve ourselves from all allegiance to the British crown, and abjure all political connexion, contract, or association with that nation, who have wantonly trampled on our rights and liberties, and inhumanly shed the blood of American patriots at Lexington.

"That we do hereby declare ourselves a free and independent people; are, and of right ought to be, a sovereign and self-governing association, under the control of no power, other than that of our God, and the general government of Congress; to the maintenance of which independence, we solemnly pledge to each other, our mutual co-operation, our lives, our fortunes, and our most sacred honor.

"That as we acknowledge the existence and control of no law nor legal officer, civil or military, within this county, we do hereby ordain and adopt as a rule of life, all, each, and every of our former laws; wherein, nevertheless, the crown of Great Britain never can be considered as holding rights, privileges, immunities, or authority therein.

"That it is further decreed, that all, each, and every military officer in this county, is hereby reinstated in his former command and authority, he acting conformably to the regulations. And that every member present of this delegation shall henceforth be a civil officer, viz. a justice of the peace, in the character of a committee man, to issue process, hear, and determine all matters of controversy, according to said adopted laws; and

resting transaction would be acceptable to the readers of the Messenger, and impart summary information to those who have not examined the testimony adduced in its favor. Wherever an impartial investigation has been instituted on this subject by the *candid inquirer after truth*, the universal conviction has been, that the Mecklenburg Resolves are an *original* and *bona fide* Declaration of Independence; and, as such, *claim priority over all others*. However *sensitive* the acknowledged author of the National Declaration was, on the first announcement of this subject in 1819, and whatever skepticism others may now exhibit, yet the venerable maxim, "Truth is powerful and will prevail,"

to preserve peace, union, and harmony in said county, and to use every exertion to spread the love of country and fire of freedom throughout America, until a more general and organized government be established in this province.

"ABRAHAM ALEXANDER, *Chairman*.

"JOHN M'KNITT ALEXANDER, *Secretary*."

It is our misfortune to differ with Mr. Tucker about the character of this document. He is anxious to justify Mr. Jefferson against the charge of plagiarism, and he contends that the charge is the other way; that the Mecklenburg Declaration has been altered, both in its scope and expressions, from its original cast; that the two paragraphs in which the coincidence (between the Mecklenburg Declaration and Mr. J.'s Declaration,) is found, have been subsequently interpolated, with a view of enhancing the merit of the act, and of making it a more unequivocal Declaration of Independence! One of Mr. Tucker's arguments in favor "of the probability of this supposition," is, that "it seems impossible, that if they had all been drawn at once, the second and third had not *preceded* that which now stands first. We can (says he) more easily believe that so singular an inversion of natural order was caused by the wish to conceal and counterfeit interpolation, than that it ever could have suggested itself to any mind that had written all the five resolutions."

We think, on the other hand, that all the propositions stand in their natural order; that the one grows necessarily out of the other, as conclusions following their premises. Mark the necessary connexion!

The 1st proposition declares in substance that Great Britain has violated the charter of our rights,—so plainly and directly that no man can countenance the invasion, without being an enemy to America, and to the inherent rights of man.

And *because* she has so directly invaded our charter and our rights, *therefore* the 2nd resolution declares the political bonds, that have connected us with the mother country are hereby dissolved.

Because these are dissolved, the 3rd proposition *therefore* declares us to be a free and independent people, a sovereign and self-governing association, subject to no other control than the power of God, and the authority of the general government of Congress—and they pledge themselves to maintain that independence at every hazard.

And *because*, as a consequence of this dissolution, they acknowledge the existence of no law or officer (of the British government—as some temporary government is wanting within the county,) they, *therefore*, in the 4th proposition adopt, (of their own accord,) and as their rule of action, their former laws; disclaiming at the same time any authority in the British crown to claim any rights, privileges, &c. under those laws.

And *because* they have voluntarily re-adopted the laws (and must have officers to carry them into execution), the 5th proposition *therefore* reinstates every military officer in the county in his former authority—and they also constitute civil officers, to issue processes, and determine all matters of controversy, according to said adopted laws, &c.

In all this it appears to us, that there is nothing forced, and no inversion of the natural order—but that the several links form a connected chain of propositions—the 2nd naturally growing out of the 1st, the 3rd out of the 2nd, until the whole are exhausted.

But, though we cannot subscribe to Mr. T.'s suppositions, still we agree with him in his main object. We clear Mr. Jefferson of the charge of plagiarism, as we have shown in our April No.

conveys salutary advice, and requires only time, in this instance, to receive additional confirmation. We are fully disposed to render to Mr. Jefferson all that need of approbation to which his eminent services justly entitle him; but, at the same time, wish to guard against that overweening attachment or parasitical admiration for a distinguished name which would make us partial in our decisions.

In preparing this succinct account of a memorable event, and the most prominent causes leading thereto, we shall draw our materials from the few recent publications on the subject. If we differ in opinion from either the reviewer or the reviewed, it will be an honest difference—not resulting from dark revenge or rancorous feeling—and our remarks, accordingly, will be more of a corrective and explanatory, than a controversial nature. On the greater portion of the article above referred to, touching Mr. Jefferson's religion, moral defects, &c. we are not disposed to offer any critique of our own, but feel perfectly willing to permit the literary combatants,

"With stomachs stout
To fight it out."

Without, therefore, pretending to award the palm of victory to either, we leave the matter where we find it, before the public tribunal—*sub judice lis est*, and shall acquiesce in their decision.

At an early period in the history of North Carolina, may be traced manifest signs of that spirit of freedom and secret aspirations after liberty, which afterwards shone out in all their meridian splendor. The great distance of the mother country—the absence of royal magnificence—the free exercise of religious opinions—the general mediocrity of society—the numerous obstacles surmounted in settling a wilderness and securing a home, all tended to produce among the colonies a sense of *self-dependence*, and render them averse to every species of superiority or domination. They were so many *excitants* in awakening successful enterprise, and gradually unfolding to view a progressive development of national pride. From these causes and others of collateral tendency, originated an early conviction that all men were "created equal," endowed with certain "inalienable" or "inherent rights," and entitled to certain "exclusive privileges." When it was resolved by Parliament on the 10th of March, 1764, to raise a revenue in the colonies by a system of taxation, the delicate cord of "national rights" was sensibly touched, and ceased not to vibrate until the disturbing cause was removed. On the 31st of October following, we find the popular house of the assembly of North Carolina, in their address to the Governor, openly avowing its injustice and unconstitutionality. On the passage of the Stamp Act in 1765, the citizens of North Carolina exhibited, in common with the other colonies, an unqualified disapprobation of the "odious measure," and a stern and unyielding opposition to its execution within her borders. This exasperated state of feeling and complete failure on the part of the British ministry to distribute stamps, we cannot pursue in detail. Suffice it to say, it justly constitutes one of the proudest and most brilliant achievements in the history of the state. But another strong fomenting cause in North Carolina, of an early and continued repugnance against

British authority, and which ultimately exerted a more powerful influence on the destinies of her people, than grievances of a common nature, is to be found in the number and frequency of her gubernatorial quarrels. In the history of no one of the colonies, not excepting Massachusetts with her inexorable Hutchinson, can be traced such a continual conflict of opinion betwixt the Governors and people. Every arbitrary exaction, or unjust invasion of the people's rights on the part of the Governors, who were mere instruments of power, clothed with a little brief authority, strongly tended to aggravate existing troubles, and weaken allegiance to the crown. Hence arose the belief that "moderation ceased to be a virtue, when the liberty of the British subject was in danger;" and to submit, under such circumstances, became a crime. From the 3rd of April, 1765, to the 1st of July, 1771, North Carolina was governed by William Tryon. During the whole term of his administration, the public mind was agitated by the passage of the Stamp Act. Tryon met his first assembly one month after entering upon the duties of his office. Rumors and reports from the North currently prevailed among the people, that the Stamp Act had been passed by Parliament. "This intelligence reached Wilmington shortly after the meeting of the assembly; and such was the violence exhibited by the members of the popular house, that Governor Tryon suddenly prorogued the legislative body on the 18th of the same month in which it had assembled. The popular house had but just replied to the opening speech of the Governor, and adopted the usual preliminary steps of legislation." Such was the excitement produced, that the Governor "apprehended an overt act of treason; and to arrest the disease in its incipient stage, prorogued the assembly." The patriotic enthusiasm that manifested itself, was so strong, that "the speaker, John Ashe, pledged himself that he would resist the iniquitous law, and informed the Governor that the people would support him in the holy cause. Had the Governor permitted the house to have organized itself on the 30th of November, the day to which it stood prorogued, its proceedings would not have proved less treasonable in the eyes of royalty.

In this year, 1765, a proposition was adopted by the assembly of Massachusetts, and warmly responded to by the other colonies, to form a general Congress, consisting of delegates from the popular house of each. In this Congress, which convened in New York, several of the colonies were not represented. North Carolina was deprived of the opportunity of sending delegates, through the rash prorogation of the assembly above alluded to, just on the eve of entering into an election. The popular house was not permitted to convene itself until November, 1766; being prorogued in February preceding, by royal proclamation. Thus, through the fears of the Governor, the province was deprived of an assembly for more than eighteen months. At this session occurred a quarrel with the Governor on account of the long chasm in the legislation of the province. The house likewise regretted its inability of acting in concert with the other colonies in the late Congress. But our limits will compel us to pass over many legislative disputes growing out of acts of ministerial dictation—the court-law controversy—the repeal of the acts of 1749 and 1754, laying a poll-tax, and a duty on

liquors, &c. Of these distracting questions the court-law controversy was the most prominent source of dissatisfaction.

"For more than twenty years before the Revolutionary war, the popular house and the Governors were divided on the details of a bill to establish Courts of Law." We will now advert to a few important transactions in the administration of Josiah Martin, Tryon's successor, and the last of the royal Governors. On the 19th of November, 1771, Martin met his first assembly. At each session of the assembly, from the year 1771 to 1774, inclusive, there occurred a quarrel with the Governor, invariably terminating in a prorogation of that body. These prorogations or dissolutions uniformly grew out of the adoption of some high-toned resolution, or the passage of some bill on the several local questions which agitated the province. After the dissolution of the assembly, in the spring of 1774, the situation of the province was little short of anarchy. The total disregard to the wants of the people on the part of the Governor, could not fail to produce the most intense excitement. Owing to this incessant source of vexation, and the universal discontent that prevailed, we find the principal whig leaders of that day busily engaged in maturing plans for the organization of a provincial Congress, "directly from the people, and independent of the authority of the Governor." The following extract from a letter of William Hooper to James Iredell, dated April 26th, 1774, forcibly illustrates the tone of thinking among some of the public characters on prospective events, in which it is said, "With you I anticipate the important share which the colonies must soon have in regulating the political balance. They are striding fast to independence, and will ere long build an empire on the ruins of Britain; will adopt its constitution, purged of its impurities; and, from an experience of its defects, will guard against those evils which have wasted its vigor, and brought it to an untimely end." This is strong language, and sufficiently indicative of the spirit of the times. It is here particularly adverted to, that the reader may mark the period that gave it birth. When the project of a provincial and continental Congress was published abroad, the people embraced it with enthusiasm and zeal. About the 1st of July handbills were circulated throughout the province, inviting the people to elect delegates to a convention, to be held at Newbern on the 25th of August. The objects of the said convention were stated to be to express the sentiments of the people "on acts lately passed by the Parliament of Great Britain, and to appoint delegates to represent the province in a continental Congress." By the 1st of August a large majority of the counties had held elections, and returned their most faithful leaders. When information of these elections reached the Governor, who at first doubted the success of the plan, he issued, on the 12th of August, the usual missile of authority, a proclamation, condemning such proceedings. But the proclamation proved of no avail—*vox, et præterea nihil*—a vain and inoperative display of words. The delegates punctually met in Newbern on the 25th of August, 1774. This was the first provincial Congress. The interesting proceedings on that occasion can receive in this sketch nothing more than a passing notice. The several acts of Parliament, imposing duties on imports,

were condemned as highly illegal and oppressive; the inhabitants of Massachusetts province were applauded for distinguishing themselves in a "manly support of the rights of America in general;" and resolutions proposing to carry into execution any general plan of commercial restrictions agreed to in the continental Congress were adopted. It was further resolved, that William Hooper, Joseph Hewes, and Richard Caswell, be appointed deputies to attend the General Congress, to be held in Philadelphia on the 20th of September following; and to be "invested with such powers, as may make any act done by them obligatory in honor upon every inhabitant of the province, who is not an alien to his country's good, and an apostate to the liberties of America." The second provincial Congress convened in Newbern on the 3rd of April, 1775, under the same regulations as its predecessor. In this instance, the Governor, as usual, issued his proclamation, forbidding "such meetings, cabals, and illegal proceedings." The provincial assembly likewise met in Newbern on the following day, April 4th, consisting, with but few exceptions, of members to the provincial Congress. Here is presented the bold and imposing spectacle of a popular convention, assembling before the eyes of the Governor, and in defiance of his royal prerogative! The popular house of the assembly, after sitting only four days, and still assuming a more treasonable aspect in the view of his excellency, was dissolved by proclamation. *This was the last assembly that ever convened under the royal government.* The provincial Congress, however, proceeded to the despatch of business. Among other resolutions, the proceedings of the continental Congress lately held in Philadelphia, and the "faithful and judicious discharge of the important trust" reposed in their delegation to that body, were highly approved.

After the dissolution of the assembly, the Governor found himself surrounded by only a few of his most faithful councillors. The royal government was now tottering to its base, and signs of a fatal decay were everywhere visible. In the meantime, the Governor, finding it inexpedient to issue writs of election for a new assembly, busily engaged himself in fortifying his palace, and raising a military force. "The people of Newbern watched, with much uneasiness, the range of cannon planted before the palace; and the committees of the adjacent counties, by intercepting the emissaries of the Governor, gave them intelligence of his efforts to raise a military body-guard. Governor Martin, on the 16th of March, anticipating the present state of affairs, had written to General Gage, at Boston, soliciting a supply of ammunition and arms; and by the vigilance of the delegation in the continental Congress, this letter too had been intercepted, and was now before the whig authorities of Newbern. These hostile preparations on the part of his excellency, provoked, on the 24th of April, an open rupture between him and the people." While the Governor and Council were in session in the palace, some of the leading whigs seized and carried off the artillery which had been planted for its defence. "Governor Martin, apprehending further violence from the whig leaders, on the evening of the same day, fled from the palace; and, accompanied by a few of his most faithful councillors, retreated to fort Johnson on the banks of the Cape Fear." He did not, however, find

the fort a much safer position for his head-quarters than the palace at Newbern. In this retreat he was vigorously pursued, and forced to remove his military stores, as well as the head-quarters of his government, on board "his Majesty's ship-of-war Cruiser." The flight of his excellency, from the palace at Newbern, on the 24th of April, 1775, may be marked as the closing scene of the royal government. "During the spring of this year, 1775, the attention of all the colonies was directed towards Boston, a town which seemed to be the object of the devoted vengeance of the ministry." Several detached meetings of the people of Mecklenburg were held during the spring, in which it was declared, "that the cause of Boston was the cause of all;" and "that their destinies were indissolubly connected with those of their eastern fellow-citizens." Out of this state of feeling grew the *Mecklenburg Declaration of Independence*. The convention which assembled in Charlotte on the 19th of May, 1775, and declared independence on the succeeding 20th, was convoked by Col. Thomas Polk, who afterwards performed the office of a herald, in proclaiming its proceedings, "to a large, respectable, and approving assemblage of citizens." "The subject of independence was discussed during the two days of its session, and was at last unanimously declared. The news of the battle of Lexington arrived by express during the session of the convention; and this intelligence inflaming the minds of the people, the universal voice was for independence." The flame thus kindled at Lexington continued to spread through the province with unabated fury. Associations were held in various parts of the state, in all of which, they solemnly engaged "to take up arms, and risk *their lives and fortunes* in maintaining the freedom of our country." The people everywhere felt as if they were now breathing the delightful atmosphere of a free government. Reconciliation was at an end. Truly then was it said by Mr. Jefferson, in his letter to Mr. Adams, "no state was more forward or fixed." After Governor Martin was expelled from the province, and forced to take shelter on board his Majesty's ship-of-war Cruiser, and whilst this declaration, by the citizens of Mecklenburg, was still ringing unpleasantly in royal ears, he issued a lengthy proclamation—the last dying effort of fallen, but struggling authority. In this furious document, after reciting several "traitorous proceedings" of the people, he uses the following language: "And, whereas, I have also seen a most infamous publication in the Cape Fear Mercury, importing to be resolves of a set of people styling themselves a committee for the county of Mecklenburg, most traitorously declaring the entire dissolution of the laws, government and constitution of this country, and setting up a system of rule and regulation repugnant to the laws and subversive of his Majesty's government." This extract cannot be viewed by the most skeptical inquirer as otherwise than affording *impartial and contemporaneous* evidence. Another high source of authority attesting the identity of this declaration is to be found in the manuscript "Journal of the War in the South," by the late Rev. Humphrey Hunter, who was an eyewitness of the proceedings of that day, and a soldier of the Revolution. This journal we saw before any extracts from it came before the public, and know it was *expressly prepared* to show to the world the part its author took in scenes

which "tried men's souls," and to confirm and perpetuate this memorable declaration. In this "Journal" may be seen an account of the battle of Camden, and the most correct detail of the painful circumstances attending the fall and death of the brave Baron De Kalb. We deem it unnecessary to analyze particularly the various sources of evidence, any one of which justly merits respectful consideration. The certificate of Captain James Jack, who bore the declaration to Congress, then in session at Philadelphia; a letter from the late General Joseph Graham, a soldier of the Revolution, and covered with scars in its defence; the personal testimony of the late Colonel William Polk of Raleigh; and a letter from John Davidson, the last surviving signer, have all been adduced to confirm its adoption, and constitute a mass of high and indisputable testimony. Numerous events in our Revolutionary history, which have received the stamp of universal belief for more than half a century, cannot present a more formidable phalanx of irresistible proof.

In the article above referred to, the serious inquiry has been raised, "How is it possible that this paper, if it reached Congress, was concealed?" To this we answer in the language of the "Journal," just mentioned, that "on the return of Captain Jack, he reported that Congress, individually, manifested their entire approbation of the conduct of the Mecklenburg citizens, but deemed it premature to lay them officially before the house." In other words, the citizens of Mecklenburg, and of the state generally, were more than one year in advance of the other colonies in a determination to declare independence. At that period Congress had not arrived at sufficient maturity of opinion as to ensure unanimity of action on a question so momentous, and on the determination of which depended the destiny of the nation. There were many distinguished patriots who still ardently entertained hopes of an amicable adjustment of difficulties with the mother country; but in North Carolina pacific measures were out of the question—the royal Governor was expelled from the province, and the people quietly living under a whig government! Generality of opinion had already developed itself in Congress, but an approach to unanimity of opinion was necessary before an appeal to arms—the *dernier resort* of an injured people. It is then, in all probability, to the "premature" nature of this declaration, and its consequent informal reception by Congress, that we are to attribute the absence of any record of its presentation on the journals of that body. The question has been likewise asked, why it should remain unknown so long afterwards? To this we answer that few copies of such a paper would be prepared at first, and consequently, still fewer would escape the ravages of time. These, through the careless researches of historians, have remained concealed until within a few years past. A noble task still devolves on some future historian, of compiling from the musty records in the archives at Raleigh, and from other sources, public and private, a full and complete history of the state. To exemplify still farther the ignorance that has hitherto prevailed on the colonial history of the state, we will barely introduce an important transaction of the provincial Congress which convened in Halifax, April 4, 1776. In this Congress, the question of independence was moved, discussed and unanimously approved—a circumstance alone

calculated to perpetuate its fame. On the succeeding 12th, a report was submitted, concluding with a resolution empowering their delegation in the continental Congress, to concur with the other colonies in declaring independence. These proceedings, it will be seen, preceded the recommendation of the Virginia convention on the same subject by more than a month, and is the first open and public declaration, by state authority, on record. This resolution was forwarded to the continental Congress, and presented to that body on the 27th of May, 1776. Although this illustrious movement reflects so much honor on the state, and corroborates the opinion that the people were fully ripe for independence, yet, it too, like the Mecklenburg declaration, was doomed to long and silent repose. Within a few years it has been observed among the state papers at Washington City, and has been properly noticed in Mr. Pitkin's able and useful work, the "Political and Civil History of the United States." Again, a serious charge has been advanced by Professor Tucker in his "Life of Jefferson," where he says the compiler of the Mecklenburg Declaration borrowed certain parallel phrases from the National Declaration, and interpolated them into that copy. This is a bold charge, but we think neither plausible nor tenable. We entirely concur in the following introductory remarks of the editor on the "Review" above quoted. "We do not adopt Professor Tucker's theory, that the extant copy of the Mecklenburg Declaration is so far spurious, that the compiler of it borrowed from Mr. Jefferson's draft these parallel phrases, and interpolated them into the Mecklenburg copy. We are willing to admit the present Mecklenburg copy to be as it was at first written, and we entirely dissent from Professor Tucker's account of the changes and interpolations which he has assigned to that copy." There is one circumstance which ought to settle this matter to the satisfaction of the candid inquirer, and bar all idea of interpolation. The Mecklenburg Declaration of Independence as published, and now in the executive office of North Carolina, was preserved by General Davie, a name of distinction and worth in the south, and illustrious in the history of the state. A proper appreciation of this fact alone brings the Professor's charge, with all its improbability, to the ground. We think these "parallel phrases" may be accounted for in quite a different and far more charitable way. It is simply this: as the grievances of the colonies were of a common nature, resulting from a violation of their just rights, so would their sentiments naturally flow in equivalent, or similar language. Whoever will examine the numerous resolutions, speeches, letters, &c. on colonial affairs, will find many vivid thoughts—the glowing emanations of a patriotic and warm-hearted people, conveyed in nearly identical language. Even among the colonial papers which have lately come to light in North Carolina, this similarity, and sometimes identity of language, is perceptible for several years anterior to the adoption of the National Declaration. In the course of time many of these choice expressions—these "phrases of rhetorical excellence"—would be noted and remembered by every enthusiastic lover of liberty, and thus become interwoven into the proceedings of the times. Such we believe to be the "common fountain" to which such parallel expressions, in the two instruments, may be traced.

We have now presented a brief outline of the train of proceedings leading to the adoption of the Mecklenburg Declaration of Independence on the 20th of May, 1775. If we have succeeded in imparting information, invalidating objections, or removing prejudices from the mind of any one on this subject, our humble, though laudable, ambition, will be fully satisfied, and our limited exertions amply rewarded.

C. L. H.

MIDNIGHT.

BY C. W. EVEREST.

'Tis Midnight all, the solemn noon of Night!
Through the clear vault of heaven, in constant care,
The silent Moon pursues her pathless course,
And the lone Stars, like "wakeful sentinels,"
Do keep their vigil in the far-off sky!
Nature reposes on the lap of Night,
And Earth's glad voices now are hushed and still,
Save but the cricket's solemn, distant chirp,
And the deep baying of the faithful dog!

The city's hum has ceased: no more the sound
Is heard of busy artists, at their toil,
Nor hurried step of eager, gathering crowds,
Who throng the mart, intent on paltry gain!
'Tis silent all—no sound of human voice,
Save the hoarse watchman's cry, "*Past twelve o'clock!*"

Man resteth from his labors: all his cares
Lost in the soothing rest Oblivion gives!
Forgot are all his carking woes and toils,
While his "tired nature" hugs the grateful couch,
Wrapped by the balmy mantle of repose!
Man resteth from his labors, only where
The feeble taper 'lumes the house of wo:
Where, bending low beside the sick one's couch,
The anxious mother mourns her suffering child,
Or the fond wife bewails her bosom's lord;
Or where, perchance, in secret halls of vice,
The haggard gambler tempts the desperate die,
Or rushes madly on the dart of Death;
Or where, in chambers of more shameful crime,
The child of guilty pleasure seeks his lust!

Man resteth! Sweet his peaceful, hallowed rest,
Where conscience slumbereth peacefully within.
The infant smileth mid his dream of heaven,
And the fond mother folds her happy boy
Close to love's aching breast, and keeps him there:—
The maiden murmurs in her dream of Love
The name long cherished in her inmost soul,
Then blushes at the memory of the name;
While the fond lover, starting from his couch,
Calls for a moment on her treasured name,
Then turns him to his pleasant sleep again:—
The peasant slumbers, on his humble bed,
More happy than his lord, who restless turns,
But still his fevered frame no rest can find:—
The merchant dreameth of increasing gain,—
The miser counteth oft his hoarded gold,—
But oh! the pillow of the man of guilt!
No peace is there—but dæmons haunt his bed,

Weave all his dreams, and riot in his groans:—
The prisoner turns him on his lowly pallet,
And the deep clanking of his dungeon chain
Goes up for witness to the bar of Heaven:—
He who deceived the heart of trusting Love,
And basely ruined, where he should protect,
Starts back, all trembling, at the pallid form
Of the lost victim, beckoning him afar,
And shrieks, and groans, and prays for Death—for
Hell:—

He who hath trod dishonor's shameful path,
And wronged the widow and her lonely babes,
What ghastly visions gloom upon his sleep:—
But ah! whence comes that shriek of wild despair,
That yell of agony, too dire for Earth?—
'Twas from the murderer's couch, of scorpion-sting,
Where Conscience points him to his victim slain,
And whispers of his fearful, written doom!

* * * * *

Man resteth—for a moment's fleeting space!
But the soon Morning's dawn shall call him forth,
Again to mingle with the busy world!
But for a little while—and man shall rest
In Death's long slumber, in the grave's still night:
And he shall wake no more on Earth again:
But, at the last, the mighty Angel's trump
Shall wake him from the midnight of the tomb,
And call him up to judgment: There, in truth,
Must he be judged for all his actions done;
And, if he be accounted meet for such reward,
Shall cease from all his labors and his cares,
And enter into everlasting rest.

NOTES AND ANECDOTES,

Political and Miscellaneous—from 1793 to 1830.—Drawn from the Portfolio of an Officer of the Empire—and translated from the French for the Messenger, by a gentleman in Paris.

BARON TAYLOR AND THE PYRAMIDS OF EGYPT.

After completing some very beautiful decorations for the theatre *du panorama dramatique*, and, among others, a glass veil, which some twelve years ago attracted all Paris by its novelty, M. Taylor suddenly became a Captain of the Staff, a Baron, and a Royal Commissioner near the *Theatre Français*. M. Taylor, a spirited and pure writer, succeeded in proving that the duties of a commissioner of the government, near a royal theatre, are, for so distinguished a wit as himself, of such easy execution, that the person who enjoys the situation, and draws a salary of six thousand francs a year, may consecrate nine months of the twelve to scientific voyages at the expense of the government. It happened to M. Taylor that he sometimes dated his receipts for instalments of his salary as a Commissioner Royal for the *Theatre Français* from the banks of the Nile.

During one of these excursions into Egypt, M. Taylor, on visiting the pyramids, according to custom, engraved his name upon the stone of these ancient monuments. But his mind was, at the moment, occupied about something else; he was, perhaps, thinking of his duties at the *Theatre Français*, so that his name was badly cut. The second stroke of the *y*, in the word *Taylor*, was omitted.

One evening, after his return to Paris, while promenading in the green-room of the opera, he encountered an Englishman, who had also visited Egypt and the pyramids; and who, if he had not engraved his name on the stone of these monuments, had at least taken into his head the singular fancy of copying, in his memorandum book, all the inscriptions which time had suffered to remain legible.

"Then," said M. Taylor, "I hope that I have not been entirely forgotten by you, since my name must be on your tablets."

"No, I assure you it is not."

"How is that? It is not a year since I engraved it; it could hardly be effaced already."

"I assure you I did not discover it."

"It is very extraordinary."

"I read and copied a *Tailor*; but your name is too well known, in the literary world, for me to confound it with any other. I have always read your name written with a *y*, while the one I have copied contained only an *i*."

The next morning, by seven o'clock, M. Taylor was at the office of the Minister of the interior: he announced his intention of going into Egypt to complete his unfinished researches, and solicited a new mission from the government.

The request was too legitimate a one to be refused. The *Théâtre Français* was again deprived of its Royal Commissioner for nearly a year; but the *Tailor* of the pyramids is now *Taylor*.

THE PACHA OF EGYPT.

I trust the reader will not peruse, without interest, some details concerning the origin and character of the Pacha of Egypt, which were communicated to me by a French general officer, to whom the Egyptian army was indebted for the excellent organization which rendered it so formidable to the Ottoman empire.

Méhémet-Ali is a man of great capacity; he has effected a prodigious advance in the civilization of the East. An inquiry into the origin of a man, who, without instruction, and by the sole power of his own talents, has made himself the independent sovereign—independent, at least in fact, of an immense country, cannot fail to be interesting.

At the period of the campaign in Egypt, 1798, Méhémet-Ali was nothing but a brave and enterprising contrabandist. He had already inflicted incalculable losses upon the government, which, despairing of becoming master of his person, offered him a pardon, and a rank equivalent to that of a French *chef-de-bataillon*, (the title of this grade signifies, in the language of Egypt, the commander of a thousand men) if he would unite himself with his band to the troops sent against the French army.

Méhémet-Ali accepted the offer. His successes were but feeble, but he knew how to profit by them—he perfectly understood the fabrication of bulletins; and it was not long before he succeeded in creating himself a party. Egypt having been evacuated by the French army, Méhémet-Ali labored still more actively in the execution of the great *projet* which he had conceived; and one day having cut off the heads of three Pachas,

and strangled two others, he proclaimed himself Pacha of Egypt, uniting under his authority the different governments, of which he made himself the heir, by putting to death their rightful rulers.

The Porte did not hesitate to confirm him in the dignity which he had conferred upon himself. The tribute is the great question for the Porte in affairs of this sort; and it generally shows itself but little disposed to disturb any enterprising individual, who may thus possess himself of power, especially at five hundred leagues from the metropolis, provided he sends a supply of presents, and promises to pay the regular tribute. Méhémet-Ali paid it very regularly for several years, though I believe he is just now somewhat in arrear.

When Méhémet-Ali made himself Pacha of Egypt he could neither read nor write. In Egypt and Turkey a man of elevated dignity does not find it absolutely necessary to know how to write, but he ought to know how to read. Méhémet-Ali perceived this necessity on discovering that his secretaries had frequently misread the *firmans* or despatches which they submitted to him. He accordingly determined to learn to read, but he was anxious to do so in secret.

One morning he was informed that a vessel, bearing the imperial flag of Morocco, was signaled at the entrance of the port of Alexandria. He ascertained that this vessel had been freighted for a son and a daughter of the Emperor of Morocco, who were going on a pilgrimage to Mecca. He invited them to repose from the fatigues of their voyage—the Prince in his palace, and the Princess in his harem—promising to treat them with a hospitality worthy of their rank.

A few days afterwards the imperial Prince was enabled to continue his voyage; but the Princess remained voluntarily in the harem at Alexandria, and became one of the four legitimate wives of Méhémet-Ali. The Pacha of Egypt had four harems, and eight hundred wives; and in each harem he had a legitimate wife.

The Princess of Morocco was extremely well educated; she knew how to read, and became the instructor of Méhémet-Ali; and when the education of the Vice Roy was completed, his secretaries learnt, in undergoing the punishment which he inflicted on them, that their master was no longer contented to be deceived.

There are few men, even in Europe, who have more extended, or accurate information, than the Pacha of Egypt, on the subjects of agriculture, navigation, and commerce. Heretofore the necessity of securing his conquests, and of establishing definitely his independence, has compelled him to impose enormous charges on his subjects; but his immense works will survive him, and Egypt will be indebted to him, at a future and not very distant period, for an incalculable increase of her riches, and a civilization which he invites by all the means in his power. The desertion of Soleman-Bey was a severe loss to him. Soleman would have been a remarkable man in Europe. He spoke French, German, English, and Italian with equal facility; and he had made himself well acquainted with the exact sciences. It was never certainly known to what cause to attribute the discontent which induced him to abandon the cause of the Pacha of Egypt for that of Mahmoud. Mahmoud himself looked with dis-

trust upon this desertion; and Soleman, whose death was announced a few months after he quitted the service of the Pacha, it was said, was poisoned by order of the Sultan. He had a brother among the young Egyptians entrusted to the care of M. Jomard.

Méhémet-Ali is admirably seconded by his son Ibrahim, a General endowed with great military talents, but whose excellent qualities have been dimmed by the most frightful cruelty. Ibrahim does not send to the executioner those who displease him—he puts them to death himself. He has never failed in devotion to his father, though he has not always approved his political ideas; however, he more recently has altered his opinions, and surrendered himself up entirely to a system which he promises to continue.

The Pacha of Egypt has a buffoon of the name of Mustapha. This creature is not without wit. He unites with his functions of regular buffoon, those attached to one of the great dignitaries of the palace. Mustapha enjoys much favor; but with oriental Princes the most extraordinary regard does not always prevent exposure to very disagreeable caprices.

"Mustapha," said Méhémet-Ali, one day to his buffoon, "let us play a game of checkers."

"I am at the service of your highness."

"But I desire that you should lose."

"Then I will lose."

"What shall we play for?"

"Whatever your highness may please."

"Then we will play—you will lose; and, if you do, I will have you thrown into a well."

"I will play—I will lose; and if your highness wishes to have me thrown into a well, I will be thrown—you are master."

The game was played, the buffoon lost, and the Pacha ordered him, accordingly, to be thrown into a well, which was done. He was immediately drawn out, and brought back, wet through and through, to the presence of his master, who gave him the magnificent cachemire which he wore round his own waist to wipe himself with.

THE SLIPPER OF M. DE PEYRONNET.

An old and common proverb says—*trop gratter cuit, trop parler nuit*. If the principle of this proverb is applicable to common life and private individuals, how much more is it to public men, whose most insignificant words, when collected, weighed, and commented upon, receive from the interpretation that may be given them, an importance which those who uttered them never dreamt of. It especially applies to those expressions uttered in a moment of passion; and which, for the very reason that they seem less the result of reflection, are received as involuntary but positive evidence of the secret thoughts of the speaker.

When, during the conferences of Dresden, the Emperor said harshly to M. de Metternich, who had come to have an understanding with him on the basis of the alliance between France and Austria, "How much do the English give to determine you to advise the Emperor of Austria to separate himself from me?" he made an open enemy of the most influential member of the Austrian cabinet; and, by a word, pronounced in a

moment of ill-humor and impatience, alienated the only great power which still hesitated to declare against him.

It is probable that M. de Metternich had received from the English either money or promises. Had the Emperor not have been soured by the misfortunes of the Russian campaign, and the recent desertions which he had suffered from, he would have contented himself by offering M. de Metternich double the sum he supposed him to have been promised by the English, saving to himself the means of seizing, at his pleasure, a favorable opportunity for procuring his dismissal from the Ministry: but anger never reasons.

When, during the famous sitting of the Chamber of Deputies, in which the petition, demanding the recall of those who had been proscribed in 1815, was reported, M. de Serre pronounced, in reference to this subject, the word *never*! he lost, by that single expression, the prestige with which his brilliant success in the tribune had surrounded him. He became an ordinary man. The word *never* should not have passed the lips of a statesman.

M. de Peyronnet who seemed to set himself studiously to work, for the purpose of covering with oblivion the excellent qualities which it was impossible not to recognize in him, also uttered one of those expressions which destroy a man. The two last sessions which preceded the fall of the Ministry of M. Villèle, were marked, in spite of the compact majority of three hundred which sustained the government, by those half-checks of the tribune which foretell the end of an administration. The Council had also begun to suffer some discord. M. de Peyronnet, less a statesman, and more of a partizan than M. de Villèle, more frank and free in his behaviour than the President of the Council, energetically repulsed everything which seemed like concession.

The session of 1825 had just terminated, and M. de Peyronnet announced his intention of visiting some of the watering places of the continent. One of his friends observed that it would hardly be prudent to absent himself at such a moment. "What matters it?" said M. de Peyronnet; "they will never dare to do anything without me. I leave my slipper here, which is all that is necessary."

These words, circulated in the court and the saloons, by the amiable friend who heard them, made more and more dangerous enemies for M. de Peyronnet, than all the acts of his long and difficult Ministry.

SONNET—TO MARY.

Mary! 'twas when at first thine eye I met,
Love claimed my heart, and set his arrow there:
Call me not rash—he came unbidden, yet,
O! not unwelcome! Then I breathed a prayer,
Invoking him to use his witching wiles
To plead my cause with thee; for, O! 'twas vain
To ward the archery of those radiant smiles,
For ever, as I chanced to meet thine eye,
The fickle Archer-God was sure to gain
Over my heart a fresher victory.

And now he doth so like a tyrant reign,
I have no joy, no peace, save thou art nigh.
My love is boundless! changeless! Oh that thou
Wouldst welcome Cupid and my true heart's vow!
Richmond, April, 1838.

L. L.

THE ADVENTURERS.*

BY HORATIO KING.

In the early part of the 17th century, the Indians held undisputed sway throughout almost the whole territory of the province of Maine. There were several tribes of them, and their number very great. Few whites had ventured far beyond their scattered settlements on the seaboard; and though several treaties had been made with the Indians, who solemnly swore to maintain peace, their engagements, as often as entered into, were broken. At one of these conferences in June, 1703, attended by the chiefs of the Norridgewock, Penobscot, Penacook, Ameriscoggin and Pequakett tribes, the governor of the state also being present, the natives assured him "that they aimed at nothing more than peace; and that as high as the sun was above the earth, so far distant should their designs be of making the least breach between each other." But in less than two months from the date of this treaty, aided by the French, who were then at war with the English, they destroyed almost every village and dwelling east of the Saco river; and in fact, extended their devastations as far south as Wells. They continued their hostilities, without intermission, until 1713, when another treaty of peace was entered into between them and the government—delegates from the tribes on the St. John, Kennebec, Ameriscoggin, Saco and Merrimac being present at the conference. The Indians manifesting a friendly disposition, the whites now ventured to return and re-establish themselves in their former situations along the seaboard. It was several years, however, after this treaty, before any considerable number took up their residence east of the Kennebec river. "Falmouth Neck," (now Portland) and vicinity, affording some of the most pleasant situations on the coast, emigration was directed that way, and population increased there quite rapidly. But the renewal of Indian hostilities in 1720, again checked the progress of population and the prosperity of the settlers, who were destined to suffer for five years in another bloody conflict with these wild and savage dwellers of the forest. It was in August, 1724, of this war, it will be recollected, that the English surprised and entirely destroyed the settlement of the Norridgewocks, eighty of whom were killed, and among whom was "Father Ralle," their French Priest, who had resided with them over thirty years, and had been instrumental in inciting them to harass, plunder, and murder the whites. It will, doubtless, also be recollected, that the closing battle of this war, of any considerable importance, was the engagement between the volunteer company under

Captain Lovell, and the Pequaketts, whose chief was Paugus, in May, 1725. In December of that year, another treaty was executed, and finally ratified by all the eastern tribes.

But the back country was yet a vast wilderness, and still alive with innumerable savages, professedly friendly, but whose warlike and ferocious spirit was still unsubdued. Even while professing friendship, there were always those among them not scrupulous about committing depredations upon the property of the whites, and taking their lives also, whenever it happened to suit their purposes. The latter were obliged to submit silently to these outrages, or run the risk of kindling a flame which might overwhelm and entirely destroy them. Their ravages, however, were not very extensive; and the settlers were encouraged to persevere in their enterprises—every year becoming better established, and increasing in numbers and strength, by emigrations from the older towns in Massachusetts and other states, as well as from Europe.

Among the early settlers of North Yarmouth, the town adjoining Falmouth, was a company of enterprising young men from Duxbury, Massachusetts. They emigrated thither about the year 1743. Purposing to journey into the wilderness together, suitable preparations were made for their comfort and safety on the way. By previous arrangement, the evening before setting out was spent in company with each other, for the purpose of a mutual understanding upon matters interesting to them all. Ten in number, they met at a handsome dwelling, a short distance from the centre of the town, in which they belonged, on the road leading from Duxbury to Plymouth. The house, a few years since, was still standing, having, by occasional repairs, been preserved in a good condition.

"Well," said Jones, the adventurous band having, as above remarked, all assembled together, "we have, at length, succeeded in mustering courage sufficient to cut the strong cords which have thus far closely confined us to our native hills! What success, think you, shall we experience in this new move of ours?"

"I fear we shall have a tedious journey of it," answered Freeman, another of the company.

"Yes," added a third, named Davis, "and ten to one if it be not a bloody one too! Those red rascals, down east, are as numerous almost as the trees; and we may think ourselves lucky if we reach our destination with whole scalps! What say, Jones—is your old firelock in prime order?"

"Aye, let me alone for that," replied Jones, "she is sure fire, and no stranger either to the red faces, as some of them, to their sorrow, have felt! She was true to the country long before I came upon the stage—trust me, she will not prove unfaithful now! What's the matter, friend Rice?"

* For the historical facts in this sketch, the writer is indebted, mainly, to Willis's History of Portland.

why look so sad?" continued Jones, jocosely; "I suspect the thought of leaving young Eliza occupies your mind at this time. Cheer up, my fellow! bright prospects are before you, and you will soon be prepared to take her to yourself. Come! what's the use of sadness? we'll have a pleasant journey and a prosperous time of it yet."

"To tell the truth," answered Rice, "I do feel rather sad this evening—not from the cause you intimate, however, but I had a dream last night—and I fear it may come to pass."

"A dream, eh?" exclaimed several of the company, with a burst of laughter, in which Rice was forced to join.

"Yes," continued he, "I dreamed that we were on our way, and were attacked and cut to pieces by the Indians. It appeared so much like reality, that I awoke trembling and much alarmed; and, in spite of my courage, the circumstance has given me not a little uneasiness since."

"A truce to your dreams!" said Drinkwater, "leave them to the old women. Come, who shall be our commander?"

"Jones, Jones," answered a number of voices. The vote was taken, and Mr. Jones unanimously declared to be their choice for Captain. The dream was laughed out of the company, as a matter of no moment.

The war of 1703, and subsequent wars with the Indians, had proved exceedingly unhappy to many of Jones' ancestors; and he was ready to embrace the first opportunity which might offer itself to chastise the savages for their cruelty so often displayed. He readily accepted the appointment, swearing by his old firelock, to do his duty manfully.

"Now, Captain," said Blanchard, another of the company, "suppose we encounter a gang of hostile red faces, what shall be our first step?"

"Shoot every soul of them, and send them to settle their accounts with Father Ralle!" was the reply. "But we must keep a bright look out, or they'll wing us before we know it!"

"Right, Captain," responded Blanchard, "they know well how to take their game, as poor Lovell and his ill-fated but gallant band might testify."

"Aye, but Paugus finally found his match," said the Captain, "and if they surprise us, we must endeavor to give them as good as they send. They, too, may find their scalps at head quarters for the premium, and ourselves the bearers!"

"Good!" exclaimed Mitchell, who, until now, had remained almost in silence. "Who knows but we may make our fortunes in whipping the rascals? What will they bring a head, Captain?"

"Stop, stop," interrupted Rice, "you are a little too fast; the government pays no premium for scalps now—what's more, we had better take care of our own, or I am no prophet!"

"Well, well," replied Mitchell, "premium or

not, I hope we shall not get frightened at dreams before starting! Do, friend Rice, take courage! We have to die but once, and that's but a trifle, you know, if we are only prepared! Ah, I recollect, the governor withdrew the premium on the heads of the Indians, upon their promising good fashions in future. Maybe they'll not trouble us."

"But who'll trust them?" continued Rice. "They have broken their pledges, and proved false too often to be trusted now. For myself, I intend to be on my guard against them—and heaven grant my dream may prove the presage of no evil!"

All acknowledged the importance of being prepared for the worst; and the company, after spending the evening in a manner somewhat as above described, separated to seek rest and take leave of their friends, in view of an early start in the morning.

In those days, it was considered a great undertaking to travel from the old settlements in Massachusetts to the province of Maine, especially if the adventurers were purposing to take up a permanent residence "down east." Compared with such a journey then, the distance from Maine to New Orleans is travelled now with perfect ease. Running through vast forests, and very little travelled, the road, much of the way, was hardly more than a rough path; and the danger of being surprised and massacred by the Indians, added much to the importance of the undertaking. Nothing daunted, however, and full of courage, our enterprising band were assembled and ready for their march in the morning, ere the sun had again made his appearance. It was early in the spring of the year, and they were to make their journey on foot. Thus, each with a knapsack of provisions, &c. upon his back, and a good gun on his shoulder, they started on their way.

For the first five or six days, they met with no serious difficulty, though occasionally startled with the sight of an Indian, springing up and bounding on ahead of them, as if alarmed at the approach of white men. But on the seventh day of their journey, they were not so fortunate. Two of their company, Captain Jones and Mitchell, had wandered from the rest, a short distance from the road, in search of game. They were near each other, when, much to their surprise, they heard in a direction still farther from the road, the report of two guns, and balls came whistling by, lodging in the body of a large tree immediately behind them. It was evidently the salutation of no friend. Quick as thought, both sprang for safety to the opposite side of the tree from which the balls had penetrated, and prepared to return the shots. In an instant, they saw two Indians, with uplifted tomahawks, slowly advancing toward them, as if they thought their balls had taken effect—the smoke of their guns, probably, shielding their

intended victims, for the moment, from their sight. They were suffered to advance but a short distance, before each found himself drinking deeply of the cup he anxiously hoped and believed was the bitter lot of others! The sure fire of Jones and his companion had brought them to the ground, and they lay before them in the agonies of death! Those of the company in the road, hearing the report of the guns in such quick succession, hastened to the spot just in time to see each of the savages draw his last breath, which was spent in earnest entreaties for their lives to be spared.

"What now!" exclaimed Davis, addressing the Captain. "The fellows attempted to blow you through, eh? A bad move for them, I'm thinking!"

"And for us, too, I fear," added Freeman. "Either of you wounded, Captain?"

"Not touched," replied Jones—"a thousand wonders we were not both killed. The rascals must have taken deliberate aim at us!"

"Aye," said Cutter, the youngest of the company; "but you paid them in their own coin, Captain; they've no cause for grumbling!"

"True!" responded the Captain; "but we must hasten to conceal their bodies and be off, or it may be ill with us yet! Their confederates are not far distant, I warrant you."

No time was lost in attending to this suggestion. The remains of the two savages, together with all they had about them, were buried near the place where they fell, being covered with decayed wood and such other light materials as were at hand; and all again proceeded on their way. They were now somewhat alarmed, as they had reason to be, lest the occurrence might be the means of involving them in more serious difficulty. The day was far spent, and they had knowledge of no human habitation to which they might flee for safety during the approaching night. Summoning to their aid all their courage, however, they determined to make the night answer a good purpose to them, even though it brought no rest to their weary limbs. They therefore improved the larger part of it in travelling as far on their journey as possible, in hopes to get beyond the reach of the Indians, should they be pursued. At the dawn of day, on the following morning, thinking themselves no longer immediately in danger, they halted in the midst of the wilderness, to take rest and refresh themselves by food. A good hour or more having passed, they resumed their march. But they had proceeded but a few miles, when Mitchell, a little ahead of the rest, caught the glimpse of an Indian still farther on, just springing across the road to a shrubby thicket on the left. He gave the alarm, and the Captain directed his comrades to leave the road, that in case of an attack, the trees might serve to defend them from the fire of the enemy. The

command was hardly given, before the report of a gun was heard, and Rice fell, wounded, to the ground—a musket ball having passed through his leg just below the knee, entirely disabling him. A sharp contest was now anticipated as certain to follow; for they correctly believed themselves overtaken by the savages they had so much exerted themselves to avoid. Indeed, they immediately perceived that they were outnumbered, nearly two to one, by their foes, and that they must fight for their lives. The road they had travelled the night previous, it was afterwards found, was very circuitous; and the Indians, being acquainted with the way, had taken a shorter direction across the woods, for the purpose of concealing themselves in the thicket, and making sure of their prey undiscovered. But for the sharp look out and early alarm of Mitchell, their purpose would doubtless have been executed. A good Providence, however, still favored our adventurers. Guarded by the trees, they poured in a most deadly fire upon the savages, who had the advantage of no large trees to protect them. A brisk fire was kept up on either side for several minutes, when the savages, finding themselves constantly growing weaker, and disheartened by so unexpected a defeat, retreated into a contiguous swamp, intending to renew their attack under more favorable circumstances to themselves, having, in the first instance, chosen their position, not for defence, but concealment. Our gallant band (with the exception of poor Rice, who could not be found after the conflict,) being again at liberty to proceed, the question now arose, what direction they should take, to be most secure from the pursuit of the Indians. Still, in the midst of the wilderness, it was evident they could not follow the road with safety; and to leave it, and run the risk of finding their way to a settlement through a dense and almost boundless forest, was also exceedingly hazardous. One or the other course, however, must be taken; and the latter was decided upon as being, under the circumstances, most likely to end well. They accordingly left the road on the right, and travelled in a westerly direction from it—meeting with no other serious trouble on their journey. But for a fortunate circumstance on the next day, after leaving the road, however, it might not have been thus well with them. They had become bewildered, and utterly at a loss which way to proceed, when they discovered an Indian, apparently unarmed, advancing, with friendly gestures, towards them. They doubted, at first, his sincerity; but permitting him to approach, he soon convinced them of his friendly disposition, by directing their attention to a canoe which he had left behind, and which, he said, was but a short distance from the Saco river, where he had been engaged in fishing. They offered him a few trifling presents, and he in turn, gave them

some of his fish, of which, with other food, after cooking, they partook together, much to the satisfaction of all. It is needless to add, that the presence of their unfortunate companion, whom they had left behind, and whose loss they severely mourned, would have rendered the rough banquet of our travellers far more pleasant. But of his fate they were ignorant. They little doubted, however, that the Indians had, ere then, cruelly put an end to his existence, if so unfortunate as to have fallen into their hands; or, it was possible, his wound might have caused his death before the savages returned. His dream, in respect to himself at least, had indeed proved too true!

After a few hours' rest, our travellers, having engaged the friendly Indian to act as their guide, again started on their way, crossing the river by means of his canoe; and on the following day arrived safely at the settlement on Falmouth Neck. Purposing to follow farming for a livelihood, they chose North Yarmouth as their place of settlement. But before getting even comfortably situated, the French war was declared in 1744.

Notwithstanding the Indians on the west of Penobscot river, by a treaty with the government, bound themselves to remain neutral during the war, on being afterwards required to aid in subduing the St. John and Cape Sable Indians, who favored the French, they proved false, and joined the enemy. Hence war was declared against them in 1745, and a bounty of one hundred and sixty-five dollars established on Indian scalps. Volunteer companies were now raised to go in search of the Indians. In 1746, several individuals in North Yarmouth, among whom were our friends, Jones, Mitchell and Drinkwater, joined one of these companies. Philip Greeley, a neighbor, (who, if we mistake not, was also of the adventurous band,) having been shot by the Indians, near his cornfield. The strongest house in the neighborhood had been selected and guarded for a place of safety, by surrounding it with long posts, forced into the ground, closely joining each other, a few rods from the dwelling. Thus a number of families unitedly secured themselves from the constantly expected attacks of the Indians. Early on a morning in August, Greeley had left this dwelling to examine his cornfield, which was not far distant, and the Indians, being on the watch, fired upon and killed him, before he was able to get beyond their reach, or assistance could be rendered.

The volunteer company immediately started on their expedition. They were several days absent without encountering their foes, having penetrated the wilderness to the west of Saco river. At length, near the close of the fourth day, they saw two Indians, and orders were immediately given to shoot them down. They raised their pieces for

the fire, when the savages, dropping their weapons, ran towards them, begging for life. Being convinced of their pacific intentions, their entreaties were granted, on their voluntarily promising to bring to them, the next day, a white man, who, they said, had long been a captive in their tribe. They were faithful to their word, and to the unspeakable joy of the company and himself, the captive was no other than William Rice, who, three years before, had been left wounded in the power of the savages! Accompanied by the liberated captive, the party immediately returned home, delighted with their expedition. Thus was Rice restored to his friends, and civilized society, after a painful captivity of more than three years. On being discovered in his place of concealment by the Indians, in the first instance, after receiving the wound in his leg, he looked only for the most dreadful suffering and death. Faint from pain and loss of blood, he had lain several hours insensible when taken up. But weak and faint as he was, he was compelled to accompany the savages to their settlement, a distance of several miles, on foot! Here he soon learned that ten of their best warriors had fallen in the contest with his companions; and was given also to understand that his life was prolonged only to be disposed of in the most brutal manner, when a portion of the tribe, still in pursuit of his friends, should return! Fortunately for him, however, three days transpired before their return, affording him an opportunity of planning to avert the blow which was to fall upon him, and of gaining the confidence and esteem of the less savage of the tribe. He improved his time to advantage. Learning that a fatal malady prevailed among them, and professing to be a skillful physician, he flattered the savages that he might be highly serviceable to them, on his recovery, were his life spared. But though successful in alluring them from their dreadful purpose, he yet had serious reason to fear death from his wound, which, from want of proper attention, had thrown him into a violent fever. After severe suffering for several weeks, however, he at length recovered his health, but with almost the entire loss of the use of his leg. Having now little hope of regaining his liberty, except through the favor of the Indians, he used every exertion to please them in his power. As a physician, (though by profession a cobbler,) fortune seemed to smile on his efforts; for remarkable cures were indeed effected under his direction. He thus secured the confidence of the tribe, and made his situation comparatively one of happiness, being constantly supported by the hope of ere long seeing himself free, with his relatives and friends. Ignorant of his distance from the white settlements, he made no serious attempt to escape—trusting in God for a deliverance. The sequel proved that his trust was not in vain. After tarrying a short time in

North Yarmouth, he returned to his native town, welcomed by all—especially by Eliza Stanwood, who afterwards became his wife. A valuable and respected citizen, he died, much lamented, in 1767, at the age of fifty-six.

Our settlers in North Yarmouth, as well as in most other parts of the country, continued in a state of excitement from the war, until 1748, when the suspension of arms in Europe, resulting in the treaty of Aix-la-Chapelle, put an end to the destructive warfare, which had so long disturbed their repose. The war being terminated, their prosperity was not again interrupted before the great revolution of 1776. Ardently engaged in the cause of freedom, they now aided in achieving the independence of their country—and lived, many of them, to witness the success and happiness of their descendants—the unparalleled prosperity of a great and free people in after years.

SPRING JOYS.*

By the author of "Love at the Shrines," "Sleet Storm," &c.

There is joy coming to us all from the skies, but it comes slowly and tremblingly, like a proud woman's smile upon the man she loves. The birds are making a great disturbance among the trees, and every now and then, a bud or a leaf, falls through the branches, and flutters in the breeze. Really spring is a delightful season to think in, and it fills the heart with delicious and never to be expressed sensations of delight—crowding it over with wild fancies of shaded valleys, and warm sunny slopes, where grow the daisies and the wild roses—those fragrant and simple flowers.

How gay are our children, and our wives are tramping over head, and closets are locked and unlocked, and large supplies of winter clothing are hanging on the back porch to air. The red cornered blankets are luxuriating in the genial beams, and the children are looking for crooked pins among them, which they call witches. You all remember those freaks, which are nothing more nor less than the first dawnings of fancy and imagination, that afterwards enlarge through the big veins of poetry or history, and marvel the world with goblins, and stories of wizards and warriors.

There is so much of domestic poetry in spring, that the soul yearns to it, and every minute beauty of nature becomes exaggerated to our eyes, and endeared a thousand fold to our hearts. It is the magnifying power of our love of nature!

How the morning sun glides over the window panes; and, lo! an old weather-beaten spider is crawling forth from his wintry lair, with steady and ferocious steps. I will watch the assassin giant. He spins out his coil of deadly rope, and takes a survey of his dominion.

* This article was written in early spring, but delayed in the hands of the author, which accounts for its late appearance. It is presumed that the thoughts of which it is composed, are so generally diffused through the hearts of all, that even at this late stage of the season, it will not be unwelcome.

The glassy surface is his slaughter-house. He seems to prick up his ears, that Arab of the window, and his long black legs are tremulous with ecstasy as he hears the murmuring buzz of his victim. Fool of a fly keep off! His eyes are glistening, and his sides distend with his hungry panting, and rapidly he whirls out his net. Nearer and nearer comes the child of frolic and of sugar—the ridiculous and sensual fly. He cleaves the air with his sonorous wings—he sees a thousand prismatic and beautiful colors in the glass—he sees the distant and glorious fields—the rose bushes in their incipient bloom—the cherry blossoms and the apple flowers—the green grass—and he longs to perch himself upon the tapering ears of my browsing steed, and rapidly he darts against the glass. He cannot break the sand-blown barrier, and forthwith, with an aching pate, (so hard was it thumped, that I wonder his brains were not scattered out,) he commences his dance on his forelegs. How he kicks and cuffs and grumbles and growls, and then bursts forth in a wild and romantic bugle note; finally he settles in a corner and smooths down his ruffled front, and strikes up his angular music with his elastic legs. Meantime the black giant is busily engaged. He keeps as silent as the grave; his fuzzy back is raised, and his ferocious eyes sparkle with savage joy; he swings himself along the glass by one of his cables, and apparently without noticing the fly, he spins out with greedy haste the death entrapping seine. The fly is dreaming by this of love and sugar-candy, having buzzed himself to sleep. Gently a thread is passed over one of his wings; he feels it not, for his noddle is filled with harmonious memories of the last summer's glories. The spider works on; another and another impalpable thread is passed over his pinions—the cord is tightened round his legs, and fully caught, and awake, the poor fly sets up the wail of the prisoner. His gentle and heart-rending appeal is lost upon the desert air; he is alone with the fly-eater, on a wide and desolate field of ice—not another fly is seen to speed to the rescue. A group of savage young spiders crawl out of their corners, and smirk at each other: they gaze around and watch from afar off the victory of their monarch: they sharpen their fangs for the first banquet of spring.

The tragedy is drawing to a close: my heart is touched at the ghastly picture of tyranny, and I feel now that I have read of such scenes in Roman and Grecian history, in English and Spanish annals, in French and German story, and I long to exercise the attributes of mercy and of vengeance. Just as the despot is about to pounce upon his entangled prey I will save him. To accomplish my purpose, I have slyly loosened my slipper from my left foot. Ha, the monster! he is now for the death spring! It is now my time. Mercy! I have smashed the glass into a thousand atoms! The spider's bloody carcass is crimsoned and mangled upon the heel of my shoe, and the fly is away upon the wing through the soft air, without one buzz of gratitude. That same chap will bite me on the nose, as in the midday heat of June, I poke it into a tumbler of iced punch or port. Such, alas! is the gratitude of flies and men.

It is now ten A. M. by the clock, and I saunter forth into a friend's beautiful garden, (sweet by its own natural adornment, and by the taste of those fair hands that strew its paths with flowers.) The lilacs, on the

crowning slopes, are blue and crimson ; the sun darts through the parted lips of leaves and flowers, and upon the short velvet grass he scatters his golden dust ; the fish are disporting in the pond, and yon old and sentimental trout, who lies so softly in the water-grass, is basking his fin in the summer warmth, and wags his pliant tail in all the luxury of piscatory contentment.

Oh, how the woodbine creeps around the dairy, and the moss spreading over the peaked roof, has wound itself into the semblance of a velvet collar around the coat of some ancient gentleman. There is a still, but eloquent meditative sentiment about this spot, that checks the worldly thought, and ministers to the true throb of the innocent nature. The thick and shady grove over my head, and yon majestic oak, with his thousand branches, which he lifts with a sentient majesty to the sun, how beautiful—how full of testament of a God ! It is spring—the year is in its youth and its purity ; and that majesty, which ere long, is to tower in its saffron robes and glittering coronals, is lapped on the cradle of a million buds, and rocked to and fro by the balmy breath of the playful zephyra. My soul is glad within me ; and melodious symphonies of boyhood—memories of my life's earliest hours—trip over the green sward of recollection, and sing peace and quiet to my struggling heart. There is no blemish in that retracing of those sunny paths, save of truancy from the stern school, and of precepts from parents—those kind representatives of our God—neglected or disobeyed.

The wiry dog, my loved companion, gazes askant on the pellucid waters of the fish-pond, and watches with an eye of intelligent interest, the swift motions of the Gold Fish, who scatters with his beaming tail the waters in his course. An old and solitary squirrel, gray as my grandfather's wig, chirps on the outward branches of the oak, and ogles a young blackbird, his only companion, in these verdant latitudes, with a cute and curious eye. Not a breath stirs a leaf. An aroma pervades the air, and fills my senses with rapture. The spring is the angel of God made visible to mortal ken in various and wonderful figurations. It bursts in beauty upon our senses in the lily—it threatens in the distant thunder—breathes to us from the limbs of the forests and the flowers of the fields ; and we read of the existence of a God in a leaf, which maps his power. How solemn and how calm—how glorious and how tender, are the sentiments that flock to the heart's fold, like so many young birds, hopeful of the mother, at the first outburst of the spring. We lift our eyes up to the blue worlds, and the ear and the mouth are filled with fragrant gales, and we let our souls go out to the skies, and converse with the seraphims. We hear their gold-strung harps, and our minds, how intellectual in such moments of transcendent enthusiasm, hold words of wisdom with those who stand nearest to the mighty one of all. Virtue now becomes a graven and cabalistic word upon the tops of the mountains, and honor and justice are reflected from the skies into those thoughtful sheets of water that lie between those hills of everlasting strength. The earth and the air—the waves, those dark and mighty waves, that roll and flash into eternity, with their mysterious murmurs, seem filled with the moral sentiment of innocence ; and the little barque that floats like a wafer upon their long swells, is as safe as

the star that rides upon the bosom of that blue heaven, which at night covers us with religion and majesty.

It is spring, and yet how fickle ! The price of fuel has not diminished, and the poor man who digs up his little patch of earth, and cultivates his cabbage and potatoes, turns at evening into his humble shed, and finds his little ones warming their hands over the unseasonable fire. However, that will not last long. The south wind is springing up, and I see the rose bushes bend to and fro. Bear up with cheerful hearts for awhile, ye poor, and the showers soft will be poured out, and to the sound of your children's merry prattle, the buds will bloom into perfection.

Two blankets o' night in May ! I won't hear of it ! What ! when I know that the wheat crops and the rye patches are busy at their golden crowns and tassels—when I hear the mockingbird, and see the soft moon of love, and the stars so warm ! I will keep up the old custom of sleeping under a white counterpane, and leave blankets to those who cannot bear music in spring gales, or see beauty in spring shrubs. It is night, and the memories are at work—those busy chaps that garner up the old dried leaves of flowers interspersed in our school books, and that prate so garrulously of our schoolboy sweethearts, when we used to copy verses from the "Lady of the Lake" for our beloved. Oh ! how they were kept in of evenings for not knowing those old primer tasks ; their young noddles so full of us boys ! Imprisoned with the stern dominie, even while the rainbow spanned the east ! Mayhap his old heart was touched with their young beauty. Delicious recollections ! What to them are the memories of the conqueror's march through vanquished nations—through bloody and dead armies—over rent banners and broken constitutions—perhaps over dead liberty ? Oh, nothing—absolutely nothing. The fresh memory of boyish innocence—of flowers that were culled to crown our sweethearts with—the gambol and the sport—the game upon the green—the tumble and the toss,—oh, they are the memories that nature dictates, and that God feels for. All others, of vanity, of victory, of blood, of crowns, of politics, of power and ambition, are but as demons that darken the sunshine of the earth, and convert the chapel of the mind, sacred in its orisons and its object, into a hated arena of unworthy thought.

Washington City, May, 1838.

LEIGH HUNT,

ON SONNET-WRITING AND SONNET-WRITERS IN GENERAL.

It would be difficult to find, in any writer whose works have crossed the Atlantic, more pertness and shallowness than appear in the subjoined piece, written by Leigh Hunt, for the *Examiner* newspaper ; of which we believe, he was editor.

It is from our old Blackwood, for 1819.

"Petrarch wrote Sonnets. This, I think, is pretty generally known—I mean among the true lovers of Italian poetry. Of course, I do not here

allude to those young ladies and gentlemen who are beginning to learn Italian, as they say, and think Petrarch really a charming man, and know by heart the names of Tasso and Ariosto, and of that wholesale dealer in grand vagaries, Dante. But besides these, several other Italian writers have composed sonnets, though I do not think with the rest of the world, that they have brought this species of composition to anything like perfection.

"Among us, Shakspeare and Milton have made attempts. Milton, by the way, is known to people in general merely as the author of *Paradise Lost*: but his masque, called *Comus*, I think the finest specimen of his poetical powers, faulty as it is in many respects. Some allowance, however, must be made for his youth at the time he wrote it; and indeed I must, in common fairness, admit, that when I composed my *Descent of Liberty*, I had the advantage of being somewhat older.

"When I inform my readers that Shakspeare wrote sonnets, I know they will be inclined to receive the revelation with a bless-my-soul sort of stare, and for anything I know, discredit it altogether. People, generally speaking, are very ignorant about the great nature-looking-through Bard, though I know they pretend to talk a good deal about him. His sonnets, for instance, are known only to the few whose souls are informed with a pure taste, and whose high aspirings enable them to feel and enjoy all the green leafiness and dewy freshness of his poetry. For my own part, I think well of them; and certainly upon the whole, they are not unworthy of their great author. Yet he has left something to be done in that way.

"Among the moderns we have no great examples. This lack of good sonnet-writers in England, is in some sort attributable to the style of versification prevalent among us, and which is totally unfit for the streamy, gurgling-brooky, as it were, flow of the sonnet. Dryden and Pope, I think, were wretched versifiers, though I know this opinion will absolutely horrify all the boarding-school misses, as well as many other well-intentioned folks, who like verses which cost them no trouble to read into music. But to come to the point. What our poetry has hitherto wanted, is a looseness and irregularity—a kind of broken, patchy choppiness in the construction of its verse, and an idiomatic how-d'ye-do-pretty-well-thank-ye sort of freedom in its language. This, at length, I have succeeded in giving it, and present my readers with the following sonnet on myself as a specimen. By the way, I intend it only for such readers as have a fine eye for the truth of things—for sweethearts and fine understandings—for maids whose very souls peep out at their bosoms, as it were, and who love the moonlight stillness of the Regent's Park.

" SONNET ON MYSELF.

"I love to walk towards Hampstead saunteringly,
And climb thy grassy eminence, Primrose Hill!
And of the frolicsome breeze, swallow my fill,
And gaze all round and round me. Then I lie
Flatly on the grass, rurally,
And sicken to think of the smoke-mantled city,
But pluck a butter-cup, yellow and pretty,
And twirl it, as it were, Italianly.
And then I drink hot milk, fresh from the cow,
Not such as that they sell about the town; and then
I gaze at the sky with high poetic feeling,
And liken it to a gorgeously spangled ceiling;
Then my all-compassing mind tells me—as now,
And as it usually does—that I am foremost of men!"

Page 21.

And so "good bye for the present, sweet Master Shallow;" we shall come back to thee anon, as sure as our name is
Z.

THE DESULTORY SPECULATOR.

For my own amusement, and possibly for that of your readers, I propose to send you, from time to time, the occasional thoughts and reflections of my mind, under the above title. They will of course be desultory and various, and may from that circumstance, be less *ennuyeux*, than regular and elaborate essays.

Spring is beginning to unfold her beauties, and the ethereal spirit, veiled in a shower of shadowy roses, has descended on our fields and mountains and valleys. The air teems with fragrance, the grove is animated with melody, and all nature is rejoicing in her renovation. Among the sweetest productions of her reign is

THE ROSE.

This beautiful shrub is found in almost every country, and wherever found, its fragrance and splendor have made it the ornament of the garden and an object of admiration. Nature, as if charmed with this exquisite specimen of her skill, has multiplied its species and varieties to an almost unlimited extent, and the poet has sung its praises in all ages and nations. It has been wedded to the nightingale, and its fragrance and beauty have been the theme of every tongue. It was called by the ancients the "splendor of plants," and has been made an universal emblem. "La piété," says a French writer, "en decore les temples, l'amour et la gaieté en forment des couronnes, la douleur l'effeuille sur les tombeaux, la pudeur et la chasteté la reçoivent comme la prix le plus doux et le plus glorieux."

"Resplendent rose! the flower of flowers,
Whose breath perfumes Olympus' bowers,
Whose virgin blush of chastened dye
Enchants so much our mental eye."

Anacreon has sung the praise of this beautiful flower:

"Rose, thou art the sweetest flower
That ever drank the amber shower!
Rose, thou art the fondest child
Of dimpled spring, the wood nymph wild."

It is an object which has been embodied in the poetry of all ages. No flower that blooms is more poetical. Its very origin is blended with the fancies of the poet.

"Tendre objet des pleurs d'Aurore."

The Guebers believe that when Abraham was thrown into the fire by Nimrod, the flame turned into a bed of roses. The Turks have an idea that it sprang from the perspiration of Mahomet, and they cause a rose to be sculptured on the monuments of all young women who die unmarried. The mythological writers say, that Apollo caused Rhodante, Queen of Corinth, in consequence of her extreme beauty, to be changed into a rose. The first rose is said to have been given by the God of Love to Harpocrates, the God of Silence, to engage him to conceal the conduct of his mother Venus, and hence it was made the symbol of silence. A rose was always placed above the heads of the guests in the banqueting hall, to banish restraint, and to denote that nothing said there should be repeated elsewhere; and hence originated the saying *sub rosa*, when a secret was to be kept. Rhodes is thought to owe its name to the immense quantity of roses which it produces. At Salreay, in France, a curious festival is kept up, called the festival of roses. A young girl is selected from among three of the most distinguished for female virtues: her name is announced from the pulpit; she is afterwards conducted to the church, to attend the vesper service. She was formerly accustomed to open the ball at night with the *seigneur*; now a present is bestowed upon her, and she is called *la rosiere*, because she is always adorned with roses. The perfume of this delicious flower, is thus poetically accounted for by the fabulous authors: "Love, at a feast on Olympus, in the midst of a lively dance, overset, by a stroke of his wing, a goblet of nectar, which, falling on a rose, embalmed it with the rich fragrance it still retains."

As Venus wandered midst the Idalian bower,
And watched the loves and graces round her play,
She plucked a musk rose from its dew-bent spray,
And this, she cried, shall be my favorite flower;
For o'er its crimson leaflets I will shower
Dissolving sweets, to steal the soul away. *Reesce.*

In Shiras and Cashmere the rose is peculiarly odoriferous, and yields the most fragrant ottar or essential oil.

Who has not heard of the vale of Cashmere,
With its roses the brightest that earth ever gave. *Moore.*

Catullus thus accounts for the color of this beautiful flower, which was originally white:

While the enamored queen of joy
Flies to protect her lovely boy,
On whom the jealous war-god rushes,
She treads upon a thorned rose,
And while the wound with crimson flows,
The snowy flowret feels her blood, and blushes.

The petals of the rose are the only part of the flower that imparts the odoriferous matter to water by distillation and infusion. The ottar is obtained from various species of the rose, but particularly the musk species. The aroma or odor, though so agreeable, has in some instances produced fainting, hysterical affections, inflammations of the eyes, &c. A case is recorded of a celebrated painter, who could not remain in any room where there were roses, without being attacked with violent sickness, succeeded by fainting. These effects have been attributed to the carbonic acid gas which these flowers exhale. But few, however, are thus

affected, and the fragrance is to almost every one delicious. All would wish

"To die of a rose in aromatic pain;"

and our most beautiful sentiments are tinged with the *couleur de rose*.

Washington.

W—N.

A RECENT VISIT TO LADY HESTER STANHOPE.

BY AN AMERICAN.*

She is an extraordinary woman, this Lady Hester Stanhope. Extraordinary in her character, in her appearance, in her opinions, and in the romantic incidents of her life.

* * * * *

Sidon is about twenty miles north of Tyre, in like manner upon the sea-coast, and in an equal state of misery and decadence. It was originally an open roadstead, furnished subsequently with an artificial mole, the remains of which yet exist. These towns owed their origin and prosperity to their situation, as the most convenient marts for the country east of them. The vallies of Lebanon, in their rear, are fertile and productive; and the great valley, in which Baalbec is placed, between Lebanon and Anti-Lebanon, was one of the richest regions upon the face of the globe. And Damascus, on the eastern side of Anti-Lebanon, and its beautiful circumjacent country, must have always depended upon these ports for the exportation and importation of whatever articles formed their commerce. "Syria was thy merchant," says the Prophet Ezekiel, speaking of Tyre. "Judah and the land of Israel, they were thy merchants." "Damascus was thy merchant." How true all this was, history has told us. And it perfectly agrees with the geographical features of the country, and with the relations necessarily existing between the regions extending as far as the Euphrates, and this part of the Mediterranean. Beirout, about twenty miles north of Sidon, has now taken the trade which formerly enriched that city and Tyre; and there must always be some considerable mart in the neighborhood. The inhabitants are, indeed, miserable, debased by vices of morals and of manners, and pressed down by the extortions of Eastern despotism. Still there is produced in the country much silk, fruit, wine, and drugs. While upon this topic of oppression, I am induced to mention a circumstance strikingly illustrative of it, which passed under my own eyes, at Cairo. We had been furnished with the necessary boats by the Government, but there

* Copied from the May No. of the Democratic Review, to which work it was forwarded by Hon. Lewis Cass, our Minister in France.

was a deficiency of boatmen. We lay at Boulac, the port of Cairo, and a large crowd had assembled, as usual, to witness the arrival and departure of vessels. Suddenly, some police officers seized a rope, and pushing into the crowd, surrounded with it a number of men, whom they compelled to come on board to serve as sailors—and what is worse, without any arrangement for pay or provisions. Where boats are furnished by the authorities, there is no obligation upon the passengers to remunerate the wretched beings employed in their transportation. I need scarcely add, that we did not seek to withdraw ourselves from our equitable duty by this immunity.

We left Sidon on the morning of that day, and after passing its miserable walls, we found ourselves upon the sandy beach of the sea. After travelling upon it about two miles, we began to ascend the head of a small stream, deriving its sources from the ridges of Lebanon. It is perennial, and its course is marked by productiveness and abundance. Water and fertility are almost synonymous in the East; and the fig and mulberry trees and the vines along the valley of this stream, presented a most delightful contrast to the naked and sterile ridges which enclosed it. We soon, however, left it, and traversed a very rugged and inhospitable country, ascending and descending hill after hill, each composed almost wholly of rock, till we came in sight of the little insulated mountain where Lady Hester Stanhope had established her lonely dwelling. It is almost conical, and separated by a deep valley from the other hills. We toiled up its precipitous side by a narrow winding path, enjoying the full benefit of a Syrian mid-day sun. When on the top, we stopped a moment to rest, and to survey the prospect around us. Steep valleys on every side seemed to enclose similar hills. Near was one having on its top a Greek convent, and others in the distance spotted with villages, Greek, Arab, and Druse. There must be something peculiar in the soil of this region, for to the eye nothing could promise greater sterility. The worst spot in the Alleghany Mountains would seem to me to hold out greater encouragement to industry; and a person who has visited the Gap in the White Mountains, may form a tolerable idea of the rocky desolation which the prospect offers. Upon the top of the hill, this self-expatriated grand-daughter of the great Earl of Chatham, this niece and adviser of William Pitt, has established her residence. The house, or rather the cluster of houses, is built in the Arab manner, low, irregular, and almost detached. It is of stone, rather rudely constructed, and surrounded, as is usual here, with a stone wall. There are some fig and pomegranate trees, vines and flowering shrubs, cultivated with care, and furnished with water brought from some distant spring in the valley below, upon asses—for

the hill itself is as destitute of water as the deserts of Arabia.

I had taken the precaution, before leaving Sidon, to transmit, by a messenger, my card and letter, stating our desire to have an interview with her ladyship. I had understood, when in Damascus, from the French consul, who had been for some years her physician, that she was not always accessible, and I was advised to give her previous notice of our intended visit. When we reached her house, we found she had not risen, for among her peculiar habits, is one which converts the day into night. She had, however, given orders for our hospitable reception, and requested we would dine, informing us she would receive us about three o'clock in the afternoon. This, however, did not suit our arrangements; for one object we had in view in the journey, was to visit the Emir Beschir, the Prince of the Druses, who lives about seven hours' ride beyond Lady Hester, in the midst of the Ridges of Lebanon. We, therefore, excused ourselves to her ladyship for not waiting, promising to make our visit to the Emir that evening, and to return, so as to present ourselves again there by noon the next day. To this arrangement she assented, and we continued our journey without seeing her.

The same uninviting country met our view, until we crossed over some steep, rocky ridges, and struck a petty stream, which discharges itself into the Mediterranean, between Sidon and Beirout. It is the one in which the Emperor Barbarossa was drowned, while engaged in a crusade. We travelled up this stream to its source, and after dark reached the residence of the Emir, one of the most romantic spots in the world. This singular people, the Druses, occupy these mountains. They have preserved a species of independence, and are governed by their own princes. I may take some other opportunity of communicating to you the particulars of our visit. A more interesting one could not have been made. We were received and treated with true Arab hospitality. The palace is by far the most magnificent building in Syria, and more than four times the size of our President's house. It is said the Emir keeps a thousand servants. During the journey of this day, we saw, for the first time, those horns alluded to in the Scripture, which are worn by the women. They are at least fifteen inches long, and rise over the forehead, being covered by a veil—and most uncouth looking objects they are.

We returned to Lady Hester Stanhope's at the hour indicated; and after a short time were introduced into her private apartment. She was sitting, dressed like an Arab, clothed in white, with a turban upon her head, and smoking a long pipe. She is tall and spare, with a worn and sickly complexion, and apparently about sixty-five years of age. I had heard from her physician, in

Damascus, that she had been engaged in early life to Sir John Moore, and I looked for those traits which may have been supposed to have attracted this great captain. But the remains were not to be found. There was a settled melancholy which added to the interest of her appearance; and the recollection of what she had been, contrasted with what she was, produced a powerful impression upon each of the party.

She received us with great kindness, and entered into a free and unrestrained conversation. She has seen life in a great variety of forms, and communicates her observations with spirit. She related to us many anecdotes of Mr. Pitt, and of his cotemporaries, who were associated with him on the stirring scenes during the French revolutionary wars. She has an unconquerable aversion to George the Fourth, and considers him the worst man who ever lived—except her neighbor, the Emir Beschir, who rather occupies the nadir in the circle of her affections. Of the Duke of York she spoke with great kindness; and I am inclined to think, that in both of these cases her own opinions are the faithful mirror of those of Mr. Pitt. She lived with that eminent statesman during the latter period of his life, and was admitted to his confidential councils and to the examination of his most private papers. What peculiar circumstances led her to change all the habits of her life, and to flee beyond Christendom, I know not. But as she displayed some eccentricity in the conception, she exhibited great firmness and intrepidity in the execution of the plan. On her first voyage she was shipwrecked somewhere off the coast of Caramania, I believe, between Cyprus and Rhodes, and was detained some days upon a barren waste. She lost every thing, and suffered all the hardships incident to such an accident in such an inhospitable region. But with indomitable resolution she returned to England, and, after procuring such articles as she needed, re-embarked for the East, and safely reached Syria. From that period her adventures are well known. She traversed almost all the country between the Euphrates and the Mediterranean, and by her conduct and her largesses, acquired an extraordinary influence over the tribes of nomadic Arabs who roam through this region. She was even saluted Queen of Palmyra, amid the mighty and interesting ruins which attest, upon a small oasis in the middle of the desert, the former power of Zenobia; and perhaps visions of glory floated before her eyes, and perhaps she dreamed of rivalling the renown of the unfortunate sovereign, who, after resisting the strength of Rome, was led away captive by Aurelian. But, alas, the Ishmaelites are poor pillars for a throne to rest upon, a foundation as unstable as their own sandy ocean. The leech, cries 'Give, give'—and the Arabs cried, 'More, more,' till the treasury of the Lady Hester was well nigh ex-

hausted; and as her means diminished, her influence also diminished, till the latter is reduced within very narrow limits, and till the former, I fear, is much less than the interest I take in her fate induces me to wish it was. At one time, her passport was a safe guaranty for the traveller, insuring him protection and hospitality among the wildest bands.

I found she held the moral character of the Turks in high estimation; but she denounces the changes which are evidently in progress throughout the Empire, having a tendency to assimilate the Mussulman population to the Christian standard. This she charges upon Sultan Mahmoud; and as her *beau ideal* of a gentleman seems to be a Turk of the old school, with his flowing robes and the other accessories of an Eastern toilet, she may well be supposed to hold in detestation the ugly Fez cap, the pantaloons and the long frock coat, which have changed and disfigured the Mahometans. We had much interesting conversation with her, which I shall not repeat, confining myself to such remarks, indicative of her frame of mind, as may appear to be of a general nature. I found she had so far lost her command of the English language, as to be driven occasionally to have recourse to the Arabic. She expressed much dissatisfaction at the accounts which some travellers have given of their interviews with her, and was particularly severe upon M. Lamartine. Her strictures upon the work of this gentleman exhibited much feeling, and she considers his description of her dress, and manners, and conversation, as highly colored, and, in fact, distorted—and she qualified it by an epithet I feel no disposition to repeat. M. Lamartine is a poet, with a vivid imagination, surveying objects through a less sober medium than we every day folks; he is also a gentleman of great worth and of high reputation, and no doubt described objects as they struck him; but really, after having followed a large part of his route, I must say, that his book is a very erroneous guide to a just appreciation of the mind and manners of this region. It is a picture sketched and colored with great beauty and brilliancy, but one whose prototype it would be difficult to find.

I cannot fully make out from M. Lamartine's narrative, whether he united with Lady Hester Stanhope, in the opinions he states she entertained concerning the miraculous horse whose destiny is to be so noble. There is here so much of mysticism in his narrative, as to baffle my penetration with respect to his own views. However, after diligent inquiry, we could learn nothing of this new Alborak. Her ladyship disavowed, in decided terms, the charge of being decked as M. Lamartine paints her—saying she was clothed in a dress precisely similar to the one she had on when we were with her, which was perfectly simple.

Our interview was highly interesting. Lady

Hester is possessed naturally of a vigorous intellect, improved by early study, and by a free admission to the best society. As may well be supposed, her peculiar opinions upon some subjects almost approach monomania. I imagine her long residence in the East has produced an effect upon her religious views, for there seems to be a medley, in her conversation, of the doctrines of Christianity and of the dogmas of Islamism. She alluded, in pretty distinct terms, to a story resembling in its outline the legendary tale of the Seven Sleepers of Ephesus, and which relates to certain persons now sleeping at Damascus, whose awakening, which is not far distant, is to be attended with some strange event. I believe we have all of us more or less of a spirit of hallucination, each perhaps when his own peculiar chord is struck, and more or less *developed*, as the craniologist would say, as the proper bump is greater or smaller.

Lady Hester has shown much friendship to our countrymen, and I think has received them whenever they have presented themselves, which she has not always done to British travellers. Ladies she never receives. Whether this exclusion is founded upon the Turkish opinion of female inferiority, I had not an opportunity to judge. We have certainly to thank her for her politeness and hospitality: and this she carried so far, notwithstanding our objections, as to send a servant with fruit to our boat at Sidon. We left her, wishing her more happiness than I am afraid is in store for her.

HEAVEN.

(FROM A LADY'S ALBUM.)

There is a realm beyond the distant sky,
Veiled from the impious gaze of mortal eye—
A realm of bliss unfading and serene,
Where sorrow is not known, and vice hath never been!

No anxious cares there rack the heaving breast;
There none are found by woe or grief oppressed;—
The needy widow there shall cease to need,
And gain that wealth for which a world might bleed.

The tear that glistened oft in beauty's eye,
There shall the pure celestial breezes dry;
And every sigh which filled the earthly breast,
In holy bliss shall there be calmed to rest.

No plaints of broken vows shall there be heard!—
No victims there of ardent hopes deferred
Shall be;—no chidings of the jealous mind;—
No artful wiles affection's links to bind.

All sensual feuds—all bitter strifes shall cease—
O'er the fair scene shall triumph heavenly Peace;—
While Love in one continuous glow shall beam—
The pure, enshrined Divinity its theme!

Alexandria, December, 1834.

REMARKS

ON A LATE REVIEW OF BACON.

By a native, not a resident of Virginia.

"It is the first duty of every christian and every patriot to oppose everything which tends to corrupt public morals or promote licentiousness of opinion." This sentiment of one of your contributors, has strongly affected my mind in reference to a recent review of the works of Bacon, in the Edinburgh Review, and which has been transferred, in a condensed form, to the columns of the Messenger. Regarded merely as a composition, it is beyond all praise. Every paragraph betrays the hand of a master. The illustrations, which are most felicitously used, show that the writer is at home in every department of polite literature. Admiration of intellectual power and of rhetorical graces, however, though always pleasant free-will offerings to genius, should never blind us to the moral bearings of any production. With all the admiration of the writer's power awakened by this essay, there was at the close of it a mournful conviction, which has been strengthened by repeated reflection, that its tendency was to be deplored, and ought, if possible, to be counteracted. It is altogether probable, that an undefined sense—that something wrong and dangerous, was mixed up with all this splendid diction—may have pervaded the minds of others. With this feeling, I had expected to see something in the Messenger which would have obviated any remarks by the writer; but having waited in vain, may I have the use of a few pages to give utterance to the thoughts that have arisen from the reading of this essay?

What shall be said, regards almost exclusively the latter part of the review, beginning with the February number of the Messenger. With the biographical part there can be no just quarrel. The apprehension of injurious effects arises from the views given of the Baconian philosophy, and the high eulogium on its superior practical advantages, as contrasted especially with the philosophy of Plato. Many may smile at this honest expression of apprehension. Why, they may ask, what injury will it or can it do society, or what influence can it have on the moral interests of our community, whether a man prefers or praises the philosophy of Bacon or of Plato? Are not these mere questions of speculation? No; far otherwise. This essay has had, and will have its moral influence; it will shape the thoughts, and mould the sentiments, and give a tinge to the plans of those who move the opinions of the mass. "*Philosophia sedet ad Jubernaculum.*" She is the true mistress—more potent than literature—more lasting than governments, in moulding men's opinions. She strikes her empire into the depths of the soul. "The

principles of philosophy, good or bad, when incorporated in the minds of the few thinking and reflecting, descend and entrench themselves, not so much as speculative views, but as practical principles, into the body of the people." The spirit of philosophy, in the minds of the intellectual of an age, are like the inner works of a clock; we see the results on the mass, as we see the outward index of the time-piece. The retired student powerfully agitates, or mightily controls that sea of human affairs, from which he is at so great a distance. "In view of the wide and fatal influence of false philosophy, we should aim to correct it, notwithstanding the perils involved in the attempt," or the presumption which seems to be argued by the effort. "We are not to abandon the errors of philosophy as hopeless, or disregard them as innocent, while we know that their seat is at the very centre of all influence, and their power is almost omnipotent." In this conflict, about the true philosophy, is embosomed some of the best interests of man; and every one, according to his ability, should contribute to rectify the wrong, and recommend the right. With these convictions, the writer diffidently adventures his protest against this essay.

It has been well remarked, that "the human mind possesses an instinct which leads it to seek the deeper grounds and universal relations of the various objects of its knowledge, and organize from them a systematic whole." From this instinct arises philosophy. Men who think must be philosophers. They must follow some method in the pursuit and arrangement of knowledge. The question is not, shall we philosophize, but *how* shall we do it? In any age but a few are philosophers, strictly speaking, i. e., in the sense of having felt within themselves this instinct, and yielded to its suggestion by forming new methods of philosophizing. The mass philosophize according to the methods which reign around them, and which they have found established, and generally surrender themselves to some master, both in regard to the mode of philosophy and the supreme objects of pursuit. There has been, in the history of philosophy, two great families of philosophers, or methods of philosophizing. In different ages, and for different temporary peculiarities, these have been distinguished by different names; such as idealism and realism—the spiritual and material—the metaphysical and mechanical. It is not proper to enter into the minutia of this history now. We consider these two kinds of philosophy to be the manifestations of two grand leading tendencies of mind—*geistesrichtungen*, as the Germans say—which have always existed among mankind. Of these, Bacon and Plato may be considered the representatives. Platonism is but the summing up, or systematizing of one of these tendencies, that considers spirit the great object of

philosophy, and self-consciousness the great means of its prosecution. It existed before Plato. It survived him. It exists yet, but it bears his name, because he gave it shape and clothed it with beauty. So Baconism is the summing up and systematizing of the other great tendency of the human mind, both in regard to the object of pursuit, and the method of attaining it. The theatre of this last philosophy is matter, and mind as affected by matter. The method of pursuit is strict analysis of, and experiment upon, matter, and a careful collation of the knowledge we acquire by means of the senses. It existed before Bacon. Its developments may be seen in all history, as the constant antagonist of the other philosophy; and as one method or the other prevailed at different periods, we may see the method of philosophizing appropriate to matter, applied to the discoveries of mind, or the rules of philosophizing proper for investigation of the mind, applied to analysis of matter. Bacon gave this philosophy form and substance and eclat. He reduced its scattered principles to a system, and showed the true method of making progress in material discoveries. He gave it his name because he made it popular, and illustrated its advantages more fully than any of his predecessors.

If this view of the history of philosophy be correct, it seems very obvious, that neither of these methods can be sufficient of itself, unless we abandon, as altogether useless, one of the two grand departments of human investigation, or involve ourselves in inextricable confusion by transferring from its appropriate sphere, the respective method of mental or material investigation. Nothing can be more unphilosophical than an overweening sense of importance on either side, or by either of these families of philosophers, which would utterly condemn or ridicule the other. While matter remains to be investigated, and material discoveries and triumphs are important and desirable, none should desire to see the philosophy of Bacon again immured in the dust of metaphysics; and while mind remains worthy of investigation; and its powers and operations constitute a subject of contemplation, no one should desire to see the spiritual philosophy completely exorcised by the mechanical. The system of Bacon, for certain purposes, is desirable and useful. It is good in its place. So is the system of Plato. But the reviewer, taking occasion from a new edition of the works of Bacon, has elaborated a most masterly exposition of his philosophy, and holding it up in contrast with Platonism, challenges for the one system universal suffrage, and endeavors to create against the other the feeling of contempt. Without pretending to be exclusively a Platonist, or deeming that idealism is the only way to arrive at full knowledge of the system of things, there may be an advantage in repelling these exclusive claims,

and showing some of the excellencies of the Platonic philosophy.

The review in question may be considered as a systematic and most elaborate attempt to show that utility is the proof of the true philosophy. Any system which cannot show its *fruit* is to be rejected, and the fruit thus considered as the genuine and only test of a philosophical system, is, "when called by its christian name," *physical enjoyment*. The reviewer states over and over, and with manifest encomium, that the end of the Baconian philosophy is this kind of fruit, and that it has produced it, is the demonstration of its vast superiority. This is what is meant by "the well-being of man:" this is the plain translation of Bacon's Latin phrase, "*commoda vitæ*"—abundance of good things. This is "the way the mass understand the term good." It is physical enjoyment or animal comfort. The position is broadly and most ingeniously taken, and most learnedly defended, that this is the "*summum bonum*" of man. Here we are constrained to say, if this be so, then the philosophy of Bacon is the philosophy for man. Grant these premises, and the conclusion seems irresistible. If fruit, in this sense, is the great and only desideratum, Bacon has a right to be called the philosopher, and his system the philosophy; for sure it is, he has made us more comfortable, and his philosophy has added vastly to our animal enjoyments. That this is not a libel on the object of Bacon's philosophy, or of the reviewer's meaning, may be gathered from the fact that he thought Bacon had more claims than Epicurus to the eulogy.

O! tenebris tantis tam clarum ex tollere lumen
Qui primus potuisti, illustrans commoda vitæ.

Which may be Englished somewhat freely thus:

Thou, first to scatter darkness from the art
Of living worthy of our sensual part.

Epicurus professed to introduce a philosophy which secured pleasure. But in the reviewer's opinion, he failed in the attempt, and what he failed to do, Bacon accomplished. He illustrated the real conveniences of life, and made provision for man's physical enjoyment; he attended to "vulgar wants;" he disdained the impracticable idea of making man a God; he contented himself with rendering him comfortable as an animal, and his glory is that he succeeded.

Here we think is the real point where the two systems are to be compared. Bacon's philosophy was for the animal in man: Plato's for the divine in man. Bacon's progress is marked by sensible gratification: Plato's by mental elevation. Plato's aim is character: Bacon's enjoyment. Plato designed by his philosophy the highest possible development of the human spirit: Bacon the utmost possible convenience of the human body.

Plato had always in his eye the spiritual, the abiding, the eternal wants of man: Bacon had in view his animal, temporary, vanishing necessities. The true question is, which of these two systems, if we must choose between them, lays the strongest claim to our admiration? or, in other words, must we abandon Plato and his object, even if we admire Bacon in his wide sphere?

Our controversy with the reviewer, is not that he praises Bacon; but that he despises Plato. We object entirely to the test he has adopted. If *fruit* in his sense, be the proper test, then we confess the philosophy of Plato, which "aims to form the soul," and to produce the elevation, expansion, and refinement of man's spiritual nature, is wrong in aim and absurd in means. This philosophy, which boasts no such results, as can be the object of sight and touch, because its domain is spiritual, must shrink from competition amidst the clatter of spinning-jennies, the roar of steam engines, and the lightning of rail-road cars, the legitimate and lauded fruits of the mechanical philosophy. But is this the only kind of fruit which philosophy ought to produce? We say no. But the reviewer seems to say yes, and then gives the weight of his talents, and the fascinations of his style, to this fallacy—a fallacy, which, when it takes full possession of any human soul, must degrade it—and a fallacy which presents the strongest obstacle in the way of the real elevation of our race. I mean the fallacy—that enjoyment in the physical sense of the word is the real "*summum bonum*." This we take to be the *proton pseudo*s of the whole system. It is Epicureanism revived and amended; it attaches supreme importance to the sensible; it allows no value to what cannot somehow be touched, tasted or handled; it makes an apotheosis of the animal in man; it measures human glory by conquests over matter—human wisdom by its inventions, and human wealth by material sources of gratification; it makes the great proofs of the progress of man—for which as a race we ought to be singing hallelujahs—to consist in our machinery for locomotion, or our engines for using gunpowder; its glory is, that it "furnishes new arms for the warrior," and that by its means we "can traverse the earth in cars which whirl along without horses, and the ocean in ships which sail against the wind." It is a material philosophy, whose triumphs are material, whose tendencies are materialising: all good enough in its proper place and degree, but not good to the exclusion of everything else. Here is our controversy with this essay; it gives a tremendous impetus to the materialising tendencies of the times; it stamps the ugly spirit of utilitarianism with the graces of style, and endorses it with the sanction of a master in literature. This essay will give this spirit an entrance into many minds, and a supposititious influence over many hearts. It

will help to make this jejune philosophy—jejune, I mean, as to any fruit but what is merely physical or calculable, the popular philosophy, and popular too, in a region of our land where hitherto the old feelings and habits have been all the other way: it will provoke the south to a bad ambition, and to an unhappy rivalry. When generally welcomed, and when it has performed its perfect work along with other influences now in operation, it will convert the fields of the south into vast repositories of machinery—make a profusion of rail-roads, the synonyme and proof of internal improvement, and money-making the great desideratum.

This philosophy and its fruit does not suit my taste. I know "*De gustibus non disputandum est*;" but in the words of the reviewer, "from the cant of this philosophy," this everlasting reiteration of steam engines, spinning jennies and railroad cars, "sick chairs, guns, cutlery, spy-glasses and clocks," and all the other paraphernalia that "minister to our vulgar wants," and all good enough in their place, it is delightful to turn to the pages where Plato breathes the lessons of his own divine philosophy. It is like escaping from the murky streets of a city, where a thousand chimneys are volleying forth the coal smoke, and its collateral quantum of dirt, and breathing the fresh air of the country. Even as Platonism is given by the reviewer himself—though given for the purpose of invidious contrast with the substantial benefits of Baconism—almost any unsophisticated mind would say, "the old wine is better." Does not every one feel disposed to say, "we must attend necessarily to the body and its wants, and their supply; but we want still something nobler, higher, more elevating;" there are irrepressible aspirations of the spirit often buried up amidst the turmoil of vulgar cares and material distractions, but which it is luscious to indulge?" These Bacon never takes for granted, or believes in, but Plato tries at least to provide for. Surely man was made for something more spiritualizing than to enjoy the "*commoda vite*." I may live in the wrong age. My tendencies, sympathies and habits, may have been guilty of an awful and unpardonable anachronism. The progress of the Baconian philosophy may place me where Posidonius of old was placed by Seneca, still "*naturam expellas*," &c. I must plead guilty to the sin against utilitarianism, of preferring the reputation of working into the human spirit one idea, like the divine "*know thyself*," to that of having made the first arch, invented the steam engine, the cotton gin, or what the reviewer seems to think of immense moment, even gunpowder. As a matter of taste, I must plead guilty of loving Plato and his philosophy, much as it is despised by the reviewer. Sentiments, the growth of years, most worthy of confidence in moments of highest self-consciousness,

held in common too with spirits of the noblest character, through the long tract of human history, cannot be easily relinquished, notwithstanding the beautiful antithesis of contempt, delivered *ex cathedra*, from Edinburgh, and endorsed in the Old Dominion! Nor do I deem myself by any means unique in this taste. Many, I am persuaded, if they would pause long enough amidst the objects of material admiration and of bodily enjoyment, which the Baconian philosophy of fruit has brought to our age, to drink of the well of Plato's philosophy, would say, as I have felt disposed to say, many times while reading this contrast, "Were I doomed only to be dashed a little while in this sea of life, and then to be conscious no more, (and this let it be remembered is the real issue made by the reviewer, not entering at all on the educational or disciplinary influences of the two systems for eternity,) methinks I would rather float—the sea all around me—the sky above me, and have a thinking soul, that holds communion with a spiritual world, for a little while at least, within me, on this plank from Paradise, as some one calls Plato, than to be whirled along without time to think, or leisure to look at the beautiful world, I should leave so soon and forever, as a part of one of your modern modes of locomotion, called railroad cars, or even through the sea, without sail, and against the wind, in company with the highest conquest of mind over matter, in the shape of a steamship." It is an old fashioned sentiment, but still I must confess I would rather breathe after all the air of heaven than of "Solomon's house."

But the review is not objectionable merely as a matter of taste, but of principle. A far more serious fault is its direct tendency to throw into the shade those feelings of the human soul, which produce disgust at the racket and rattle of material existence, so far as not absolutely necessary in the discharge of duty. It is guilty, and we take it to be no small guilt, of casting a distorted eye and a sneering glance at these noble desires for communion with the beautiful and the good in our universe, which we are all too prone to disregard; and with the holy and abstracted in our own characters, which we are all too willing to forego. We do not object to his praising the inventive genius of the age; we do not blame him for narrating the results of the inductive philosophy, nor do we wish at all to detract from the credit and the utility of these things—we must have them and use them as we wear our clothes and eat our dinners. But we do object, and seriously too, to his warring under the name of Platonism, against whatever in man is holiest and most spiritualized. We enter our solemn protest against his implicitly calling that mysticism and puerility, which though cherished and valued, by the loveliest and best that ever belonged to our race, yet cannot be weighed, mea-

ured, or made productive of material fruits. Let him praise Bacon, but let him not point the finger of scorn against Plato. Here we would desire to be explicit in our condemnation, not as a matter of taste, but on the higher ground of its moral tendency. We dread the kind of character which this philosophy will produce, and the direction it will give to the object of pursuit; we feel disgusted at the low aims it encourages, and the gorgous baptism it gives to ignoble and degrading enterprises. And it is because the real nature and tendency of this philosophy is so well shielded from detection by happy illustrations, admirable touches upon human prejudices, fine compliments to the common classes of mankind, and an appearance of remarkable candor, that we consider the essay in question the more dangerous.

It is our sober and growing conviction, that we have too little Platonism in our day, not too much—that our tendencies are downward, not upward—that our danger is of excessive animalism, not spiritualism. The American character, generally, is antipodal to that of the Platonist philosopher. Now we fear, that many who have indulged in Platonism, without knowing its name, and have felt its refining power over their characters, will, after reading this review, shrink from an indulgence which may be so effectually ridiculed. Many a youth, whose original tendencies towards Platonism, have not been altogether chilled—for fallen as man is, he still instinctively pants after the beautiful and the perfect and the spiritual—will, after reading this authoritative condemnation of all such stuff, hasten the process of exterminating such fruitless, and consequently improper susceptibilities. Such persons will soon, under such influences, cease to love and practice the philosophy that aims to form the soul, and turn to the more popular system that promises fruits. Character is an idea, they will soon learn to say, but cash is a reality. Discipline of mind and cultivation of heart is Platonism, and must be eschewed. Increase of purse, and increase of muscular energy is Baconism, and must be assiduously cultivated. Will not such a philosophy, producing such fruit, be ultimately injurious? Will it not sap the very foundation on which true nobility of character is to be reared? Soberly and seriously we ask, is there not reason for apprehension from such eloquent eulogies on fruit, and such disparagement even of the end aimed at by the Platonic philosophy? Ought we not to be alarmed at this sober and settled effort to make us altogether material; especially when all the tendencies of an age of enterprise—of feverish speculation—of mad cupidity, are in the same direction? Do we need stimulants and arguments to make us more earthly in all our pursuits and plans? Does the age, and does our country need more of Bacon or of Plato to mitigate our excesses, and modify our

character? Whatever the reviewer, or his admirer who furnished it for the Messenger, may think, there are those who do honestly believe, and every day more firmly, that unless something arrest our downward, earthly, materializing tendency, all that is noble in character is gone, and that we shall become like the divinities of Egypt, calves of gold amidst pyramids of power. This is what alarms us. What, let it be asked, is the spirit which this philosophy would cultivate and render universal? Is it not just the spirit which asked at the end of *Paradise Lost*, "Will it raise the price of corn," or that would more appropriately ask, in the region where the Messenger circulates, "Will it raise the price of cotton or tobacco?" This is precisely the test to which the reviewer would have everything subjected. What if it does soften, refine, elevate our souls, this Platonism breathed into an immortal poem or a thrilling essay, or manifested in acts of magnanimity and self-consecration, by those whose souls have been formed by its influences—what of all this, if it does not contribute to the well-being of man, in "the sense in which the mass generally understand the word, good?" "*Where is its fruit?*" asks the Baconian: "It is fruit a true philosopher looks for, and what brings forth no fruit, though it may charm the eye, and soften the heart, and calm the soul, and tranquillize the temper, and raise the soul above the sense of 'vulgar wants,' is of no practical value." We ask again, is this the spirit we want to have fostered? Is this the highest man can aspire to? Must everything which brings no per cent. of present or palpable gain, be exorcised from human feeling and affection, by this relentless philosophy which values nothing but fruit? If so, for one, I am almost tempted to say—away with such philosophy, with all its fruits.

Let us try this philosophy by a test, which very probably may sometimes occur. A rail-road is proposed to be taken through an ancient and time-honored graveyard! The question is, shall we disturb the dead for the gain of the living? Shall we remove or permit to repose the remains of those, who, when they laid them down in that spot of earth, hoped to rest there till the morning of the resurrection? What does the philosophy of Bacon say? It says, the feeling that attaches sacredness to place—the luxury of weeping over a consecrated spot of earth—the desire to have a quantity of powdered dust, once the form of a dear friend, to rest undisturbed—these are all ideal. The benefits of a rail-road are substantial. You will gain one hundred per cent. on invested capital, and this, according to the strict inductive philosophy, is demonstration that the cypress and the yew should bow, and the dead be huddled out of the way, and the lightning speed of conveyance for passengers, and of transportation for goods, be

made to roll remorselessly over their once consecrated resting places. Or, let us put this subject in another light from an actual case. After the revolutionary struggle was over, a farmer, whose cattle had been unceremoniously used by the soldiers, sought to recover the amount by due process of law. And he was right, a Baconian would say. What was liberty and patriotism, and all "the cant of this philosophy" to him—he wanted *fruit*? It happened that Patrick Henry, the orator of Virginia, was the advocate of the country against the countryman—of Platonism against Baconism. And he carried the day against the Baconian by the following concentrated view of the philosophy that seeks for fruit: "Amidst the rejoicings of patriots—the songs and shouts of exulting freemen—the roar of grateful artillery, for an emancipated country—here comes the hoarse voice of this man, brawling, beef! beef!!" Pity, the advocate of Baconism in the Edinburgh Review, or his admirer in the ancient dominion, had not been the antagonist of the immortal Henry. "He would have gone for the shoemaker." A man can eat beef—it is one of the largest of the "*commoda vitæ*;" but on patriotism he might starve. A man can count and weigh money, but the spirit of sacrifice for a country's independence is an impalpable idealism.

We do not wish to be uncourteous, yet we are strongly tempted, by some things we have noticed, to judge very degradingly of the fruit which the reviewer demands as the result of genuine philosophy. Look, for example, at the significant quotation out of Persius, "*Cur quis non prandeat hoc est?*" and the reference to the ox of Prometheus; "goodly to look at, but containing nothing to eat." Is it libellous upon the reviewer to say, that his *fruit* seems to come under the category of gastronomy—a science pertaining to the "*commoda vitæ*" in a very significant sense? Is it an unjust inference, that a Baconian would consider this more practically useful than another science, not very different in name, which appertains to the heavenly bodies, especially if cultivated, merely as an exercise of mind and a means of mental development, without any reference to its utilitarian bearings on the mode of setting our kitchen-time-pieces, or ascertaining the precise moment when a soup may be spoiled, or a pudding overdone? Read what the reviewer says of Plato's recommendation of astronomy and mathematics, as a means of mental improvement, and his genuine abhorrence of all such fruitless pursuits, and then say whether we have gone too far! Plato, forsooth, loved and recommended the study of an astronomy, which would dilate the soul, and make it wander through the universe of being on buoyant wings, and realize its immeasurable superiority to all forms of matter, and its elevation beyond all limits of space. But this is idealism, the reviewer

would say, and scrupulously attentive to "vulgar wants;" and fearing that men, when immersed in such transcendental pursuits, may forget their stomachs, would recommend as far more practically useful, a *viva gastronomia*—"a setting forth of the nature, motions and influences," of various delicious viands, by which men who are prone to become too etherealized, and thus evaporate into mere angels or gods, might be rendered sufficiently material to transact competently the business of the present life. If any one feels disposed to object that ridicule is no test of truth or falsehood, we have only to say, that the reviewer has justly elicited such a mode of reply, by holding up the ancient Platonist philosopher to scorn, for his useless speculations. It is well to see that the ridicule is not all on one side. But seriously we object to the test of excellence in philosophy which the reviewer has given; and, therefore, even if he has succeeded in proving that Baconism produced such fruit, and Platonism did not, the question is still appropriately "*sub judice*" as to their respective merits. The end aimed at by Platonism was in itself noble. He failed, and his successors, whom the reviewer so severely satirizes, failed also; especially those who voluntarily relinquished the aid of christianity. But this does not prove the end itself wrong, or that its attainment is hopeless. Grant that Plato failed to "form the soul"—to perfect his ideal wiseman—to realize his republic in actual existence—ought we thence, despondingly, to infer that man should never aim as high again, or may never aim hereafter more successfully, to reach this point of mental and moral elevation? Plato's was a splendid failure. His defeat had more glory than Bacon's triumph—*excedet moti-mis ausis*. Because Plato failed in this noble end to lift man above the empire of the senses—to fill his soul with the beautiful and the good—to expand and refine him and make him on earth a spectacle grateful to the gods—must it be forever abandoned? So it would seem. The reviewer—by well directed contempt upon the whole sphere of effort, cultivated and commended by Plato, and by high eulogium on the substantial fruits of a mechanical philosophy—would turn us off entirely from the high pursuits of spiritual elevation and mental perfection, and make us fall down to the poor ambition of attaining the best kind of eating, drinking, wearing, sleeping, riding, and the rest of our physical necessities, while we are men. Here is the choice he gives us. This is the boasted philosophy whose triumphs we are called on to admire, and whose speedy universalism we are invoked to promote. We are called on to rejoice in this light, and call all else darkness. Who does not say, as Lanctantius said, of one he passionately admired—"If I must err, let me err with Plato, rather than be right with Bacon." If it be an illusion, I would not wish to be robbed of it for

all the substantial blessings of Baconism; that man was made for something higher than supplying his vulgar wants, and the proper function of philosophy, is to educe and develop those undefined but irrepressible presentiments that link us with a higher economy of being, and adapt us for a nobler sphere of action. I am well aware that in saying this, I utter a sentiment which the taste of the times does not receive very graciously, and will possibly call *cant*. In the eyes of the reviewer, and of all who have learned to swear, in the words of this master, all this is utopian and ridiculous. "An acre of Middlesex is better than a principality in Utopia." A shoemaker who mends soles well, is better than a philosopher who "forms souls" imperfectly. "The wise man is a grander object than a steam engine, but there are steam engines." Then we are sinners against the laws of this reigning philosophy, and wilful sinners too. It says, because Plato failed to make us gods, and "filled the world with long beards and long words," we must be content to be noble brutes. It goes for *available* things. We may build ourselves fine houses, and invent many luxuries, and transport ourselves rapidly from one part of the country to the other, or from one continent to another, but that is all. It is a sin against Bacon to aspire higher. His advice is, as we cannot be divine, as the formation of the soul is utopian nonsense, let us be so dazzled by flashes of power, and so whirled by engines of motion, and so pampered by appliances of sensuality, that we may afford to forget the loss. "It is amusing to think with what horror" Plato would have imagined, that any man more than three thousand years after he wrote his "Critius," would seriously urge such a course. And are we quite ready for this ignoble surrender? Shall we, by endorsing this philosophy, as the "*ultima thule*" of human aspiration, retreat even beneath the dignity of an unenlightened heathen's ambition, when struggling to find man's noblest destiny by the lone star of unaided reason? Is this giant of learning and prodigy of power, who has invested Baconism with such attractions, sporting with our credulity, or seriously recommending us to be satisfied if we are "comfortable," as are our pigs and horses, if they have the wherewithal to satisfy their vulgar wants? There are some in this land of characteristic utilitarianism; there are some it is to be hoped in the ancient dominion, who are not quite ready for this result, though "the Edinburgh Review," which with many is "an end of all strife," has "come out" to patronize "the philosophy of fruit," and to pounce on every one who dares to rebel against its dicta. Would that the distant voice of one of the sons of Virginia, might lead many to ponder, before this siren of a sensual philosophy has fully effected their transformation from the hope of being partakers of the Divine nature,

into the condition of well fed and nicely clothed animals!

"Like bubbles on the sea of matter borne,
To shine awhile, then to that sea return."

Passing by the aspect of this subject, which might be called religious, the utter repugnancy between the whole spirit of this material philosophy, and the genius of christianity, which is emphatically a plan of efficiently forming the soul to glory and honor and immortality, by working into it the lineaments of the Divine character, as not exactly appropriate to the pages of a *Literary Messenger*, though it is, at the same time, its most serious aspect to every evangelical christian, these protracted remarks will be concluded by a reference to the great failure of Bacon's character, as the most conclusive argument against his system. This, we acknowledge, is a mournful part of the subject, but it must be touched on. We cannot agree that we must look at a system irrespective of the character of its author. These things are connected in the reality of things, and ought to be in our sentiments; and if our remarks have any truth or foundation, what other character would we expect than what Bacon really exhibited? A system which placed the highest estimate on the "*commoda vitæ*," belongs legitimately to a father, who, with all the immensity of his learning, and the sublimity of his genius, deserted the friend of his youth, to secure the favor of the great, and permitted himself to be bribed to maintain the splendor and glory of his establishment! Bacon's life ought to be studied along with his philosophy, by every one who is disposed to flout at Platonism as utopian, and character as ideal. If Bacon was bribed—if the "*commoda vitæ*" bent his moral principle by their magnetic power—oh! how coldly do his eulogies on them come to the heart; and though "painfully," yet profitably "we may turn from contemplating his philosophy to contemplate his life." His life may cool the ardor his philosophy has enkindled. Was this its *fruit* after all? Was he "the greatest, wisest, meanest of mankind?" Then can we feel safe in adopting his system? Would the Redeemer of men be the object of confidence in his system of truth and doctrine, if he was not the object of unmingled admiration in his character? Do we not instinctively judge the tree by its fruits? And thus judged, can we feel otherwise than a settled feeling of distrust of the philosophy of Bacon, when, after perusing his life, "we turn from it as a checkered spectacle of so much glory, and so much shame?" My sincere wonder has been, that the reviewer who so ingeniously acknowledges the failings of Bacon's character, had not been led by them to suspect his system; and that he had not anticipated, as the writer has done, that the effect of the universal reign of Baconian philosophy would be, to make giants in intellects and pigmies in morality.

TO THE JAMES.

STREAM OF THE HILLS! (those frowning peaks,
Whose base thy limpid current laves,
As, lightly bounding on, it seeks
A broader tide, and prouder waves :)
So brightly clear's thy crystal flow,
The loveliest Naiad's eye of blue,
If mirrored in the wave below,
Would still retain its heavenly hue !

STREAM OF THE VALE! thy rolling tide
No longer leaps in careless play ;
A hundred showers have swelled thy pride ;
A thousand streams have own'd thy sway.
But shower and stream have stained thy face,
As human hearts are stained by time,
When childhood's bright and playful grace
Gives way to manhood's loftier prime.

STREAM OF THE PLAIN! a mightier force
Is urging on thy ceaseless tide ;
A mightier spirit rules thy course ;
Thy waters more majestic glide.
The mountain brook, where scarce could rest
The sportive elfin's tiny boat,
Is now that stream, on whose wide breast
A thousand barques securely float.

Old stream ! I love thee—for thy shores
Are thronged with visions of romance ;
And memory there unfolds her stores ;
While fancy's dreamy spells entrance.
I love thee, for thy waters flow
Through fair Virginia's classic ground,
Where erst the red man drew his bow,
Where still we see his funeral mound.

Flow on, flow on, thou noble JAMES,
Till sun and stars shall cease to shine ;
Thy storied history now is fame's—
The homage of our hearts' is thine.
But higher feelings stir the soul
To stand near thee as at a shrine ;
For, while thy princely waters roll,
VIRGINIA'S name is linked with thine.

THERE'S A FLOWER.

FROM A LADY'S PORT-FOLIO.

There's a flower that grows,
By the side of a rill—
Tho' the mower oft mows
There, it flourishes still.
As oft as 'tis broken
From off its green stem,
It springs up, (sad token !)
And blossoms again.

All drooping its posture,
Deep purple its hue,
E'er bent down with moisture,
And dropping with dew.

When morning is beaming
From orient skies,
It glows, like tears streaming
From beauty's bright eyes.

At every breath trembles
Each delicate leaf ;
So much it resembles
Young beauty in grief.
A fond blossom bleeds
Beneath its dark shade,
And its root deeply feeds
On a warm heart betrayed.

So the flower still weeps
Where the pale maid lies,
And the west wind creeps
To contribute its sighs.
And the murmuring rill,
As it ripples along,
In strains mournful, still
Chants her funeral song

L. P.

LUCILE:

A NOVELETTE.

By the Author of "The Curse."

CHAPTER IV.

I will do
What heaven approves—my duty ! *Karel.*
The hope is crushed
That lit my life ; the voice within me hushed
That spoke sweet oracles. *Helen.*

The sun was setting, and the lengthened shadows caused two travellers, who were journeying together, to urge their horses to greater speed. The young moon was riding high in the heavens, though her light was dimmed by the retiring glories of the monarch of day. An air of reckless gaiety distinguished the younger of the two gentlemen, and at intervals he carolled a gay song, in a voice of deep, rich tone. He was small and delicately formed, with a face of almost feminine beauty, yet the eyes, of a clear bright grey, had more of the eagle than the dove in their expression. A Spanish hat was placed on one side of his head, and the drooping plume mingled with the short curls of dark hair, which escaped from its confinement. His companion was much more advanced in life: he was a tall gaunt figure, arrayed in the garb of a monk. His cowl was thrown back, displaying a face that might once have been handsome, but the austerities of his religion, or severe physical suffering, had reduced him to a mere shadow, and his complexion was of such deathlike paleness, that, but for the quick flashing of the keen black eye, one might have fancied that they gazed on the dead. He looked worn and restless; like one who had struggled

with the passions of life in the vain endeavor to overcome them, and become, what he professed to be, a devotee to heaven.

"Father," said the youth, "we are nearly at the end of our journey. We must surely reach my uncle's house before the moon drops behind the trees."

"Yes, my son, before the hour of seven arrives we shall be in his presence. Even now our road winds through his vast domains: look, Victor, and see what you may inherit if you are not wayward and foolishly proud."

"Proud! father;" said the young man, earnestly; "do you call it pride to shrink from forcing my cousin into an union with me? I have her letter now next to my heart, and when mercenary, selfish thoughts intrude, I will read it as a talisman to preserve me from the meanness of desiring a connexion which is so repugnant to her feelings. That letter has made me her friend for life. My uncle will not find in me an instrument to further his cruel intention of separating two hearts that are united."

"Pooh! you are unacquainted with the character of your uncle: where he has once determined he is inflexible, and you will find yourself as wax in his hands. The girl, too, is surpassingly beautiful; you are at that age when love has the most powerful sway, and spite of your determination to the contrary, you will love her;—what will then become of your quixotic determination to resign her, when all things are in your favor?"

"I shall only love her as a brother, and as such counsel and assist her."

"We shall see—we shall see," said the monk, shaking his head. "At your age such sentiments are natural, but wait until the heart speaks in favor of your own interests, and *then* decide on the course you will pursue."

"That course, under any circumstances, must still be the same. If I thought it would not, my prayer to heaven should be that the rod might press upon my breast ere a chill and blighting hand be laid on it, withering the noble aspirations which give us assurance that we claim some affinity with beings of a higher order. Father," continued he, earnestly, "I would not lose the consciousness of having acted as a man of honor and feeling should do, for this whole island and all the wealth that it contains. I prize my own self-respect beyond my uncle's riches:—the love of his daughter is not hers to give; and I should deem myself a spiritless wretch, could I ask Lucile to bestow on me the hand which should only accompany her heart. No! all my efforts shall be used to induce my uncle to receive Sidney Grey as his son."

"And all your influence be unavailing. I tell you, were all the pride of all the Howards condensed in one single form, that form were your

uncle's: his daughter is as dear to him as life itself, but he will sacrifice even her on that ruthless altar, sooner than see her wed one so obscurely born as Grey. Why, every drop of his proud blood boils at the bare suggestion of the son of his former overseer daring to raise his eyes to his lovely child. But 'tis idle to speak of the future, for you must be guided by events, and above all things, endeavor to obtain the good will of your uncle. He is all you have to depend on; and if he casts you off, you are undone. But here is the house before us, and I hear the voice of Gen. Montessor on the gallery calling a servant to take our horses."

The road wound through a long avenue of limes, with their white blossoms glittering in the bright moonlight. In a few moments they entered an extensive yard, shaded by groups of magnificent trees, through the branches of which glanced the columns and galleries of a splendid mansion. Two black servants took the horses of our travellers, and they were ushered into the house with a hearty welcome from its hospitable owner. He folded his nephew to his heart with much emotion, as he said,

"You are right welcome to my home, my dear boy. I have looked for you long and earnestly; and there is one other face, fairer and younger than mine, that has brightened at the news of your expected arrival, I promise you."

"I should feel too much flattered, my dear sir, could I think for a moment that my cousin would feel pleased to hear that I am here."

"Pleased! the deuce! what—what do you mean, sir? She were no daughter of mine, if she were not delighted to welcome her own near relation to her father's roof. She expects you with pleasure; so go to her at once—no ceremony—you will find her a little pale and weak, as this hot weather has retarded her recovery from a spell of illness; but she knew you were to be here this evening, and requested to see you if you came before her hour of retiring. Here, Agnes," he continued, calling to a girl who was crossing the door at the moment, "show Mr. Montessor where to find your young lady."

Victor followed the girl across a wide hall, into a spacious room decorated with busts, pictures, and flowers: the furniture was of the lightest and most elegant description, and as he glanced around, he thought it a fitting sanctuary for the young and lovely occupant. The windows all opened to the floor, and near one of them, on a low couch, reclined his cousin. Victor started as his eye fell on the wan, yet still beautiful features of Lucile. A loose dress of embroidered muslin enfolded her slight figure, and it was scarcely whiter than the cheek of its wearer: her hair was put back from her brow, and spread over the pillows, as if the weight of it was more than the throbbing temples

could sustain. A faint flush tinged her cheek, as Victor knelt beside the couch, and taking her pale, thin hand in his, said—

“I dreamed not, dearest cousin, that you had been so ill as your appearance denotes. I am here to fulfil your behests. The humblest slave your father claims, is not more ready to do your pleasure. Can the dread of me have reduced you to the state I find you in?”

“Ah, no! not altogether that,” murmured Lucile, “yet I knew you not—you might require the fulfilment of the bond; and my father relents not. Forgive me, dear cousin—you have taken a weight from my heart which was crushing me to the grave. I have been very ill—and very, very unhappy. You have my letter?”

“Yes—and my heart thanked you for your confidence. I will prove myself worthy of it: I will endeavor to win the esteem and affection of your father, and then use my influence to gain his consent to your—”

“That were a hopeless task,” interrupted Lucile. “You will only embitter him against yourself, by making the attempt. No—all I ask is the liberty of remaining as I am, with the sad privilege of thinking on the past, and consecrating in my heart the image which has so long reigned there. I know that without my father’s sanction I cannot marry Sidney, for he is poor, and I am too helpless to share the lot of one destitute of the gifts of fortune. I could not bear to entail on him the curse of genius struggling not only with poverty, but the misery, the privations to which I should be exposed, would cause him. No, Victor, I cannot be his wife, but I can still glory in his genius; and when the meed of fame is awarded to his talents, I can say in the deepest recesses of my heart, ‘he was worthy of the love I bestowed on him,’ and no other shall possess the right to reproach me for the thought.”

“What would I not give for such love!” thought the youth, as he gazed on the pale cheek lit up by the passing glow of excited feeling. “Ah, sweet Lucile, why did you give the priceless gem of your affections to one who can never call you his? I must keep strict watch over my heart, or it will prompt me to act the traitor to my principles. Tell me, sweet cousin,” he continued, aloud, “where Mr. Grey is to be found? I have a great desire to cultivate his acquaintance.”

“He is in Havana, I believe,” said Lucile, in a low voice. “I have not seen him since that dreadful night when my father learned that we were attached to each other. During my long illness his name was never mentioned, though my ear thirsted for the sound, and my heart grew sick as each day closed and no token of remembrance came from him. I did hear at last: he wrote me such a letter as soothed my wounded feelings and reconciled me to our lot. He spoke of my fa-

ther’s prohibition—dwelt on his obligations to him, and ended by the assurance of unwavering affection for myself. He has left us—refused all further assistance from my father, and is seeking his subsistence in Havana as a portrait painter. He fondly hopes to acquire a competence within a few years, and then win me to be his. For myself I cherish no such delusion. In the years that must intervene before such a result can rationally be hoped for, the remembrance of his early dream of romance will have been effaced by the stirring realities of life, and the springing up of that ambition which ever accompanies a high order of genius: while my woman’s heart will exult in his fame, and feel that it casts a reflected lustre on myself, he will scarcely revert to the being who gave to him the life, the freshness, the energy of undisciplined feeling. Yet why should I grieve? It is the destiny of my sex—neglect—forgetfulness, is too often the meed of woman’s lavished affections, and mine will be no uncommon lot.”

She spoke calmly, but the tears forced themselves from her closed eyelids, and rolled in large drops on the hand that still clasped her own. Deeply, too deeply for his own peace, did Victor sympathize with the suffering those tears denoted.

After a few moments, she slowly murmured a quotation from a writer she admired much—“‘What is the love of restless, roving man?—a vagrant stream that dallies for a time with each flower on its banks, then passes on and leaves them all in tears.’ Ah! how true! Leave me now, dear Victor; I am weary and over excited—tomorrow I will see you again.”

CHAPTER. V

The clouds from off thy pinions flinging
As though they bore to-morrow’s light.

Why in this furnace is my spirit proved
Like steel in tempering fire? because I loved?
Because I loved, what not to love and see,
Was more or less than mortal, and than me.

Byron.

Alone, in a lofty and spacious apartment, sat the young painter. His cheek was thin and pale, but his eye flashed with the brightness of undimmed hope. He was at work on a picture, which he fondly anticipated would give him such a reputation as would insure him the competence he so ardently desired to acquire.

A few weeks before, a stranger had called on him and described a scene which he wished him to paint—the principal actors in it were sketched with such minuteness, that Grey had little difficulty in transferring the likeness to his canvas, and the scene which the stranger desired to see represented, was rapidly growing beneath his hand.

It was a night scene: an old castle partially in

ruins, embowered in venerable oaks. Before the entrance of the castle was a group of figures looking up with an expression of terror, at a bright luminous light on the opposite side of the heavens, from where the full round moon was slowly rising. It was not a meteor, but rather a fixed-glowing radiance, like the red glare which the light from a large fire throws on the sky at night; and in the centre were several glittering orbs like balls of fire. The unnatural light fell on the figures, and illumined each countenance with its unearthly splendor. There was a woman, past the prime of life, with features of a haughty and regal beauty, which time had lightly touched: her stately figure was drawn up to its fullest height, and her head proudly raised, to gaze on the supernatural light; her countenance expressed terror, but it was not the terror of a weak and yielding mind—it rather seemed as if her spirit scorned itself that fear should fall on it, and dim its proud confidence.

Beside her stood a gentleman, whose hair was silvered o'er with years; his venerable countenance expressed awe, reverence and fear, and his hands were clasped, as if invoking the protection of heaven. In front was a woman kneeling, and weeping, as she clung to the drapery of the principal figure.

This was a girl of a beauty as rare as it was exquisite; yet deep and agonizing was the expression of suffering on that young face. As one looked on it, they involuntarily bent the ear to hear the low wail of anguish which seemed to burst from the half-parted lips. The face was pale and appeared worn with suffering, yet nothing could destroy the beauty of the regular Grecian features, and the drooping grace of that charming figure. Her arms were crossed on her bosom, in an attitude of hopeless dejection, and her long hair, falling around her person, half-veiled its exquisite symmetry. Her head was partly turned from the light, as if it were a sight she could not command sufficient firmness to look on; and there was a breathing terror in the expression of the whole countenance, which at once enlisted the sympathies of the beholder, and created a desire to fathom its source.

The artist stood off and looked on his work, and the triumph of successful genius shone in his eye, and flushed his dark cheek.

"Ah, if this should win me a name," he muttered, "I should then see my way before me, and would no longer feel myself presumptuous in asking her to share my humble lot. Ah, Lucile, had I a hope of future fortune, I would not thus tamely submit to the harsh mandate of your unrelenting parent."

"This is beautiful," he continued, gazing with enthusiasm on the picture. "'Tis an effort worthy of me: never before did I feel the full power of that glorious talent with which heaven has gift-

ed me. I only now begin to feel my own capacity to emulate the masters of my noble art. And this will bring gold to me—gold! sordid ore, dug from the dark caverns of the earth; and yet without it, my genius may become a self-consuming lamp—my spirit rust in neglect and forgetfulness, and I sink, in an unknown, unhonored grave, one of the many victims to the early struggles of genius."

The stranger entered the room. He was a middle aged man, with an expression of the deepest melancholy in his countenance. He gazed on the picture some moments in silence—then turning to the artist, he said—

"Ah, my young friend, you have succeeded to admiration. That picture commemorates the fate of one as gentle, as lovely as your own love, and one doomed to the same fate by an ambitious and overbearing mother. Nay—start not—your history is not unknown to me; the many tongues of gossip have already informed me of all worth knowing in your past life. Complete the picture, and then find means to let the father of your betrothed see it, and hear the story which it is designed to illustrate. The outline of that story you shall have. It will be a warning to him to shield the drooping flower, and bind up the bruised heart. Tell him, should he doubt the truth of that supernatural warning, that there are those now living who can bear witness to it. Ah! would—that it were not true, beloved Beatrice," he continued, passionately gazing on the fair face of the principal figure in the group—"would that thou wert now beside me, as in days of yore, my eyes gazing on thy breathing loveliness, and not on that shadow, which but mocks me with a resemblance, that is, and yet is not her I once loved so wildly."

There was a pause of some moments, when, turning to Grey, he said, "Adieu, young man—you have my thanks for your endeavors to please me: here is the stipulated price of your labor, and may it be but the commencement of that prosperity which should reward the exertions of such talent as you possess. The stranger and the wanderer leaves with you his thanks, and his earnest prayers for your future welfare. I go hence in a few days, but shall return within the month, and claim the picture. In the meantime use it, together with this manuscript, for the furtherance of your own views as you may think proper."

He placed a few leaves of paper, much discolored by time, into the hand of the painter, together with a well-filled purse, and immediately departed.

Grey placed himself beside the window, and read the wild story the manuscript contained: and as the waning light of day fell on the picture, the figures seemed to start into life before him.

It thus commenced:

"The prediction is fulfilled! For years it has hung over that devoted house, and now has fallen to crush the loveliest of its daughters!—There is an old castle in a remote part of Ireland, which descended from generation to generation of bold and hardy barons, till at length the only scion of that noble race was a feeble girl. Her mother was a woman of imperious temper, who mourned that the name of a high race should become extinct, and determined, in her own mind, that exalted rank should compensate her daughter for the sacrifice of her paternal name: but in vain did she seek to fill the mind of her gentle yielding child with her aspiring views. Beatrice loved one of humble birth—the son of one of her father's tenants. They had been reared together, and she had loved him ere yet she knew love's name; but her hand was sought by one who thought he honored her by his choice. The father was passive—the mother forced her to become the bride of him her heart loathed.

"It was the evening after her inauspicious marriage, that her nurse was standing beside her young lady, placing the bridal wreath on her head for a feast which was that night to be held in her father's halls. Suddenly a bright light fell on the person of the bride, and the old woman shrieked—

"The prediction—the prediction: this night shall the glories of this ancient house pass away!"

"Then that group gathered before the castle, and the father repeated the words of an ancient seer, who had foretold the downfall of his house. The prediction ran thus—

"When the proud eagle shall rend the breast of its young, then shall the red light warn the house of its fall, and the lovely and beloved shall find peace where alone it may be found?"

"I cannot—no I cannot look on it," said Beatrice, as she turned shuddering away; that red light seems to scorch my heart and sear my eyeballs. Mother—oh, mother! let me hide myself from my doom—throw your arms around me, that I may feel myself in safety, as, when a little child, I clung to you for protection. Hold me to your heart, mother, and do not let the red demon take me from you—your love can be a shield for your child—a mother's love is too pure and hallowed a circle, for his demon hate to step within its influence, to drag me from your arms."

"My child—my daughter—this is folly, madness—come within and take something to compose yourself."

"Yes, mother, I will come in, but mark my words: as I cross the threshold it is the last time I shall cross it *alone*. When next the shadows of the oaks of my fathers fall on me, I shall be borne out—struck—maddened—blasted by the curse of ambition. Oh, mother! mother! was it well of thee

to crush my heart, because the blood that gave life to it was said to be of a nobler stream than his? Nobler! man's nobility! and he—he was God's!"

"My daughter, hush those frantic words—your husband waits." "Call him not my husband!" said the poor girl, passionately. "What care I for husband now? He knew I loved him not—I told him so—that my whole soul was devoted to another: what cared he for my passionate appealing? The heiress with her broad lands and full coffers was all he sought;—he has them; but my heart he never had—he never shall have—a few more hours and it will be chilled, and cold, and at rest."

"One week from that night she was borne to her grave, and the wail of anguish rose loudly to heaven for the fate of the broken-hearted. Her father sank at once beneath the blow. Her lord sought a new bride; him she had loved became a wanderer; and the mother, whose haughty spirit had wrought the fulfilment of the prophecy, died of that searing, lasting grief, which stern hearts sometimes feel."

Grey arose, and walked several times across the floor, stopping each time to gaze on the picture, which possessed a new interest in his eyes.

"'Tis a strange story," he muttered, "and may be useful. It may remind him, when he looks on the pale cheek of Lucile, that such a doom may fall on her. I will try it at all events."

CHAPTER VI.

In the desert a fountain is springing,
In the wide waste there still is a tree,
And a bird in the solitude singing,
Which speaks to my spirit of thee.

Byron.

Let her keep her pride.
Mine hath enabled me to bear her scorn.
Heaven and Earth.

There was a pavilion in the garden of Gen. Montessor, which had been fitted up under the superintendence of his daughter. It was a light and elegant structure, situated in a grove of orange and citron trees: the interior was decorated with the earlier efforts of Grey's pencil. It contained an organ of fine tone, and at the hour of vespers its solemn melody had been wont to fill the air, accompanied by the sweet voice of Lucile singing the hymn to the virgin; for, though not a Catholic, there was to her romantic mind a charm in some of the observances of that imposing faith; and never did the pure soul of that young girl more deeply feel its immortality, than when breathing in that solemn hour the thrilling words of appeal to the mother of him who wept over a lost world.

It was that still and dreamy hour, and once

more Lucile was in her favorite retreat. It was the first time since her illness that she had ventured thither. She had feared that the associations of the hour and the spot might overcome her newly acquired tranquillity; but she had a letter from Grey, which had reached her that morning, and she felt that the sweet and tender memories linked with the pavilion, would no longer oppress her heart with a sense of its present desolation, by contrasting it with the happy past. A faint rosette was once more on her cheek, and hope again threw her magic halo over the future—the hope of a young and loving heart, which could not believe that time would fail to soften her father in favor of her noble Sidney; yet had she been of a suspicious temper, a new cause of uneasiness might have been found in the conduct of her cousin.

During the weeks of her convalescence, Victor had watched over her as a brother. It was his hand which gathered the freshest flowers—his voice which read the poem or the story, that wiled away the tedious hours of languor and weariness, and Lucile was deeply grateful; but it was not thus with Victor. He had yielded almost unconsciously to a passion for the gentle and uncomplaining being thus thrown on his sympathy. A passion which was destined to become fatal to his peace and her own. He reproached himself with bitterness, but each day found him more deeply enthralled, and all his thoughts were given to the possibility of winning the love of his fair cousin from the poor and insignificant Grey. A change had indeed “come o’er the spirit of his dream” since the evening of his arrival. He came full of high and honorable intentions; the generosity of a youthful spirit; but spite of his own resolves he loved, and what love is not selfish? We may lavish wealth with a prodigal hand, or, in a moment of thoughtless folly, waste the wages hardly won, but who is willing to yield to another the affections of those they love? The heart acknowledges no prior right. Where so much love is given we fancy that we have a right to claim some portion in return. Thus it was with Victor: all things were in his favor, save that little rebellious heart which still clung with woman’s faith to its early love. Yet he did not despair. Time—her father’s wishes—would eventually triumph over her ill-placed affection; and in the interim he might linger by her side, and offer his homage at the shrine of her beauty, without molestation from his rival. Selfish thought! yet true to a lover’s nature.

And Lucile was again in that sanctuary, sacred to the recollections of the past, but no sound of music floated on the hushed and breathless eve. Her head was bent forward—her lips apart—her ear listening for that step which had so often brushed the dew from the pathway that led to her retreat.

The orange boughs were parted—a shower of snowy leaves fell at her feet, and starting forward, Lucile was clasped to the bosom of her early playmate.

“Once more, dear, adored Lucile, do we meet;” murmured a low, deep voice; “and you have suffered much, beloved one—you are pale, and tears are on your cheek.”

“But they are not tears of sorrow,” said Lucile, raising her soft dark eyes, whose long lashes were heavy with the dews of excited feeling. “Ah, Sidney, how I have wished for this hour, and grew heart-sick when I thought it would never come. During these long, long weeks, when I lay on a restless and feverish couch, I in vain looked for some token from you—some assurance that I was still fondly remembered. Ah, thoughtless one! did such an assurance come?”

“And did it not, Lucile?” asked Sidney, earnestly. “Heaven and your own heart are my witnesses that I am incapable of such neglect: I, who hovered around you night after night, watching the light that gleamed from your sick chamber, and when day dawned feared to ask your attendants how you had passed those still and lonely hours, lest the answer should extinguish all hope. I could not enter those walls from which I had been once expelled, with little show of courtesy or affection; but I could send my soul to your sick couch, and in the anguish of my spirit raise my heart to heaven in prayers for your recovery. This I have done—and not this alone. When assured by your physician that the delirium of fever was past, I daily found means to send a line by your waiting maid; and after the arrival of your cousin he kindly offered to become the medium of communication between us.”

“What! Victor?” exclaimed Lucile. “He brought me one letter—only one; and he it was who commented on your neglect, and contrasted it with the fond affection with which I lingered over each line from you. Surely Victor could not thus have acted without a motive.”

“No—he could not—he did not,” said Sidney, in a deep, stern tone, “and ’tis as I feared: the integrity of your cousin is not proof against the combined charms of your person and fortune. He sees me poor, unfriended, struggling for an existence even—and he feels that it were far better for you to forget your unworldly dream of love, and, wedding him, live in the splendor in which you have been reared, than mar your fortunes by linking them with mine. I see, I feel it all—I have felt it long pressing on my heart with the weight of despair. What, you! the spoiled and flattered beauty, whose wishes are laws to those around you—whose looks are watched by a train of menials prompt to execute each bidding, before it has scarcely time to shape itself in words,—you wed a nameless, houseless, pennyless man!—one

too, cursed with a genius—proverbially the most luckless, reckless race on earth—why there is folly, madness in the thought—presumptuous that I am to dream of such a misalliance. No, Miss Montresor, if you would be happy, drug your memory into forgetfulness of the past: in the airy castles that imagination loves to build, place some other image—that of your cousin, if you will, for he is handsome as a god—and though he has been treacherous to his trust in one instance, he may not prove so again. He may become worthy of you—at least he is your father's choice, and there will be no sacrifice in accepting him, save of a heart that adores you: a heart which has suffered your image to come between me and my bright dream of future fame; yet that heart can bid you forget me, if 'tis necessary to your happiness to do so."

"Cruel, cruel Sidney!" said the weeping girl. "Have I merited reproof? The effort for forgetfulness shall not be wanting, at least on my part, if such is the language you can use toward me."

In an instant Sidney was beside her, with her hand clasped in his, imploring forgiveness.

"Pardon me, Lucile—pardon me. My haughty and irritated spirit should not pour its bitterness on you, I know full well; but my lot is a hard one to bear. Condemned to loneliness—misery—wasting my heart in vain regrets, and vainer aspirations for that future which may not be for me—happiness, affection within my reach, yet I dare not grasp them, lest in so doing I make the wretchedness of her I love beyond my own existence. Oh, Lucile! is it not a fate worse than that of Tantalus of old? Yet, dearest one, withdraw not your affection from me; for without it life has no object. Without your smile, even fame, the flattering breath of thousands, would be valueless. Look on me, dearest girl, and say that my hasty words are forgiven."

"Ah, you know full well that your voice never petitions in vain. Yet I am distressed at the conduct of my cousin. He knew of the arrival of your splendid picture, and the strange story connected with it. He volunteered to show it to my father, and I can now fathom the cause of his relentless mood when he came to me, and reproached me for clinging with such tenacity to my predilection for you. He said that such foolery was beneath you and himself—he, fortunately, was not a moonstruck lover, or a wandering maniac; and the servants already had his orders to convey it to your abode forthwith. But hark! there is a footstep—leave me, leave me now—for worlds I would not have our interview discovered."

"Meet me at the same hour to-morrow evening. I have much to say to you."

"I will—I will—but now leave me."

A hasty adieu was murmured, and the parted

boughs had scarcely closed over his retreating figure, when Victor stood before her.

"You are out late, *ma petite cousin*," said he, gaily. "I have sought you in many places which are wont to be gladdened by your presence, but they knew you not, and I have wandered around your spirit's shrine like the ghosts of departed pleasures around the heart they once made joyous, but you came not, and I fortunately remembered the pavilion. It has hitherto been as a sealed book to me—may I enter and survey the wonders it contains?"

"If it will give you pleasure to do so," said the lady, coldly. Victor felt the change in her tone, and knew not to what to ascribe it, but he entered, and looked around.

"These—books, drawings, flowers, music—a very pretty assortment; and—let me see—this dim twilight scarcely allows one to judge, but you have also some pretty specimens of painting: the productions of your own pencil I presume."

"No—I seldom draw, and very imperfectly. They are those of"—

"Ah, I understand—of Grey. And you rise from your sick bed, Lucile, to come to this spot, which is consecrated to his image, to draw the past closer to your breast. That past which you are bound by every duty to endeavor to forget. Even your womanly pride is bowed before this neglectful lover, who in your hours of suffering was forgetful of what caused your cheek to pale, and the pulses of life to grow faint. Is this well?"

"Victor," said Lucile, "why speak to me thus? I have seen Sidney within the hour—learned your treachery—for what softer name can I give it?—and now I ask you how you could so recklessly increase the anguish which was consuming my spirit? You who vowed to further my wishes as far as lay in your power—why, why have you done this?"

"Because," said Victor, throwing himself before her, "because I adore you! I came to you with high and honorable intent, yet in the first hour I saw you I learned to love: yet was I not a traitor to my vow. I used all my influence with your father, until I found that 'twas worse than useless. Then, then I yielded to my passion. I saw you separated from Grey, with no rational hope of a reunion. I felt that to win you from the contemplation of the past, might not be an impossible task. I suppressed his letters—taught you to think him forgetful—heartless—and my apology is the deepest, wildest passion, that ever man felt for woman."

Lucile arose, but he caught her dress.

"Leave me not, Lucile! Say but one word—turn on me but one look from that averted face, to assure me that I have not forever cursed myself in your opinion. Speak, I conjure you, but one word."

"That word will not be one of hope, Mr. Montessor," said she, in a low, struggling voice. "I cannot forget that where I have confided, my confidence has been betrayed. Let this be the last time such language is addressed to me: with or without the consent of my father, I am in soul and spirit the betrothed of another: and the turf must lie on a broken heart before that heart can give to him a rival. Adieu!" And in another moment she was gone.

Victor threw himself on the seat she had left, and covered his face with his hands.

"Lost—ruined—undone! Madman that I have been, to hope for success through such black treachery."

A low, scornful laugh reached his ears: he started up and beheld the priest.

"Did I not tell you so?" said he. "You were fairly warned, and might have guarded your heart from the contagion of worldliness—but no! you braved the danger; and the fair lands, and yon fairer girl, have proved temptations too strong for you—ha! ha!"

"Fiend!" muttered the excited youth, "how dare you, at such a moment, speak to me thus?"

"Dare!" repeated the other, scornfully. "Pooh, I am no child, to be frightened by an angry brow or a fierce tone. Smooth your ruffled feelings, good Victor—persevere in the pursuit of your cousin, and all her wealth shall be thine."

"Her wealth! I wish it not; I ask it not! Think you, sir priest, that the sordid love of lucre bows me before the shrine of my cousin? No—I am not yet so despicable—her love were worth it all."

"So you may think now, good Victor; but so you will not long think. What is the love of the fairest of womankind to the many gratifications that gold can buy? Without it, we are nothing—with it, every thing is at our command. It can purchase all things save *forgetfulness*: the want of it makes Grey an outcast, and made me, what you see me, a blighted ruin."

There was a momentary wildness in the eyes of the speaker, but it soon passed away; and drawing himself up with much dignity, he continued—

"I taunt you often, because bitterness has become my most familiar mood, even with those I love; but I now only tell you the truth which my experience has taught me. Seek to rise above the multitude, and they will bow before you—ask wealth of the gods, and you need wish for no other gift with which you are not already endowed: it is the 'open sesame' to all hearts. Ponder my advice well, young man, for it is not lightly given."

He turned away, and before Victor could reply, the outline of his dark robes only was visible, as he threaded his way through the serpentine avenue of limes.

JOURNAL

OF A TRIP TO THE MOUNTAINS, CAVES AND SPRINGS OF VIRGINIA.

By a New-Englander.

(CONCLUDED.)

To CHARLES E. SHERMAN, Esq. of Mobile, Ala.

These fragments of a Diary, kept during a tour made in his society, are respectfully and affectionately inscribed, by his friend and fellow-traveller,
THE AUTHOR.

Virginia! Yet I own
I love thee still, although no son of thine!
For I have climbed thy mountains, not alone,
And made the wonders of thy vallies mine;
Finding, from morning's dawn till day's decline,
Some marvel yet unmarked, some peak, whose throne
Was loftier,—girt with mist, and crowned with pine:
Some deep and rugged glen, with copse o'ergrown,
The birth of some sweet valley, or the line
Traced by some silver stream that murmurs lone:
Or the dark cave, where hidden crystals shine,
Or the wild arch, across the blue sky thrown.

Wilde.

CHAPTER VII.

Departure from White Sulphur. Shoemates and Bedmates. Arrival at Hot Springs. Dr. Goode. The Spout Bath. The Boiler. Peregrine Prolix. A touch at description. Ben Garnet, the original "Wormwood." "Old familiar faces." Col. Fry. Sunday at Hot Springs. Woodland pleasures.

Hot Springs, (Bath Co.) July 13, 1835.

Left White Sulphur and all its gaieties, pleasures and attractions, after dinner yesterday, in the midst of a grateful shower of rain, the first we had experienced for many days. This did not prevent the assembling of a numerous concourse to exchange the usual salutations with us, at parting. The going away of a visiter is an event in the routine of life here,—and excites much more interest and greater manifestation of feeling than similar occurrences are apt to do in the more varied and busier walks of life. This was observable as long as our coach was in sight of the springs, and the waving of kerchiefs was the last glimpse we could catch of White Sulphur.

We reached a tavern kept by a man yeleft Shoemate, at nine o'clock in the evening, and found a supper of venison steaks, hot coffee, corn cakes, and sweet butter, a delightful *terminus* to our ride. Here we found about twenty people, awaiting accommodations for the night, and our quarters were somewhat crowded, as you may suppose; but I should have done very well, but that the occupation of my bed was vigorously disputed with me by sundry pertinacious fleas—and the contest waxed so warm towards midnight, that rather than be turned out of my own quarters, I wrapped myself in a cloak and took the outside, leaving Messieurs, the combatants on the other part, full possession of the interior. This arrangement being made, I enjoyed the appointments of Master Shoemate for my accommodation, as well as could have been anticipated, until about 3, A. M., when the blast of a stageman's horn broke my slumbers, and transferred them, (after some *fuss*,) to the stage coach. Towards sunrise we came within sight of this place, and as we passed through a gap in the mountains, where the same turnpike so often mentioned is smooth and straight, the white cottage that forms the centre of the Hot Springs buildings, struck

the eye very agreeably, relieved as it is against the deep masses of foliage that rise one over the other to the summit of the noble range of mountains that overhang it on the south and east. The approach from below, as you come from Warm Springs, is not so fine: but that from the west is indeed very picturesque, equaling any landscape I have met among these mountains. The buildings here are roughly built, and when nearly viewed, present no very attractive appearance, being scattered here and there without much method or order, and inviting the visiter less by any exterior attractions of their own than by the positive and intrinsic virtues which they possess.

Dismounting here with my companion, we engaged a comfortable cabin, (a palace to any thing we had enjoyed at White Sulphur,) ate a breakfast, which by the same standard of comparison or contrast, might well be called a feast, and then sat down to read the welcome letters which we here found awaiting us from home.

As we approach the Hot Springs from the west, by the mountain road, we come suddenly upon it as we pass through a narrow gorge between the hills; and viewed hence, it presents a beautiful landscape to the eye of the traveller. The road descends from this gorge into a valley, the middle of which is low and somewhat marshy, and here the springs are situated. The buildings erected over them, for the accommodation of visitors, are unsightly in construction and in their relative location, and of course add nothing to the beauty of the situation, as a whole. The hotel, too, on nearing it, is converted from the lovely little cottage which your fancy has led you to imagine it, into a white-washed and inconveniently constructed old fashioned house, of no very attractive exterior or interior. Here we found several of the recent residents at White Sulphur, who had, like ourselves, come to this region, to put the finishing stroke to their experiments upon the waters of the Virginia Springs.

We are now comfortably bestowed in a neat, new, unfinished little box, that is nevertheless a stately mansion compared with any thing in Fly Row,—and we breakfasted as princes would be glad to breakfast after a fortnight at White Sulphur. After this operation, we called to see Dr. Goode, the intelligent proprietor of these springs, who advised us to commence with the trial of the "Spout Bath." At the proper hour, therefore, we entered a low wood building, where disencumbering ourselves of our apparel, we stepped into a round basin of water that seemed scalding at first, and from which the first impulse is to draw back with something of a start. But being thereto encouraged, we persevered until we stood up to our ears in water of the temperature of about 170 degrees of Fahrenheit. It was a very pleasant bath, and almost equally so with that at Warm Springs, already described, though I must confess I should prefer the latter as a matter of mere pleasure. In this basin a hollow log has been constructed, which conducts water of the same temperature so as to fall on any part of the person the patient pleases,—and this is what gives the bath its name. I found the *Spout* quite agreeable. There is a constant rising of gas in this spring, which renders it a most delicious bath; it seems to buoy the body up towards the surface, and by sensibly diminishing the weight of the water, as you walk or swim in it, almost giving the effect of entire non-resistance to your motions.

Upon leaving this bath, the doctor prescribes that the subject go directly to his room, and not expose himself to the action of the air upon his person, until the profuse perspiration, which is the effect of bathing, has left the surface. We did so, and found the most agreeable effects resulting from the precaution: and our first experiment with the *Spout*, warrants us in the confident anticipation of the best results from its further use.

There are at present many invalids here, the place forming quite a hospital, and presenting a strong and striking contrast with the White Sulphur Springs, where there is such a constant flow of gaiety, and so constant a bustle is humming from morning till night. Many invalids have come down from Calwell's, and are now *Boiling, Spouting* and *Sweating* under Dr. Goode; and the Warm Spa being near, we have enough company to make the time pass away tolerably.

Dr. Goode is an experienced physician, (I believe from Scotland originally,) and became possessed of this valuable property by purchase from the former owner, *Peyton*, who received it as a part of his wife's portion, without a very adequate notion of its true value. Many improvements are going on, new springs being discovered, and much promise being held out of future comforts and conveniences that are now *desiderata*.

August 15.

A lovely place is this stage of my wanderings among the Springs of Virginia. It did not look to me as if I could linger among its vallies and mountains with much satisfaction after leaving the White Sulphur, but it has grown wonderfully upon my good will within these few days. I have already given some idea of its situation, its arrangements for invalids, and the qualities of its waters. I have continued to enjoy its delicious baths, and with no little advantage, and find them now as necessary to my daily enjoyment as I had previously done the White Sulphur waters.

Well does the facetious Peregrine Prolix remark, that the scenery at Hot Springs "grows into your affections the deeper, the longer you remain." We came here for three days, and are regretting already that we may not extend our stay beyond a week. Since I came into Virginia, I have seen nothing in nature more lovely than the twilight of last evening, as I viewed it from the piazza of the old tavern here. It had been one of the finest days of the season. From morning till midnight the horizon, resting all around upon the ridge of the mountains that hem us in and form our little secluded world, spanned but one glorious arch of beauty. The sun, lifting up the thin cloud of silver and azure mist, that rested upon the mountain brow at its rising, came forth in splendor on his march across the trackless firmament, while the old trees that raised their proud heads by thousands over each other upon the hill sides, stood solemnly and silently still, not a breeze stirring their leafy tops amidst the quiet of the Sabbath noon; and gloriously too did he sink, the King of Day, to his rest beyond the distant verge of the western horizon. There is a spot here whence you may view the loveliest sunset and twilight landscape that it ever entered into the imagination of a Milton to describe, or a Claude to depict. Standing at sunset, a little north-westerly of the hotel on the hill, you look westward through a gap in the ridge of mountains I have so often alluded to as forming a beautiful feature of the scenery here, and following the direction of the road, the eye strikes at the remotest point of vision, the edge

of another range of hills, behind which the sun has just set in undimmed glory. Above the lowest point of the horizon, a long line of glowing light extends the whole width of the space between the near mountains, that form your foreground, and thence mellowing upward in fainter and fainter degrees of intensity, it loses itself at length in the deep dun of the heavens above, amid which the stars are one by one shining forth, to make a night worthy of such a day. That one view is enough, for its present enjoyment, and for the recollections with which it has stored my memory, to repay me for my journey over the blue Alleghany.

One learns to like his landlord, too, at Hot Springs, in an incredibly short time. Dr. Goode is a fine looking, intelligent, middle aged gentleman, who received his medical education at Edinburgh, and conceived the project of turning these springs to account from the experience that he himself had enjoyed of their efficacy. He has been their proprietor somewhat less than two years, and is in the midst of building and other grand improvements, the result of all which, it is a reasonable hope of his, will be to render these springs a very general resort for those who are suffering under hepatic and rheumatic affections. He is of mild manners, easy and winning address, gentlemanly and affable as an acquaintance, and instructive in his conversation upon general topics as well as upon those connected with his profession.

Mr. Edmondson is the "Mr. Anderson" of Hot Springs, and meekly (in comparison) does he bear his honors. His right hand man is Mr. Smith,—a common name, it is true, but "what's in a name? A rose by any other name would smell as sweet,"—though "Smith," never knew I one, who for the concoction of a mint-julep, that pride of the Old Dominion, could come within hailing distance of him of the Hot Springs.

As queer an appendage of this place as any connected with it, is our barber. He rejoices in the euphonious name of Ben Garnet, and styles himself, Barber, Clothes Cleaner and Renovator. By courtesy, our coterie have dubbed him "Wormwood," from the resemblance he bears to the worthy of that name who figures in the "Lottery Ticket" so facetiously: particularly in his gait, that is most singularly limping, as he hops about to shave beards and renovate unmentionables. *Wormwood* owes his limp (so gossip tells) to a wound received *en cuerpo*, as he was retreating from an unsuccessful attempt to raise a subject for the dissecting table of the medical students at Charlottesville, where he resided, lang syne: but whether this be a true or gossiping story, I know not: he says he came by his lameness by means of a downright honest rheumatic fever. Any how, (as Virginians say,) *Wormwood* is an oddity in his way, and it is worth a day's stay at Hot Springs to develope the fellow.

We are within five miles of the Warm Springs, and on Saturday, I rode over and found the good Colonel as happy as a king, in the midst of a house full of visitors. Some of these were "old familiar faces," and recalled White Sulphur associations most delightfully. We were to have engaged rooms there, but the Colonel told us that "he never does them things;" giving all a fair chance, and no monopolizing! What a lesson for Master Anderson, thought I.

Yesterday was a *dies non* to all the intents and purposes of a spring life, and so entirely out of reckoning was a neighbor of mine, as to the days of the week,

that he was actually caught in asking a black who frequents the piazza of his cabin, with his violin, every noon, to play "Zip Coon," and was much mortified to hear the conscientious Orpheus reply, "it is Sunday, Massa!"

I have just returned from a ride on horseback to visit a spring, about three miles north of this place. The road was delightful, the day fine, my companions choice, and the horses good;—and to crown the pleasures of the morning, I tasted once more the real sulphur water, bubbling up from the earth, in all its undoubted purity. I did not drink it, it is true, from the octagonal basin, beneath the pillared pavilion, presided over by Hygeia, that graced the verdant square of my good friend Calwell's domain,—but it was *the real thing*, and tasted as deliciously beneath the green trees of the primeval forest as it could have done in the costliest fabric of man's hands. The owner appears to possess no adequate notion of the value of the spring, leaving it open to all comers. Who knows, but that in time to come, a new "White Sulphur" will arise, and divide the palm with the present "lion of the mountains?"

We passed a cave or two of inauspicious aspect, but hating every thing Cimmerian, I did not turn my horse's head to explore them: a wagon load of negroes, old and young, male and female, some chained hand to hand, being on their way with their owners, for sale, probably to the south, and a whole family of whites, moving from Rockbridge to Ohio. We conversed with the latter in its various picturesque groups, and learned the story of their plans, and as we came back, we saw them halting to dine on the banks of a mountain stream, forming a picture worthy the pencil of a Salvator.

CHAPTER VIII.

Warm Springs again. The Colonel. The Baths. General hints. My last day at the Springs. Advantages of the tour. Advice to our critics. The Virginian. Ride over the mountains. The Blowing Cave. A hoax. Millborough. Alum Spring. The Hunter's bivouac. Lexington. Natural Bridge. Staunton. Weyer's cave.

Warm Springs, August 20, 1835.

Here I am back again at the comfortable quarters of my good old friend, Colonel Fry,—who received me with his accustomed cordiality and hospitable welcome. I find his cabins and chambers almost completely pre-occupied—for the travellers in Virginia from the north, generally take his springs in their homeward route,—but still by a little manœuvring, I was enabled to bestow myself quite easily in a suit of cabin apartments, much to my satisfaction.

I believe I was clear enough, for all useful purposes, as to the topographicalities of Warm Springs, upon my first visit, and can add but little to the useful or amusing accounts already attempted, of this part of my tour. I meet many of my White Sulphur acquaintance here, and have every prospect of a delightful sojourn for a few days. The baths, the luxury of which I have already endeavored to describe, are still attracting hosts of visitors, and they tell me that they find it difficult to break away from the fascinations of the place.

Gaiety, too, is as rife here as at White Sulphur Springs, proportionally speaking. The dancing hall is nightly opened, and one fancies himself at Calwell's, under the management of Colonel P. more. Such a contrast as the whole affords to

pled condition of things at Hot Springs, (which an old inmate calls the "Hospital of Incurables,") makes it additionally attractive, just now, and thus you see my leave-taking of this region is likely to take place under most favorable circumstances.

My ride from the Hot Springs hither was unincidental, and was taken upon a gloomy, lowering afternoon, and of course, the sight of the well-filled colonnaded piazza was cheering indeed. Some people had just come from the upper springs, who represented the falling off there to be rapid and constant. This of course increased my self-felicitation upon having come away so opportunely. Who does not hate leave-takings, among pleasant acquaintances?

Yes! the season is over, or nearly so. The invalids are wrapping up and turning their faces homeward,—the votary of Fashion is sighing a last farewell to the scenes that have been so delightful to him,—and every thing appears to be verging towards the end of the ball. I saw to-day the withered foliage of a maple, solitary and alone, in the midst of the forest, and its brilliant hue, like the hectic of the consumptive, warned me that it was time to depart also. I shall linger but one day yet, and then cross into another county of delightful Virginia, enjoying new sights and curiosities,—hunting over yet unassayed ground.

August 22.

This is my last day among the Springs of Virginia. My visit to them, with its varied incidents, has been described to my patient and long suffering readers in a series of letters that I hope have had the effect to render these springs an object of interest in their eyes, and to induce some of them to turn their faces hitherward, whenever a journey of health or pleasure is to be projected. Should such an effect result from the publication of my notes, I certainly shall not have written in vain.

From what has been so rapidly sketched, it may be deduced that the better route for a northern traveller to take to the Virginia Springs, would be to start about the middle of July on the tour, taking the Richmond steamboat at Baltimore, and the stage-coach at Richmond, and so direct to the Warm, Hot, and White Sulphur Springs. If he be dyspeptic, he will content himself with a few baths at Warm, look in upon Dr. Goode at Hot, and tarry a fortnight at White Sulphur. Should the vice-like grasp of that "friend that sticketh closer than a brother," as the rheumatism has been aptly described, clinch him in its rude embrace, his place of sojourn must be in the Thermal valley, alternating between Hot and Warm, as Drs. Goode and Strother shall advise: doubtless the greater portion of his time should be devoted to the baths of the spout and the boiler. The consumptive must avoid all these springs,—the Red and Gray Sulphur offering the only inducements to such patients to visit this region. If, however, none of these disorders and diseases shall drive the visiter hitherward, but his malady be enervated, or the propulsive power that moves him towards Spa be only the behest of fashion and a love of pleasure, he will find the White Sulphur his place the season round, Salt Sulphur occasionally, and this hospitable abode of Colonel Fry, towards the close of July. Returning, he has "the world before him, where to choose." He may return the way he came,—or may go back to Staunton, and thence diverge to Fredericksburg, and so go to Baltimore or Washington by

stage, and take the rail-road. If so disposed, he may go twice each week to Lexington, by the way of Callaghan's, (above Hot Springs,) and thence may go to the Natural Bridge, (being thirty-five miles hence,) and taking Staunton in his way, may return as before directed. This will furnish a very agreeable, varied, instructive and health-giving season; and if the traveller be not the better for it, it will be more his own fault than that of the roads, the inns, the people, the fare, or the face of nature, on the entire route.

One thing has been very remarkable during my whole tour to the springs. The weather has been uninterruptedly fine throughout. Every one remarks that the present season has been marked no less for its unusually bright, clear and delightful skies, than for its wonderful increase of travellers in this region since the last. It is very certain that of late much more notice has been publicly taken of the tour, than has ever before been done in the country, and there is every reason to believe, that the result will be a prodigious increase of travel here during another season.

The opportunity that a journey to the springs of Virginia affords the traveller from the north to form an acquaintance with the people of the various parts of the country south of 'Mason and Dixon's line,' is to be superadded to the advantages already enumerated as attending such a tour. It is incredible to the inexperienced in this matter, how great a deduction of that prejudice which is based upon no other ground than a few merely sectional differences of opinion on local and peculiar points, is effected by the contact and collision that such a journey produces. And it is doubly advantageous, inasmuch as this action upon prejudice is reciprocal; the southerner meets his brother of the north, and forms an intimacy with and an attachment to him, that results necessarily in the production of the best feelings on both sides.

The character of the Virginian is peculiar, and at first view less pleasing than upon a cultivated acquaintance. He is proud, and high toned in his feelings; and in nothing does this characteristic show itself more plainly than in the exercise of his most distinguishing trait,—I mean his hospitality. Of nothing is he more proud than that he is most hospitable. There is a gentlemanly manner pervading the people I have met in this state that is entirely irrespective of rank, class or condition; and indeed I have seen it more strikingly developed, oftentimes, in those from whose appearance I was led to expect it least, than from others, to whom I looked for it as a matter of course. In no place I have ever been, have I seen so much occasion for a constant attention to the duty of acknowledging and reciprocating politeness, kindness, and attention, as in the mountain region of Western Virginia, during a month's 'Trip to the Springs.'

* * * * *

August 23.

At Warm Springs, I very gladly accepted a proposition from a friend to join him and one other companion in chartering a coach to Staunton, by the way of Lexington and the Natural Bridge. Having packed up, we took leave of the lingerers at the Colonel's, jumped into our two-horse vehicle, (denominated by courtesy a coach,) and were soon on our way over the Rock Mountain that overhangs the valley of the springs. It was early in the day, and we were to stop after the first thirteen miles from our starting place. A most delicious air rendered the heat of the sun,

shining down upon us unclouded and bright, quite tolerable, exposed as we were to his rays, determined to enjoy the splendid scenery that surrounded us on every hand. We soon diverged from the main road, and struck off south-westerly towards Millboro', where is a sulphur spring, and where we were to breakfast. On our way we got out to see the wonderful "Blowing Cave," mentioned by Jefferson, in his "Notes," as prostrating the grass for rods before it, and celebrated in all the guide books and travellers' long yarns from Dan to Beersheba. *But it had done blowing!* So much for cave hunting!

Arrived at Millboro', a little village where there is a mill, a hatter's shop, (there located "because furs are so cheap," as the master of the ten foot establishment told me,) a tavern, and a real White Sulphur Spring. The mill has done grinding, the tavern is beautifully situated, and afforded a capital breakfast, the hatter was a yankee, (*of course,*) and the spring was quite respectable. After these discoveries, we pushed south-erly into Rockbridge county, went up hill and down hill, along vallies, over rocky roads, and crossed the same creek six and twenty times, all counted. There was no tavern on the route from Millboro' to Lexington, which we were to reach that night, and our dinner was to be merged in supper. The boys, the women, and the men on the road were too busy to give us a cup of cold water to drink, and we were obliged to subsist on the apples we could knock from the trees by the way-side. In the course of the afternoon, having ridden through a succession of fine scenery, of the same character as that already described to you in my letters, we came to the foot of a hill, to the abrupt and densely wooded summit of which we ascended, to behold a most striking and singular sight. On the other side of this hill, which descended precipitously into a deep and rocky ravine, an hundred feet below where we stood, was a little settlement or encampment of deer-hunters, who come annually to this secluded and wild spot, to follow their game, bringing with them their families, and remaining during the whole season. The place selected is famous as the site of an alum spring of great power, to which people resort to accomplish cures for those diseases that are benefitted by an application of that mineral. It was a rude, rough, and novel scene, a parallel to which I do not think can be found in our country. I am told that this place is not renowned for its strict exemplariness in matters of morals and civil good order; these hunters being a kind of outlawed race, with few or no sympathies in common with the rest of the world around them. We reached Lexington, a place of eight or nine hundred inhabitants, that night, thirty-five miles from Warm Springs, after a fatiguing ride. There are an arsenal, with thirty or forty thousand stands of arms, and a garrison of forty soldiers; Washington College, which was closed, it being vacation time; a good court-house and gaol, churches, and many fine dwelling houses. It stands in the midst of a delightfully cultivated valley among the mountains, and is a place of no little consideration. We made a very comfortable inn our head-quarters,—and having passed a good night, we were bright and early on our way to the crowning curiosity of our tour,—the Natural Bridge of Virginia. We reached it at noon, after a ride of about sixteen miles. A public house stands near it, where we left our carriage, and proceeded to view this stupendous wonder at our leisure.

Words are inadequate to convey the emotions with which one approaches, gazes upon, and admires this most magnificent display of that omnipotent power that called the earth and all it contains into being. One must go and stand upon the rock on the north of the ravine, and look down upon the bed of the stream three hundred feet below, and gaze with awe-struck admiration upon the immense sweep of the single arch thrown over this wide and growing gulf, below which and over and upon which trees are growing in masses, and which sustains a solid block of everlasting rock, *fifty feet thick*, upon which a common travelled road is run,—and then by a circuitous path he must descend below the stupendous arch, and gaze upward, and thus form an idea of its vastness, and the many wonders that its existence, its formation, and its regular mathematical proportions excite in the mind of the contemplative observer, ere he can conceive of what I should in vain attempt adequately to describe.

On the rocks and trees forming this magnificent curiosity, some visitors, desirous of fame, have recorded their names, many modestly, and some ostentatiously. For our parts, we contented ourselves with bearing away a hawthorn stick and a cypress bough as our memorials of a visit so full of impressive associations.

The bridge is private property; it did belong to the estate of Jefferson, and has been sold to its present owner, within three years, for fifteen hundred dollars, with about sixty acres of land. No doubt the purchaser is now reaping a rich harvest for his bargain.

Leaving Lexington and Rockbridge county, we came, on the route of our return, to the little town of Staunton, on the main post-road to Richmond, where accident threw in our way an opportunity, (which, upon reflection, I think I should much regret to have lost,) to visit "Weyer's Cave," the most celebrated of all the limestone excavations which have been discovered in Western Virginia. "Madison's Cave," so celebrated in Jefferson's "Notes," is very near it, but since its discovery, has ceased wholly to attract the popular curiosity: and Weyer's is admitted by all visitors to be the grand wonder of this interesting tour. Being detained a day at Staunton, by some disappointment as to seats, our little party of three, determined to spend it at the Cave. Our curiosity to do so was excited by the landlord's exhibiting to us some beautiful specimens of spar, crystal, and stalactite, that had been brought thence, and forgetting our horror of being taken in by another "Cave," so naturally produced by our disappointment at "Windy Cave," *so called*, we took a convenient conveyance and rode out seventeen miles, to the abode of Mr. Morley, who has the care and the exhibition of this prodigious cavern.

Having provided us with lights, arranged so as to throw the glare forward without dazzling the eye, we went about a quarter of a mile from the landlord's house, and ascending a hill, soon came to a wooden entrance upon the rocky side of a precipice, and stood in the *ante-room* of the cave. While standing there, our guide informed us that the place had been discovered twenty-nine years, and that its discovery was the result of accident, a hunter being on a search after some lost game, which he tracked to the mouth of this cave. His name was Weyer, and hence the name. We went through a succession of rudely divided apartments, formed by heavy and massive convulsions of the rocks on which the everlasting hill, hundreds of feet over our heads, was resting, each distinguished by some appel-

lation that had been given it by the inquiring and intelligent visiter, from some resemblance which its entire form, or the concretions within it bore to some particular object. These apartments are in number no less than thirty-six, and I believe a few more, each containing stalactitic and stalagmitic formations, produced by the constant dropping of the limestone in a soluble state from the roof of the cave. The stalactite is formed by the drops from the ceiling or sides, in a hanging position, like icicles from a wall, or sheets of ice upon a water course. The stalagmite is the formation of a concretion upward from the ground, upon which, drop by drop, the solvent falls from above.

The wildest vagaries of romantic and poetical fancy, the most visionary conceptions of the freest rover in the realms of imagination, can never match the beauties and glories of this most wondrous of all the works of nature. There is not one feature of this fairy palace, be it ever so minute, or ever so grand in its proportions, that art can imitate with any thing like a shadow of the reality. The eye wanders amid a boundless variety of charming objects, and as it roves around these massive halls, the architecture of nature during the lapse of ages, the heart of the gazer is struck with awe at the stupendous manifestations of God's omnipotence the scene discloses at every step. Where all is so beautiful, grand, magnificent, sublime, to particularize within the compass of a single letter were presumption. All parts of the great whole were full of interest, and to the admiration of each alike did we devote ourselves as we passed them. Here, a splendid ceiling, over-arching an apartment of great extent, was hanging thick with stalactites of every shape and size and tint, the single drop of lime water pendent upon the point of each, and with the crystals that had here and there formed upon them, glistening in the torch-light like masses of diamonds. Next, the attention is directed to enormous hangings of the same formations, but in broad folds resembling the richest drapery; every sheet or volume of which, a light being placed behind it, would seem to be hung with a broad border, and a regular hem. Again, stalagmites would here and there arise like statues or pedestals, imitations of antique marbles, requiring but little aid of the fancy to assimilate them to the well known *chefs-d'œuvre* of the art. Then, a magnificent hall, level, regular, lofty and extensive, would stretch out before the wondering gaze, and in its centre a statue would appear, the guardian genius of the place. The hall would be adorned with hangings of the broad and beautiful formations already described, and its ceiling sparkling with innumerable stalactites, spar and crystals. Anon, what seemed a mighty waterfall, stayed by the hand of Omnipotence in its descent, would stand, in motionless magnificence, fall after fall, volume after volume, lying still, clear, pure, cold and bright, one over the other, upon a perpendicular descent of an hundred and fifty feet,—some of the stalactitical concretions were so massive as to separate apartments from each other, and in one of these, the walls thus formed were beautifully transparent. A thin partition of this kind upon being struck gave out a deep tone, like the Chinese gong, and another had all the resonance of a fine bass drum,—while, in the same room, a succession of irregularly shaped columns of the stone, upon being hit rapidly with a small cane, produced a series of notes, not unlike those of the Pandean pipes, or of the musical glasses.

But I have not the time now, which it would require even to recapitulate, much less to describe the various attractions and fascinating wonders of this most interesting cave. I shall only add, therefore, that the traveller in Virginia should never consider his plans for a tour through that most wonderful state complete, within many a degree, until he has placed prominently among them, "*two whole days to be spent in exploring Weyer's Cave.*"

EXPOSTULATION.

It is not, dearest, that thy words
Come with a harsher tone—
I have no lute-string like the chords
Around thy spirit's throne.
The wind that makes all earth a harp,
The streamlets that rejoice,
Have not a note to win me from
The music of thy voice.

But, dearest, when 'neath yonder arch
The winds come trooping by,
I feel them on their gentlest march,
And when the storm is high;
And so, when gladness fans thy breast,
Her zephyrs o'er me blow—
But ah! when storms assail thy rest,
I may not share thy wo.

The streamlets flashing to the sun,
And dancing down the hill,
But to each other faster run,
When floods their channels fill.
So, when life's current gleams with bliss,
Our thoughts together flow;
Alas! 'tis but in happiness—
I may not share thy wo.

Oh! let my love divide thy cup!
My joy shall meet thy smile,
As fountains leap in sparkles up,
The sunbeams to beguile!
But keener, keener far, the zest
Of joy, might I but know
Whatever sorrows fill thy breast,
Might I but share thy wo.

Life's brightest is a glimmering ray,
And clouds will intervene;
Yet every shower but damps the way,
To make our graces green.
Oh! how can faith and patience, here,
In me abound and grow,
If never water'd by the tear
That channels for thy wo?

Yet I can weep—and patience take
A most abiding root,
Water'd by tears that do not wake
An answer to my suit.
Still shall I find a charm to bless,
When joys within thee glow;
And life may lose some bitterness,
Though I share not thy wo.

Camden, S. C.

B. W. H.

BIOGRAPHICAL SKETCH OF CAPTAIN SAMUEL COOPER.

BY A CITIZEN OF FREDERICK COUNTY, MARYLAND.

Terrible was the gleam of his steel: 'twas like the green meteor of death setting in the heath of Malmor when the traveller is asleep, and the broad moon is darkened in the Heavens.
Ossian.

On the evening of the 28th of June last, I visited Captain SAMUEL COOPER, of Georgetown, D. C., that I might ascertain the events of his military life. The venerable man was seated in his portico, from which we saw old Potomac rolling his waters far as the eye could reach, insensibly leading the imagination to the tomb of Washington, and in quick succession reviving all the prominent events of his day. The capitol of our country, too, and the proud monuments of national glory, were immediately before us, which we could not behold without recurring with sorrow and indignation to the disastrous events of 1814, when a vandal foe laid them in ruins. The rays of the setting sun gilded the horizon with a beautiful lustre—the lofty oaks, which surrounded his house, were covered with the richest foliage—the feathered songsters poured forth their sweetest music—and when I was told, that this was alike the birthday of the aged patriot, and the anniversary of the battle of Monmouth, where he had fought for our country, my curiosity was much excited to learn his history. He seemed at first rather to shrink from the narration of the stirring scenes of his adventurous career: his modesty recoiled from the task. At length I saw his eye kindling, his mental powers were quickly excited; and he thus began. “Often like the evening sun comes the memory of former days on my soul. I was born June 28th, 1755, in Boston, and was enrolled in Col. Knox’s regiment of artillery, May 2d, 1775. I saw the blood of my neighbors flow at Lexington, on the 19th of the preceding month, and had frequently heard the great orator, Dr. Warren, thunder in the ‘Old South,’ against the oppressions of England, even when the British soldiers menaced him with instant death in the holy place. Sir, (said he, rising from his seat, in a sort of ecstasy,) I yet hear his unrivalled eloquence—his pathetic tones—I see the people electrified and borne off to the aid of their country, despising the horrors of war—by the all-powerful oratory of this second Demosthenes. I had previously, in 1774, borne a very prominent part in the destruction of three hundred and forty-two chests of tea, in Boston harbor. And although this expedition was fraught with the best effects to the whole country, yet was it as nothing when compared with the battle of Bunker Hill, which was not surpassed in bravery or good fortune, either in ancient or modern times.

“Our army had blockaded Boston: we labored incessantly through the night of the 16th June, ’75, to fortify our position on the summit which completely commanded the city; and it was not until four next morning that one of the enemy’s ships first perceived our operations, and played on us with their artillery. The three English generals saw that all their efforts to dislodge us from our strong position would be vain, unless by a general assault. Our lines were manned with yeomanry, many of whom had never been in battle. Putnam commanded in chief, assisted by Starke and other brave spirits. A few minutes before the contest began, Warren appeared in all the pride of youth and courage. I remember distinctly his countenance, (which strikingly resembled that of the late Mr. Wirt,) glowing with patriotism and ardor—his hair fell in curls down his shoulders—his presence inspired the troops wherever he was seen. The sun had risen resplendently, indicative of our fortunes on that remarkable day. We saw from the top of the hill the British shipping and barges in the harbor—thousands of anxious spectators filling the windows, balconies, and roofs of houses of my native city—the enemy preparing for the conflict—all was big with the fate of the two nations. About one o’clock, P. M., they landed at Moreton’s Point, without meeting resistance, ten companies of grenadiers, ten of light infantry, and a quantity of artillery, commanded by Generals Howe and Pigot. On surveying our intrenchment, the British General halted, and sent for a reinforcement. They advanced in two columns. At this moment Charlestown was in one sheet of flame. The enemy gradually advanced up the hill now covered with their troops—their colors flying—music mingling with the roar of their artillery—soldiers well dressed—officers distinguished by their splendid costume—whilst we waited in profound silence for their near approach: our starspangled banner spread out to the unclouded sun—no signs of fear in any countenance—all, cool and determined, were awaiting the signal. On our first fire, hundreds of the enemy lay dead before us; their ranks were broken, and they retired in disorder to their place of landing: their officers were seen running in every direction, inspiring their soldiers for another attack. The second charge was to them more disastrous than the first. Again the survivors fled to their old position. An universal shout of joy along our line, enlivened with the favorite air of Yankee Doodle, apprized the enemy that our arms were nerved by a superior power in our country’s cause. But for Sir Henry Clinton, who beheld the scene from Coppe’s Hill, the British army had never rallied. He fled to its succor. That enterprising officer cheered the drooping spirits of his troops, and himself led the third and last charge. He attacked our redoubt at three several points. We now

suffered from the artillery of the ships, which not only kept off our reinforcements by the isthmus of Charlestown, but even uncovered and swept the interior of our trench, which was assaulted in front at the same instant: our ammunition was exhausted—no hopes of succor—no bayonets to our guns—the redoubt filled with the enemy—a retreat was now ordered. We were forced to pass along the isthmus of Charlestown, and here we suffered considerably from a British ship of war and two floating batteries. Here Warren fell, close by my side. I saw him standing alone in advance of his troops, rallying them by his own glorious example. His voice was heard above the storm of battle. He reminded them of the mottoes inscribed on their ensigns, on one side of which were written these words; ‘An appeal to heaven;’ and on the other ‘*Qui transtulit sustinet*,’ meaning that the same Providence which had brought their ancestors through innumerable perils to a place of safety, would also support their descendants. Imagine my feelings when I beheld his noble form covered with blood—what indignation swelled my bosom as I beheld Charlestown a heap of smoking ruins—whole families destroyed—more than a thousand corpses exposed to the sun—the groans of the dying mingled with the shout of victory—give but a faint view of the horrors of war!” “True,” replied I, “but the contest was a holy one. You were fighting for liberty.” “Yes,” he rejoined, with enthusiasm; “the battle of Bunker Hill in some degree resembled the thunders and lightnings of the mount where the law was delivered to Moses. The way was opened for the national glory of the Jewish and the American people, and the fire of liberty glowed in our bosoms, like the flaming bush which burnt, but was not consumed.” The patriarch now resumed his seat. “Did you retire from the camp after this memorable conflict?” “By no means. Washington, on the day after this battle, had been appointed by Congress general-in-chief of all our armies; he arrived at head-quarters at Cambridge on the 3d July, and it was determined on the 9th, in a council of war, that Boston should be closely besieged. I remained here during the whole time, and on the morning of the 17th March, 1776, saw their fleet filled with troops under sail for some other position. I was actively engaged at White Plains, New York, in October, 1776, where Washington gave proof of that intrepidity of character and military science, which he had displayed on the banks of the Monongahela on the 9th of July, 1755. Subsequently to this period, during the fall and winter of 1776, fortune seemed to have deserted our standard; but I never once despaired. On the 25th of December, we passed the Delaware to surprise the enemy in Trenton: the weather was excessively cold—the river filled with ice—wind high—a powerful foe to be attacked by a dispirit-

ed army—but, sir, it was a splendid affair: twenty-three officers and eight hundred and eighty-six soldiers were made prisoners of war! Not a man of our troops was killed; and but two wounded. We retreated from Trenton only to engage the British near Princeton, on the 3d of January, 1777, where our loss was inconsiderable when compared to that of the enemy, although we all lamented the fall of Gen. Mercer, of Fredericksburg, Virginia, who had seen good service at Culloden, and also in the French war in this country, where his intimacy with our beloved chief began. It was not until September 11th of this year, I had the pleasure of again encountering the foe at Chad’s Ford, on the Brandywine. The day was enlivened by the martial appearance of the chivalric Lafayette, who rode along our line with Washington just before the action commenced. True we were compelled to quit the field, but be assured the battle was warm and sanguinary. Philadelphia passed into the hands of the enemy—Congress removed hastily to Lancaster—the whole country was dismayed—but the general-in-chief on the morning of the 4th of October, at Germantown, again taught the British a lesson which they never forgot. My own commander, Knox, displayed on this occasion the most entire coolness and intrepidity, combined with the most profound skill and science. Nothing but the lightness of our artillery prevented our demolishing Chew’s house, from whence our brave comrades were mowed down with a most destructive fire. Notwithstanding the thick fog of the morning, and the derangement of the plan of battle from unforeseen causes, the English army would have been captured, had not Cornwallis, at the crisis of the contest hearing the noise of our artillery and small arms, arrived with fresh troops from Philadelphia. So changeable is the fortune of war, that the affairs of nations often hang on the events of a moment! The campaign closed, and we withdrew into winter-quarters at Valley Forge, on the 22d December; and with your permission, (bowing politely,) I will retire for the evening.”

Early on the ensuing morning the good old man renewed his narration:—“The winter of 1777-78, at Valley Forge, was the most dreary I ever saw. Washington’s head-quarters were very near the Schuylkill, while the several divisions of our army were stationed at proper positions: ours was in the centre. The enemy occupied Philadelphia. While they were enjoying at their ease the luxuries of life, we were exposed to cold, nakedness and famine. Deep snows, bleak winds, combined with the almost entire want of clothing, brought on us a train of evils and of trials which I cannot describe. Beyond all this, a deep laid and abominable plot was devised by Conway, Gates, and other disaffected generals, to deprive the commander-in-chief of his hard-earned fame. The fate of our

country now hung suspended on a single hair. Never shall I forget the awful scene! Washington, conscious of his own integrity, stood like a rock, firm and immovable. I could see that his countenance was occasionally lighted up with a glow of deep-toned indignation, and that he struggled hard in his own virtuous bosom, to repress his injured spirit. The conspiracy was not entirely crushed until the last of March, 1778. Suddenly the cloud vanished—the sun shone forth with the most gorgeous splendor—and he stood like Mount Atlas,

‘ While storms and tempests thunder on his brow,
And oceans break their billows at his feet.’

“We remained at this position until the 18th of June, when our army was put in motion, in order to pursue Sir Henry Clinton, who had evacuated Philadelphia on the preceding day, and was now making his way through Jersey to New York. All was now life and joy: our officers and soldiers greeted each other with the kindest salutations, at the prospect of again entering the field of glory. I saw our chief mounted on his war horse, elegantly caparisoned, surrounded by his staff—his eye lighted with fire—his countenance full of animation—the army catching from his bosom the spirit of liberty. Never; no, never, sir, did I behold so joyous a day as when we were in pursuit of the enemy on this occasion. Great skill was displayed by the respective commanders of both armies on the memorable 28th of June, 1778, when the battle of Monmouth was fought. The unfortunate mismanagement of Gen. Lee deranged in some degree our plan of battle—but the result was clearly favorable to the Americans. Three hundred of the British were slain, a like number wounded, and one hundred prisoners were taken. We slept on our arms with the hope of renewing the conflict at the dawn of day, but Sir Henry Clinton had eluded our vigilance at midnight, and was now in full retreat. From this time I had not the good fortune to encounter the enemy in the open field, but was actively engaged in the partizan warfare, in which detached portions of our army so often participated.”

It happened that at this part of his narrative, I inquired if he knew any thing of the history of the unfortunate Major Andre.

“I am intimately acquainted with all its details, and witnessed the last thrilling scene of his earthly career. He arrived at Tappan on Thursday, September 28th, 1780, under the care of the late Col. Talmadge, for many years a representative in Congress from Connecticut, to whose especial superintendence he had been entrusted by Washington at West Point, whither he had been taken after his capture, on the preceding Saturday, near Tarrytown, on the opposite bank of the Hudson. Here I first saw

this brave and chivalric officer, then in the twenty-ninth year of his age. His person was of the middle size, well proportioned—his bearing noble—his manners polished in the highest degree—his countenance indicating deep thought and extensive literary acquirements. Occasionally a cloud of melancholy obscured for a season the sunshine of his soul. His parents were natives of Geneva, who emigrated to London, where their highly gifted son was born. He was bred to the mercantile business, and when about twenty years of age became deeply smitten with the charms of a young lady residing in the same street with himself, to whom he often addressed the sweetest effusions of his muse. His affection was reciprocated, but their union was prevented by her parents. Chagrined beyond measure he joined the royal army, then coming to this country—occupied a high place in the esteem of Sir Henry Clinton—was a commissioner with Col. Hyde at Amboy, on the 12th of April, 1779, to effect an exchange of prisoners with the American commissioners, Davies and Harrison—and signed the articles of capitulation as aid-de-camp of the British commander, when Fort Lafayette capitulated on the 1st of June of the same year. He had formerly fallen into our hands as a prisoner of war, and with Capt. Gordon and other officers, was detained for some time in Carlisle, Pennsylvania, where he was almost incessantly occupied in the perusal of books. Here, as everywhere else, he won the affections of the citizens of that borough, who heard with undissembled grief of his subsequent deplorable end. I now regretted his present misfortune the more, because he was the victim of Arnold, the most perfidious of all traitors, who had now left him to expire on that gibbet where he himself should have died a thousand deaths. Every heart bled for the forlorn stranger, and Washington was melted into tears. On Friday the court convened, and I saw Andre escorted from the guard house, dressed in full regimentals, and heard him candidly and fearlessly acknowledge before that tribunal all the circumstances necessary to establish his guilt. On his return from the court, on this day, he wrote to Sir Henry Clinton, at New York, a most touching letter, in which he reminds his late chief of his perilous situation, and recommends to his especial care a widowed mother and three orphan sisters. Home, with all its enjoyments, was now unspeakably dear to his affections. He beheld, in his mind's eye, over the broad Atlantic, the forms of those who were dear to him by every tie of humanity, and anticipated their unspeakable sorrow when the intelligence of his ignominious death should be announced. Sir Henry Clinton was almost frantic when he found that all his efforts to obtain the release of Andre were unavailing. On Saturday, General Greene, president of the court, held a

long conference with General Robinson of the English army, at Dobb's Ferry, in which this interesting case was canvassed at large. No effort was left untried on the part of the British commissioner to maintain the position that the laws of war did not condemn the prisoner. Greene argued that he had been convicted, by a court properly constituted, as a spy, aiding Arnold in the perpetration of an act of treason of the deepest dye, and that however much his untimely fate was to be deplored, still it was irrevocable. Washington so instructed him prior to this interview. During this day I visited him, in company with other officers. Our sympathies increased, as the fatal hour was hastening on when his earthly career was to end forever. He was, however, tranquil, and occasionally cheerful. He seemed at first to be buoyed up with the hope that he would be exchanged for Arnold, and such also was the ardent desire of every officer and soldier in our army. It being ascertained, however, that Sir Henry Clinton had rejected every proposition which could lead to the surrender of Arnold, the order for his execution, at five, P. M., on Sunday, October 1st, 1780, was issued in the morning orders of that day, but the protracted discussion between Generals Greene and Robinson, prevented its consummation until twelve o'clock, M., of Monday. During the Sabbath he dictated and sent to Washington the most touching letter ever written by man, imploring him merely to soften his last moments by assuring him that he should "not die on a gibbet." Never before was the illustrious chief of our army placed in a more trying situation. It was universally reported and believed in camp at the time, that he shed tears, on signing the death-warrant of the brave but unfortunate captive. The stern, unbending laws of war, pointed to an ignominious death only, and he possessed no power to change those laws. Monday morning the sun rose clear; all were busy in preparing for the tragic scene before us; large detachments of troops under arms; nearly all the general and field officers, except the commander-in-chief and his suite, were mounted on horseback, in their appropriate costume; an immense concourse of citizens thronged every avenue; melancholy sat on each countenance;—the scene was awful! Sometime before he left his quarters, I went in company with Captain Lecraft, of New-York, to bid him farewell. He was in the act of shaving himself, standing before a glass as we entered the door. Seeing that we paused, he turned round and pleasantly observed, 'Come in, gentlemen; you perceive I am now in the *suds*—but I shall soon be relieved from this predicament.' Soon after he bade adieu to all immediately around him, in the most affecting manner. He was escorted from the door to the place of execution, (about three quarters of a mile distant,)

by two of our officers; one was a Mr. Samuel Hughes of Baltimore, if my memory does not deceive me; the name of the other I have forgotten. Andre walked between them, dressed in full uniform. How wonderful and mysterious are the dispensations of Providence! A few years before, and these very officers were prisoners of war in Quebec, where Andre was town major; and they had been treated by him with kindness and humanity—now they were compelled, by the inflexible code of military law, to aid in taking away the life of their amiable and hapless friend! I kept very near his person until the scene was finally closed. He seemed elevated above his misfortunes. Not a feature of his countenance changed. He smiled as he bowed gracefully to many of our officers, with whom he was acquainted. His step, firm and soldierlike; his bearing, lofty and firm;—and while the assembled throng was dissolved in grief, no tear coursed down his cheek. When he ascended the cart, Maj. Jos. Pattingall read the death warrant. The executioner appeared to do his office, but Andre ordered him to retire. When the rope was adjusted about his neck, with his own hand, without any assistance, I distinctly heard him say, 'In a few minutes I shall know more than any of you.' After he had bandaged his eyes with a white handkerchief, Col. Scammel said, 'You can now speak, if you wish.' Raising the handkerchief, he replied, with a firm voice, 'I pray you to bear me witness that I die like a brave man.' After the body was interred, and his clothes delivered to his servant, to carry to New York, the dead march was played, and we retired to quarters, overwhelmed with the sad scenes of this memorable day. I have been told that a monument was long ago erected to his memory, in Westminster Abbey, and that his ashes were disinterred in 1821, by Mr. Buchanan, British consul at New York, and removed to England, at the suggestion of the late Duke of York."

"Is it true, sir, as related by Lee, in his incomparable narrative of the enterprise of John Champe of Loudoun county, Virginia, that he deserted prior to the execution, in order to seize Arnold and bring him alive to camp?"

"No, sir," he replied. "On the contrary, Champe did not leave us until the night of the 20th of October, and was then sent to discover how far the suspicions of Washington were well founded, as to some of his chief officers, whom he had been induced to believe were concerned in the treason of Arnold. The agent mentioned by Lee, to whom Champe was introduced in the city of New York, and whose information was conveyed by him in cypher to the American general, was Sam Francis, a negro man, who kept a tavern in that city for some time prior to the battle of Long Island, and who remained there during the whole period of seven years, while the city was held by

the enemy. Washington's head quarters were at one time at Sam's house, prior to the evacuation of New York by the Americans, in August, 1776. He formed for his colored host an inviolable friendship. The house abounded in good cheer. Francis was uniformly polite and prompt—very observant of passing events—thoughtful and taciturn as Champe himself—kept his day book and ledger with his own hand—was a genuine patriot, as well as an admirer of the American chief. There is no doubt in my mind that Washington himself gave Sam the key to the cyphered letter, and that he had received advices through this channel, of the movements of the enemy, long before Champe's adventure. Sir Henry Clinton and his principal officers lodged at his tavern during all their residence in New York, occupying the very rooms where Washington and his staff had often slept. Sam became as intimate with them as he had previously been with our chief. They little supposed that Sam was in correspondence with the head of the American army, nor did he give them the opportunity of suspecting that he was noting their conversations at his table, or searching with inquisitive eye the workings of their minds, frequently displayed in their thoughtful visage. Never did he once betray the confidence reposed in him, or mislead his friend during this eventful and interesting period of our history. I was present in New York at Francis' tavern, on the 4th of December, 1783, and saw Washington once more greet his faithful confidante. An affecting scene now occurred. The warrior was about to separate from his companions in arms. His chief officers advanced to receive his last embrace and final blessing. My own faithful commander, Knox, under whose banner I had often met the enemy, first grasped his hand: both were overwhelmed with strong emotion: these stern chieftains, unmoved amidst the shock of battle and the groans of the dying, were now subdued by the tide of grief rushing on their souls. No word was uttered to break the profound silence of this majestic scene. Walking to White Hall, attended by a numerous concourse of admiring and weeping spectators, he entered a barge, which was to transport him to Paulus Hook. It was manned by twelve seamen dressed in white. I yet see the noble form of that immortal man, as he stood erect in the barge and waved his hat in bidding adieu to the multitude thronging the shore. Surely no man ever served under such a commander!"

"Pray, sir, what became of Sam Francis?"

"Congress, on the recommendation of Washington, presented him with a farm on the Raritan, where he lived many years, and died universally esteemed for his virtues and patriotism."

"Have you detailed all the events of your military life?"

"No, sir," he replied; "I omitted to mention,

in its proper place, that I witnessed the convention of officers at Newburgh, on the fifteenth of March, 1783, when Washington delivered his address, in order to counteract the effects of the celebrated anonymous letter of John Armstrong, a composition not surpassed in splendor of style or bitterness of spirit, by the best efforts of Junius himself. The object was to prevent the army from sheathing their swords, until Congress had settled all arrearages of pay and compensation: and this bold and reckless measure, which aimed to undo all the work of our revolution and establish a military despotism, unless the demand was gratified, was crushed by the superior energy and decision of the commander-in-chief.

"I was also engaged in defence of Mud Island, where our privations and exposures were truly great and hazardous.

"Such, sir, is an outline of my services to America, for almost nine years; and if I have contributed to establish the liberties of my country, and the constitution under which we enjoy our invaluable rights and privileges, it shall solace me in the decline of life; and when the God of battles shall summon me from earth, I shall bow submissively to his sovereign will, and say, 'Lord now lettest thou thy servant depart in peace, for mine eyes have seen thy salvation.'"

LAMENT OF AN OLD BACHELOR.

Indulgent Muse! I woo thee still;
Thy breathings nerve my fragile ear;
They, soft as sound from murm'ring rill,
Dissolve each frozen tear.

I woo thee for thyself alone;
No dreams of earthly fame I know;
Yet sing, oh! sing, in mellow tone,
My tale of earthly wo.

Alas! by fancy's flick'ring light,
In youth I've soared on wings of fame,
But shuddered, each returning night,
To find myself the same.

And now, the dreams of fancy gone,
By friend and foe, and love forgot,
I'm left to weep my fate alone,
In this poor shattered cot.

No cherub lips a father's name;
No fair one smiles to find me near;
No anguished heart is here to claim
The tribute of a tear.

The friends my early childhood knew,
As leaves returned to parent sod,
Have paid the debt to nature due,
And gone unto their God.

When lowly down my body lies,
And fell disease my frame commands,
I drink the draughts which lucre buys
From cold and heartless hands.

No "ladye-love" is there to soothe
The anguish nature's laws impose,
Nor make the bed of sickness smooth,
Nor sympathy disclose.

A mote upon the stream of life,
I've floated down its ebbing tide,
Unheeded in the raging strife
Of passion and of pride.

My "head is silvered o'er with age;"
My veins are filled with sluggish gore;
I totter now upon the stage,
To fall! and rise no more.

Sad relic of departed days,
Still left awhile to linger here,
And watch the hour that seeming stays
To keep me from my bier.

LYRICUS.

August, 1838.

BENEFITS OF THE REFORMATION ON THE HAPPINESS OF MAN.

By a Native of Godchland, Va.

There are some epochs in the history of our race, to which we look back with admiration and gratitude. They are associated with the remembrance of every blessing. Their records form bright pages in the dreary annals of the world, upon which the eye of the philanthropist lingers with delight. Amidst changes, they will stand as landmarks to guide the patriot of all future time; as a rock in the tumultuous ocean of human passions, remaining unmoved and uninjured by the floods of licentiousness; upon whose top, like Ararat of old, the ark of human hope can rest. The sons of old England will hold in proudest recollection the 19th day of June, 1215, as long as the principles of Magna Charta, the foundation and bulwark of English liberty, are known and appreciated. And the pious Israelite never remembered, with more devotion, the cloud by day and the pillar of fire by night, which led his kindred from a land of bondage to one of promise, than have the friends of civil and religious freedom been accustomed to recollect the reformation of the sixteenth century. The voice of this day and generation has pronounced that event to have been the greatest and noblest triumph ever achieved by virtue and knowledge over ignorance and vice.

A writer in the March, and in a subsequent number of the Messenger, in ably and eloquently discussing "the influence of morals on the hap-

piness of man," has controverted this position; and contended, that all the blessings which have been attributed to this occurrence, would have been enjoyed by the operation of other causes less objectionable in their character and results. In his ardor to establish his theory, he depicts the licentiousness and the corruption of public morals as the legitimate fruits of an unrestrained press—of unbridled thought, and freedom of opinion—and of a mere intellectual improvement.

An impartial tribunal will always acknowledge, that many evils flowed from the operation of the principles which were established by the reformation, and which were also interwoven with its very destiny. We have never imagined that the revolution of the sixteenth century would ever be compared to that great reformation of the religious institutions of the world, which, for ages before it occurred, had been the song of the prophet and the hope of man. That reformation was entirely in the hands of him who called all things out of nothing. At his command, the raging ocean and the stormy winds are still. The other reformation was in the hands of poor, feeble, frail man. But, because it is not within the compass of human power to bring heavenly beauty and order out of moral chaos, and to control the boisterous passions of mankind, like him, who, in opening the sacred fountain of happiness from which all the springs and joys of life were to flow forevermore, when he was smitten, smote not again; are we, therefore, never to struggle in the cause of virtue and knowledge? Man's works will ever be imperfect. This imperfection is the great destroyer of his institutions. It is a volcano continually breaking out beneath the monuments of his most splendid achievements. But it is not for the philanthropist, on this account, to despair of the great cause of human improvement and happiness. On the contrary, he ought to buckle on his whole armor, and rush onward to the hottest of the fight.

No one can doubt of the necessity there was for a correction of the abuses which existed at the beginning of the revolution of the sixteenth century. The Catholic church had usurped temporal and spiritual power. The sound of freedom, once echoed amidst the classic hills of Italy and Greece, had died away. The bright beams of knowledge, which had been reflected from Greece to Rome, had been lost amidst the clouds which enveloped the dark ages, save here and there a few scattering rays were collected by some cloistered monk, less ambitious of temporal power than his brethren. The delightful strains which had been harped upon the banks of the Nile and Ilissus were forgotten, and the lyre was unstrung. The pure fountain of morals was corrupted; and every stream that issued from it, carried disease and death through the world. The religion of Rome

had become the prolific source of licentiousness ; of that foul frailty of man, which has marred the beauty and symmetry of his nature ; stamped the indelible mark of vice upon his character ; and which not only invoked the fire from heaven that burned up the cities of the plain, but has left everywhere impressed upon the face of the world, lasting memorials of its desolation. The streams of intellectual and moral corruption gushed through the land, poisoning all the fountains of life. Leo X, by his worse than infidel mockery, the selling of indulgences, wounded the moral sensibility of the world to the very quick. Superstition had everywhere overwhelmed the people with the most enormous load of absurdity. And the very champions of popery, with Henry VIII of England at their head, disgusted the people with their open and avowed contempt of the most sacred obligations of virtue and morality. Nor would the Catholics yield in the most insignificant trifle, or acknowledge a single fault ; but they persecuted, with the utmost cruelty, all whose opinions were not agreeable to their own standard of faith.

Amidst such circumstances, originated this great moral and intellectual revolution. It was an expiring effort of knowledge, responding to the call of virtue. Printing had given an impetus to the human intellect. Events had occurred, which aroused into action all the energies of humanity. The long and the distant past called loudly on the future. The voice of patriotism, long ago hushed, and silent as the mouldering relics of gratitude, which marked the tombs of the patriots, was again heard, calling to the rescue. The wave was in motion, and its course must have been onward or backward. There was no hope in retreat. Virtue, with her thousand smiles, chanting the song of joy, beckoned onward, whilst the wild and frightful revelry of licentiousness was the only inducement to remain. Before was heard the organ choir of nature, tuned to the song of rational and free devotion ; and the spacious temple of the world, erected for the children of men, whose architect is God, echoed the delightful strains : behind was seen the bloody trophies of desolation, and the cries of persecution and the howlings of fanaticism drowned every note of grateful praise. Man, ruined by the perversity of his own will, was still more injured and debased by oppression. He has ever been prone to wander ; prone to forget the high destiny to which he has been called. Still he might have retraced his steps ; he might have been warned by the light of experience, which was continually flickering up around him, that truth and virtue were the only pillars, in the path of his pilgrimage, which pointed to happiness ; he might have returned from his wanderings in the arid and sandy deserts of ignorance, and tasted of living waters ; had not the sceptre of unbridled power reduced him to unqualified sub-

mission and dependence, trammelled the energies of his intellect, and forced a union between the brightest aspirations of his soul and the greatest immoralities.

Was it not time for the friends of humanity to strike a blow for the liberties of the world ? Or was there any plan by which the objects of the reformers could have been obtained other than that which they adopted ? Revolutions are alarming events. They often sweep, even from remembrance, the fairest and best monuments of human greatness and goodness. But where, in the dreadful and bloody rolls of revolutions, can be found anything so injurious to the social institutions of man, as that deadly apathy which leads whole nations to forget that virtue and knowledge have any charms, or that vice and ignorance have any frightful horrors. Better ride upon the mountain wave than perish in a breathless calm. It is better to brave the whirlwind than to breathe the still and putrid air. Yet the reformation was not the result of a momentary excitement, or of a sudden explosion of the passions. Prior to the invention of the art of printing, and in the latter end of Edward III, John Wickliffe began to spread the doctrines of reformation. And though strong symptoms appeared, of a desire to shake off the bondage of the Roman hierarchy, its power was too strong to be resisted. The world was not yet prepared for such an event. The art of printing was yet to be discovered, to prepare a more appropriate period for the finishing blow to ecclesiastical power. Numberless causes were in active operation, to rekindle into a flame those sparks of virtue and morality which remained unsmothered amidst the ruins of their own temples, and unquenched amidst the thousand muddy streams of corruption and vice which flowed from the Pontifical See, and swept from existence all the vestiges of moral greatness or of intellectual worth. And the fitful flame of knowledge which the more benevolent and virtuous of the clerical order watched with all the devotion of the early vestals, cast its flickering light into the deep labyrinths of error and superstition, where nations had been wandering for centuries ; and in its last struggles to overcome a total extinguishment, it blazed up in a splendor that expelled the darkness which surrounded those paths which led down to that grand cemetery of nations, where the hopes of millions had been buried forever. Then truth commenced its conflicts with error, and knowledge its struggles with ignorance. The resilient energy of the mind threw off the shackles that had so long and so fatally bound up its powers. Religion, which, in the hands of fallen man, had become the scourge of the world, displayed its powers in breaking the sceptre of despotism, the wand of ignorance, the fascination of licentiousness, and in elevating the moral and intellectual

condition of man, and in mouldering into the dust all the splendid monuments of oppression. The reformation progressed, dispensing blessings everywhere to social man; triumphing, not over kings and priests, but over the worst enemies of humanity—fanaticism, superstition and tyranny—and, contending for no ambitious chieftain, its supporters rallied under the banners of knowledge and virtue.

The imagination cannot conceive any other causes which could have possibly produced the benefits which flowed from this great revolution in the moral and intellectual conditions of our species. The voice of religion, of virtue, of humanity, of literature, had remonstrated in vain, against the establishment of institutions, the sole objects of which were to degrade their characters and conditions. Remonstrances, long and often repeated, had been entirely disregarded. The faggot and the stake of persecution, were the only responses to the cries and the sufferings of the generous and the brave. There then was no relief, except opposition to the power which authorized and sanctioned these abuses. This was the sentiment of the age, and must be the decision of posterity.

The Augustine friar acted in obedience to the spirit of the age in which he lived. Man had become restless under his multiplied sufferings. And all of his energies were prepared to be directed against the very fountain of his evils. In the conflict, ancient institutions might perish, social and political establishments might be blotted out of existence. But why should there have been any longing after their immortality? Did they elevate one human feeling, or soothe one human sorrow? The philanthropist must rejoice that they are gone, now that we have such blessed and excellent ones, established upon the sacred principles of the reformation. May these be immortal, and safely float upon the stormy billows of the human passions, down to the last moment of time, when the funeral knell of all earthly things shall be sounded!

It was fortunate for mankind that the reformers directed their first attacks against the religious establishment of their oppressors. The chains of political slavery had been rivetted by the perverted religious principle. Civil abuses had been sanctioned by ecclesiastical ones. The expediency of a political measure addresses itself to the reason. Religion appeals to the warmest emotions of the heart. And when the heart is prejudiced, and biased and warped, the reason must succumb. Thus the only mode of effecting any purpose which the judgment approves, and the affections censure, is to free the heart from all improper influences. Light and knowledge cannot control the feelings when our eyes are shut against them, notwithstanding their power of refining the heart,

when prejudice does not prevent. Thus so long as the hierarchy corrupted the principles of morality and virtue, the patriot could entertain no hope of correcting political abuses. What was the object of the contest? It was the establishment of freedom of thought and opinion, and to gain exemption from the tyrannical abuses of the hierarchy. And this was necessary to the organization of the institutions of political freedom. All free and liberal institutions have their foundations in an enlightened and unprejudiced public sentiment. Without this, nations, which blossom as the gardens of Jericho once did, will become as desolate as the ruins of Babylon.

But this question is not left to the decision of our poor, feeble reasonings. Happy for mankind, it has been decided by a tribunal whose judgment can never be reversed, though the besom of destruction should now sweep away every institution of man, and the fragments of the mouldering columns of his greatness should overshadow the tomb of his last hope. History, with her instructive pen, has recorded the proof. Go back in remembrance to those intellectual and moral giants, who succeeded the outbreaks of the spirit of reformation, and who were its creatures. Forget not their struggles for freedom. Recollect the development and progress of free principles, until finally the great work of the reformation was accomplished, by the patriots of the American Revolution. Then was a political system organized upon the great principles of human right:—a system, too, of political liberty, as free from impurities as anything human can be. It stands as a mighty memorial of the blessings of the reformation. The pillars of Hercules stood as the boundaries of his labors. The pyramids of Egypt are lasting monuments of the power and tyranny of her king. Triumphal arches arose in honor of the mighty conqueror. But the gratitude of the human heart for the reformers, throughout the ceaseless ages of eternity, only shall limit their praise.

The benefits which were achieved for social man, during the progress of the religious revolution, were felt at every step of our revolution for political independence. The American patriot, did not have to contend with the dominion of the priesthood, or with perverted religious feelings. The heart responded with a tide of emotions to the conclusions of the mind. Had there not been freedom of religious opinion, no green laurel would now be waving over the tombs of Washington, and Henry, Hancock and Lee. The dark spirit of *intolerance* would have crushed liberty in its germ, and torn from the brow of the hero the never fading wreath of imperishable fame.

In the freedom of religious opinions, the "Native of Petersburg" thinks he beholds not only the shadowy monster infidelity, but the decay of every

valuable blessing. His imagination pictures it as the deadly upas, which is to wither up every thing valuable in our social condition. To us it has no such horrors. It is the anchor of our hope. And if the blessing of our social fabric can survive the ruins of others, we shall be wholly indebted to this principle.

History does not show that liberty of thought and action have been the parent of all the woes which have afflicted the human family; nor that it is the most prolific source of licentiousness, and of all the dreadful consequences which have resulted from it. Man, under all forms of government, and in every condition of society, has been liable to excesses of profligacy. And the annals of the world, as a faithful monitor, points to those periods when the intellect was harnessed, and the conscience inured to slavery, as the springtime of infidelity and licentiousness. Despotism can and does conceal acts of atrocity. There is no mirror in which we can behold a true picture of her deeds. Men are restrained by the strong arm of power from publishing to the world a history of their lewdness. But this is all that government can do. Its power cannot extend to the motives of the heart. It cannot reform the evil disposition. And that single declaration of our Saviour, "My kingdom is not of this world," was of itself, and alone sufficient to attest his claims to infinite wisdom. Every state that ever attempted to control the thoughts and opinions of its subjects, chained virtue to the car of bigotry, and blotted out from its national institutions whatever was calculated to elevate the condition of society. What was the history of many of the centuries which preceded the reformation? The powers of the human mind were fettered—and man seemed to be in a wild and frightful delirium. He was tossed upon a boisterous sea, without compass or rudder, and finally shipwrecked. Virtue and morality were forgotten as national honors and badges of national worth. And if an heroic achievement now and then immortalized the actor, it resulted from the spontaneous emotions of the heart, in spite of the demoralizing tendency of the government. The fairest temples of intellectual greatness and splendor mouldered in the dust, covering in their ruins the unmourned and unhonored champions of virtue. There could be but few incentives to intellectual excellence, whilst the only standard of morals which the government would allow was corrupt. It is not to be denied, that licentiousness has ruined kingdoms that were once free and enlightened. But the philosophical inquirer will trace the licentiousness to other causes than to intellectual freedom. The monuments of the power of the lust of the passions are to be seen thickly scattered over those parts of the world where the empire of the goddess of liberty has never extended. Where free inquiry has never

been permitted, is now to be seen the thralldom of vice. The people are depraved and corrupt; without morals; without literature; without any thing that can interest them in the perpetuity of the institutions of their country. And where do you find the greatest happiness and prosperity? In no community but where emancipated mind has extended its dominion and carried its blessings. No where do you find morals so pure as in free communities: and no where else is there such great exemption from the evil effects of licentious principles. In such a society there is always a public opinion, which has an inconceivably greater effect upon the conduct and character of its members, than government restraints upon the conscience ever can have. It is confessed, that when the principles we are advocating were first considered as being established, many ran into the opposite extreme of infidelity. Men who had been forced to acknowledge the authority of a false religion, very naturally, when the restraint was thrown off, denied all religion. They only judged by the demoralizing influence which had brutalized them. As soon as the human intellect had collected its energies, their error was exposed; and no work, advocating infidel principles, has appeared within the last fifty years, that did not fall dead from the press. At the most turbulent period of intellectual freedom, infidelity never exerted half the power which it did when clothed in the garb of popery.

Improvement of the moral feelings is the first duty of every people. When this is not directly done, the improvement of the mental powers will exert a salutary influence over the moral faculty. We believe that every intellectual research will call the mind off from the pursuit of animal gratifications, in a measure, and tend to call the attention of man to his own origin and destiny. No one can explore with the chemist the mysteries of nature, or soar with the philosopher from star to star, and return with a presumptuous understanding. We see the image and goodness of God impressed everywhere upon his handy works. In this age of the world, men, generally, if freedom of inquiry is permitted, will direct the exercise of their intellectual powers to the investigation of their moral duties and obligations. But where this freedom is not allowed, the officers of the state take upon themselves the guardianship of the public morals. And those who contend for this state of things, seem to take it for granted, that a proper direction will be given to public sentiments and morals. Is not this a delusion? Has not every system of morals or religion, which has been forced upon a deluded and enslaved people, proven to be degrading and corrupting?

Wherever the powers and privileges of the people have been abridged, and their mental energies paralyzed, rulers have succeeded in perpetu-

ating their institutions for a long time. But stability is not the first thing needful. The cause of humanity is but little aided by any system of principles, which, in their tendency, are not calculated to give a right direction to a single human thought, no matter if they possess the durability of the eternal hills.

We agree, with the "Native of Petersburg," that corrupt morals are destructive of the tranquillity and happiness of any nation. And it is the duty of every citizen to oppose whatever will promote licentiousness. This is one of the grounds on which we rest our opposition to the abuses of popery, and our support of the reformers. We had entertained the hope that the old popish doctrine, of the immoral and licentious tendency of knowledge, had been exploded. Alas! how mistaken. Because man has, Prometheus like, stolen the living fire from heaven, the advocates of the church of Rome would tie him, as the father of the gods did the son of Japetus, to a rock upon Mount Caucasus, where a vulture was to feed upon his liver, which was never diminished, though continually devoured. They represent the fruit of the tree of knowledge as containing the poison which brought crime and death into the garden of Eden, and warn us of the danger of eating thereof. This is a libel upon the goodness of God. "Man's first disobedience brought death into the world, and all our wo." The evil resulted from a violation of the command of the Creator. In that morning of time when the stars sang together, and all nature shouted with joy, if the Creator had said "Worship me not with your face turned towards the rising of the sun," disobedience would have been attended with the same dreadful consequences. Why was the fruit of the tree which stood in the midst of the garden the forbidden fruit? Because if man erred, if he did go astray, he might then have some light to cheer his tiresome and hopeless way; and in his wanderings through an evil world he might have his eyes opened to choose between good and evil. Knowledge was not the cause of the fall, but was given to bless man's fallen condition. Blessed provision for man's lost estate! Without it he never would have tasted of "Siloa's brook, that flowed fast by the oracle of God."

What else we have to say in defence of the stability of free political institutions, and of their tendency to promote correct morals, we must reserve for some future time, when we shall answer the attack made upon the political revolution of the eighteenth century.

It seems to us to be strange how any man, in this happy country, can question the benefits of the reformation. Its trophies are scattered thick around us. The human intellect has reared lasting monuments of its blessings everywhere. Its proud triumphs are to be seen in the social estab-

lishments of the age. The traces of its progress are to be seen on every page of recorded thought. And the literature of the past, and of the present generation, has woven a green and never fading garland, to hang over the tombs of the reformers forever. It had been injured and degraded; but when the power of the pontiff was broken, like a flower beaten to the ground by a past storm, it raised up its head amongst its ruined beauties, and twined a green laurel around the brow of its preserver. He must remember coldly, indeed, the delightful and pathetic strains of Milton, Cowper, Campbell, Burns and of a host of other bards, who can see nothing exalted in the triumph of free and enlightened principles. The harp that was tuned to their immortal songs, would have forever hung upon the willow if the wand of popery had not lost its enchantment. Our own delightful land would be a barren and waste wilderness. No flower of literature would bud and blossom here. For those rapturous notes of joy which are wafted from our seashore to the mountains, and echoed back again, we should have nothing but the mournful hoot of the bird of desolation. And this glorious union of free and independent states would become a dark and dreadful despotism, withering up the sources of happiness, and tattering the star spangled banner.

BIOGRAPHICAL SKETCHES

OF LIVING AMERICAN POETS AND NOVELISTS.

No. IV.

WILLIAM GILMORE SIMMS, ESQ.

The land of the pilgrims not only is the cradle of American liberty, but also of American literature. Boston, styling herself "The Literary Emporium," has, for more than a century, boasted, not only her Fanueil Hall and her stern patriots, but her halls of science and men of learning. Among the band of refugees, who landed on the rock of Plymouth, were men of profound erudition, as well as unaffected piety; divines, not only deeply read in the fathers, but scholars, whose minds were stored and enriched with classic lore. Side by side, with their first humble temple of worship, rose the walls of the still humbler school-house; and, nourished by intelligence and piety, religion and science, like twin sisters, grew up together in the land. Upon the foundation laid by the wisdom and foresight of the early settlers of the Plymouth colony, through the industry and taste of succeeding generations, a strong and beautiful temple has been erected, which, like the temple of the Ephesian Diana in its influence, has, until recently, claimed and received the homage

of all the devotees of learning throughout the American Union. Yale and Harvard first shed around it their classic light, like *pharoi* on the shores of science, guiding the sons of learning through the reigning gloom.

Although precedence is justly due to New England in literature, we must not withhold the truth, that to southern mind, as it developed itself in the general relations of the American people to each other, throughout one of the most interesting periods of human events, is due the palm of supremacy; the one state of Massachusetts, perhaps, alone excepted. New England maintained her ascendancy in literature, by the superiority of her *home* education over that of the other colonies. But to balance this, the Carolinians and Virginians were generally educated in old England, the tutors, instructors and libraries of which country, it will not be denied, were far superior to any in the commonwealth of Massachusetts. After America cast off her allegiance to Great Britain, New England became almost exclusively the nursery of men of learning in the south.

At length Virginia and the Carolinas, beginning to feel the force and truth of the proposition that foreign education (here used in its most limited sense) is dangerous to patriotism, resolved to become independent of the north, and laid foundations for literary institutions at home. They were, however, still dependant on New England for instructors; for those southern gentlemen, who could meet the expense of an education abroad, were such, always, as could live independently of labor, especially scientific toil. All, or nearly all of the educated southerners, were men of easy fortunes, and therefore, indisposed to literary exertion; or professional men, too much occupied to turn aside from their daily duties. The north, therefore, supplied professors for their infant colleges. That independence in their fortunes, which rendered it unnecessary for southern gentlemen to superintend their colleges, was also a bar to their engaging in literary pursuits; for, it is the spur, oftener than the laurel, that urges genius toward the goal of fame. Therefore, although the south has produced many of the most polished scholars, eloquent orators, and profound statesmen, who, during the last half century, have distinguished our country, her sons have, until a recent period, kept aloof from participating (we except Marshall, Wirt, and a few others, whom our limits will not permit us to mention more particularly) in the current literature of the day. Philadelphia first began to enter the lists against New England, and has already equalled the renown of the once literary emporium. New York and Baltimore followed in the race for literary distinction, and Charleston, more recently, has advanced her claims to rank, as the Athens of the south.

The colleges and universities of Virginia and

the Carolinas now rank among the first in the United States, wanting alone, that age, which always commands a certain veneration, respect and confidence, to rival the parent institutions in New England, around which is thrown the venerable charm of antiquity.

The steps by which a people, whose elements are of such a kind as compose the constantly forming states of this Union, advance to literary distinction, after the want of literature is discovered, are few and easily traced. A weekly periodical, and the district, or village school, rise up nearly together; the academy grows out of the latter, and the weekly literary paper out of the former: this, in its turn is followed by the monthly magazine, the cotemporary of which is the university. At this crisis, the foundation of permanent literature and science is established, and the progress of the state toward literary eminence will then rest solely upon the energies and genius of its population. Like the target in a school of archery, magazines may then test the skill of the literary gladiators of the universities, whose genius prompts them to enter the arena of literature, and encourage them eventually to a higher trial of their aim, in a wider and more responsible field. Leaving, however, this brief digression, if on so discursive a theme as literature, we can be said materially to digress, we will endeavor to adhere more closely to our subject, which is one branch of southern literature alone, and this branch is Fiction.

The most prominent novelist in the south, its most eminent author, and one whose name stands among the foremost of American imaginative writers, is W. Gilmore Simms, Esq. of South Carolina.

This gentleman is a native of South Carolina. His first appearance as an author, with that prematurity which governs both mind and matter in a southern clime, was made at the early age of nineteen. "Lyrical and other Poems," is the title of this boyish production, which extended to two hundred pages, and bears the ambitious motto "Mihi cura futuri," a desire felt doubtless by all authors, but seldom so audaciously avowed in front of their works. In this production, which appeared in 1827, are a few gems of poetry, here and there, discoverable amid a mine of juvenile crudities. Of its reception we know but little, but from the fact that the book was shortly after suppressed by the author, its popularity was, no doubt, sufficiently limited. In his twenty-first year, Mr. Simms again ventured into the literary lists, throwing down his gauntlet, in the shape of a neat little 18 mo. printed in Charleston in 1829, and entitled "The Vision of Cortes, Cain, and other Poems." To this work he fixed his name, the former work having been published anonymously. This book was better received, inasmuch as it was more deserving of merit than the lyrics. It possesses numerous excellencies, and contains

lines, and even stanzas that breathe the true spirit of song. His verse is animated, and often sparkles with the fire of genius. With many beauties, there exist more defects, but throughout them all is visible the proof of poetical power of no common order. The articles are chiefly fragmentary, appear to have been thrown off, as the painters say, at a sitting, and, without being honored by the supervision of the author, placed in the printer's hands; for this is the way young authors, impatient to arrive at the dignity of type, do these things. "The Vision of Cortes," the leading poem, is thirty-three cantos in length, in the "Lady of the Lake" verse. Its imagery is often exceedingly incorrect, and it is written without the slightest regard to geographical history. Young authors can seldom dismount from their high horse to look along the ground after landmarks. Genius never consults volumes. Poets, forsooth, have nothing to do with other books than the book of nature.

This volume of Poems, though not deficient in genuine merit, and plainly bearing blossoms promising that fruit which has since ripened, would not deserve a notice in this article, aside from their relation to the early literary history of the subject of it. He, himself, will not thank us for alluding to them here, having long since made his atonement to the public in the suppression of the work. So, the proud young eagle scorns the shaggy and unsightly pinions of the eaglet, albeit from them grow the broad shapely wings on which he balances himself in mid air, or darts flashing in the sunlight.

Within a year after the publication of the "Vision of Cortes," appeared another volume of boyish miscellaneous verse. This was followed by a fourth, entitled "The Tri-color, or the Three Days of Blood in Paris," a poem of 600 lines, in the form of the lyrical ode, intended to illustrate the revolution of the *trois jours*, in 1830. The volume is eked out with other poems on kindred topics. This poem, like all the early productions of the poet, bears the evidences of hasty composition, yet it appears to better advantage than all that preceded it, though perhaps without possessing the same amount of poetry; but the art or machinery is more perfect, and fewer crudities are discoverable of immature judgment, to offend the taste of the reader. This work was published anonymously, and was shortly afterwards suppressed by the author. None of these four early productions were encouragingly saleable; they were limited in their circulation, and won for the author but faint reputation. But Mr. Simms did not devote his attention exclusively to poetry. During the whole of the period embraced by the above-mentioned works, he was the able and industrious editor either of a literary or daily political journal, and all his poetical pieces were written in the intervals of his engrossing occupation. As the

conductor of a party journal, he was fearless, just and honest, immovable and self-sacrificing, where political truths were at stake; and so firm an adherent to the unadulterated principles of civil liberty, that he was regarded in his station as conductor of the City Gazette (the first journal, we believe, that ever took side against nullification,) as particularly harsh and uncompromising. This newspaper eventually involved the editor in losses, and burdened him with pecuniary responsibilities. He therefore disposed of it, and with the independence of a self-sustaining mind, and of a man confident in his own powers, resolved to retrieve his fortunes by his pen, enlisting it in a species of composition in some degree foreign to what he had hitherto attempted. From this hour, the career of Mr. Simms as an author may be said to have commenced; for up to this time, he had accomplished nothing fairly to entitle him to any considerable rank among American poets. The work to which we allude, and which laid the foundation of poetic fame, destined, we doubt not, to survive, is "Atlantis, a Story of the Sea," a dramatic poem, in three parts, bearing the impress on every page of a highly imaginative and poetic mind. The story is simple, and beautifully told. The argument is as follows: Onesimarchus, a sea-god, enamored with the charms of the fairy queen, Atlantis, seizes and imprisons her, and deprives her of her wand, by the aid of which alone she could hope to escape. A ship at length appears in sight, and the monster leaves her, to lure the distant stranger to his island. A benevolent spirit of the air, in seeking to render abortive the malignant plans of Onesimarchus, in vain warns the crew of their danger. The barque is wrecked, and a beautiful youth who is the mortal hero of the drama, is cast on the enchanted island. The lovely fairy, on beholding him weeping for a sister lost in the waves, loves him. Her love is requited. By bringing natural and moral powers to bear against supernatural and diabolical ones, he overcomes the monster, and extricates the fairy from her situation, effecting at the same time his own release.

Though the machinery of the story is so exceedingly simple, it is managed with great effect, and made the medium of much beautiful imagery, touching description, and great purity and melody of versification. The poem is purely imaginative, appeals to the intellect alone, leaving the bosom untouched; hence its moral, which is beautiful and appropriate, is, in a measure, lost. There is a manly and concise vigor in this poem, and a clearness of expression, found only in the best poets of the language. Its general character is wildly imaginative, yet it is not wanting in play of fancy, and touches of delicate pleasantry. A few extracts will best illustrate the style of which we speak. The vessel is gliding over a summer sea, when Leon, the mortal hero, and his sister

Isabel, hear the voice of the good spirit warning,
them of the designs of Onesimarchus.

Leon. Didst hear the strain it utter'd, Isabel?

Isa. All, all! It spoke, methought, of peril near
From rocks and wiles of the ocean; did it not?

Leon. It did, but idly! Here can lurk no rocks;
For, by the chart, which now before me lies,
Thy own unpractised eye may well discern
The wide extent of the ocean—shoreless all.
The land, for many a league, to th' eastward hangs,
And not a point beside it.

Isa. Wherefore then,
Should come this voice of warning?

Leon. From the deep—
It hath its demons as the earth and air,
All tributaries to the master-fiend
That sets their springs in motion. This is one,
That, doubting to mislead us, plants this wile,
So to divert our course, that we may strike
The very rocks he fain would warn us from.

Isa. A subtle sprite—and, now I think of it,
Dost thou remember the old story told
By Diaz Ortiz, the lame mariner;
Of an adventure in the Indian seas,
Where he made one with John of Portugal—
Touching a woman of the ocean wave,
That swam beside the barque, and sang strange songs
Of riches in the waters; with a speech
So winning on the senses, that the crew
Grew all infected with the melody;
And, but for a good father of the church,
Who made the sign of the cross, and offer'd up
Befitting pray'rs, which drove the fiend away,
They had been tempted by her cunning voice
To leap into the ocean?

Mendez, the captain of the fated ship, also hears
the warning voice, but makes light of it.

Mendez. It is a standing tale
With the old seamen, that a woman comes—
Her lower parts being fishlike—in the wave;
Singing strange songs of love, that so inflame
The blinded seamen, that they steal away
And join her in the waters; and, that then,
Having her victim, she is seen no more.

Leon. And is it deemed, the idly vent'rous thus,
Become a prey and forfeit life at once?

Mendez. So must it be; and yet, there is a tale
That they do wed these creatures; which have power
So to convert their nature, as to make,
As to themselves, the waves their element;
And have a life renewed, though at the risk
And grievous peril of their christian souls,
Doom'd thence unto perdition.

Leon. And you then
Think nothing of this music?

Mendez. By'r grace,
Surely I hold it the wild, lustful song
Of this same woman; who has lost, perchance,
Since death must come at last who comes to all,
Her late companion. Would you take his place?
If not, wax up your ears and take your rest,
There's nought to fear, and sea-room quite enough.

After the shipwreck, the fairy, Atalantis,
chances to ramble with her attendant Nea, along
the sand, when she discovers the inanimate form
of the youth Leon, clinging to a spar.

But what is here,
Grasping a shaft, and lifelessly stretched out?

Nea. One of the creatures of that goodly barque—
Perchance the only one of many men,
That, from their distant homes, went forth in her,
And here have perished.

Atal. There is life in him—

And his heart swells beneath my hand, with pulse,
Fitful and faint, returning now, now gone,
That much I fear it may not come again.
How very young he is—how beautiful!
Made, with a matchless sense of what is true,
In manly grace and chiselled elegance;
And features, rounded in as nice a mould
As our own, Nea. There, his eye unfolds—
Stand away, girl, and let me look on him!
It cannot be, that such a form as this,
So lovely and compelling, ranks below
The creatures of our kingdom. He is one,
That 'mongst them all, might well defy compare—
Outshining all that shine!

Nea. He looks as well,
In outward seeming, as our own, methinks—
And yet, he may be but a shaped thing,
Wanting in every show of that high sense
Which makes the standard of true excellence.

Atal. Oh, I am sure there is no want in him—
The spirit must be true, the sense be high,
The soul as far ascending, strong and bright,
As is the form he wears, and they should be
Pleased to inhabit—'twere a fitting home!
Breathe on him, Nea. Fan him with thy wing,
And so arouse him. I would have him speak,
And satisfy my doubt. Stay, yet awhile—
Now, while his senses sleep, I'll place my lip
Upon his own—it is so beautiful!
Such lips should give forth music—such a sweet
Should have been got in heaven—the produce there,
Of never blighted gardens. [Kisses him]

Leon. [starts.] Cling to me—
Am I not with thee now, my Isabel? [Swoons again]

Atal. Oh, gentle sounds—how sweetly did they fall
In broken murmurs, like a melody,
From lips, that waiting long on loving hearts,
And learn'd to murmur like them. Wake again,
Sweet stranger! If my lips have wrought this spell,
And won thee back to life, though but to sigh,
And sleep again in death, they shall, once more,
Wake and restore thee.

Leon, at length, proposes to challenge Onesimarchus to single combat. Atalantis replies:

Atal. Could I get my wand,
In which a power of mightiest strength abides,
I'd battle him myself, and drive him back,
And whelm the barren isle on which we rest.
Nay, more than this, if that thy sister sleeps,
Beneath the waters, though I may not win
Her spirit back to life, with that same wand
We both may penetrate the tumbling waves,
Without or hurt or harm, with vision free,
To find her gentle beauties, where they rest
On quiet beds of flow'rs beneath the deep—
And with such dexterous skill, we may enwrap,
With a choice wreath of shells, her fragile form,
That still her eyes should shine as when in life,
Her cheeks still glow with purest red—her lips—
Though they no more, with many a tone of love
Made sweet by beauty, whisper in your ears—
Still look the sweetness they have ever look'd,
Wearing the wonted freshness that was theirs—
And nothing that thy sense may seek, shall lack,
To her preserved bloom.

The above passages, aside from some negligence of melody in the structure of two or three of the lines, are remarkably beautiful. They breathe the spirit of the high and beautiful in poetry. As an entire production, though still wanting in finish, Atalantis claims distinction as the best, as it is the earliest, American dramatic poem. Some passages in it are not unworthy of our modern

Shakspeare, James Sheridan Knowles:—(this we consider high, but deserved praise:) while in some of the more touching scenes, we are reminded of the exquisite fancy of Maturin. Compared with the most distinguished cotemporary poets, Mr. Simms combines with the sparkling wit and graceful vigor of Halleck, the elegance and gentleness of Bryant, resembling him closely in his truthful delineations of rustic scenes, and in the melancholy philosophy, characteristic of the great American poet. *Atalantis* belongs to the class of the "Tempest," and "Midsummer Night's Dream," the "Comus" of Milton, and Byron's "Manfred," partaking largely of the tone and character of all of them, without forfeiting its claim to originality. As an American work, it is a novelty, and its appearance created many commendatory notices from the press, on both sides of the Atlantic. The main fault of the poem is a tedium and prolixity of dialogue, the necessary consequence of inattention to epic arrangement. We have, at some length, dwelt on *Atalantis*, as it is the poem on which Mr. Simms takes rank as a poet, aside from certain beautiful lyrics, since published.

In 1832, the same year *Atalantis* appeared, Mr. Simms published in the *American Quarterly*, a review of Mrs. Trollope's "Domestic Manners." It acquired immense popularity, the papers were filled with copious extracts from it, and on all sides it met with the highest encomiums. It was republished in London, and sold enormously as a shilling pamphlet. We next hear of our author in a new character, that of a novelist, in which he is best known to the American public. In 1833, he published his first romance, entitled *Martin Faber*, or the "Story of a Criminal," which established the fame of the author as a writer of prose fictions. It rapidly acquired popularity. It is written in a free, forcible style, which is a prominent feature in the writings of Mr. Simms; and while it contains many uncommon beauties of thought and expression, and some fine touches, as if with a master's pencil, it is overlaid with too much of the "Southern florescence," as some one has termed the warm, fluent, and figurative language of the south; a term sufficiently strong to apply to that effulgence and glitter of language, which is a characteristic, but not an unfavorable one, of southern orators and writers.

The fame of Mr. Simms, as a novelist, is, however, to be dated from the publication of "*Guy Rivers*, a Tale of Georgia," a fiction which appeared a short time after *Martin Faber*. This production obtained for the author extensive popularity, and widely extended his name as a writer. Historical events, and historical facts, so difficult to amalgamize with romantic incidents, are interwoven in this tale, with much effect. It contains some stirring scenes, and several touching pictures of still life. In the delineations of

some of his characters in this novel, Mr. Simms has been eminently successful. His descriptions of southern scenery, are bold and natural, and evince the close observer and admirer of nature, in her quiet beauty as well as in her majesty. The popularity of *Martin Faber*, although it passed through two editions, was, in some degree, limited to the south; that of *Guy Rivers* was more extensive, and after its appearance, the Union claimed the novelist as one of her national writers, whose genius and talents promised to confer honor upon its native literature.

Guy Rivers, which passed through a third edition, was followed, in 1835, (about five years, we believe, after the publication of *Atalantis*) by "*The Yemassee*," a romance of Carolina. This novel at once obtained extensive popularity, and soon passed into a second, and then into a third edition. This production placed Mr. Simms among the foremost of American novelists.

After Mr. Cooper, by placing the scenes of his later fictions in Europe, and by residing there himself, had virtually deserted the field of American fiction, several competitors for his laurels appeared before the public. The most successful of these, perhaps, was Mr. Paulding, who has not, however, confined his talents exclusively to novel writing, and whose fame as a romancer, rests principally upon his "*Dutchman's Fire-Side*," and his "*Westward Ho!*" both novels evincing great talent, and which obtained for their author deserved reputation. Another of these novelists is Dr. Bird, of Philadelphia, the author of "*The Gladiator*," "*Calavar*," "*The Infidel*," and "*The Hawks of Hawk-Hollow*;" productions of distinguished merit and deserved popularity. Mr. Kennedy of Baltimore, the author of "*Swallow Barn*," "*Horse Shoe Robinson*," and that original and amusing *jeu d'esprit*, "*Sheppard Lee*," is also one of them. These three distinguished writers, with Mr. Simms, were, in 1835, at the time of the *Yemassee*, the most prominent novelists, occupying the ground so successfully held by Mr. Cooper. John Neal, Esq. who had gained fame as a novelist, and whose writings will be particularly noticed hereafter, and two or three others, had retired from active authorship before the period we have just named, and do not rank as co-aspirants with these gentlemen. Some writers have appeared also, within the last two or three years, who have not yet won the *toga virilis* of the mature writer. The field was in 1835, and, in a degree, still is in the possession of these four novelists, who, possessed of different degrees of talent and popularity, and writers of nearly an equal number of fictions, now share between them the fame which Cooper once possessed alone. One of these, or some other one, must eventually outstrip his co-aspirants, and fix on himself the public eye. There is but *one* wreath, and but *one* can win it. Al-

though the general term for literature, is, "the republic of letters," experience proves that it is an absolute monarchy. No age has exhibited more than one monarch of literature, in each of its branches. There has appeared in a generation, but one Shakspeare, but one Milton, but one Bacon, and but one Sir Walter Scott. Nor has any branch of science remained for a length of time under (if it may so be expressed) an interregnum. From among the candidates for the seat of eminence, Genius selects her favorite, and with the universal consent of mankind, places him on the vacant throne. Who will be elevated to the seats vacated by Scott, in Great Britain, and, perhaps by Cooper, in America, a few years will determine.

The Yemassee is the most interesting of Mr. Simms' novels, although the Partisan and Mellichampe are more labored and finished productions. In his descriptions of southern forest scenery, Mr. Simms is very happy, and paints with the eye of a student of nature. The portraits of Indian character which he has drawn, are remarkably graphic. In his draughts of the aboriginal warrior, he is only second to Cooper, and in one or two instances he has excelled that great master of American fiction.

In all that goes to make a romance suited to the taste of the present age, the Yemassee is eminently rich. The romance of the narrative is admirably sustained, while the curiosity and excitement of the reader are preserved unabated; it abounds in scenes of intense tragic interest, and with passages of deep feeling. As a tale, it is sufficiently mysterious, and is well told. The style is graver and more direct than that of Martin Faber; polished without being stiff, or parting with any of its characteristic ease or vivacity. Nevertheless it is open to criticism, and perhaps received a severer share of caustic *excathedra* than any previous production of the same author. This, however, may have been owing, in part, to the crisis at which Mr. Simms had now arrived. There is a certain point in an author's career, which, if successfully passed, becomes to him the gate to future eminence. The first, second, and perhaps third books of a new aspirant to literary fame, may be gently handled; but when by a succession of works, the new candidate evinces his determination to climb to the topmost peak of the literary Pisgah, those custom-house officers of literature, the critics, with equal resolution determine to examine rigidly into his claims to this distinction. *Bella horrida bella!* Then comes the tug of war indeed! On every side, he is assailed: dangers thicken around him, clouds hang over his head, thunder and lightning alarm and bewilder him, and the poor author who before thought himself gliding on swimmingly to the haven of immortality, finds himself at once, like Bunyan's Chris-

tian, "in the valley of the shadow of death; in a wilderness; a land of deserts and pits; a land of drought and of the shadow of death; a land that no man (save an author) passeth through." If he gets safely through this ordeal, he has only to walk forward to the city of Fame beyond, and enrol his name among the names of those who have gone before him. But most authors,—to continue the parallel we have adopted,—affrighted by the noise of the dragons and hobgoblins, the hisses of serpents, and the roar of hydras, turn back in despair, and never venture again on a journey beset by so many dangers.

When the Yemassee appeared, the critics newly nibbed, or, if perchance, they used steel, filed their pens, and adopting for their motto, "*cano arma virumque*," prepared to dispute the passage of this traveller up Parnassus. Though sorely beset and desperately wounded, our author passed this formidable ordeal of public opinion in safety.

In the following year, 1836, Mr. Simms, instead of being disheartened by his reception, and retiring from the contest, like others who had preceded him, sought further literary reputation through the pages of the "Partisan, a Tale of the Revolution," the scenes of which are laid in South Carolina. The Partisan professes to be the first of a series of novels, the series to be completed in three romances, of two volumes each, and each romance to embrace a prominent historical incident of the war of American independence. The same revolution in the public taste, which has cut down the novel from six and eight volumes, to two in America, and in England three, will present obstacles to the success of several consecutive novels, the characters of which are the same; such a series is in reality but one novel, divided into several books, the stories of which but slightly vary, while the characters, though in different stations and circumstances, continue the same. No series of romances can succeed, which has but one set of characters, unless the stories are wholly separate, each presenting an entire and disconnected plot. The reader, especially the reader of novels, is attracted by novelty, and few have the patience to follow one cast of characters throughout several volumes, however alluring may be the style, however thrilling the story. If an author should have the temerity to publish a novel extending to four hundred pages in each volume, his popularity would be buried beneath it, like a fair fabric crushed by the weight of its own towers. The talents, experience, and high literary rank of Mr. Simms, will enable him, however, fairly to test the success of such a series as he has contemplated, and already commenced.

The Partisan is dedicated to Richard Yeadon, Jr. Esq. of South Carolina, in a brief note of four or five lines. The custom of dedicating books is as ancient as the earliest era of book publishing,

and originated in that state of things, when authors, themselves unknown to fame, in conformity with public sentiment, were under the necessity of ushering their volumes into the world under the auspices of some eminent personage. For a century or two ago, literature had to be endorsed by some great name (not necessarily learned) to be received by the public. The endorser, or benign person, who condescended to stand god-father to the bantling, was denominated the "Patron of Literature" in general, and the obliged author's patron in especial. As in duty bound, the author, in well turned periods, and polished phrases, in which "gratitude," "honor," "condescension," "obligation," "patronage," "graciously pleased," *et cetera*, are placed skilfully, and at proper intervals thanks his lordship, his grace, or even his majesty, as the case may be, for the honor conferred upon him, the expression of his gratitude frequently extending over many pages; for out of the abundance of their hearts, their pens spake. In process of time, these dedicatory letters, which so often degraded the dignity of science, became curtailed in their dimensions, and books were often dedicated to private individuals, in testimony of the author's friendship. At the present time, the sort of patronage which gave rise to dedications, except perhaps, in some cases in England, is entirely done away in English literature, and elaborate dedicatory epistles have become obsolete. Dedications, however, still obtain, but are now used in their legitimate character, as graceful expressions of an author's private friendship, or his respect for public worth; and the most simple style of expressing the dedicatory compliment, is considered the most beautiful. In some instances, like the dedication to the *Partisan*, which gave rise to these digressive remarks, an author, at the risk of a rap over the knuckles, from the defenders of public taste, adopts the old epistolary mode. Some attempts have been made by distinguished critics, to cry down, altogether, dedications, even in the chastest form, pleading their abuse. Considerable delicacy is certainly called for, in choosing a dedicatory subject, and it is the want of this *savoir faire* in authors, which has armed this opposition. If an author places on his dedicatory page, the name of a private individual, otherwise unknown to fame, and who has but his private virtues to recommend him to fill this station in the public eye, he awakens jealousy among those who think they have stronger claims to this kind of distinction, and moreover, the individual himself must have a large share of philosophy, to wear gracefully an honor to which he has no literary or individual pretensions. If an author seeks out a name already distinguished, and dignifies his page therewith, merely because it is a name of eminence, without ties of kindred, friendship, or gratitude to influence him, he at once lays himself open to the

shafts of censure, and "adulation," "fawning," "office," salute his ears. Managed with judgment and delicacy, the dedicatory page becomes an altar devoted to friendship and honor, and as such, it should be suffered to remain. Abused, it degrades literature to the mere vehicle of personal interest, or makes it alone, the channel of individual vanity.

The dedication of the *Partisan* is open only to the application of those objections which relate to the epistolary form. The story of this novel opens in the year 1780, in South Carolina, and embracing the prominent events of the war of independence, from the surrender of Charleston, terminates about the commencement of the following year. It is therefore like the two preceding works, by the same author, historical. It abounds in stirring incidents, romantic adventure, fine descriptive touches, and is, throughout, marked by the author's best manner; it nevertheless has some blemishes which were found in his earlier writings—blemishes, principally of style; it also bears evidence of being written with less care than the *Yemassee*. The historical characters introduced into this romance are Generals Gates and Marion, De Kalb, Tarleton, Procter, Lord Cornwallis, and one or two others. The hero of the novel is Major Robert Singleton, the *Partisan*, who gives a name to it. The *Southern Literary Messenger*, after dissecting the *Partisan*, with a broad-axe in one hand and a handsaw in the other, after a fashion of its own, thus closes its review: "The *Partisan* is no ordinary work. The concluding scenes are well drawn. Some passages, descriptive of swamp scenery, are exquisite. Mr. Simms has evidently the eye of a painter. Perhaps, in sober truth, he would succeed better in sketching a landscape than in writing a novel."—The popularity of the *Partisan* was great, and justly so. Few novels, recently published, have been more extensively read and admired, and it will successfully sustain its claim to rank among the standard American fictions.

In the fall of 1836, he published the second novel of his historical series, under the title of "*Mellichampe*." Mr. Simms at this time held so prominent an attitude as a novelist, that his works, however obnoxious to criticism, in the eyes of those who read only to criticise, were, by the public, who read to be pleased, looked for with the expectation of a renewed pleasure. The popularity of *Mellichampe*, but recently from the press, is greater than its predecessors, and deservedly so. The style is chaste, easy and more finished than that of the *Partisan*, and in the delineations of character, Mr. Simms has manifested a closer acquaintance with the heart and the springs of human action, than he has hitherto displayed. It is a continuation of the *Partisan*, the hero of which, with also some of its distinguished

characters, are, in this novel, again introduced. The hero is Mellichampe, the son of a violent whig of South Carolina, and a partisan associated with General Marion. There is apparent, some resemblance between this novel and its predecessor, but not sufficient materially to diminish its interest or novelty. Mellichampe is undoubtedly the best of Mr. Simms' works. It is by this ascending continually, that the author will ultimately take a high place in American literature. It is the object of the writer of these hasty sketches, to avoid as much as possible, entering critically into the merits or demerits of a work—choosing rather to point to the landscape, and, without designating its deformities, leave the reader to admire its beauties.

Mr. Simms, besides his novels, has published several minor tales in the annuals, of great beauty and interest, and characterised for a more finished diction than is found in his more extensive productions. "Logoochie, or the Branch of Sweet Water, a Legend of Georgia," published in the *Magnolia* of 1836, is in the happiest vein of the author.

As a poet, he has obtained considerable reputation. Many of his lyrics are characterised by great sweetness and chastened feeling. A vein of pensiveness runs through nearly all of his poetical compositions. Their moral tendency is pure and elevated, the versification smooth, and the images introduced, natural and pleasing.

At present he has in press a Spanish romance, founded, we believe, on the leading incidents of the career of Pelayo, whose name is associated with the most romantic period of early Spanish history; it will probably appear during the present year. He is now engaged on a new romance, a sequel to Pelayo, called "The Fall of the Goth." We are sorry to see Mr. Simms, like Mr. Cooper, in his later works, go out of his native land for subjects of story. The American novelist, if he would be deserving of the name, should weave his tales alone out of the fertile legends of the New World.

Mr. Simms is still a resident of South Carolina, and is a married man. He is not more than twenty-eight or nine years of age. The expression of his face is open, manly and somewhat stern: his forehead is full, broad and intellectual, and his eyes a lively blue. In conversation, he is earnest, easily animated, and seeks to convince rather than persuade. His colloquial powers are of a high order, his language is select and fluent, his ideas flowing, as it were in periods and with the ease of one who is reading rather than conversing. His address is pleasing, and invites confidence. His manners are reserved, and his habits rather those of the student than the man of the world; and retirement would appear to be more congenial to his spirit, than the bustle and gaiety of a crowded metropolis.

PELAYO:

A ROMANCE OF THE GOTH.

By the author of "The Yemassee," "Mellichampe," "Guy Rivers," "The Partisan," &c.

[We have been favored by the publishers, with the following passages, extracted from a new romance by the author of "Guy Rivers," which will soon be published. We learn from them that it has been long printed, and has only been delayed from publication by the late gloomy uncertainties of business. The scene of the story is in Gothic-Spain, the time immediately preceding the defection of Count Julian, the Royal Espartorio, the dethronement of Roderigo, and the subsequent possession of his empire by the Mauritanians. The passage which we furnish, is one of the domestic scenes of the work; intended to convey a lively picture of that depravation of morals in the land, which, perhaps, more than anything beside, precipitated the Gothic dominion to the dust.]—*Editor S. L. Mess.*

VIII.

When, on the ensuing morning, the attendant Zitta sought the chamber of her mistress, she was already risen and dressed. At the first glance the slave was sure that she had not slept throughout the night; but this conjecture was immediately dismissed from her mind, as she beheld the unruffled composure of her countenance. It was indeed grave and sad, but there was no visible emotion—no proof of unschooled, unsubdued, or irrepressible feeling, such as she had looked to see; and no single trace of that feverish grief which cannot have exercise without leaving its visible impress upon the haggard cheek and the drooping and desponding eye. She little knew how to judge of that sorrow which passeth show—which disdains and dreads all ostentation. Yet was the slave right in the first conjecture, which she had so suddenly dismissed. Urraca had not slept—the whole night had been passed in thought—in that intense, self-searching, but not self-satisfying thought, which produces humiliation if it does not prompt to prayer. That humiliation had brought her strength—strength enough for resignation, if not for right. The crisis of her fate was passed, and she was now calm! Her resolve was taken, and she had deliberately prepared to die! She had nothing now to live for. She was not sufficiently the christian to live for repentance, and she had been too narrowly selfish in her devotion to a single object to live for hope. She lacked the necessary resources of life—and having too fondly trusted her fortunes to one pilot, in his falsehood she had lost every thing—she was herself lost.

The nature of Zitta was too humble, and her own sensibilities too coarse, to enable her to conjecture the mental self-abandonment of her mistress. She saw nothing but composure in the seeming calm of her countenance. Alas! it was the composure which comes from despair, like that which follows the storm, and which, though it speaks only of its own exhaustion, is not less significant of its former violence. But under that treacherous surface, with all its treasures and its precious freight, lie the wrecks and ruins of the goodly vessel. It was thus in the mind, as upon the face of Urraca. The delusive calm was there—the treacherous quiet of

composure, which, when the hurricane has gone by, overspreads the face and extends even to the bosom of the insidious sea. The tempest of her soul was overblown, but the hope with which she had been crowned and chartered, like some rich jewel, had been swept from sight while it lasted, leaving her destitute of all—too destitute and too despairing even for complaint.

She had no complaint—she uttered no sigh—no word of sorrow in the ear of her attendant. All was calmness and self-reliance. All her accents were those of gentleness, and all her looks seemed to be peace. Yet she gave herself no time for repose—indeed, she dared not—she seemed resolute to hurry through her crowding toils at once, in order that she might secure the long alumber which she desired undisturbed. After a slight refreshment, even more slight than usual, she commanded the attendants hastily to perform their several duties, while she despatched Zitta for the proper officer through whom the emancipation of the slave was to be effected. This duty was soon performed, but as yet she held the parchment.

“Until to-morrow, Zitta, it must content thee to remain with me. Thou wilt serve me until then? I shall not need thee much longer.”

Zitta professed her willingness to abide the commands of her mistress, with all the warmth and alacrity of one who has just received so considerable a boon.

“I have much meanwhile for you to do,” said Urraca. “These lustres—you will instantly send them to the Lord Edacer. I promised him last night that they should be his.”

“And greatly did it delight his mean soul, my lady, that you did so,” exclaimed Zitta.

“Perhaps!” said Urraca, “perhaps! I am glad that I may so easily delight him. He is fortunate indeed, if his soul can very highly esteem a thing of such slight worth and poor attraction.”

“Oh, my lady, I wonder that you can think so meanly of that which is so beautiful. Sure I am there’s nothing like it in all Cordova, and the cost—”

Urraca gently interrupted her:

“Alas! my poor girl, thy error is a sad, but a much too common one for note. Thou wilt find, when thou hast more experience of thy freedom, that few things possess a real value, in the estimation of the heart, which wealth may purchase or flattery procure. Nothing is of real worth but the true, unyielding affections—nothing is lastingly secure but truth—nothing always beautiful but that which is always good. Send the lustres to the Lord Edacer; and let it be said to him that they come to him from Urraca, with the single wish that he may soon learn to esteem them as I do who give them.”

“And thou regardest them as worth nothing,” said Zitta.

“True,” replied Urraca, “but that need not be said to him. Despatch them straight, for I have other offices for thee to execute.”

The lustres were soon sent to the greedy Goth, who received them with a loud delight; and the slave, bringing back his thankful acknowledgments, again stood in the presence of her mistress awaiting her commands. These were few and soon and willingly performed.

“Here is money, and there are some jewels in this casket, Zitta, for thyself. The money will serve thy own and the wants of thy mother for a season. The

jewels—thou wilt wear them for thy mistress, and think of her when thou dost so. In thy want—shouldst thou suffer want at any time to come—which I pray thou mayst not—they will provide thee, for their value is great among men. Take them—they are now thine. I will not need them again.”

“Oh, my lady—I deserve them not at thy hands. Thou hast already given me but too much—thou hast been lavish upon me against reason.”

“Not so!” said Urraca; “I give thee a great trust and a heavy burden, when I bestow thy freedom upon thee, and I should not fix upon thee this burden, unless I provide thee with the ability to bear it. Thou wilt find that with thy freedom will come new wants and wishes, which did not belong to the condition of the slave—new responsibilities will press upon thee, and in thy sickness or destitution thou wilt know that some difference lies between the slave whom a watchful interest beyond his own must provide for, and him who can only compel attention to his need in proportion to his wealth and substance. Thou wilt need all the money which I give thee, and more that I may not give thee—the wisdom from heaven to guide and direct thee aright in a new state and progress to which thou hast not been accustomed, and for which thy education has not prepared thee. Pray that thou mayst soon learn to shape thy feelings and thy thoughts to thy new condition, else wo will fall upon thee and upon those around thee. To have thoughts and desires which are unbecoming thy place is wrong; he whose mind is below his condition must be a tyrant, and he whose mind is above it—he only, is the slave.”

With such good counsel as this, bestowed without authority, and with a simple and persuasive grace, which was as strange in the sight of the slave as it was new-born in the bosom of the mistress, Urraca continued to direct, and counsel, and employ her. In this manner she despatched her to bestow sundry presents of money and of goods upon the various attendants of the household, all of whom she instructed her to dismiss on the ensuing morning. This done, she gave special directions to Zitta for the preparation of a chamber in an upper story which had long been disused. The order awakened some surprise and suspicion in the mind of the hearer.

“Wherefore, my lady,” was the demand of Zitta—“it is so cold and damp, that chamber—and so gloomy too—with but a single window that lies free to the street, and all the rest choked from light by the high houses around. Why wouldst thou employ that chamber?”

“Is it thy new freedom, Zitta, that thus provokes thee to question my desire?” responded Urraca, firmly, but still mildly and with softness.

“Oh, no, my lady—I question not,—but”—She paused, and the words and manner of her mistress, silenced all farther opposition, if they did not overcome her reluctance.

“Let the chamber be got in readiness, Zitta, as I bid thee. It is because it is cold and lonesome that I would employ it. But let it be so prepared, that it shall not seem cold or lonesome to the eye. Transfer to the walls and to the couch the rich hangings of this chamber; close all its windows, and see that many lights are there to supply what else it might seem to lack of

cheering and gay character. When thou hast done this, let a table be spread with fruits within it—and the wine—fill me a rich vase of silver with wine, and place it in readiness amid the fruits—but one vase, Zitta—one will suffice,” she murmured, as the slave disappeared—“one will suffice for Amri and—for me!”

IX.

Let us return for a brief moment to Amri. That day he condescended to visit his father, whom he still maintained within the dungeon to which he had consigned him. He carried him a sufficient supply of food, but spoke nothing of his release. The old man simply looked up to the opening above the door, through which the youth let down the provisions in a small basket by the aid of a string, but he said nothing to him either in the way of solicitation or complaint. This taciturnity irritated the youth, who addressed him somewhat tauntingly with certain inquiries touching his captivity—demanding to know upon what terms he would be willing to procure his release. To all of which the old man deigned him nothing in answer; but, with clasped hands, he murmured his repeated prayer to heaven, imploring protection from the Most High, and preferring once more the terrible imprecation which the ears of Amri had already heard, but which now, unhappily, went by them unheeded. Secure, as the latter esteemed himself, in his triumphant position, he permitted himself to speak harsh words to his father in return. His heart had become hardened within him, and he had no fears of overthrow. God was ripening him for destruction! Confident of Edacer's success with Melchior, and of his own with the lovely daughter of the outlaw, he was too buoyant in hope at this moment either to fear the wrath of Heaven, or to heed the curse which his father had invoked upon his head. He bade the old man a scornful defiance, and departed ungraciously from his presence. To Mahlon, however, he gave directions for his release on the ensuing morning, when he imagined that his projects would be fully executed, and the events happily over, from which he hoped to derive so much.

“On the morrow, Mahlon,” said he, “thou shalt release Adoniakin—not before. And, hear me, thou shalt not give entrance through the day to any who may seek him. Say that he is gone forth, to those who ask for him—he is gone forth on pressing occasion, and will not return till the night. To-morrow we shall neither of us care whether his mood be pleasant or angry. For thyself, Mahlon, here is the money thou hast demanded—there is more for thee to-morrow when I return, if thou hast truly done as I bid thee.”

That day the plans of Amri were perfected with Edacer—the latter had portioned out his men for the investment of the cave of Wamba, while the former had received from his hands the desired authority in writing, by which, in the name of the king, he should obtain access into the dwelling of the Hebrew Samuel, or any other dwelling in the Hebrew Quarter where the maiden Thyrsa might be concealed. Nor was he altogether content to await the hour of midnight, which he had himself set aside for the proposed search, when the probabilities were so much the greater of finding her in the dwelling; but, attended by one of the officers who had been allotted to him by Edacer, he

prowled in a partial disguise around the neighborhood in which the Hebrew Samuel had his abode, and cautiously pointed out to the soldier the place where they should enter. His disguise, however, was not equal to his perfect security from detection, and quick eyes were as watchful to save the maiden and her sire, as those which strove for their undoing. Elate and satisfied that the hour of his triumph was at hand, he retired to the palace of Edacer, with whom he had a farther conference on the subject of their common pursuits; and towards nightfall, with beating heart and impatient spirit, Amri proceeded to the dwelling of Urraca, anxious to gain the intelligence which he so much wished for, that she could no longer be to him an object of fear, as she was no longer an object of desire. In this hope, however, he was destined to be disappointed. The deadly work had not yet been done; and, cunningly advised, Zitta framed a story which satisfied him to await patiently for the events of the following day. A brief time only was allowed him for interview with the slave, ere he found it necessary to ascend to the upper apartment in search of her devoted mistress.

X.

A severer trial was at hand for the Hebrew than any through which he had ever passed before. He was conscious that Urraca expected from him a speedy resolve to fly with her to Guadarrama, as he had already promised, and he was only solicitous how best to frame his promises so as to satisfy and meet her present exactions. Relying on the fulfilment by Zitta of the crime to which she had pledged herself, he had no hesitation in this matter; and he had resolved to promise freely to his mistress for the future, assured that ere he could be called upon for the fulfilment of his pledges, the lips which had exacted them would have lost all power of reproach. His misfortune was, as it is the misfortune too commonly of the young and partially endowed, to be too readily satisfied with his own powers of persuasion. His vanity misled him into a self-confidence, which the circumstances did not justify. But we shall see in the sequel. That same day, and towards evening, when the coming of Amri was hourly looked for, the resolve of Urraca began to assume a more distinct and unequivocal aspect. The chamber had been prepared by Zitta agreeably to the directions of her mistress. To this chamber, which was above and remote from the other apartments, the drapery and decorations belonging to that which she had formerly occupied had been carefully transferred. The table had been spread sumptuously with fruits, cakes, and many delicacies brought freshly from the east, and in the centre, as she had specially directed, a beautiful fountain-urn of the purest silver was elevated, containing a full measure of the choicest wine. Having the room brilliantly lighted, and in every respect ready and complete, the slave called upon her mistress to survey and to approve her work. She did approve of it, and a smile of bitter pleasure overspread her countenance as she spoke.

“It is well done, Zitta—thou hast omitted nothing—it is fitly designed for those who shall enjoy it. Leave me now, my girl—leave me, and give fit reception when

Amri cometh. Deny me to all other persons, and seek me no more thyself to-night."

"Should the Lord Edacer come, my lady, he may seek you to thank you for the lustre?"

"I can spare his thanks—I can understand them unspoken. He may not see me—I am sick to all but Amri; and, Zitta—"

The slave returned. There was a pause before her mistress again spoke. Zitta advanced a pace inquiringly, and Urraca bent down and addressed her, in whisper, thus:—

"It may be thou wilt hear a noise to-night from my chamber—heed it not!"

"Oh, my lady—what mean you?" cried the slave, beseechingly. A sudden suspicion of the meditated crime of her mistress, flashed for the first time upon her mind.

"What matters it to thee, Zitta—thou art free now."

"But not happy, my lady, to see you thus," replied the slave.

"Hear me, and be assured. What I do I do for my happiness, under the guidance of the only thought which can promise me the peace I seek. I am not wild, Zitta, but what I do and contemplate, is done and considered with a deliberate mind, ungoverned by any passionate mood, such as, but too frequently, has misled me into error. Obey me—leave me now; and—hear me—whatever cry thou hearest coming from my chamber, whether of my voice or Amri, give it no heed—stir not to inquire—suffer no one, not even thyself, to approach. Think only, and rejoice as thou thinkest, at such moments, that thou art now free! It may be that even with thy thought I too shall be free, though after a different fashion. Leave me now—thy toils for me are all ended with this night!"

"But may I not come to thee, my lady—must I not, if thou shouldst call or cry out?" demanded the slave.

"No—not even if I cry out shalt thou come," was the stern reply. "Nay,—if I should implore thee, in my moment of weakness, with my own voice—heed me not—suffer me not to move thee—hearken not to my prayer. Away—good night!"

The slave, immersed in tears, would have lingered; but, gently leading her to the door of the chamber, Urraca pushed her from the entrance and carefully fastened it behind her. When she had gone, and her steps were no longer heard, Urraca carefully inspected all the windows, and saw that, in compliance with commands previously given, they were secured beyond the strength of any one man, without fitting instruments, to unfasten. This done, she approached the table, and drawing the packet of poison from her vest, emptied its contents into the vase teeming with wine, and then carefully destroyed the parchment which contained it. She had now little more to do than to await the arrival of Amri—or, we may rather say—her fate. Her resolve was taken, and her nature was of that impetuous and decisive character, that we may regard her determination as unalterable. This was evident in the coolness which had marked all her proceedings—her careful consideration of every subject in her household, however minute or unimportant, which might seem to challenge her attention—and the temperate and subdued demeanor with which she had dismissed and favored her domestics. Lifting the curtain of her privacy but a single moment

before the appearance of Amri, her traitorous lover and the destined victim of her denied fondness and defeated confidence, we behold her in an attitude—to her, one of the most unwonted, but, at the same time, of the most essential humiliation. Upon her knees she strives earnestly, but oh! how hopelessly, to pray for that mercy which she must forfeit for the crime which even then she meditates. The unspoken supplication dies away in murmurs, and the murmurs—a vain and broken breathing—are lost in the unheeding air.

FRANCIS ARMINE. A ROMANCE.

BY A NOVICE.

CHAPTER III.

—Young, and of an age
When youth is most attractive—with a look
He wins thy favor.

Be she fairer than the day,
Or the flowery meads in May;
If she be not so to me,
What care I how fair she be?

George Withers.

Pale Memory sits lone brooding o'er the past,
That makes her misery.

Letitia E. London.

An artist sat alone in his studio. Around him lay colors, and pencils, and port-folios, in admirable confusion. Here you would behold the dark face of a brigand scowling upon you, and there you would gaze at a half finished psyche—a blooming child just emerging into loveliness—or some bright and beautiful creature, scarce ever heard of, save in the poet's dreamy rhyme—and never seen, save on the artist's brilliant canvass. On the high walls of the room could be seen something for every taste. To the antiquary, there was the fine expansive head, in imitation of the old masters; to the lover of adventure, there was an old castle, in which it is presumed was immured some lovely creature; and to the observer of nature, there was the gorgeous landscape, now rich with light, and now dim with the misty and indistinct hues of twilight. But your attention would have been rivetted (as was his own) to a painting, which was placed immediately before him, in such a manner that the soft light of twilight streamed upon it, and gave it the appearance of some fairy vision stealing upon the sleeper from the land of dreams. In the perspective arose a small white cottage, around which clustered many shrubs and vines; from the far and dim mountains a bright sparkling stream came rushing down, and passed around the cot; at one side a fountain gushed up, and threw its waters, like a shower of diamonds, on the grass. Near that fountain sat, what seemed to the spectator, the spirits of the place. One of them was a fair young girl, upon whose sweet and innocent countenance a lover—his look told it—fondly gazed, as his arm was twined around her waist, and her head was nestled in his bosom. The girl was passing lovely. What a voluptuous

uous form!—what grace!—what dignity!—what beauty!—what gentleness! And the lover that hung over her, and the artist that glanced at his own penciling, were the same. That young artist! His face was intelligent and expressive, the cheeks were somewhat pale, but not so much so as the broad, snow-like forehead; the nose was slightly aquiline; the lips wore a constant smile, and the eyes were large and black, twinkling over his whole face like bright stars, and at once betraying the deep fervor of the mind, and the immortal and undying longings of the soul. It was a rare study, was the face of that young artist! Love and Ambition were never so nicely imbodyed.

Love and Ambition!—the one the sultana of the heart—the other the monarch of the soul! Who has not felt their power? The warrior, in his tent, marshals them to watch upon his dreamy couch. The poet, in his garret, awakens them to glide in meditation's sparkling stream. The artist, too, feels their influence, as he portrays the fresh and beautiful colorings of his rainbow-tinted pencil. What charms, what spells, do they not steal from his passionate heart! The warrior courts them; but his sword is forgotten, when the hand that wielded it is cold. The poet woos them; but his lyre is still, when the hand that touched its chords is powerless. But the artist feels their promptings, and is deathless. His productions are seen and adored, when his body mingles with the dust, and the willow of centuries glooms above its voiceless grave. They are the golden chains that connect the present with the by-gone—and Love and Ambition are their wizard inspirers.

Lucien Andeli—for that was the artist's name—had arisen, and was striding to and fro in his studio. A gentle rap was heard at the outer door, which awoke the servant dozing there.

"Is Lucien Andeli at home?" inquired a soft voice. The servant stepped into the room, and informed his master that a flower girl, who had called twice during his absence, wished to see him.

The flower girl entered. By the dim light of a lamp, she seemed about the middle height, fair and graceful. Her dress was slight and loose—thrown carelessly over a most enchanting form. Her skin was white and transparent, and her eyes blue and languishing.

"Well, my pretty girl, what do you want?" inquired the artist.

She held up a bunch of flowers.

"Ah, you wish to sell me flowers. There is a bunch in which is a rose scarce budded—so like my Meta. I will take that."

The girl shuddered at the mention of that name, and replied—

"But do you love none other than Meta? Rumor speaks of others—Lady Julia Rivers—"

"Oh, my patroness—an artful coquet—a beautiful creature—but without soul."

The man entered here with lights, and again disappeared.

"Lucien," whispered the girl, in a low and tremulous voice.

"Julia, by the mass!" exclaimed Andeli, as he started to his feet.

"Lucien, do you now deem me a coquet?" said she, as she arose, and twining her arms around him, smiled

sweetly in his face. That smile! it was almost irresistible.

"Julia Rivers, why have you taken this imprudent step?" asked Andeli, in unconcealed anger.

"For your love, Lucien."

"Pshaw! for my love!" echoed he, not at all calmed by the confession.

"Ah! you little know the struggles I have undergone in restraining such feelings," exclaimed she, as the tears stole down her cheeks—that surest weapon of woman—"I have striven to banish you from my heart, but the impression is indelible. In my very dreams your name has been upon my lips, and your goodness always before me. Lucien, I love you!"

"Angelic creature, I prefer making love to you!" said he; "go home, and when I visit you, receive me with your brightest smiles."

"But, Meta—"

"Mention not that name, Lady Rivers," interrupted Andeli, indignantly—"she is too pure to be thought of by you—and her very name, hallowed as it is by sweetest remembrances, must not—shall not be spoken by you."

"You terrify me. What is Meta to you, more than—"

"Charles, get my carriage, and see Lady Rivers home," again interrupted her words, as the speaker hurried from her into an adjoining room. Presently he heard the carriage drive to the house—the door opened—a foot was on the step—the door closed—and away it flew.

Lucien Andeli was one of those characters very seldom to be met with in the present times. He was a dreamer, and it is perhaps better that but few such now exist. With him every thing was bright, and fresh, and joyous. Earth, with its chilling and blighting cares, was to him an unweeded paradise; for he had passed through the flowery portals, and dwelt in the land of dreams. A shadow had not dimmed the sunshine—a falsehood had not plucked the rose-plume. The heart—the spirit—

"Ever in motion—that plays

Like the lightning in autumn's shadowy days,"

he possessed, and with them moved calmly and sweetly along, extracting from every object that met his attention a new freshness and gaiety. He lived in the golden—we in the iron age. He had not left, as it were, the bright and glowing heavens for the obscure and shadowy earth. No! He lived in the enchanting moonlight of the by-gone—when poetry was a wanderer from the heart—when music was sweeter than the song of stars. No wonder that, in the glaring daylight of the present, such as him have no abiding place. I would as soon think of beholding the bright-plumed bird of paradise wandering along the dreary desert, or the rosy star of twilight shedding its beams at mid-day upon the blessed earth!

Yet with all those qualities, which had rendered him unfit to mingle with men—with all of his high and ennobling aspirations—Andeli was linked with a band of low and sordid adventurers. Revenge is not choice in its means; so that the goal is achieved, we scan not the way through which we passed to gain it. Love itself, with all of its strong and high-toned impulses,

is not stronger than the deep, unchanging, irresistible current of revenge.

That fair young artist had suffered feelings to enter his breast, that would taint the heart, as does poison, the most sparkling stream. And now that I think of it, were I a blood-thirsty monarch upon his throne, instead of a pale, sickly student, with tintless cheeks and streaming eyes, I would just as quickly unfurl the "star-spangled banner of the free," or let the shout of freemen drown the groans of abject slaves, as permit an artist to mingle with my courtiers. It may be a queer notion, but I have always thought there's something in the profession, in the impulses that it draws forth, in the dreams that it weaves around the mind, in the revelations that it throws about the heart, that renders it averse to slavery. Is it but a dream that haunts my couch?—is it but a shadow that has risen in the silence of my chamber? No! The tyrant may forge the chain, but the artist wears it not, until the high imaginings have departed from the mind's sanctuary, or the stamp of thought and soul is stolen from its inward altar.

It was Andeli who rescued Francis Armine. Not, as may be supposed by accident; but to screen the conspirators, whose proceedings hereafter, as far as concerns this narrative, shall be developed. In the popular tumult, he had turned the tide to suit their purposes, without themselves being known or suspected, as schemers against the state. The seeds of a mighty revolution had been scattered abroad by invisible hands, and Paris had witnessed, without knowing it, the rise of the curtain, which, ere it fell, might usher in one of the most fearful tragedies ever enacted upon the arena of scathed and bloody Europe—and that too, in a country where the footsteps of war had scarcely been erased, and where the tracery of blood had scarcely been dried—in France—gloomy, crushed, yet illustrious France!

Andeli had left his studio—had wended through the streets of Paris, and from where he walked, they could scarce be seen in the perspective. All around him was becoming more and more silent and dull, and as he moved along, the clocks of the city struck twelve, which could scarce be heard through the heavy air. The stars were still standing on high, like sentinels of Time, and the moon was still pouring its light upon the earth. Andeli gazed upon the heavens, and these were his thoughts—these were the memories that the hour and the place drew forth:

"Blessings on his memory. Never did the moon smile so brightly as on that remembered night. Three summers have passed since then, yet how well I remember that deed. At my father's door we sat—a shriek called our attention, and even as I turned, a minion of the tyrant plunged his poniard to my brother's heart, and disappearing, left that brother's form almost nailed to the green turf on which he lay—the blood oozing out like so much water, and the young and beautiful countenance locked in the stern pang of death. Wildly, madly, did I cry for justice—but I was scoffed and derided; and the voice of revenge that I then vowed, ascended through the silence of nature, and was recorded on the leger book of heaven. My lost but unforgotten brother, have I not kept the vow—for ere that moon smiles its last rays again, you will

have been fearfully avenged. I may die—the same mystic and unwavering light may whiten upon my stiffened bones—but, thank heaven, they will not know of the grief that gnawed at my heart, and bid me concentrate all my thoughts of love, and hope, and ambition—in revenge."

He paused in the train of his reflections. It was a fit hour for man's communion with his own heart, and long and calmly did that young artist do so. He scanned the past and the present, and as he did so, sternly, but without a pang, did he look forward to that one dread but fixed aim. If he faltered a moment, the bloody form of his brother would appear before him and urge him on to a deed which would sweep the murderers from the ground which they cumbered, and reinstate France in her former glories—though it would bathe her vineyards with blood, and stamp his name as a butcher of war.

CHAPTER IV.

Hempekirke. It was the fellow, sure.

Wolfort. What are you, sirrah?

Beggar's Book.

I call upon thee, and compel
Thyself to be thy proper hell!

Byron.

She came!

A lovely being, scarcely formed or moulded—
A rose with all its sweetest leaves yet folded.

Idid.

Paris rested in the distance, as silent as when, centuries before that time, the wanderer had passed through the wilderness from which it had sprung. The Seine was calm and serene, as the stars glittered along its motionless waters; and with outstretched arms, in its unbroken sleep, seemed sheltering the vessels that lay on its bosom. Along the shores could not even be seen the torch of the fisherman, that was wont to flash upon the tideless stream, through the dun obscurity and gloom of night's solemn noon. No sound came through the immoving air from the city. Its very heart seemed to have ceased its vibrations. But a short time had passed since it beat with care, and toil, and crime; it was now still—but the dark thoughts, the low appetites, the brutal lusts, the fierce passions, yet dwelt there, to awaken again, refreshed and invigorated. Paris lay, like a mighty giant, whose iron limbs, and strong hands, and hardened nerves, no force could tame and no power withstand; but who, at the voice of nature, sank quietly down to rest, and arose again to curb, or crush, or overthrow.

The young artist whom we have thus far followed, had paused, and with feelings

"Heavy as frost and deep almost as life,"

he gazed upon the distant city, so lately the scene of strife, and now so silent; thoughts of the past and the future were flitting by him; and, strange to say, that with his future, even then he linked the fortunes of him, the mysteries of whose life form the principal feature of this narrative. Stranger still, that unknown as was Francis Armine to him, the very thought of him should be accompanied with a dread and a warning. Are we not the ministers of our own fate? Is it then strange, that although the vista of the future is untrod, its shadows should rest upon the present? No, it is not.

That same power which permits us not to throw back the veil, sends to us dreams and omens to warn us of the mysteries which it conceals. We are prophets, yet of what avail is our knowledge. We approach the precipice, yet shun it not; or shunning it, still work out the destiny written for us, in unalterable characters on the book of fate.

We seek not to penetrate into secret thoughts; suffice it that actions show their import. We seek not to trace the lightning from its cloud-built home, but to show its dread effects. In its blasting and devastating path, we can behold enough of its power, without seeking the unattainable, or grasping higher than the limited faculties of earth-chained mind will permit. Sacred be the secrets of the soul! We pass from them to the thoughts which find words to speak their meaning, as passes a traveller, who has lingered a moment in the dark valley, to the unshadowed earth.

"It was a well timed blow," said Andeli, as with an effort he again adverted to the events of that evening. "It was a well timed blow, and it must be quickly followed—for ere the conspiracy is known, my revenge must be consummated. The hurricane has yet to come; a few drops have fallen from the overcharged cloud, heralds alone of the coming storm—and when it comes in its wrath, wo—wo, to them on whom it falls!"

Forgetful of all but the feelings which had for years mastered every hope and aspiration of his younger days, he was recommencing his walk, without observing that to his incoherent exclamations he had a listener. On looking up, he beheld a dark form towering above him. The intruder is known to our readers, and a few of the neighboring peasantry, as the hermit of the cave, and had been standing near his retreat when he heard the words of Andeli. He had scarcely caught his attention, before he leaped from the rock on which he stood, and stood before the artist. His dark featured face, his long and matted beard, his gray and uncombed hair, and his dirty and ragged dress, together with his bold swaggering manner, rendered him an object of disgust.

"Who dares intrude thus upon my walk?" inquired Andeli, in a menacing tone, as he drew back at the approach of the hermit, who, leaning over the artist, whispered in his ear—

"Andeli, hast thou forgotten Montanvers?"

The young man started. The blood left his cheek, and the cold perspiration stood on his forehead. It could not be. He looked again, and almost shuddered beneath the ardent gaze that met his own. Those few words had rolled back the veil of past years, and brought to his memory one whom he had met but once since his boyhood. Again stood before him the once gifted and brilliant Montanvers—now, as his appearance indicated, the shunned and pitied, if not abhorred outcast.

"Ha! I see you remember me," exclaimed he, not withdrawing his fixed gaze.

"I do, although you have altered much," replied Andeli.

"Yes, time has passed over me rather roughly since we met last. The world and myself, Andeli, have wrangled much. But I am wearied now, and would ask a favor at your hands," said he, as he scanned, with an inquiring look, the features of his companion. He could read nothing there, for they were cold and stern,

though not pitiless. With a firm composure, Andeli motioned to him to proceed.

"Lucien Andeli, I wish to go and shake hands with the world again. Nay, start not, nor deem it strange. They who have stepped between me and happiness—who have changed the current of my being—who would have trampled upon me, when I fell to their own level—must again receive me. I have shrank from their intercourse for years, and now I wish again to mingle with them. The name of Montanvers must not be forgotten—it must again be on the lips of men, who feel and dread its influence. It must again be sighed by the soft voices of your women. I have a fit resting place in yon cave—the earth my bed—the rock my pillow; yet neither so pleasant as the downy couch. My clothes are worn and ragged, and food I have not tasted for two days. I see you understand my wishes, and will meet them?"

"Montanvers, do you remember how and why we last parted?" asked Andeli, after listening with a feeling of contempt to his remarks.

"Let that be forgotten with the past. You have money and friends, and must reinstate me in the world."

"Must!" echoed Andeli.

"Ay, must!" returned he. "If our former friendship will not influence you, know that I have that which will. You are in my power. Your schemes are open to me. Have I in vain attended your secret meetings, and heard your pleading and your advice? Have I in vain listened but now to your words, spoken, as you thought, to the winds? No! not in vain. One word, if I but speak, it consigns you and your friends to a disgraced and miserable grave. Andeli, are we or are we not friends?" Sternly did he rivet his eye upon the face of the young artist, to inquire, before words could speak it, the reception of his inquiry. They were calm and open, and now his gaze was returned as boldly and sternly as it was given.

"We are not," replied he, in a clear and fearless voice.

"Beware of my enmity."

"Beware rather of mine," returned Andeli, "and know that for the cause in which I am pledged, I fear not the interruption of one so foul as the murderer of Maria Serle."

Andeli thought rightly, that the memory of that deed would move his enemy from his purpose. It touched a chord long dormant, and thrilled upon every fibre of his frame. He attempted to smother the feeling, which only rendered it more intense. Conscience could not be stilled. It was like a stream whose waters have been stopped in their course, and which, on finding an outlet, rush impetuously forth, with a loud voice and a mighty leap. The cheek was pale—the hands were clenched, until the blood almost started from the thin, bony fingers—large, heavy drops of sweat hung about his forehead; and his eyes, now brightened and now darkened, as with partial insanity. The earth seemed to move from beneath him; he was one moment kneeling, as if at confession, and in the next he seemed to tread on air.

"Spirit of the lost! you yet hover around me," raved he. "From the early grave you rise to crush me. Your curse is yet with me. You wander forever on the wings of the air. Your flight is in the calm and in the whirlwind, and the trees bend swiftly to your foot—

steps, and the winds echo to the music of your voice. Beautiful one! you are with me, through the gloomy night, and amid the sunshine of mid-day. You are there—there—there. Hush! lest I fright you. I see you as once I saw you—but even now you change, and your own blood streams over that beautiful face, and around those exquisite limbs. Ha! who did that deed? You smile. It was these hands. Ha! ha! ha!” and with that strange and unearthly laugh he stretched forth his hands, as if grasping at something in the air, and fell to the earth.

Andeli saw him fall into that deathlike swoon, and turning, swiftly moved along. He had not walked far, ere he approached a small and neat white cottage, around whose door and windows clustered the vine and the honeysuckle, flinging at once a shade and a fragrance about the spot. A fit haunt was this for love and beauty! An angel, as it wheeled its course above the earth, might well start at meeting a place so beautiful in this dark world, and watch and protect its gentle inmates ere it again departs to the far off heavens. Before the cottage lay wide and boundless plains, that stretched to the shores of the Seine, and in its rear was the dark and still forest, and the tall mountains, whose peaks were lost in the blue of the sky—whilst closely around it, swept a bright and sparkling stream, now prattling with the pebbles, now playing with the reeds, and now dancing over its green margin, like a wild school-girl, singing gaily, as she romps along with a light heart and bright smile.

The young artist stopped, and gazed at the window; but it was not the beauteous flowers that clustered there, that caught his eye—it was not the slender twig or the green vine, bathed as they were in the moon's mystic light, that arrested and rivetted that eye to the spot. It was something fairer and brighter. It was a face lovely in charms—a form rounded into beauty by the goddess of love. Another moment, and his form no longer threw its shadow upon the grass—it was at her feet.

“Meta! my love, my life, I am with thee!” he whispered, as he arose, and twining his arm around her small waist, pressed her beating heart, that swelled beneath its snowy bosom, to his own.

She was very beautiful—that gentle young girl. Her cherubic features, her slight form, seemed too lovely for earth. Her face was delicate and fair—of a beauty, rather the promise of what will be, than that which is. Her features were gentle, and regular, and open. Her forehead was like a sheet of pure snow, drifted with dark and wavy locks of hair—and her cheek like a calm water, with here and there a flushed rose peeping forth; but in repose, the faintest dye betwixt the lily and the rose could not equal it. Her lips were of the clearest and softest vermilion; and when parted, displayed two rows of teeth whiter than virgin pearl—and then her eyes, so soft, and yet so bright. Her dress was rich, but plain; showing that exquisite form in its natural and most beautiful shape. She gazed upon her lover—for such was he to her; but her heart was too full for words. She gazed in silent and speechless eloquence. Not the eloquence of the lip, for that can coin itself to honied words in times of darkest doubt—but the eloquence of the soul, when every look and action imbody truth.

And he drew her closer to him—their lips clung into a long and passionate kiss; her transparent cheek rested on his shoulder—and her bosom glowed in movements with his own. Softly to their ears was borne the voice of the prattling stream—the low musical tone of the gushing fountain—the sweet hum of myriads of insects—the bland whisper of the wandering wind, and the clear cry of the night-bird, as it wheeled its course in the perfumed air, over streams, and cots, and vineyards. It was as though nature welcomed the meeting, and sent up her voice from the silent forests and tideless streams for her young and delicate children.

Thus, on the shores of the golden Seine, sat the lovers—alas! they were not wedded! She sought not, desired not the rank from which she had fallen—the name which she had forfeited. Around him clustered the brightening dream—alas! that it was but a dream!—of a fresh, first love. Poor child! she knew not the sin—heard not of the shame of such a passion. And he—by the world's law deemed the guiltier—in the opening of manhood, in his wanderings, had met her, and forgotten home, and kindred, and ambition, in the breath of a passionate and a guilty love.

The moon beamed brightly upon the earth, and the eternal stars looked down from their deep blue chambers; and they were clasped in quietness and sleep, and tranquil was the slumber, and profound was that sleep. They were alone upon the earth, and from its distant home, love, like an angel, descended upon the wings of night to their quiet couch.

SONNET.

TO THE MAGNOLIA GRANDIFLORA.

Majestic flower! how purely beautiful

Thou art, as rising from thy bower of green,
Those dark and glossy leaves, so rich and full,

Thou standest like a high-born forest queen,
Among her maidens, clustering round so fair!

I love to watch thy sculptured form unfolding,
And look into thy depths to image there

A fairy cavern; and while thus beholding,
And while the breeze sweeps o'er thee, matchless flower,

I breathe the perfume, delicate and strong,
That comes like incense from thy petal'd bower,

My fancy roams the southern woods along,
Beneath that glorious tree, where deep among
The unsunn'd leaves thy large white flower-cups
sprung.

Washington City, July, 1888.

C. P. G.

ON DREAMING THAT I HEARD A LADY ENGAGED IN PRAYER.

Methinks I hear her breathe in prayer

A heaven-taught, pure, and holy strain:

I would my name were mentioned there—

So pure a heart asks not in vain.

L. L.

TO A BEAUTIFUL CREEK BOY,

THE EVENING BEFORE HIS EMIGRATION.

BY HENRY THOMPSON.

Lone child of the forest, thou art now on the sward,
Where silently sleepeth its legitimate lord;
Thou art roaming thy last, o'er the tumulose earth;
O'er the graves of thy people—in the land of thy birth.
But alas! little Creek, o'er the turf of thy dead,
The foot of the stranger will intrusively tread,
When thou art an exile, far away from the foes,
Who have pilfered the earth where thy people repose.
Yet in majesty roam, for 'tis here thou wast born,
Although *Es-ta-hat-ke*^a looks on thee with scorn;
And gaze, Indian boy, on the blossoming rose,
For thine eyes look their last where thy people repose.

The eagle screams o'er thee, for her eaglets have flown;
Her dark eye is on thee—bright, bright as thine own—
But the bow, little Creek, is unbent in thy hand,
Never more to be strung in this paradise land.
Thy arrows are wasted, shot away to the night—
The proud bird above thee, thou can'st not affright;
And thine eye cannot weep! 'tis a stranger to tears;
Revenge is not of thee—for few are thy years;
Yet the blood of the Creek, flowing warmly and wild,
Gushes still in thy veins, aboriginal child!
And gaze while thou may'st on the blossoming rose,
For thine eyes look their last where thy people repose.

WASHINGTON,

AND THE PATRIOT ARMY.

The pleasure I took in the perusal of the sketch of the life of the late eminent judge and patriot, Jeremiah T. Chase, contained in the June No. of the Messenger, has been mingled with pain, at finding therein an incidental assertion, which, if true, is alike to be regarded as a stain upon the character of our great progenitors, and a reproach to the high and holy cause in which they so devotedly engaged.

To represent, in the most enviable light, the characters of the great and good, is a feeling spontaneous in every noble mind; but it is no unfrequent error, in striving to exalt the most worthy, to disparage subordinate merit, without whose aid even the highest individual powers and faculties had availed but little.

The halo of glory which surrounded the head of the father of his country, when he resigned the warrant of his command into the hands of that august assembly from whom he had received it, is surely not increased in splendor or extent, by the announcement that "*the army, which he had just left at Newburgh,*" was "*ready to clothe him with the imperial purple,*" and that "*disdaining the proudest trophies of ambition, he comes before Congress, and begs them to receive the insignia of his authority.*" And as one who, in common with every American, has a share in the heritage of glory which has descended from the patriots of the revolution, I deny that that army

were ready to clothe any man with the imperial purple. I repudiate the idea that such was for a moment their intention; or that their power, had such been their design, was equal to accomplish it; and I hold both to be derogatory to the high character of a patriotic ancestry, and a reflection upon the cause their valor won. It is a misconceived attempt to heap honor upon the illustrious Washington, by an undesigned detraction from the well-earned glory of his associates. The measure of his fame is already full. He needs no accumulated honor at the expense of his companions in arms. In "*the deeds of high emprise,*" which by him directed they achieved, in the defence of the liberties and support of the rights of a common country, there is glory enough for all. Whatever may be our idea of the well deserved honor and confidence in which Washington was held by the army he had so often led to successful battle, we must not forget the cause for which they fought,—that all else was secondary to the one great object,—the protection of their country from invasion, and the establishment of liberty. Let us remember that that army were no mercenary soldiery—but a patriot band who warred for freedom and independence. And is it to be supposed that these men, at the very moment when the object of all their hopes and all their labors was accomplished, were ready to become the willing subjects of an imperial sway—to surrender the very liberty they had achieved as the price of its acquisition?

But let the documents of the day evidence the objects sought to be accomplished in the grand enterprise of the revolution, the light in which it was regarded, the spirit in which it was undertaken. Look at the commission which Washington held. "*We, reposing especial confidence in your patriotism, conduct and fidelity, do, by these presents, constitute and appoint you to be General and Commander-in-Chief of the army of the United Colonies, &c. for the defence of American liberty, and for repelling every hostile invasion thereof.*" This was the power, these the purposes of its grant, held under the regulations and directions of Congress, and revocable at its will. And the instructions which accompanied its bestowal, like the injunction to the Roman consul, made it his "*especial care, in discharge of the great trust committed*" to him, "*that the liberties of America receive no detriment.*"

Look at the great charter of our liberties; read the detail of enormities perpetrated upon an unoffending people by Britain's king. "*He has affected to render the military independent of, and superior to the civil power.*" Here was one grievance sought to be gotten rid of—one outrage which was no longer calmly to be endured. But did the army indeed forget the causes for which they took up arms, or were those alleged but pretence? Can it be, that at the very moment they had wrested their country from an arbitrary rule, and saved harmless from military subjugation *the civil power*, they, of themselves, had it in contemplation to be recreant to all their plighted vows, and place the man of their choice far above the hold or influence of the proper authority—to create an imperial dynasty upon the ruins of a regal crown?

The revolution was accomplished. For eight long years our forefathers had nobly defended "*American Liberty,*" and had successfully "*repelled every hostile*

^a The Creek term for "white man."

invasion thereof." The cessation of hostilities is announced to the army by the Commander-in-Chief: "The glorious task for which we flew to arms being accomplished—the liberties of our country being fully acknowledged, and firmly secured, by the smiles of heaven on the purity of our cause, and the honest exertions of a feeble people determined to be free, against a powerful nation disposed to oppress them; and the character of those, who, having persevered through every extremity of hardship, suffering and danger, being immortalized by the illustrious appellation of the *patriot army*, nothing now remains but for the actors of this mighty scene to preserve a perfect, unvarying consistency of character, through the very last act, to close the drama with applause, and to retire from the military theatre with the same approbation of angels and men which has crowned all their former victories."

And was indeed the acknowledgment and security of our country's liberties the true purpose for which resort was had to arms; or was this but a sham, to plant upon their ruins the sceptre of imperial power? Did the actors in that mighty scene indeed deserve the countenance and support of heaven for honest exertions in a cause of purity, or was the lust of power and dominion their actual motive of action? Are they to be immortalized for their fidelity and patriotism; or should they be execrated and condemned as ready violators of their word and honor—as men prepared, in face of all engagements to the contrary, to make an unwarranted attempt at the exercise of arbitrary power?

Observe the terms in which the resignation itself is couched—weigh the expressions which Washington there makes of his sense of the assistance he received from his countrymen throughout the contest, and the spirit which he considered to animate the army. "The great events upon which my resignation depended, having at length taken place," &c.—"Happy in the confirmation of our independence and sovereignty," &c. "The assistance I have received from my countrymen, increases with every review of the momentous contest." Does he insinuate, here or elsewhere, that that army regarded him in any other light than as their commander, or for any other purpose than the establishment of liberty and the defence of right? No, no—and could he now respond to us from his hallowed tomb, he would indignantly repel such a suggestion, as an imputation upon the fair fame of his fellow patriots. And the feeling which filled the breast of his great ally, the immortal La Fayette, when a similar assertion to that which I here condemn was made in his presence, in an address delivered in honor of his visit to the place where the last great act of the revolution was performed, and upon the very spot where it was consummated, affords full and conclusive proof in what view he himself would regard it. In reply to that address, he took occasion to assert his belief that such an idea was never indulged for a single moment; while he denied the possibility, if it had been, of its successful execution. He regarded the assertion as an undeserved disparagement of his companions in arms, incapable of reflecting the intended honor upon Washington, while it in fact sullied the fame of the whole army of the revolution.

THE OLD MARYLAND LINE.

Annapolis, July, 1838.

SHE WAS NOT THERE.

I sat, where often I had known,
In other days, her kindly care;
Her smiles no longer on me shone:
She was not there!

Her heart is still, her cheek is cold;
That heart so warm, that cheek so fair!
Unseen that form of fairest mould:
She was not there!

No more her silver voice I heard
Breathe sounds of sweetness to the air,
In every soft and gentle word:
She was not there!

I missed those eyes that once could shed
The light of joy on hearts that wear
Her image yet. That light hath fled:
She was not there!

I heard the songs she loved. To me
This seemed too much for grief to bear:
They made me *feel*, those sounds of glee,
She was not there!

No more her step, the free, the light,
Nor hers the laugh, that met my ear;
On that whole scene had fallen a blight:
She was not there!

How dark are scenes, when those are not
Who hallowed them—the good the fair!
How shadowed seem'd that well-known spot:
She was not there!

But few remember long the dead;
No sorrow can the worldly share;
Yet some can ne'er forget, tho' fled,
She once was there!

August, 1838.

E. A. S.

SONNET.

TO THE HONEYSUCKLE.

Sweet household flower! whose clambering vines festoon
The little porch before my cottage door;
How dear to me when daylight's toils are o'er,
By the broad shining of the summer moon,
To feel thy fragrance on the breath of June
Afloat—or when the rosy twilight falls,
Ere the first night-bird to his fellow calls,
Ere the first star is out, and the low tune
Of nature pauses, and the humming-birds
Come wooing thee with swift and silent kisses,
Ere hovering through the garden's wildernesses,
Emblem of that calm love that needs no words;
Let me, like thee, sweet, silent clinging vine,
Clasp my own home awhile, ere stranger homes be
mine.

Washington City, June, 1838.

 A review of "BURTON, or the Sieges; a Romance—by J. H. Ingraham, Esq., author of 'South West,' 'Lafitte,' &c." received too late for this No. of the Messenger, will appear in the next.

 CORRECTION.—On page 435, July No. of the Messenger, in the article "Memory, Fancy and Love," twenty-fourth line from the bottom, for "So prudent their nursery," &c. read "so prudent their nurseries."

SOUTHERN LITERARY MESSENGER.

VOL. IV.

RICHMOND, SEPTEMBER, 1838.

No. IX.

T. W. WHITE, *Editor and Proprietor.*

FIVE DOLLARS PER ANNUM.

POLITICAL RELIGIONISM.

BY A SOUTHRON.

1. *A Letter to the Hon. Henry Clay, on the Annexation of Texas; by William E. Channing, D.D. Boston. 1837.*
2. "TEXAS." *Quarterly Review*, June, 1838.

It is unfortunate for mankind, that the literary character is not associated in glory with other professional classes of society. The latter pressing more immediately upon the attention of men, are stimulated by personal interests and remunerated by early honors; while the former, habituated to seclusion, produces its rich fruits in concealment, which are neither appreciated nor gathered until a late period of life. Indeed the utility of their labors is not always capable of immediate application, and is not unfrequently undervalued by the passing generation. Thus Milton and Shakspeare felt springing within them the germs of immortality, and overlooking the opinions of the age in which they lived, wrote for posterity. It was when the mind of Kepler, awake to celestial harmony, was filled with the enthusiasm of genius, and when he felt that the age in which he lived would not appreciate the value of his discoveries, that he exclaimed: "I have stolen the golden vessels of the Egyptians, and I will build of them a tabernacle to my God. If you pardon me I rejoice, if you reproach me I can endure it; the die is thrown. I can wait one century for a reader, if God himself waited six thousand years for an observer of his works." Genius is immortal, and not unlike the actors in the Grecian games, the torch of science has been passed from hand to hand, in all ages, by the "great lights of the world." Genius creates an intellectual nobility which is conferred on literary characters by the involuntary feelings of the public; and it is the noble prerogative of genius to elevate obscure men to the higher classes of society. But this fame is not unfrequently posthumous, and the Grecian virgins scattered garlands throughout the seven islands of Greece, upon the turf beneath which were supposed to lie the remains of the blind old bard, who wandered in penury and obscurity through life, or only sung passages of his divine poem, at the festive board of his contemporaries.

The small cities of Athens and of Florence attest the influence of the literary character over nations; for, the one received the tribute of the mistress of the world, when the Roman youth crowded the walks of her philosophy, and the other, after the revival of letters, dispensed all the treasures of literature to the admiring nations of Europe. Those who govern mankind cannot at the same time enlighten them; they merely regulate their manners and their morals: but the literary class, standing between the governors and the governed, light up with the divine ray of intellect, and give shape, and character, and beauty and utility to the whole framework of society. And to descend from classes to individuals, how often do we behold gifted men, master spirits, springing up, and with pregnant inspiration, from the depths of their solitude, impress-

ing their own upon the character of a whole people? Intelligence is progressive and cumulative, however nations may relapse into barbarism; and each departing age pours its increasing treasures into the lap of its successor. The link of mind is never broken. In every age and clime, however stormy and tempestuous, the divine intellect, like the electric flame springing into life from the dark bosom of the clouds, rolls its voice over the chasms of darkened ages, and lights up every summit which lifts its head from amid the surrounding gloom.

Far along,
From peak to peak, the rattling crags among
Leaps the live thunder! Not from one lone cloud,
But every mountain now hath found a tongue,
And Jura answers through her misty shroud,
Back to the joyous Alps, who call to her aloud.

Every father spirit in the intellectual world has his gifted sons; and it is wonderful with what rapidity the germs of intellect expand in fruitful soils. How often is the creative spark struck forth in a moment, and after the lapse of ages caught and kindled into a living blaze. There is a singleness and unity in the pursuits of genius through all time, which produce a species of consanguinity in the characters of authors. Men of genius, flourishing in distant periods or in remote and inhospitable countries, seem to be the same persons with another name, whose minds have in the intervening time been constantly improving, and thus the literary character long since departed, appears only to have transmigrated. In the great march of the human intellect, each still occupies the same place, and is still carrying on with the same powers his great work through a line of centuries. Sometimes indeed it happens that some useful labor is lost for a season, some one of the greater lights is apparently struck from the system; but another Kepler arises to point out the discord in the celestial harmony, and some future observer discovers in the vast fields of space, the fragments of the lost planet, and restores the broken chord. In the history of genius there is no chronology; the whole book is open before us; every thing is present, and the earliest discovery is connected by a thousand links with the most recent. Many men of genius must arise before a particular man of genius can appear. Aristophanes, in his comic scenes, ridiculed the Grecian mythology, and Epicurus, following in his footsteps, shook the pillars of Olympus. The skeptic mind of Wickliffe overshadowed the genius of John Huss—and Luther, girding himself with their armor, caused the institutions of Europe to tremble to their foundations. Cicero, in his sublime morality, startled the warriors of Rome with a lesson of unwonted mercy. He wished them to spare their enemies even "after the battering ram had smitten the walls." And Beccaria, catching this amiable spirit, opposed the voice of humanity to the rooted prejudices of ages. We might extend our illustrations of this sublime truth indefinitely, and we could with equal facility trace the immense, we had almost said the frightful influence of men of genius over the destinies of mankind, since the invention of printing and the revival and cultivation of polite letters. We might in-

dicata trivial and remote causes, sleeping for ages, and suddenly springing, by a happy combination, into stupendous results. The same law obtains in the intellectual and in the animal kingdoms. The submarine labors of the coral animalculæ, and the seeds floating on the bosom of the deep, have planted in the depths of the ocean large and fertile islands. How extensive then, and how incalculable are the consequences of human action, and how resistlessly and absolutely is it swayed by men of genius?

Although not a genius of the first order, nor one of those great lights which seem destined to shed perpetual lustre over the history of man, the author of the letter to Mr. Clay, on the subject of the annexation of Texas, William E. Channing, fills no little space in the public view, and is not without distinction in the republic of letters. His enlarged intellect has borrowed easy and graceful proportions from his moral virtues. He is a consecrated vessel, set apart for the service of the Deity, and for the propagation of wholesome truths to erring man. His is a ministry of peace and good will. And he has brought to the service of his master a talent, which has not been unimproved, neither has it been buried; he is a shining light, and in ready obedience to the heavenly prohibition, he has not hid it under a bushel. In the prominent power of his intellect, he strikingly though distantly resembles that characteristic of Milton's mind, which he has so beautifully illustrated, and that is the faculty of impregnation. His excursive and active genius travels over the whole field of literature; he gathers every choice plant in the gardens of wisdom, and they flourish with unusual vigor in the fertile soil into which they are translated. A graceful purity of style adorns the solid structure of his reasoning; and he has richly earned the distinguished title of the American Atticus.

It is to be lamented, that powers such as this instructive writer possesses, should, from the general neglect of literary merit in this age of utilitarianism, be forced from their appropriate and legitimate sphere, and directed to questionable, perhaps unhappy results. Few minds in this age, and more particularly in this country, where the labors of intellect are so little appreciated, and so slowly rewarded, possess the moral firmness and the persevering steadiness which lead to a solid, but slow and distant, reputation through a life of toil. Few such can resist the seducements of those instant but fleeting and precarious honors, which are snatched amid the hazards, and struggles, and excitements of political discussion. In a government like ours, in which each individual is constantly reminded of the deep stake he has in its welfare, and of his immediate agency and influence in its administration, the tendency to descend from loftier stations to mingle in the conflicts of the arena, is irresistible to the many, and seldom checked by those who have the sagacity to perceive the moment when their interposition may decide the controversy. Such is the resistless operation of this spirit of interposition, such is the longing of the impatient mind for early distinction, that all classes yield to this petty ambition. It invades the holy precincts of the sanctuary, and the priest not unfrequently becomes the agitator.

A sound and healthy state of public opinion is of slow and cautious growth, and we should accurately distinguish between this salutary agent and that feverish and artificial excitement which is produced by associations and combinations. "Public opinion," says an able

writer,* in his review of Miss Martineau on slavery, in the November number of the Messenger, "public opinion is of very slow, very temperate, and very judicious formation. It is the aggregate of small truths, and the experience of successive days and years, which, heaped together, form a general principle, which is of instant conviction in every bosom. It only requires to receive a name in order to become a law; and a law, which is precipitately imposed upon a people, in advance of the formation of this sort of public opinion, will soon be openly abolished, or become obsolete in the progress of events. For my own part, I am satisfied with the existing laws, until the convictions of the majority and the progress of experience shall call for their improvement. I have no respect for those who set themselves up for makers of public opinion; and as for the 'hell broth,' so compounded, I know not any draught which would not be more wholesome, than that which makes the body politic a body plethoric, and leaves no remedy to the physician but the cautery and the knife."

It is a subject of deep regret, that we so frequently find schemes and associations, calculated to create this spurious kind of public opinion, promoted by some of the distinguished members of the clerical order. Overzealous in the service of their master, they prepare for the fanatic and enthusiast perilous employment; and unrestrained by the stern rebuke of the Redeemer, they seem prone to imitate the chief of the apostles in their readiness to smite with the sword those who, in their excited imaginings, are the enemies of religion. The great evil of the present day, and that which threatens the existence of the Union, as well as the peace and security of the southern states, is "POLITICAL RELIGIOUSISM." And it is on account of the infusion of this fanatical and destructive spirit into the strictures of the American divine, upon the character and morals of our people, and upon the domestic institutions of the south; it is because the British reviewer, misled by these invectives, has assailed the character of our government, and proclaimed the licentious tendency of republican establishments, that we feel impelled to notice the publications placed at the head of this article.

The "Letter of Dr. Channing to Mr. Clay" contains grave charges, upon which the British reviewer, in the article "TEXAS," frames a specious argument to prove the perishable nature of our free institutions. But we can neither admit the truth of the charges made by the divine, nor the solidity of the argument labored by the monarchist. The letter states in substance:

1. That the revolt in Texas was sustained by the southern states, and the admission of Texas into the Union was demanded in order to create a new market for slaves, a new field for slave labor, and the accession of political power in those states, which subsist by slave-breeding and slave-selling, and furthermore to perpetuate in the old and to spread over the new states the horrors of slavery.

2. He appeals in behalf of the slave to the interposition of the British government; declares that England has a moral as well as a political interest in this question, and pronounces "an English minister unworthy of his office who would not strive by all just means to avert the danger."

* Not a few of our reflections upon the nature and condition of the Indian on our frontier, and upon slavery in general, will show that we have read and remembered the "Review of Miss Martineau on Slavery." We could not receive light from a poorer source, for that publication is universally regarded as one of the ablest productions of the American press.

3. He charges his countrymen with a lawlessness and corruption of public morals, which is well calculated to disgrace them in the estimation of mankind; and paints with so gloomy a pencil, that his British reviewer, the avowed enemy of all republican institutions, exposes the picture in triumph to the friends of legitimacy in Europe, as the impartial testimony of a ripe scholar, a native citizen, and an appointed priest.

The discussion of these subjects, in the articles under consideration, is so intimately interwoven with the whole subject of slavery in the south, of southern crime and southern policy, that we will confine our attention principally to that theme. With the Texian controversy we have no concern. But before proceeding to discuss this agitating topic, we will make a few remarks upon the loose morality and lawlessness of those hardy pioneers of the wilderness, for whose excesses the nation is held responsible, and by the standard of whose morals the whole American people is judged. Under the imposing title of a citizen possessing high talents and still higher moral character, the British reviewer introduces Dr. Channing to the world holding the following extravagant language:

"We are corrupt enough already. In one respect our institutions have disappointed us all. They have not wrought for us that elevation of character which is the only substantial blessing of liberty. Government is regarded more as a means of enriching the country, than of securing private rights. We have become wedded to gain as our chief good. That under the predominance of this degrading passion, the higher virtues, the moral independence, the simplicity of manners, the stern uprightness, the self reverence, the respect for man as man, which are the ornaments and safeguards of a republic, should wither, and give place to selfish calculation and indulgence, to show and extravagance, to anxious, envious, discontented strivings, to wild adventure, and to the gambling spirit of speculation, will surprise no one who has studied human nature. *A spirit of lawlessness pervades the community, which, if not repressed, threatens the dissolution of our present forms of society. Even in the old states mobs are taking the government into their hands, and a profligate newspaper finds little difficulty in stirring up multitudes to violence.* When we look at the parts of the country nearest Texas, we see the arm of the law paralyzed by the passions of the individual. The substitution of self-constituted tribunals, for the regular course of justice, and the infliction of immediate punishment in the moment of popular phrenzy, are symptoms of a people half reclaimed from barbarism. I know not that any civilized country on earth has exhibited, during the last year, a spectacle so atrocious as the burning of a colored man by a slow fire in the neighborhood of St. Louis! And this infernal sacrifice was offered, not by a few fiends selected from the whole country, but by a crowd gathered from a single spot. Add to all this, the invasions of the rights of speech and of the press by lawless force, the extent and toleration of which oblige us to believe that *a considerable portion of our citizens have no comprehension of the first principles of liberty.* It is an undeniable fact, that in consequence of these and other symptoms, *the confidence of many reflecting men in our free institutions is very much impaired.* Some despair. *That we must seek security for property and life in a 'STRONG-ARM GOVERNMENT,' is a spreading conviction.*"

The reader shrinks with abhorrence from this loath-

some picture, and is startled to learn that it has been sketched by the hand of a countryman. From the tenor of the whole letter of Dr. Channing, it is manifest that he designs to attribute this national depravity in a great measure to the slaveholder and the frontier-man. We will confine our remarks therefore to these two points, and endeavor to prove that the border-men of the south-western states are no worse than those of other nations, and that the other evils of which he so loudly complains, have been produced mainly by the northern fanatics, and are the first fruits of political religionism.

Man is a frail and rebellious creature, and the sternest sanctions of the law have in all ages been required for the maintenance of peace and order. But all the force of the laws has, under every frame of government, been found insufficient to repress the spirit of insubordination. The stormy impulse of the passions, and the hope of impunity, still impel daring and wicked men to violate the law of the land, and to commit the most detestable and atrocious crimes. But, that either in our cities or upon our frontier, there is a greater degree of crime or more profligacy than is to be found in similar classes in other countries, or that our people are more demoralized than those of other nations, has no foundation in fact. We are the descendants of the European, we are the children of sin, and we have brought with us into this country the frailties and the passions of our nature and of our forefathers. But our great cause of complaint is, that we are falsely charged with surpassing profligacy by the friends of a stronger and more artificial frame of government, upon the testimony of our own writers, who libel their kindred; and this unusual depravity is attributed to the licentiousness promoted and inculcated by free institutions. And it is to be deeply regretted that there are to be found among us those, who in their fanatic zeal to extirpate slavery in the south, exaggerate the failings and the vices of their countrymen, and thus furnish with perpetual argument the enemies of republican institutions. The heart has been made sick with details of crime and violence on our southern and western borders; and they have been diligently dressed and served up, as precious morsels, as a rich feast for our European friends. The outrages of the pioneers, the border morals, lynching, and frontier regulations, are the same in all new countries. And the classic and well stored mind of Dr. Channing treasures many a salutary lesson drawn from the flight of the Roman eagle, sweeping onward in his resistless flight from point to point in a constantly advancing frontier, to the uttermost boundaries of the haunts of men, until he had looked down upon a submissive world, and folded his unwearied wing beneath the shadow of universal dominion.

The fields of Northumberland, and the cruel inroads of the Percies, live in Scottish minstrelsy, and the observant eye of so ripe a scholar has traced the destructive progress of the freebooters of the border, by the light of the torch, and the red stain of the brand, that have marked the progress of rapine on the frontier of civilization. We can readily appreciate the sympathies of a good man, we can excuse the complaints of an apostle of peace, when the melancholy lessons of history are repeated in his own age and in his own clime; but we must be cautious to consult the lessons of experience, and take counsel of the ripe understanding, before we proclaim to the world, in the fervor of a heated imagination, the enormities of border license. Let us la-

ment the stern necessity, but restrain the current of indignant feeling, lest we exaggerate the extent of evils which loom up in deceptive magnitude through the mists of prejudice, and seem the more formidable because of their propinquity.

The annals of England and Scotland will furnish to the learned divine, as well as to his British reviewer, a tale of blood and license far surpassing the sad but unfrequent excesses on our frontier. When civilization sends forth her pioneers to open and tame the wilderness, the quiet, peaceable and orderly, remain at home; the frontier-man is the bold, and hardy, and reckless adventurer, who alone is fit to contend with the stubborn forests and the savage tribes who tread them in solitude. Is it to be a matter of wonder or of regret, that society purges off and throws among them the dissolute outcast or the exile of crime? The pilgrim fathers were a different race, not thrown upon the frontiers of an ancient or established people, to push the march of civilization, but stern men, whom the profligate tyranny of the Stuarts, and the intolerant ravings of fanaticism, sent forth to people the inhospitable shores of the new world with the sturdy and unbending spirits of the old. With no love but for freedom—with no hope but in God! their lonely barque was freighted with the consecrated emblems of liberty, and turning to the setting sun, they sped onward, to throw the illimitable waste of the ocean a barrier between themselves and their oppressors. Stern and indomitable spirits—pious and practical professors of the doctrines of the meek and merciful Redeemer—incapable of submission to oppression, and too few to shake the foundations of a throne laid deep in the recesses of time; they gathered up the fragments of their broken fortunes, and “wandered from their fathers’ houses into these ends of the earth, and laid their labors and estates therein.”

Such were the Pilgrim Fathers; and but that their graves are voiceless, they would teach to their descendants salutary lessons of patience and forbearance; they would point to their own protracted sufferings in the old world for melancholy examples of intolerance and fanaticism. They planted in this country the germ of civilization, which in our day has burst forth in wild luxuriance, and stretched its branches to the four winds of heaven. There have gone forth from among their descendants a host of turbulent spirits. These pioneers are the links which bind civilization with barbarism, the city with the wilderness. They are a rude and unpolished generation, carrying with them the elements of order, disarranged by their contiguity to savage and lawless multitudes. Crimes peculiar to the situation and character of a people are committed everywhere; and if these unsettled classes perpetrate enormities which curdle the blood of a more refined people, these latter indulge in excesses appropriate to themselves, which, although less shocking, are no less destructive to the morals and happiness of mankind. And if the “negro perish by a slow fire” on the plains of Missouri, the flames of a sacked convent, in the midst of the cities of Massachusetts, attract attention to the cries of unprotected woman and helpless infancy. If Texas be the field of blood, Boston has sent forth and protected the midnight incendiary. If the laurels of San Jacinto be stained with purple, the monument of Bunker Hill has disclosed its pallid form by the lurid glare of the torch in a night of

ruthless rapine and sacrilege, which would have disgraced the darkest age of feudal barbarism. If an enthusiast and agitator pluck down ruin on his press, and perish by a bloody death, himself red with the blood of his brother, in the town of Alton, fanaticism burns and plunders the living, desecrates the altar, and violates the dead on the heights of Charlestown. And if it were the populace which projected the crime and hoodwinked justice, it was the legislature of Massachusetts which sanctioned, aye, and still sanctions the act by withholding retribution. Crime prevails wherever man is a dweller. It is by no means extraordinary, that as man recedes from the centre of civilization, and reaches the uttermost limit of the social circle, the salutary restraints of the law should be more feebly felt, and deeds of violence and disorder should more frequently occur than in the bosom of society. We are not of the number of those who form our estimate of the morals or character of a people, by the conduct of those who scarcely feel the bonds of society. Such as they are, were those, two generations ago, who now dwell in peace and concord, revelling in all the luxurious refinements of polished and humane association.

To the west, to the successors of these border-men, who carry with them the germ of civilization, do we confidently look for the security of the republic. They throw open the wilderness; the fastnesses of the forest retreat before them, and the valleys which now ring with the yell of the savage, will soon teem with abundance. The landed proprietors have always been, and still are, the bulwark of established institutions. Upon them, in the hour of danger, falls the burden of defence. Their staid habits and steady virtue tend to check the march of corruption and commercial wealth, that mortal foe to the only sentiment which sustains republics. We look to the wilderness for protection from the cities. In our happy country, and under those excellent institutions which breathe a spirit of equality, this commercial spirit may be counteracted; for, the main pillars which sustain it in other countries have been thrown down by our sagacious forefathers. Entail and primogeniture have ceased to create and to perpetuate a privileged class. In every age, from the palmy days of Rome and Athens to the stormy revolutions of Paris, centralism has been fatal to the best interests of a people. As our empire expands over the great western frontier, the large commercial cities of the Union will cease to overshadow, to corrupt, and to control the Union. Our north-eastern brethren, hardy and intelligent, are consumed with this commercial cancer. If, like Franklin, they have diligently investigated the practical truths of material philosophy, they recognise him as the founder of a trading people, they adhere with the religious observance of the Spartan to his mercenary precepts, and have superadded to them parsimonious habits and wary cunning. A prying curiosity into the concerns of their neighbors, is another leading trait in their character, sketched by the same hand; and to this bias in their nature, we may attribute, in a great degree, their blindness to their own Vandalism, in the sacking of a convent, and their deep solicitude to deliver their southern brethren from the horrors of slavery, even with the aid of foreign interposition. Let us not be understood to undervalue the enterprising activity, the love of freedom, the moral

rectitude, the intellectual acumen of the New Englanders. We would willingly do them no injustice. But when in their intemperate zeal, they proclaim freedom to the slave, and denounce the slaveholder, even from the sanctuary; when they exhibit their southern brethren to the eyes of the world as the most profligate and unfeeling of mankind, surely it may not be amiss to invite their attention to those defects in their own character, which should be amended, before they become apostles of reformation.

By what right do so many of our northern and eastern brethren demand and attempt, by all the powers of combination and association, the abolition of slavery in the southern states? They have permitted themselves to become the agents of foreign agitators; for this fanaticism is of foreign birth, and originated in England, with the very people who introduced and planted slavery in our soil. Her example is no precedent for us; for, the structure of our government, the fundamental law of the land, and our peculiar position, present insuperable obstacles to the march of this foreign enemy. An immense empire, belting the globe with territory, may indeed abolish slavery, indemnify the owner, and preserve public tranquillity in a few small and distant islands of the ocean. In our country there is no such power vested in the government, even if the scheme were practicable, or its consummation desirable. To supply the absence of such authority, the powerful engine of public opinion is used. All the elements of society are disturbed, public and private right is invaded, and the integrity of the Union is threatened by this destructive agency. Ministers of the gospel, messengers of peace and good will to man, have abandoned their appropriate functions, and like another Peter the Hermit, preach a crusade of blood and folly.

Whether we direct our attention to the desperate struggles of the different sects for ascendancy, among a new and unsettled people in the great valley of the west; or whether we observe the jealous zeal with which some professors of various denominations, instead of rebuking the evil passions of mankind, abase themselves to court or color public opinion, with an assiduity which would shame the obsequious courtiers of Dionysius or Canute; we are brought to the melancholy conviction, that there are churchmen still animated by worldly ambition, and that religion, in many of its teachers, has degenerated into a wild spirit of proselytism. How often have we heard the voice of the priest, anointed only to bless mankind, swelling the fanatic outcry, and diligently employed in the manufacture of a spurious public opinion, which like the pestilent simoon, is to overwhelm with indiscriminate ruin domestic tranquillity, private right, public faith, and federal compact? Upon what principle do the clergy claim this right of interference with the domestic polity of the land? Is it under the exploded claim "*jure divino*?" Or do they take their stand with Dr. Channing upon "God's moral and eternal law?" From the high ground taken by some of the clergy in relation to slavery, one might suppose that they deem themselves special messengers—"one would infer that they had just descended from a forty days' communion in the mount with the Deity, beaming with celestial radiance," and empowered to revise and correct the

domestic and political establishments of man, "blasting their opponents with interdicts, and opening sluices and removing mounds for the sweep of devastation." Verrily, they know not what they do. And it infuses not a little vexation into the southern feeling on this subject, that it is impossible to make these northmen comprehend the true character of southern slavery, the frightful mischief they promote, or the imminent danger of prompting the undisciplined passions of the dark man.

Slavery was already existing in most of the states at the time of the first confederation, and was distinctly recognised and protected under the federal compact, at the time of the adoption of the present constitution. In fact, two-fifths of the slaves became an integral portion of the basis of federal representation. This being the case, by what authority or under what pretence is it, that other people, incapable of comprehending the true character of the domestic relations of the south, and who are parties to this fundamental compact, presume to interfere? It is a crime. Is it committed, because a limited jurisdiction enables them to assail the south in this most vulnerable point with impunity? Our sagacious forefathers, well knowing the oppressions which spring from the union of religion with civil authority, have in most of the states declared the clergy unfit to represent the people. They were anxious to erect every possible barrier between the church and state; the union of which had always been fatal to the purity of each. When was this clerical body, thus disfranchised, made the expounders of constitutional law, or authorised to declare how much of the federal compact is opposed to and abrogated by the law of the gospel? Indeed the civil disabilities of the clergy were intended by our pious ancestry, not so much for the security of republican institutions, as for the preservation of the purity and simplicity of religion itself. Whenever the high priest descends from the altar to bedraggle his robes in the vile mire of an electioneering progress, from that moment religion falls into contempt with the mass of the people, and its ministers become the most profligate and the most contemptible of mankind. Already many of the northern clergy have shaken, if they have not entirely lost, the confidence of the southern people; and we are shocked from day to day with startling evidences of abatement in that respect, which a pious people always extend to a worthy ministry who command and merit their esteem.

And if the question of slavery fell peculiarly within the province of the clergy, and might be safely agitated, why should many of them labor so constantly and so disingenuously to mingle this question, in all its local incidents, with national politics, ecclesiastical agitations, and treaties of war and peace with foreign states? Why does Dr. Channing invoke the interposition of European powers, and recommend a dissolution of the Union rather than slave states should be created in Texas? In this land we have few time-honored associations, little reverence for ancient establishments, and with a clear vision, we are accustomed to judge everything by its merits. Our government secures to us freedom of religious opinion, and under this generous rule, the different sects are left to repose in security, or to contend with each other for the ascendancy;

but the moment their ministers mingle in the discussion of political and social questions, and from priests become agitators, their doom is sealed; and unless we greatly mistake the signs of the times, the horns of the altar have already been severely shaken by the intemperance of some of the priesthood.

If a pure motive impelled the northern and eastern agitators, they would sometimes hearken to the remonstrances of the southern people who seem to be objects of their benevolence, and pause to observe the result of their past efforts. After years of agitation, slavery still exists. But the machinations of agitators have already redoubled the rigor of the criminal law and domestic police in the slave states, against the unhappy objects of their mischievous philanthropy; their super-serviceable efforts in the cause of humanity, have been sealed with the blood of the red and of the black man, to whom they have preached discontent, insubordination and resistance. Yet are they deaf to the voice of their suffering victims, and blind to the consequences of their own action. Is the white man massacred amid the horrors of insurrection? these enthusiasts proclaim the butchery to be the inevitable result of oppression, and they vindicate to themselves the merit of a prophecy which they have aided to fulfil. Are the rebellious slaves subdued and executed under the law which they have been stimulated to violate? the cruelty of the white man who punishes, lends fury to the enthusiasm of these agitators.

We feel no disposition to retort upon our adversaries, by instituting inquiries into the time and manner of abolition in the northern and eastern states—into the time allowed to sell the few slaves that remained among them into southern bondage, before their law of emancipation took effect, or into the trifling cost of this movement. But we undertake to assert, without fear of contradiction, that whenever the generous south can be satisfied that it can be done with safety to themselves, and that the objects of their benevolence would be benefitted, and not accursed by the change, one hundred planters in any one of the slaveholding states can be readily found, who will contribute most cheerfully to effect the abolition of slavery, double the sum it cost any state north of Mason's and Dixon's line to carry out the same design. Some of those states whose citizens are the most active friends of abolition, permitted slavery until the period arrived, which in their own cool judgment, enabled them with perfect safety and trifling loss to abolish it. We are yet to learn that New England surpasses the south in generosity. And if our eastern brethren will permit us to enjoy the privilege which they have exercised, we will most assuredly imitate their good example, and abolish slavery whenever the poverty of our soil and our true interests shall demand it. Although the plans of these agitators had not then been reduced to that system and perfect organization which have since characterised them; yet, by the aid of letters, pamphlets, papers, and tracts, they produced the insurrection in Southampton, in the state of Virginia. Indeed, the character of the tracts secretly distributed among the negroes, threw suspicion upon many of the ministers of religion, and reflecting men have long since been convinced, that the religious instruction imparted to slaves is so defective in its character, as to corrupt their fidelity, to increase

their discontent, and to abase their morals. Wherever their religious culture, under this imperfect system, has been most assiduous, there was less merriment, less singing, less dancing, but not less lying, drinking, stealing, and disobedience. The calm philosopher, the sedate and orderly christian, has long and anxiously watched the progress of gloomy bigotry throughout the land. The gloomy and ascetic doctrines inculcated among these unreflective beings, resulted in their greater depravation. For religion can never be blended with any system of worldly policy, without becoming utterly corrupt. She is the daughter of the skies, and refuses to intermarry with the sons of the children of men. In this regard all religions are alike. They have all, in their turns, scourged mankind, whenever they became the instruments of worldly men, or were connected with political schemes or establishments. And whether a crusade be led by Peter the Hermit, or the northmen, whether its object be to expel the Saracen or to redeem the captive—to extirpate Islamism, or abolish slavery—it is equally offensive to God and destructive to man.

The gospel duties are permanent, uniform, and universal, in their character; the duties of the clergy of all denominations are pointed out by this invariable law; yet the clergy of the north and of the south, even of the same churches, derive opposite lessons and duties upon the subject of slavery from the same divine law. Thus, the Reverend Dr. Channing is the indignant champion of the Indian and the negro, while the Reverend Dr. Schermerhorn reaps golden fruits from the treaty which robs the aborigines of their dearest rights. The catholic missionary teaches the Indian the observance of the ten commandments, and the slave obedience and subordination; but he does not interfere with their innocent amusements; nor does he harrow up the angry feelings or stimulate the truculent and revengeful temper of the red or the dark man, by teaching the white man's oppression. Hence the popularity of that mission in the south-western states, although its ministers profess a creed exposed to the prejudices of three centuries of obloquy. The Methodist and Baptist churches, also, if we have been correctly informed, have acquired no little share of public confidence by an official declaration of their opposition to this fanatical and destructive crusade. We have already observed, that the exclusion of the clergy from political preferment, and their civil disabilities, are not only a safeguard to the public, against the abuse of a wholesome but powerful influence, but is the surest protection of the clergy themselves, and of the purity of morals and religion. Remove these civil disabilities, and let these reverend gentlemen imitate the example of Dr. Channing in the discussion of agitating political topics; let them unite with foreign reviewers in decrying our morals and proclaiming the lawlessness which only exists in their heated imaginations, and if they do not themselves become the victims of a just indignation, they may at least rest well assured that when the day of tribulation comes, the ruins of the altar will crumble amid the ruins of the republic.

Abolition of slavery in the southern states, and the admission of slaves to the rights of freemen, constitute the wildest scheme that ever entered the brain of visionary enthusiasts. The color, the character, the capacity of the negro, the condition and morals of the free

negro in the free as well as in the slave states, bear melancholy testimony to the truth, that if the colored population are to remain among us, the safety of the white man, and the happiness of the black, as the weaker party, require that the blacks should be retained in slavery. We will not presume to fathom the designs of Providence, we will not attempt to indicate the peculiar destiny, or the similarity of the children of Ham to the descendants of Abraham; but it is manifest that the distinctive character of the Israelite, does not so effectually cut him off from a full communion with the human family, as does the prejudice arising from color separate the Anglo-Saxon from the African. No matter whether this prejudice be implanted for wise and holy purposes, or whether it be the curse of the age, it exists, its roots are deeply planted, it is a part of ourselves, and he is but a shallow observer of man, a blind and bigoted philosopher, who will overlook or despise this pervading and resistless feeling, originate whence it may.

The only hope for the African slave is in his removal from the house of bondage to the land of his forefathers. The unqualified advocates of slavery and the abolitionists occupy the two extremes of this much vexed question. But the scheme of colonization is the juste milieu. This is the broad platform upon which the friends of this unhappy race may meet in soberness and safety. The morals and misery of the free negroes in the northern states, the perpetual and bloody conflicts between them and the white man in New York, New England, and Philadelphia, show that to them freedom carries no healing on its wings, and liberty, that blesses all, has no blessing for them.*

*As an evidence of the beneficial results of the friendship of the abolitionist for the slave, we submit to intelligent readers the subjoined extract from a Boston paper:

POLICE COURT. *Degraded condition of a colored female, abducted by the Abolitionists.*—A case came off yesterday which may be fairly used to advantage by the opponents of the Northern Abolitionists. A well dressed, intelligent and high spirited mulatto woman, named Lucilla Tucker, was brought up by officer Glover of the West Watch, and charged with being a common night-walker, and the evidence was absolute that, for the last ten days at least, she had openly led a lewd and dissolute life. She was originally a slave, and two years ago came on here, in the family of her owner, a gentleman belonging to Natchez, who put up at the Tremont House. As soon as it was known to the Abolitionists that she was here, a plan was laid to get her away and secure her; and, under some friendly pretence, she was enticed to visit, and was not permitted to return to her master's family. The abduction made some stir at the time of it, and the master had to leave the city without her. In speaking of it, yesterday, she said, "I always had a good home in Natchez, and I did all I could to get back to my master, but they would not let me go any where till it was too late. Then I was left to shift for myself, and I would have done any thing to have got the means to return to Natchez."

Court. It is apparent that these people have been the means of bringing you to shame and degradation, although they probably supposed that they were doing God's service and saving you at the same time. They have unfortunately done you a great wrong.

Lucilla. I am fully aware of it; and do not expect to be better off, unless I can get back to my good old home, where I had every thing comfortable that is required.

Court. I hope you will find means to do so; but your late conduct has been a public and gross offence against our laws, and the least that I think of is to sentence you to two months labor, in the House of Correction.

Lucilla. Me in the House of Correction! What have I done, that I should go to such a degraded place as that? I should never

Denied the protecting care which the interest, if not the feeling of the owner, extends to the slave; subjected to all the prejudice of color; with some of the rights of a freeman, and all the sentiments of a slave; they constitute an intermediate class, having no bonds of common interest, no ties of sympathy to sustain them; too indolent to labor, and too insolent to serve, they are the most depraved and unhappy race under this government. It has been the constant practice of northern writers to dwell upon the oppression and cruelty of the task-master of the south, and the ill usage and sufferings of the slave; but those who are familiar with their domestic institutions well know, that where the agitator is unknown, there is not upon the face of the globe a people doomed literally to earn their bread in the sweat of their brow, who are more cheerful, contented and happy. Examples of fidelity and devotion to their masters not unfrequently break forth upon an admiring world, and but that the agitator is wilfully blind to all such cheering views upon the broad waste of slavery, his restless eye might dwell for a season upon them. In that dark hour of danger, when the pride and the chivalry and the beauty of the south were smitten on the waters by the angel of death, a slave was found coolly and diligently laboring to construct a raft of the fragments of the ill-fated Pulaski, to "try and save his master." Such owners are no tyrants, and such a slave has no taskmaster. Cast him loose from his bondage, and this estimable but humble being becomes that most wretched of the human family—a free negro.

Redeemed from slavery by the mild influence of the laws, by the generosity of their owners, or by the persuasive force of a wholesome public opinion, and translated to the shores of Africa, these men will be as superior to the native races, as the whites are to them. And the prejudice of color being thus removed, the natives may be civilized and enlightened through their agency. They can there blend by intermarriage, without the aid of Mr. Tappan. They may plant the cross amid the sterile sands of the desert, and be the heralds of salvation to a benighted people. We feel little inclination to offend the moral reader by any attempt to expose the ridiculous and revolting scheme of amalgamation; let its projectors be classed with those fanatical advocates of temperance, who would substitute buttermilk for wine in the Lord's supper. It is by colonization alone that the descendants of Ham can be redeemed. There are at present but few spots on the African continent settled for this purpose, and their growth is feeble and sickly, as were the colonies of Jamestown and Plymouth on our own shores. But the little fountains that now well up in the desert may multiply and blend, and roll on until they sweep onward, not unlike their own Nile, in one resistless and

be able to hold my head up again after being there; and I will never go there. I would rather cut my throat from ear to ear, first. Yes, I'll die—I'll murder myself, sooner. Keep me here in Boston, away from my own home, and send me to the House of Correction! I'll never, never submit to such a disgrace. I defy all the officers in court to attempt it; and if they want to see a dead woman, they will start with me for that place.

The officers now removed her in a most violent paroxysm of indignation, and uttering imprecations loud and deep on the heads of those who had ensnared her away from her own home.

{*Best. Post.*

fertilizing stream. How long was it before the early colonists of America toiled up the summit of the Alleghany, and from another Pisgah looked down upon the land of promise? Yet as they descended, in little more than one generation of the children of men, empires have arisen and cities have peopled the wilderness.

The first fruits of abolition we have already gathered, and the branch which bore them is of the tree of death. In its destructive progress abolition would more speedily effect a revolution, but when its wild fury shall have been exhausted, its stormy depths will settle down into a sullen and stagnant pool, not unlike the sluggish waters which sleep upon ruins in the valley of Siddim, containing no living thing within their bosom. Colonization, with its mild and wholesome influence, operating slowly but effectually, will lead the children of captivity forth from the house of bondage to the homes of their fathers, in a clime peculiarly fitted for their habitation. The strong arm of the Deity is no longer stretched forth visibly to chastise and subdue with famine, and pestilence, and fiery plague; but the inconveniences and evils of slavery press with a constantly accelerative force, and may ultimately compel the white man to strike away the fetters of the captive. Although the bars of the prison door may not be again thrown back, and the bonds of servitude forcibly torn asunder, yet, under the blessing of heaven, and with prudent counsels, the good jailer may himself relent, and invite the captive to come forth. But should the abolitionists succeed in their turbulent efforts, in the hour of departure which they prepare, every "lintel and door-cheek will be sprinkled with blood, but not as a token to the red right arm of the archangel that the inmates are to be consumed."

It is not the discussion of this exciting and alarming topic to which the south objects; but they do object to making their slaves a party to the controversy. They object to the artificial formation of a spurious public opinion through the agency of associations acting directly upon the slave and stimulating him to rebellion. For they think with Milton: "Who knows not that Truth is strong, next to the Almighty; she needs no policies, no stratagems, no licensings, to make her victorious." She disdains all combinations, clerical or political. Like the mighty eagle, Truth soars with steady flight and unblenching gaze into the higher heavens, while those timorous companions of her early flight, dismayed and paralyzed by apprehension, can never penetrate those abysses of light in which she floats in solitude, undazzled and unalarmed.

Have these misguided enthusiasts been taught no salutary lessons by the calamities which their interference has heaped upon the red man? Whithersoever they turn, their embrace is death. They have taught these denizens of the forest to resist the settled policy and pledged faith of the federal government in their removal, without which they die. Even in the sanctuary we have heard exhausted all the powers of rabid eloquence—we have seen priests, with all the fanatic raving, but without the inspiration of the Pythoness, depicting in glowing colors to the savage the loss of his home, of his hunting grounds, of the graves of his forefathers, the fields of his bloody trophies, and the bones of his warriors; but they overlook the sufferings of this weak and uncultivated people in contact with the re-

sistless white man on his frontier march, their poverty, their starvation, their necessities, their pillage and murders, and the retributive vengeance, which the strong never fail to visit mercilessly on the weak. How much of these eloquent complaints of politicians and religionists only exist in the fervid imaginations of the declaimers, and how little is there which the understanding approves? We can readily comprehend the reluctance with which the civilized man abandons the comforts of home; but to the roving tribes it is but a change of hunting grounds. With little exception, they have never known a fixed abode. The awful truth constantly presses upon us, that the Indian on the borders of civilization must either be *subdued to inferiority* among a people with whom he can never blend, or he must be *removed or exterminated*. To sympathize with the sufferings of this unhappy race, to feel a chill of horror upon observing the closing scene in the destinies of this doomed people, this decayed branch of the tree of civilization lopped off in the depths of hidden ages, and perishing in the wilderness,—these are feelings which a christian may safely indulge, while, with a heart filled with gratitude for the blessings heaped upon himself, he may beseech the great Arbiter of human fortunes, that he will so guide this free and favored people, that they may avert the degradation and debasement which have overtaken the red man. To teach resistance to the Indian by dwelling upon the oppression of the white man, is to exterminate the lingering remnants of these vagabond tribes, until there will be none left to lift up his voice on the margin of the king of waters, to bewail the untimely fate of his people. The genius that has so beautifully told the melancholy tale of the "Last of the Mohicans," may yet be employed to sketch the instructive history of the last of the red men. It is impossible that these tribes can live in contact with civilization, and retain their independence; neither can they be incorporated among us any more than the negro. Indeed they are one degree further removed than the black man from the pale of civilization. They have to encounter the same invincible prejudice of color, which is unhappily stronger on the point of contact than elsewhere. In the sweat of his brow has man been doomed to eat his bread. The necessity of labor, that first law of humanity, that everlasting canon, the destiny of man since his fall, these people stubbornly resist. No persuasion, no force can subdue them to this stern law, which is the porch of civilization. They will perish in the vestibule rather than enter the temple of civilization through the narrow gateway of labor. From the early settlement of these colonies they have been hovering on the borders of civilization; and notwithstanding all the efforts of missionaries, and the attractive order and beauty of civil institutions, they still remain the same uncultivated barbarians.

But there are considerations connected with the decrees of a superintending Providence, in the government of man, from which the reflecting mind may borrow many salutary lessons in relation to the fallen races of the human family. Sacred and profane history unite in teaching us the awful truth, that national debasement invariably follows national crime. It is a fixed canon in the institution of the world, that no creature can depart from its appropriate function, from the law

of its foundation with impunity. In moral agents, endowed with understanding and free will, Justice the Avenger, punishes every departure from the prescribed rule of action. Individuals, it is true, sometimes appear to escape the punishment due to crime; but let us not forget, that divine justice may be disarmed by prayer and repentance, and that for the wicked there is retribution beyond the grave. But national degradation is the inevitable consequence of national crime. During the latter part of the eighteenth century, when the powers of darkness seemed for a season to have prevailed upon the earth, there arose indeed unbelieving men, who found it necessary in their attacks upon the social institutions of man to proclaim the savage state as a state of nature. But the christian philosopher well knows, that the sublimest of the works of the supreme architect did not come thus rude and unfinished from his hands, and the traditions of all ages, as well as revelation itself, assure us that civilization and science are the primitive and natural condition of man. Thus all the traditions of the east, from which we derive every ray of light, characterize the first ages of man as a state of perfection and light; and even fabulous Greece confirms this truth by commencing the golden age with the origin of things. It is no less remarkable, that this people has not connected the savage state of man with any one of their ages, not even with the age of iron; so that all that is related in her annals of primitive men, who frequented forests and fed upon acorns, and thence advanced gradually to a state of civilization, contravenes the current of her own tradition, or else refers to particular tribes or colonies of degenerated men, returning tardily to that civilization which is the true state of nature. Has not Voltaire himself declared, (and his authority on this subject is everything,) that the "motto of all nations has constantly been that the age of gold first appeared on earth?" Now as all nations have unanimously protested against a state of primitive or original barbarism, that protestation is entitled to much weight.

It is impossible for us to look back into the abyss of time, and discover at what period the aborigines of this country were debased beneath their primitive condition. And indeed it matters not at what time any branch was lopped off from the parent trunk. Concede to us a fall of the human family from an original and more elevated condition, and there will be no doubt of the cause of that degradation, which can be nothing but crime. The moral principle of a people thus degraded has been corrupted, and the consequent anathema has been entailed upon their generations. This depressing force is cumulative in its action, and by perpetually pressing upon the descendants, reduces them at last to what we term the savage state. And this is the degraded condition of fallen man, that Rousseau and his companions call the state of nature.

It has been the common error of the clergy in all ages, to transcend the limits of moderation and truth in the fervor of their zeal. Upon the first discovery of this continent the same exaggerated statements of the character and virtues of the Indian were published by these pious men that we now hear; and in the excess of their philanthropy, similar appeals were made to the interposition of foreign power. In South America, from the bosom of deserts bedewed with their blood,

and fruitful of their labors, the clergy flew to the courts of Rome and Madrid, invoking the interposition of both the secular and spiritual authorities to check the merciless avarice which labored to reduce the Indian to hopeless slavery. Animated with a charity transcending the precepts of the gospel, the enthusiastic priest exalted in order to preserve him; he extenuated every vicious propensity, he exaggerated every virtuous quality in the Indian character to such an extent, that Robertson, in his History of America, cautions his readers not to confide too fully in the narrations of the clergy, on account of their partiality to the aborigines. Another source of inaccuracy as to the character and condition of this people may be found in the philosophy of the last age, which misrepresents the savage state, to underprop its frivolous and malignant assaults upon the social state. Thus the clerical enthusiast and the infidel philosophist unite to deceive us. But it will require little investigation to expose the errors as well of the religionists as of the irreligious. We have only to contemplate the savage to perceive that he has none of those high qualities in behalf of which our sympathies have been so enthusiastically exerted, and that in his present debased condition he can never blend with the white man, or prosper in his vicinage. Look upon him but for an instant, and behold the anathema graven not only upon his heart, but upon his frame of body. He is an ill favored mortal, lusty and ferocious, over whose countenance the light of intelligence casts but a feeble and glimmering ray. Smitten by a terrible power, the two great characteristics of human grandeur, forethought and perfectibility, have been obliterated in the savage. To gather the fruit he fells the tree; he slaughters the oxen bestowed upon him by the Missionary to till his lands, and with the fragments of his plough he builds the fire to roast his food. For three centuries he has dwelt within sight of civilized man, and has obtained from him nothing but powder to destroy his brethren, and intoxicating spirits to destroy himself. And still relying upon the undying avarice of the white man to supply him with these destructive agents, he has never dreamed of manufacturing them for himself. As substances abject and repulsive in themselves are susceptible of still further debasement, so the inherent vices of humanity acquire a darker character in the savage. He is a robber, he is cruel and lascivious, but he is so in a different manner from us. To commit crime we violate our nature, the savage follows his: with the appetite for crime he feels no remorse. While the son murders the father to relieve him from the ennui of old age, his wife will destroy in her womb the fruit of his brutal passion to escape the duties of a nurse. He snatches the bleeding scalp from his living foe, he tears the flesh from his body, he roasts it, and devours it amid songs of triumph; if he can procure ardent spirits, he drinks to intoxication, to madness, to death, insensible alike to the reason which restrains man by his fears, and to the instinct which repels the animal by distaste. He is manifestly a doomed being; smitten for his crimes by an avenging hand in the innermost recesses of his moral conformation, so that he who regards him with an observant eye, trembles as he views.

But if we wish to tremble for ourselves with a salutary fear, if we desire to find objects for our overween-

ing charity in the beings who surround us and who are connected to us by the most endearing ties, let us reflect, above all let the compassionate clergy reflect, that with all our morals, our sciences, and our arts, we are degraded as far below the primitive condition of man as the savage is debased beneath ourselves. Let us not rend the mantle of our charity by fruitless and destructive efforts to stretch it over the obdurate and distant savage, while there are so many among us requiring the aid of the Samaritan. Let us be moderate even in our virtues—the over-zealous priest degenerates into the intolerant bigot and brawling politico-religionist. Let him imitate his Master in the meekness and retiring simplicity of his character. Let us have no fiery tracts thrown abroad like brands; let us have no associations, no combinations, no letters, no pamphlets reviling our southern brethren, no interference with their domestic relations. It is time that the clerical order should be excluded from the political arena—let them visit the sick, and the prisoner—let them console the afflicted, bind up the broken-hearted, bury the dead, and teach the living by example rather than by precept to observe the law, to respect established institutions, and above all to abstain from bearing false testimony against their neighbor. Let the church stand apart from the state.

Such being the melancholy debasement of the Indian people, with whose rise and progress we are wholly unacquainted, but whose awful degradation alone indicates the extent of the crimes they have committed in their generations; it is the first duty of philanthropists who wish to restore them to their former dignity to adopt such measures as the condition and character of these tribes seem to require. If it be true, as we have supposed, that the cause of all the evils which afflict both the Indian and the white man on the borders, is their juxta-position; if it be impracticable for these opposite races to blend harmoniously either from some unknown invincible difficulty, or from some unconquerable repugnance or prejudice; if in the march of civilization the inferior people must give way or perish before the advance of the more powerful; then there is no other mitigation of the sufferings of the Indian than his removal from the vicinage of the white man, and the interposition of such space or such barriers as will abstract from the Indian the opportunity of plunder and rapine, which he never fails to seize, and for which the white man as surely retaliates. From these reflections, it is manifest that the government has adopted and steadily pursues that policy towards the aborigines, which is wisely adapted to the character and condition of that people, and which is well calculated to restore and maintain peace on the frontier. And there is as little doubt, that much of the sufferings of that unhappy people during the last five years has been occasioned by the interference of their northern friends, whose incessant clamor about the rights of the Indian, and the wrongs inflicted by the white man, has incited the former to rebellion, and has stained the hammocks of Florida with the mingled blood of these hostile races. The march of civilization is onward in self-defence. Like the ocean she can never repose, action is essentially necessary for her preservation; to pause is to fall a prey to those savages who prowl around her borders. When Rome was in advance of

the nations of the earth, they fell back before her eagles to the fastnesses of impenetrable forests; but when reposing upon her laurels she became corrupted and debased beneath the martial virtue of the barbarian, the tide of civilization rolled back before the overwhelming torrent of Gothic barbarism, until Alaric pressed forward amid the ruins of the western empire to inscribe his name on the trophies of the Cæsars. Such is the melancholy history of social man, such is the fate of nations. Civilization gradually refines and enlightens, and no sooner is man thus improved, than a corrupt will leads him to abuse his transcendent gifts, and Justice the Avenger of crime, degrades him to a level with the savage. The day perhaps is not far distant, when we shall be enabled to trace the primitive purity and perfection of man in a state of nature—and the gradual debasement of the corrupt nations of the children of men, as well as the merciful dispensations of Providence in raising them from time to time from this state of degradation, and in preparing them slowly for admission once again into the pale of civilization. We ourselves are debased very far below the primitive condition of man, and it is impossible for us to fathom the designs of Providence in relation to us. But as national crime invariably induces national debasement, our rapid advances in the paths of licentiousness proclaim that we can arrogate to ourselves no exemption from the decrees of avenging and retributive justice. The day may be, probably is, distant, although it seems to be a law of nature that whatever is destined to be durable is slow of growth. But our growth has startled the nations of the earth. Yet the destinies of mighty empires are not speedily wrought out; the designs of providence are surely but slowly and steadily matured.

There is in the increasing depravity of our people much cause to apprehend, that Providence will cease to bestow upon us those signal benefactions which have marked our early progress; but the calm observer is neither startled by the unfaithful picture and boding augury of the American divine, nor alarmed by the prophetic aspirations of his British reviewer. We flatly deny the justice of imputing the excesses of city mobs, or the depravity of border men, to the great body of the people. And we confidently assert that notwithstanding the military despotism and rigorous laws of other nations, and the comparative impunity of rioters in this country, there is scarcely a nation of Europe in which there is not more bloodshed and outrage by irregular action of the populace in one year, than there has been in the United States since the declaration of American Independence. We advance a step farther, and question whether in the whole current of history from the institution of governments, to the present day, there has been a people of equal extent of territory and of equal population, whose annals, with the exception of the burning and sacking of the convent in Massachusetts, have been stained with as little popular outrage. It would seem then, that Dr. Channing is mistaken in the apprehension or the desire for a "stronger government;" and that his tory reviewer should have attributed, not our supposed unparalleled depravity, but our unexampled purity of national character, our unprecedented growth and prosperity, to the ennobling influence of republican institutions.

The language of Miss Martineau was thought sufficiently unjust and extravagant, when she charged the south with having purchased Florida, because it was a refuge for their slaves: but the native divine, as if to show the extent of the privilege of speech in a free country, has accused the same vilified people of seeking the admission of Texas into the Union as a market for slaves which they breed for the purpose, and as a means of unjustly extinguishing the claim of Mexico, to lands for which they have purchased scrip from the Texan government. We have already said that we had no concern with the Texan controversy. But supposing the accusations of Dr. Channing to be strictly true, have we no cause to complain of his exclusive kindness and sympathy for the Indian, the negro, the Mexican and the Spaniard, and his deep and solemn denunciations of his Anglo-Saxon countrymen? His benevolent heart overflows with tenderness for the stranger and the savage, and seems to be sealed against the white man. His charity appears to water abundantly the sandy desert and the remote wilderness, but it stagnates into a pool of bitterness at the approach of his fellow-citizens. Are the waters of refreshment still reserved for Ishmael, the son of Hagar, the dweller in tents and the robber of the desert, whose hand is against other men to the end of time? Why not imitate the pervading love of his Master, and when his affections are thrown abroad upon the ocean of life, let the circle which they form, continue to extend its waving ripple until it is swallowed up in its immensity? He is so wholly engrossed with the real and imaginary wrongs of the dark and the red man, that he is insensible to the virtues of the whites. Did not the slaughter of the Alamo, exact retributive justice? Was there no gallantry displayed in the action of San Jacinto? Were no laurels purchased in the defeat—no magnanimity displayed in the treatment of the ruthless Santa Anna? The Mexican hordes led on by this bad man waged a war of extermination; their hands were red with the sign of death with which the compatriots in arms of the Texans, had been sealed; yet they were treated with kindness and mercy.

We have the greater reason to complain of Dr. Channing, because he speaks *ex-cathedra*,—the sanctity of his lawn is invoked to give weight to his testimony. He is an American citizen, supposed to be elevated by the character of his function above the influence of party or local feeling; he professes to be consumed with love of country, and to be steadfast in his faith as to the stability of our institutions; and yet he mingles freely in the discussion of the most agitating political questions; he advocates schemes which have already shaken and which still endanger the Union; to check the growth of slavery in the south, he invokes the interposition of a foreign government, and he supplies the friends of "stronger governments," and the enemies of republics, with endless arguments to inveigh against the demoralizing tendency and frail texture of republican institutions. The reveries and libels of foreigners we might safely despise, though we well knew that the trumpet of Miss Martineau had been filled with the voice of the northmen, for they spoke in a tone to awaken the sleeper and to startle the deaf. Let us not conceal the humiliating truth. These men, in their mistaken zeal, become the most dangerous

enemies of the cause of freedom, of the peace and prosperity of our common country, and labor in that most destructive of all earthly missions to shake the faith of our people in the strength and stability of their institutions. And these boding dreams, these hallucinations of minds heated with intemperate zeal, furnish a goodly and perpetual repast over which the enemies of republican establishments gloat with rancorous rapture.

The policy of the government in relation to the removal of the Indians, being definitively settled, let us reflect a moment upon the fatuity of those agitators who seek to resist the action of the executive by inciting the Indian to rebellion, for such is the only result of their interference. The accumulation of Indian tribes on our southern and western frontier, where the slave population is most dense, both of which classes the northern fanatics constantly feed with discontent, concentrate a force hostile and formidable to the white man; and in the event of foreign interposition, which these enthusiasts openly invoke, the Mexican, the Indian, and the Negro, fortified with all the sympathies of their northern brethren, are prepared to assail the Anglo-Saxon of the south. Are these fit allies for the northmen? The British power is invoked. Is this allegiance to the Union, or fidelity to confederates? The great family of European nations has already been shaken to its centre, thrones subverted, and the superstitious observances of centuries dissipated by the first-breathings of free principles which our French allies of the revolution introduced among them. To weaken our institutions at home by domestic strife, to arm the cold, calculating fanatic north, against the impatient and fiery south, to repel the working of our principles abroad, is the policy of those nations; and they are not a little indebted to those churchmen who delight in evil auguries, and who exaggerate the licentiousness of our people as if it were the greatest of public virtues.* And when one so distinguished as Dr. Channing volunteers his testimony, it is seized upon with avidity, and published to the world, not as the revilings of a prejudiced foreigner, but as the impartial declaration of a native citizen, a vessel of election, an oracle of truth, one anointed of heaven.

The language of European writers in relation to our civil and political establishments, betrays that degree of ignorance which is the mother of fear. The true character of the colonists and the nature of their institutions have never been properly understood by the people of England. Negligent to observe the progress of the human mind in the new world, the inquisitive speculations of its inhabitants upon the natural rights of man, and their extraordinary enterprise in the de-

* But for the unusual length to which it would have extended our article, we would have invited the attention of the public to other consequences of a serious character, which flow from these exaggerated statements of the lawlessness of our people and the weakness of our government. They have already occasioned difficulties, by many deemed insuperable, in the settlement of the outrage at Schlosser on the Canada frontier. Our own writers have so frequently published to the world the unbridled licentiousness of our people, and the inability of the civil authorities to restrain them, that foreign nations justify an invasion of our territory, and the capture and cuing out of a boat, upon the grounds assumed by Mrs. Trollope, Dr. Channing, and Miss Martineau. But a full exposure of all the consequences of these imputations upon our moral and national character would require a volume.

velopment of the plenteous resources of the country ; when the long suppressed energies of this youthful but adventurous people burst forth into successful action, the disciplined European, trammelled by hereditary prejudices and observances, regarded it as a transient ebullition of feeling worthy only of derision. They mistook it for the mountain torrent that would pass away with the storm that gave it birth : they knew not that it was the stream of human opinion, which the accession of every day would swell, and which was destined to sweep into the same oblivion the resistance of conservative bigotry and powerful oppression. The uncompromising love of freedom which induced the early colonists to abandon the homes and the graves of their fathers, and to subdue a wilderness in order to escape oppression ; the dangers to which in their infancy they were exposed from the vicinage of a murderous foe, and the hardships incident to their new situation, naturally inspired them with an energy of character and a loftiness of soul, unknown to their European kindred. The restraints of the feudal tenures had been left behind them, and they were warmly attached to the soil upon which they trod ; they were the "freeholders of the land, and the rent day had no terrors for them." The equality introduced by the abolition of the law of entail and primogeniture, the general diffusion of useful and practical knowledge, the deep stake each individual had in the government, could not fail to infuse into their bosoms that love of liberty, that independence and elasticity of character, that jealousy of power, which has led to the establishment of a frame of government which is at once a blessing to mankind, and the hope of the nations. If we revert to the continent of Europe, we will discover that the principles upon which our government is framed, had long been recognized, although no people had carried them into practical operation. History is an immense collection of experiments of the nature and effects of the various forms of government. Some institutions are experimentally ascertained to be beneficial, some others to be indubitably destructive to human happiness. The philosophers of Europe had, for a century preceding our revolution, listened intently to the testimony of ages, and of nations, and collected from them the salutary principles which regulate the mechanism of society, and recognise the unalienable rights of the citizen. The nature and excellence of free institutions had been reduced to demonstration, yet these convincing arguments influenced the councils of no government, and awakened to resistance no oppressed people. It was at this propitious period when all Europe presented the repulsive spectacle of a liberal theory opposed to a barbarous practice, when the germs of free institutions had taken root in the understanding and were entwined with the affections of man, that our forefathers escaping from the oppressive and time-honored establishments which pressed them to the earth, sought at the extremity of the ocean, a clime, in which they might substitute for established formulas the pure and voluntary worship of the Deity, and where they might erect political institutions originating in compact, springing immediately from the will of the people, and reposing upon the rights of man. Deeply impressed with the injustice and the absurdity of the various constitutions which chance had scattered over the world, the com-

prehensive intellect of our revolutionary fathers was exerted in erecting a stupendous and imperishable fabric, which reposing on the immutable basis of popular right and general happiness, should exclude the defects and combine the excellences of the multiplied political establishments known to man. Antiquity could consecrate to them no rule which reason did not respect ; and they shrunk from no innovation to which reason conducted. Guided by the polarity of reason, they stood out from the shore, and leaving the ancient landmarks far behind them, they sought by a bolder navigation to discover in unexplored regions the treasure of public felicity. And they found it. Notwithstanding the vaticinations of men of evil augury and timorous apprehensions ; notwithstanding the eagerness with which these sickly dreams of a distempered fancy are repeated, by those who can neither appreciate nor admire our government, as if they were the breathings of holy prophecy ; we, the American people, unseduced from our allegiance, unshaken in our confidence in the excellence and permanency of our institutions, feel, and are thankful that the Ark of the Covenant is among us. If not more favored, at least more thankful than the chosen people of Jehovah, we will not proudly exult, but meekly bow down in gratefulness for blessings, such as heaven in its mercy has seldom vouchsafed to man. "Ask of the days of old," exclaimed the indignant prophet when he rebuked the repining Israelite, "ask of the days of old, that have been before thy time, from the day that God created man upon the face of the earth, from one end of heaven to the other end thereof, if ever there was done the like thing, or it hath been known at any time"

Let us assure Dr. Channing that we are not the depraved people he has imagined us, and that in the whole book of recorded time, he will scarcely find a people equally numerous who are less depraved. And as the British reviewer bases all his prophetic aspirations of our speedy ruin upon the unfounded charges of the learned divine, the framework of his argument falls, because the foundations are hollow and unsound.

There is in France a school of philosophers and politicians, who have been appropriately denominated *raz mistics* ; they are not unfrequently led by clergymen, and constitute, in that crater of political convulsions, the *MOVEMENT* party. At the very head of this band of agitators is the celebrated politico-religious demagogue, the Abbé de la Mennais. Reformation of abuses by the calm and peaceful agency of wholesome public opinion, has no attraction for them. The whirlwind of revolution is the only agent fitted to their rash designs and heated imaginations. And this morbid desire for revolution does not seem to be entirely prompted by that love of change or excitement, or by that ambition which usually impels men to subvert existing establishments ; no, they are *FANATICS*. They anticipate stupendous results from the action of enthusiastic associations forcing public opinion into rapid and straitened currents, and overthrowing in its resistless progress every barrier. By an agency independent of, and transcending all law, they expect through a long chain of revolutionary convulsions to effect a certain social revolution, which is to consummate the happiness of the human race, by abolishing every vestige of slavery, and introducing a happy millennium

of universal equality. Let us not incline to ridicule this fanaticism as too wild and destructive in its character to engage the attention of reflecting men. It has its attractive as well as its dark aspects; it is to all appearance a mingling of heaven and earth. There is widely disseminated among us, particularly in the northern and eastern states, a peculiarity of mental character, in which a strong native sentiment of religion is blended with a powerful tendency to skepticism and infidelity. In the delirium of hope, these men divert all those aspirations which properly belong to a future state, towards speculations upon the perfectibility of mankind on earth. Unbelievers of ardent and imaginative temperaments are very prone to fall into this fanatic trance; for, when incredulity draws an impenetrable veil over the future, it is perfectly natural that men should become the dupes of these gross delusions. And why should this astonish reflecting men, when the distinguished divine, who has become the apologist of Kneeland, the blasphemer, boldly sustains Tappan, the agitator?

We will invite public attention to a few more extracts from Dr. Channing's libel upon our character and government, and hasten to conclude. "We are a restless people," says Dr. Channing, "prone to encroachment, impatient of the ordinary laws of progress, less anxious to consolidate and to perfect than to extend our institutions, more ambitious of spreading ourselves over a wide space, than of diffusing beauty and fruitfulness over a narrower field. Henceforth we must cease to cry peace, peace. Our eagle will whet, not gorge its appetite on its first victim; and will snuff a more tempting quarry, more alluring blood in every new region which opens southward. To me it seems not only the right, but the duty of the free states, in case of the annexation of Texas, to say to the slaveholding states, '*we regard this act as the dissolution of the Union.*' We will not become partners in your schemes of spreading and perpetuating slavery, in your hopes of conquest, in your unrighteous spoils. A PACIFIC DIVISION in the first instance seems to me to threaten less contention, than a lingering, feverish dissolution of the Union, such as must be expected under this fatal innovation. We shall expose our freedom to great peril by entering a new career of crime. We are corrupt enough already," &c. "Still I am compelled to acknowledge an extent of corruption among us, which menaces freedom, and our dearest interests. That the cause of republicanism is suffering abroad, through the defects and crimes of our countrymen, is as true as that it is regarded with increased skepticism among ourselves. Abroad, republicanism is identified with the United States, and it is certain that the *American name has not risen of late in the world.*" Deeply as we revere the function of the priesthood in its appropriate exercise, a love for truth and justice to our common country, compels us to pronounce these extracts a gross libel on the American character and government. In the just indignation which every man who respects the national character must feel for this unwarrantable and unfounded abuse by a christian divine and native citizen, there is little inclination to complain of the *Io triumphes!* which the British reviewer pours forth abundantly over the moral degradation of a people, who, before the publication of Dr. Channing, had persuaded themselves that they were the purest,

and happiest, and most intelligent of the sons of the children of men. It is from publications of this kind, that the enemies of republican institutions in the old world derive those atrocious calumnies, which represent us to the nations of the earth as the most turbulent and demoralized of people. The article of Dr. Channing had probably reached Europe when M. Lackanal read to the French Academy of Moral and Political Science, the following extract from his work on the United States, to which we append a few observations by a Paris correspondent:

"According to M. Lackanal, in the United States, 'nothing is easier, than divorce—nothing more secure from judicial process and social disgrace than insolvency.' His account of our negro slavery, and the condition of the free colored people, rivals at least that of Miss Martineau. 'The Central or Federal Executive power is without means of enforcing the laws of Congress with the States, who resist whenever they please. With every American, individualism or personal independence is at its height. No American entertains the least veneration for the law, or respect for the magistrate; he creates both one day; he can unmake them the day after; he never forgets that they are his work. The people literally regard the President, the members of Congress, the judges, as their servants, and give them no other appellation. They slap them in the face,—so great is their irreverence: witness the slap dealt to President Jackson, and with impunity. If a member of Congress ventures to call for laws to repress popular excesses, he only provokes new storms,—this is what happened after the conflagration of the Ursuline convent near Boston.' Lackanal then read details of General Jackson's treatment of legislators and judges at New Orleans, of the execution of Arbuthnot and Ambrister and similar measures—adding—'*tout cela pouvait avoir son utilité; mais ces faits sont peu d'accord avec le respect qu'on professe en France pour les garanties de la loi.*' M. Lackanal thinks that General Jackson, while President, let loose the reins of Democracy, in order to become at length a necessary dictator. 'In fine, the futurity of the United States is a curious and pregnant problem. Will these wild democracies ultimately fall into the track, shape and polity of the old communities of the world, or will the elements now fermenting in America, engender a new régime and a new aspect for human society?' I leave these questions to the soothsayers. With regard to the superior respect manifested in France for the guaranties of the law, let the point be examined with a little reference to the domestic history of France under the old Bourbons, during the revolution, or even since the revival or vindication of the charter in 1830. France is still under the government of state necessity; and the popular excesses are far more numerous and grave, than those which occur in the United States. The riots at Tours, Amiens, Angouleme, Bordeaux, Macon, of recent date, cost more blood than all the disorders of the kind which have occurred in the United States since the date of their constitution. Last week we had information of a female commotion on the banks of the Rhone. The women assembled in great numbers, broke down some dykes just constructed, and fought a hard battle with the soldiery called in by a sub-prefect to disperse or capture the ladies. Were it not for the military force always at hand, what would be the ostensible respect for law?—Unfortunately, throughout Europe, the influence of law seems to be owing principally to the idea of an overwhelming military coercion. Law is received as the work of selfish power, not of executives and legislatures instituted and acting for the national weal. However, the comparatively few disorders, and the instances of *Lynch* justice, of which so much is made in the London and Paris papers, together with the historical character of European democracy, have produced an almost universal impression that the American citizen is and must be

anarchical; and it is upon this supposed *lawlessness* that the writers on the Canada rebellion count as a sure and all-sufficient auxiliary for that rebellion, whatever may be the dispositions and proclamations of our General and State authorities."

That we shall ultimately attain our destiny—that our decline and fall will at some future day add another to the many lessons of experience, to instruct future generations—will only furnish another proof of the perishable nature of all human institutions. But that we shall demonstrate the great problem of the capability of man for self-government, and of the capacity of republican institutions to secure the greatest share of happiness and freedom to the greatest number, we can never doubt, so long as the past is admitted to be an index to the future. Indeed it is by no means improbable that the Union may be dissolved, and that we may be forced into new associations by the agitators of the northern states. And the blow which severs the bond will come from the south, and the northmen will be startled in the midst of their agitations, by the decisive action of a people who have long since been convinced that upon the delicate subject of slavery there is no longer any union or sympathy between the free and the slave states. That blow already impends. Indeed we have twice seen the union of these states endangered. Once by New England in the dark hour of adversity, and once by South Carolina in the floodtide of prosperity. And during the session of the present Congress, when the southern members were driven from the hall of representatives by the abolitionists of the north, the Union for the time being was virtually dissolved.

But there are better days, there are brighter auspices before us. Even the reverend gentleman himself, prophetic of evil as he is, is constrained to admit that among dark omens he sees favorable influences, remedial processes, counteracting agencies. And we will venture to predict, that another lustre will not have passed away before the whole band of agitators, with their clerical leaders at their head, bowing down before the indignation of a long suffering people, will be made to confess and to feel that fanaticism is not religion, that intemperate zeal is not charity, and that political religionism is only calculated for the meridian of Spain. It is a melancholy but growing conviction, that a considerable portion of our clergy is falling away from the sound morality and staid sobriety of the fathers of the American church. Ambition seems still to be a weed of quick and early vegetation in the vineyard of Christ; and surpliced priests, forgetful of the sanctity of their function, and swollen beyond the girth of the canon, plunge headlong into the turbid waters of political controversy, and instead of being ministrants of peace and good will, are constantly obtruding themselves upon the public, and mingling in the most exciting and exasperating discussions. Sterne was a lewd hypocrite, and has, we believe, had no imitators in this country; but the politico-religious demagogue, Swift, has many competitors for the vile crown which he preeminently merited. It is because of our reverence for the clerical order, that we regret at all times to hear the voice of one consecrated to christian meekness and charity, lifted up amid the political clamor, where nothing pure can live and retain its purity. The forum is no place for the priest; and if he be earnestly devoted to the service of his Master, the widow and the orphan, the sick and the prisoner, the sorrowful and the dying, all the ministrations of charity will so engage his feelings and occupy his attention, that he will have little inclination

or time to abandon his appropriate functions to fan the flame of political excitement, or to seek distinction by mingling in the heady current of religious or political fanaticism. When not employed in the functions of their ministry, prayer in the solitude of their chambers would suit them far better than the publication of letters to eminent statesmen, derogatory to the national character and morals. They were consecrated to minister to the spiritual necessities, not to pander to the intolerant feelings of men; they were set apart to bless, and not to curse mankind.

Whether we look to the extent of our territory, embracing every temperate clime, and teeming with every variety of production, or to the character and promise of our free institutions, evidences of the munificence of a bountiful Creator crowd around us, and impel us to maintain that union upon which much of our happiness and security depends, and which none but ourselves can put asunder. Licentiousness and insubordination, the impatience which frets under a system of established order, and the fanaticism which would hurry man by unnatural stimulants towards unattainable perfection, these are the restless and natural enemies of republican establishments; and the agitator and politico-religionist are the high priests of *intemperance* and *misrule*. We have opened a new volume in the book of man, more precious than the last of the Sybil's. We have collected from the wisdom and experience of departed ages a new theory of government. It is an experiment ripe with promise to unborn generations. We have no past history of our own to guide us; we stand forth before the nations of the earth bearing through a wilderness the consecrated emblems of freedom, and if, after a weary pilgrimage, we shall attain the promised land, and infuse the spirit which animates us into stable and permanent institutions; if we shall kindle the divine flame of liberty upon altars surrounded and protected by a nation of invincible freemen; if we shall substitute, in the structure of governmental machinery, the controlling power of mind for absolute will, and rational equality for artificial checks and privileges; then may the governments of the old world tremble for their time-honored and crippled observances, for the ancient despotisms will be crushed beneath the vast and magnificent structure of democracy, which is already pushing its foundations far and wide, into the confidence and affections of mankind. It is this principle of democracy, now in the full sweep of successful experiment, that alarms the despotism of the old world, and induces its votaries, with thoughts that are fathers to their wishes, to found, upon such unmerited libels as those of Dr. Channing and Mrs. Trollope, prophetic arguments of our speedy dissolution. These are men whose thoughts, feelings, habits, associations and prejudices, are closely interwoven with things of the olden time, and have embraced with a thousand delicate tendrils which may be sundered but never disengaged, the crumbling ruins of the ancient fabric, whose mouldering condition is concealed from themselves by the luxuriance of their affections. They look upon all change as ruin, and all decay as the fruitful source of life and beauty. Although they seem to walk with eyes wilfully darkened, yet in their hearts have they trembled; for they have felt the agitations beneath and around them, and they "grope tremblingly among the bristling energies of popular feeling as if they were on the crater of a volcano." They live with the past—they have no hope for the future; and the spirit which ani-

mates our institutions, by a single breathing would shiver the enchanted talisman which guards all their treasured wealth. But for us, we are a new people, springing at once into the full vigor of life, unafflicted with the weaknesses of infancy or the palsy of age; we have no records of the past—no traditions of glory; we have commenced our sublime career; our associations, our hopes, our honors, are all with the future; in the past we behold nothing but the sufferings of the many and the crimes and oppressions of the few—and shrinking from the contemplation of the dark ages of man, we have opened a sealed book, a new volume, filled with the promise of happiness and moral excellence and dignity to the human family, under the influence of the equality breathed forth in every lesson of that other book, which is called the book of life. We are in the bud and promise of blossom and fruit; and like the rod of the prophet in the tabernacle, the staff upon which we lean blooms and fructifies. Let not the monarchists of Europe, misled by the intemperate language of enthusiasts or agitators, hug themselves in the forlorn hope that we shall find it necessary to borrow their artificial checks upon the will of the people, and let not Dr. Channing persuade himself that we shall require a "stronger government;" our forefathers have impressed upon their descendants too lively an image of their sufferings under the oppressions of kings and nobles, to permit them to abandon their own pure faith to bow down before such idols in their western asylum. We are now the only nation in whom the vital principle is active and progressive. Other nations have been—their onward career is closed—their history is written in the fate of other empires which have preceded them in the march of ruin. But in the structure of our own beautiful edifice, it would appear that all the salutary lessons of history had been gathered and studied, and that the temple destined to flourish forevermore, had sprung up into fair and beauteous proportions, not unlike the foam-born Cytherea from amid the wrecks of ages on the stormy shores of time. Our institutions are based upon a sound morality; and the genius of christianity has imparted a portion of its immortality to the institutions which embalm it. What a sublime destiny is ours, and how immeasurably beneath contempt do those sink, who affect to see in casual excesses that ruin which they rather desire than anticipate. What a sublime destiny is ours? Of that Anglo-Saxon race peculiarly constituted for freedom, with political institutions admired by the world, and only feared by its oppressors, with a prosperity like that of the Samian prince, so startlingly stupendous as to be its only evil omen; carrying civilization into the fastnesses of the forests; erecting empires and cities in the wilderness, in one short generation of the children of men; with one arm stretched forth towards the abode of winter, and with the other reaching towards the tropics, with opposite oceans for boundaries; to whom is it given to calculate the future elevation and moral grandeur of this people? And even while men of limited views discuss the excesses of the border, the frontier line has moved, and the theatre of semi-barbaric strife has already been subdued by all the refinements of society. Before another century shall have elapsed, empires will have sprung into being which will render feeble the voice of those who demand the abolition of slavery. When this unhappy race shall have been fitly prepared for freedom, when their emancipation can be effected with safety to the white man,

and when the slave states themselves in their own good time, shall deem it wise and proper, then, and not before, will the sons of Ham go forth from the house of bondage. The single enemy, the natural foe of our institutions, is licentiousness; for as all free institutions repose on the broad basis of morality, whatever tends to introduce insubordination is eminently destructive. And whenever the fanatic, the abolitionist, the politico-religious demagogue, in a spirit of wanton mischief or misguided zeal, throw their fire-brands among any portion of the people, and stimulate them to rebellion, let us reflect upon the wisdom of the Romans in the purer days of the republic, when they represented LICENTIOUSNESS AS THUNDERSTRUCK BY HEAVEN AT THE MOMENT SHE STRIVES TO BREAK A TABLE OF THE LAW AND THE BALANCE OF JUSTICE.

Yet we entertain no serious apprehensions of the consequences of clerical interposition in secular and political affairs; for, however deeply enthusiasts may deplore it, the age of crusades, like the age of chivalry, is past. Although our peace may be fearfully disturbed for a season, and the Union seriously threatened, the influence of the clergy in this country will ultimately be restrained within its appropriate sphere; and the moment its members mingle with excited crowds of citizens, making broad their phylacteries with strange and unholy characters graven thereon, they cease to compel or to merit the reverence of reflecting men. They may bring religion into contempt with the mass of the people; but they can never shake those establishments or dissolve that Union, which were founded in a deep jealousy of their controlling influence and frightful corruption in other lands. But if, instead of inciting the angry and vengeful feelings of the weaker portion of our people, the clergy would interpose to inculcate patience, forbearance, and brotherly love; if, instead of inflaming the passions which alienate the northern and southern states, and coolly recommending disunion rather than the erection or admission of slave states into the confederacy, ministers of the gospel would teach us how pleasant it is for brethren to dwell together in unity; if, instead of pandering to the coarse appetite of monarchists, by collecting from every filthy deposit straggling instances of the profligacy of border morals or city license, and proclaiming them to the world as conclusive evidences of prevailing immorality and republican licentiousness, they would (if indeed they must transcend their sacred function,) vindicate the character of our free institutions and the morals of our people, notwithstanding occasional outrages; if they would discard from their alliance in behalf of the Indian, the slave and the Mexican, the "friends of stronger governments" in Europe, and uphold and sustain instead of disuniting and traducing our people and government; then, would our march to eminence be peaceful and prosperous, and before the curtain of time shall have fallen upon another century, unborn millions throughout the vast and untrodden regions of our productive soil, gathered together, the children of oppression, from the four winds of heaven, men of every tongue and clime, will exhibit to the world the sublime spectacle of a republic of boundless extent of territory and unprecedented populousness, flourishing in stable security upon the broad basis of popular will. The capability of man for self-government will have ceased to be a problem.

We may be mistaken in our judgment, but we are fully persuaded that if members of the clergy had

never promoted or sanctioned the efforts of the abolitionists in a spirit of misguided philanthropy, the present unhappy state of feeling between different sections of the Union would never have existed. This interference of the ministry with political discussions, this prompting of popular and sectional delusion, is eminently wrong and intolerably disgusting. But though we are indignant, let us be strictly just. In the American church there are meek, unpretending, and godly men, who stand aloof from these vexatious movements, and confine themselves exclusively to the work of their divine Master. And it is proper to state, that in the appeal we have now made to the clergy in behalf of religion and humanity, we have addressed ourselves to that portion of the ministry alone, which, feeling the justice and truth of our remarks, will stand rebuked, and therefore indignant. Entertaining for the former class esteem and reverence, we have no apology to offer to these latter for the boldness, it may be the presumption, with which we have spoken unwelcome but salutary truths. Engaged in a good cause we have no false delicacy, no priestly apprehensions. But while we respect a well-ordered priesthood, we love our common country; while we revere religion, we detest fanaticism; and while we are pleased to behold under benign auspices, clouds of incense ascending in peaceful union from altars of every denomination to the throne of grace, we abhor **POLITICAL RELIGIONISM.**

Let clerical agitators beware. In rending the tree with Prospero to liberate the imprisoned spirit to do their bidding, let them take warning from the impressive lessons of antiquity, lest its reaction be destructive to themselves. But we will not despond; for, these assaults, however continuous and violent, can never overthrow the muniments which surround us; and there is a detergent energy in our system, which, however tardily excited, will effectually repel them. And when the "deluge of fanaticism shall have fallen back from the Ark of Freedom, the dove will go forth with his olive branch," the harbinger of peace and tranquillity, and the beautiful bow will be hung out in the heavens, the emblem of reconciliation.

In our progress to eminence, we have not, like other nations, to pass through a tedious pilgrimage; separated from the nations of the earth by the ocean, we have no enemies to subdue; no sudden reverses of fortune to apprehend; springing at once into the vigor of early manhood, we have no early history to compose; we have only to fill up the measure of our dominion and glory. We shall sooner than other people enter upon the mature age of nations, and behold mind asserting its supremacy; animated by those patriotic emotions which glowed in the bosoms of our forefathers, we will speedily seek the enduring glories of peace, and by devoting all our energies to mental improvement, will adorn with all the triumphs of genius the land of our nativity. And when our power shall have attained its height, and our government its magnificence, who shall prescribe limits to its science or refinement? Wherefore shall we not attain to those heights of knowledge, which, restoring us to the primitive range of intellectual vigor, will assimilate us to those men of the olden time who were deemed worthy to hold friendly converse with angelic spirits? Yet the star of our destiny must ultimately set forever, for the only star that gives promise of immortality is the one which conducted the eastern sages to the feet of the infant Redeemer. Other nations have perished, and left behind them a moral and a memory of desolation, and

the scattered vestiges of their magnificence are at once the evidences of the pride which goeth before ruin, and the prompters of mournful and chastening feelings. The successor of the fisherman sits upon the throne of the Cæsars; the descendants of Ishmael, whose empire extended from the Atlantic to Bagdad, the seat of the Caliphs, from the gardens of Cairo to the shades of the Alhambra, have been driven back to the sandy deserts of Arabia; and the dynasties, which now seem to be firmly established, must yield to the empire of fate and furnish new lessons for the future. And although speculation on this subject may seem to be profitless, inasmuch as it is given to no man to lift a corner of the veil which overshadows the future; yet when we reflect upon the moral culture of our people, the nature of our institutions originating in the consent of the governed, and founded upon the purifying and salutary principles of christianity and freedom, we may justly anticipate a longer duration, a more sublime destiny, than has marked the career of other governments, whose foundations have been less stable and permanent. When by the slow and peaceful operation of wholesome public opinion, we shall have emancipated the slave; when through the agency of a sober and pious ministry, we shall have civilized the savage on our frontier, we shall have no Goth to fear like the Roman, no Moor like the Spaniard, no Arab like the descendants of Constantine; but we shall attend singly to the preservation of our Union, to the intellectual and moral culture of our people, to the development of our vast resources, and to the perfection of our beautiful system. And after having attained this elevation, when the whole fabric shall slide from its foundations and crumble into ruins, we shall not, like the cities of the desert, like Babec and Palmyra, like the ancient seats of empire and the arts, like Rome and Athens, leave only vestiges of our former grandeur to attract the regard of future generations; but we shall bequeath to man those indestructible principles of free government, which though they cannot impart their immortality to perishable institutions, will yet secure to the children of men, to the consummation of ages, the greatest possible moral elevation, the greatest political equality, and the purest social happiness. But to attain this sublime elevation, beyond which on this side of the grave, man has no hope and heaven has no boon, let us bear constantly in mind that we must realize the type of Roman virtue, and smother the thunders of the Olympian Jupiter to "**SMITE LICETIOUSNESS WHENEVER SHE STRIVES TO BREAK A TABLE OF THE LAW OR THE BALANCE OF JUSTICE.**"

MR. MAURY AND MISS MARY.

Mr. Maury and Miss Mary,
Of graver talk grown weary,
Essay'd to task their cunning,
In the pleasant sport of punning.
Said the former to the latter,
"Far be't from me to flatter,
But certainly 'tis true,
That if 'twere not for U
Most gladly I'd be Mary."
The ready witted fairy,
Prompt not to be outdone
In compliment or pun,
Replied, "If I had U
I would be Maury too."

Washington City.

BURTON; OR THE SIEGES.*

A Romance, by J. H. Ingraham, Esq., Author of "South West," "Lafitte," &c. 2 vols. 12mo. Harper & Brothers: New York. 1838.

The author of this excellent novel is gaining for himself a distinguished name as an American novelist. We first hear of Professor Ingraham as a writer, through the pages of a book entitled "The South West, by a Yankee," published in January, 1836. This is a book of travels in Louisiana and Mississippi, containing valuable statistical information, fine descriptions of scenery, and graphic and racy sketches of manners and customs in that interesting, and hitherto little known portion of our country. The work originated from a private correspondence with a friend, who placed the letters, without the knowledge of their writer, in the hands of the editor of a Natchez paper, who published several of them. The truth of their descriptions, and their admirable style, (for which the writings of this author are distinguished,) attracted the attention of the press—and the letters were widely copied and praised. At the suggestion of his friends, the author was at length induced to write a book on the country, with which his letters showed him to be so familiar. The two volumes called the "South West," is the work he produced, and it at once won for him enviable reputation. Encouraged by the success of this work, in July of the same year, he wrote a novel called "Lafitte," which, though hastily written, (composed in less than six weeks, we believe,) and never copied, from its admirable style, and wildly thrilling story, became one of the most popular fictions ever issued from the American press. We reviewed it at the time, and although we did justice to the talents and genius of the author, we objected to the tone of the work—the moral of novels having bold, bad men for their heroes, however skilfully managed, being always of questionable utility. Within the last month, the author has put forth a third book which gives title to this notice.

We sat down to the perusal of this work, with the feeling that the reputation of the author as a novelist would be made or lost by it. It appears to us that it is not a very difficult matter for a young man of brilliant imagination, active fancy, and some invention, to sit down and write a novel for the first time. In the heads of such persons there are a thousand wild thoughts, romantic fancies and crude conceptions; a myriad of dazzling images, and a confused chaos of brilliant material, floating hither and thither without compass or aim. In a first novel, these will find vent. Every thing he has ever thought or dreamed of, heard or read, digested or undigested, will here find "habitation and a name." It will be the receptacle of every thing he knows or guesses at, and when it is completed, his brain will be like an exhausted receiver. His book will create a sensation—**emphatically TALK**, and great things be prophesied of the successful debutant; but the author is never heard of again—or if so, it is to

thoroughly damn himself in a second book. This is the secret of the existence of so many men who have "written a book," and only a book. With something like misgivings of this kind, with regard to the author of that glittering production, "Lafitte," we opened "Burton." As we progressed, each page reassured us, and we had not read half through the first volume before we gave ourself up to its perusal without fear of shipwreck, and permitted ourselves to be carried along with that delightful abandonment with which we have hurried through the pages of Scott. We do not here compare Burton with any of the Waverly novels. It is too American to admit of this. But in the style we are reminded of Sir Walter Scott, almost on every page: though without imitation, still the author shows that he has made this great model his careful study. We are glad to see this, for it promises well. In many of his finer passages he seems to have paused to study how Scott would have expressed such and such thoughts—and written accordingly. This seems to be wherein the secret of his resemblance lies. The care with which he has formed his style is most strikingly apparent, when contrasting "Burton" with "Lafitte." We see the same hand in each, but now it holds the burnisher where then it held the chisel. Now to the story of "Burton," the hero of which is Aaron Burr.

When the American colonies rose in arms against Great Britain, it will be remembered that the first step of the colonial army was to plan an expedition against Canada. The army was divided into two divisions, one of which, under Montgomery, was to penetrate into Canada by the way of Lake Champlain, and fall upon Montreal; the other under Colonel, afterwards the traitor, General Arnold, by the way of Maine. It was planned between the two leaders, that which ever arrived first in Canada should send a messenger to inform the other, so that the two armies could form an immediate junction and act in concert. When Arnold arrived on the borders of Canada, he assembled his officers and called for a volunteer to go forward and inform Montgomery of his presence. Young Burr, a volunteer in Arnold's division, immediately offered himself for the expedition. In the disguise of a monk he left the army, and hastened forward on his perilous way. It is on the second evening of his journey that the novel opens, and introduces him to the reader in the following words:

The bells of a ruined monastery in the vale of Chaudiere were chiming the hour of evening service at the close of a cold windy day in the month of November, seventeen hundred and seventy-five, when a single traveller, in the garb of a Roman Catholic priest, appeared on the skirts of a forest, that, sacred from the invading ploughshare or the axe of the woodman, stretched many leagues into the province of Maine. His steps were slow and heavy, as if he had travelled many a weary mile of the vast wilderness behind him; and, when the north wind howled at intervals through the wood, he drew his garment still closer about his person, and bore himself with a sturdier step; but, nevertheless, his slight frame and vacillating limbs did not promise to withstand for a much longer space such rude assaults.

Although faint with fasting and toilworn with long travel, yet the sound of the convent bell, as it swept past him on the wind, infused additional vigor into his limbs; and roused to renewed exertions, with an exclamation of joy he hastened forward to a slight eminence which rose in his path. From its summit he

* We are indebted to the politeness of Mr. R. D. Sanxay, of this city, for furnishing us with a copy of this admirable work; and would remind the public that it can be obtained at his book store.

beheld a prospect that fully rewarded him for all the hardships he had endured in his lonely pilgrimage through the wilderness. Beneath him lay a secluded and pleasant valley, about a league in breadth, guarded from the wintry winds that swept the highlands, by a chain of hills, wooded to their tops with forest trees, the lingering foliage of which was dyed with every hue of the rainbow. Through its bosom the Chaudiere flowed, in a thousand romantic windings, towards a scarcely visible opening in the range of hills to the north, through which to pour its tributary waters into the St. Lawrence.

* * * *

After gazing, until twilight rendered distant objects dim and uncertain, upon the scene so unexpectedly presented to his eyes, long familiar only with the gloomy grandeur of pathless forests, occasionally relieved by the hut of their savage denizen, the traveller gathered the folds of his robe beneath his belt, and grasped his staff resolutely; then for a moment fixing his eyes upon the towers of the island convent as the last chime of the bells ceased to echo among the hills, he said, as he prepared to descend a rude path, if the scarcely visible track left by the hunter or beasts of prey may thus be denominated,

"There shall I find what I most need, a night's repose; and, if all tales be true, good and substantial cheer withal; for the reverend fathers, while they have care of the souls of their flocks, are not wont to neglect their own bodily comforts."

He is entertained in the convent by a Catholic priest, who was formerly a military leader. The following extracts will show best who he is, and the state of political feeling among the Roman Catholic clergy:

The monk, having at length succeeded in disengaging the fastenings of his cowl and gown, without replying, now hastily cast them aside, and stood before the astonished father no longer the hooded and shuffling monk, but an elegant and graceful youth, in a blue military surtout, with a short sword by his side attached to a buff belt, in which was stuck a pair of serviceable pistols.

"Reverend father, I am neither monk nor priest, but a soldier of the patriot army, which, doubtless, you have learned, ere now, is preparing to invade the Canadas," said the young stranger, in a firm, manly tone. "In proof of my words and in token of my good faith," he added, fixing his eyes with a look of intelligence on those of the priest, "I will repeat the talisman that shall beget mutual confidence between us. I have the honor, then, of addressing, not simply the monk Etienne, but the Chevalier de Levi."

"Thou hast the true credentials, young sir," said the priest, assuming the air and manners of a soldier and man of the world; "in me you see that unfortunate chief who was once the leader of a gallant army, and conqueror of those proud islanders who now hold these fair lands. In this peaceful garb," he continued, with emotion, "you behold the last general who drew blade for the Canadas. Driven by a superior force from before the walls of Quebec, which I had closely besieged, I left that citadel in the hands of the enemy, and, in despair of ever retrieving our national misfortunes, buried my disgrace in the seclusion of a religious life. But," he added, with increasing energy, pacing the apartment, "the servile oath of allegiance to the British king I have never taken, nor do my religious vows interfere with my patriotism. I have ever been ready, when the time should arrive, and, please God, that time is now at hand, to aid in the removal of the invading Britons; and, if need be, by the mass! I can still wield the sword as I have done before in the same good cause."

* * * *

Despairing of any present means of expelling the conquerors of his native country, the Chevalier de Levi

retired into the monastery of St. Claude, then a thriving community, although, at the period of the disguised young officer's visit to the Father Etienne, the name assumed by the military recluse, it was only a ruined asylum for a few aged priests. Were we to weigh carefully the motives that induced the unsuccessful soldier to take this pious step, we should, perhaps, find them composed, in part, of a desire to bury his own disgrace from the world: in part of a morbid melancholy, the consequence of his defeat and disappointment, a disposition of the mind which often drives men both to the church and the cloister; but we should also find that he was governed by a deeper feeling than either of these. Aware that the priesthood were generally disaffected with the existing government, his main object was to attach himself to this body, that, by the aid of so vast an engine of political power, and under the cover of a monastic life, he might combine a conspiracy against the new government, and, when it should become fully matured, apply the torch to the train he had, and spread a revolutionary flame like wildfire throughout the territory.

Such were the motives which converted the Chevalier de Levi into Father Etienne. His schemes, however, never ripened into maturity; and though always planning and plotting with a perseverance and secrecy not unworthy of Lucius Catiline, and constantly corresponding with the disaffected in every quarter of Canada, and even with ambitious individuals in the British colonies, among whom, as has already been intimated, was the leader of the eastern division of the invading army, yet, on the day we intruded into his retirement, he was as remote from his object, so far as the restoration of the French dominion was concerned, as on the first day he assumed the religious habit. By long devotion to one sole object, from which nothing could make him swerve, aided by an active imagination and a sanguine temperament, the chevalier had become transformed from a calm and dispassionate patriot, devoting himself to his country, into a settled monomaniac. To such a mind, therefore, the threatened invasion, although it did not embrace its long-cherished and favorite project, was, nevertheless, welcome intelligence, inasmuch as it would be, at least, the instrument of overthrowing the government of his conquerors. This object effected, the restoration of the old Canadian régime, he was willing to confide to the course of events.

Inspired, therefore, with renewed ardor in the cause to which he had devoted his life, by these tidings of invasion, with his eyes sparkling and his hands trembling with excitement, he seated himself at the table as the young soldier threw himself upon the floor to sleep, and soon became involved in a manifold correspondence. His arguments were skilfully adapted to the circumstances and the prejudices of those to whom his letters were addressed. To the disaffected priest, and there were many such throughout the Canadas, he held out the restoration of the Roman Catholic ascendancy and the return of the golden days of papal regality. Before the imaginations of those Canadian gentlemen who desired a change of government, he displayed gorgeous pictures of titles and dignities, and predicted the restitution of their alienated privileges and honors; while the eyes of one individual, of high birth and once in power, were dazzled with the glitter of a vice-regal crown. No scheme, however wild, seemed impracticable to the mind of this visionary enthusiast. Finally, in addressing a distinguished primate, whose good sense, he was sufficiently aware, would not be blinded either by his sophistry or arguments, however plausible, and who, he was convinced, would withhold his name and influence until there remained no doubt of the re-establishment of the Catholic, or, which was virtually the same thing, the Canadian ascendancy, he hinted that the American army was but a few thousand strong; that they should be supported by an active co-operation on the part of the Canadians until they had captured Quebec; "Then, if the partisan leaders are alive to their

own interests, which," he continued, "I myself will undertake to be the active instrument in awakening, in the unguarded moment of victory, and by the aid of superior numbers, we can snatch the citadel from their grasp, and, please God, the flag of France will once more float above its towers." The crafty politician facetiously closed his diplomatic letter by relating the fable of the "Monkey and Cat's-paw."

After various adventures, graphically detailed, Burton arrives at the tent of Montgomery with a nun, whom, from one of the convents at which he was entertained on his way, he has eloped with. The story now goes forward with intense interest, and is most beautifully told. The delineations of character are bold and life-like, and show a profound knowledge of the human heart with its subtler and deeper workings. Motives are analysed with a chemical nicety; emotions and feelings traced to their source with singular clearness and felicity. With a few touches of the author's pen, an individual starts boldly into life, in whom we at once become interested, and whose adventures we follow with unflagging excitement.

We did think of entering into an analysis of the work, and of giving a skeleton of the story; but a fair lady at our elbow says we must do it by no manner of means, as it would destroy the whole mystery of the tale, and "who," she asks with a pretty pout, "would read never so fine a novel when it's known how it's a going to end?" As in the course of our terrestrial pilgrimage, experience has taught us that women are always right, in matters of taste, we shall be silent about the mystery involved in this tale.

In graphic and truthful sketches of character, in richness of description of natural scenery, in dramatic vigor of dialogue, and in bold and trying scenes, where the highest moral and intellectual attributes are called into action, the author of "Burton" is peculiarly distinguished. The writings of this author must be admired for their elegance and purity of style. A fine imagination is characterized by a just taste throughout; a delicate humor prevades his pages, but it is never coarse—never far-fetched, but always natural. Some of his low characters, particularly Zacharie and Jacques, have no superior in any American novel. His pages are varied by bold tragedy, touches of gentle pathos, excellent wit, and irresistible humor, while the whole, unlike "Lafitte," wears an air of probability; and there is scarcely a worthy emotion or passion that the reader will not find awakened by the perusal of these volumes. If Professor Ingraham continues to write, he must reach a proud elevation in the literature of his country, as an American novelist.

EPIGRAM

On a hen-pecked husband, who opposed his wife's devotion to Literature.

Oh, why on Madam's musings frown,
Or send her to her stitches?
In pity let her wear "the gown,"
'Twill help to hide—the breeches.

ANOTHER TREE ARTICLE.

I am of the mind of old Drummond, who, two centuries ago, sang thus:

"Thrice happy he, who, by some shady grove,
Far from the clamorous world, *doth live his own*:
Though solitary, who is not alone,
But doth converse with that eternal love.

Oh! how more sweet is birds' harmonious moane,
Or the hoarse sobbings of the widowed dove,
Than those smooth whisperings near a prince's throne,
Which good make doubtful, do the ill approve!

Oh! how more sweet is zephyres wholesome breath,
And sighs embalmed, which new-born flowers unfold,
Than that applause vain honor doth bequeath!

How sweet are streams, to poyson drank in gold!

The world is full of horrors, troubles, slights—

Woods, harmlesse shades, have only true delights!"

And being in this mind, I have turned my back upon the city, and am here at Oakwood, upon a high hill in Fairfax, "far from the clamorous world, living my own." Embowered in oak-shades, with here and there glimpses of the blue sky over head, I am in the fruition of my favorite trees. To quote old Chaucer,—

"Here up I rise, thre houris after twelfe,
About the springing of the gladsome day,
And on I put my gear, and mine aray,
And to a pleasaunt grove I 'gin to pas,
Long or the bright sonne uprisin was,

In which are okis grete, streight as a line,
Under the which the grass, so freshe of hew,

Was newly sprunge; and, an eight fote or nine,
Every tree well fro' his fellow grew,

With branchis brode, ladin with levis new,
That sprongin out agen, the sonne shene,—

Some very rede, and some a glad light grene;

Which, as methinks, is a right pleasaunt sight."

Oakwood contains some scores of the species *Quercus*. I find a new one every day. With old Michaux, his admirable Sylva in my hand, I go among these shades, and sitting on the back of sorrel Mab, pull down the branches and compare them according to class with the book. Among the most curious of my specimens are boughs, which you would take your corporal davy are chesnuts, and willows, 'till you see the acorns putting forth under the leaves, and then you admit them oaks, and do not forswear yourself.

I said something but now of sorrel Mab. She is the "most charming of her sex" and species: a mare of all mares the paragon: perhaps transcending the best of the sex, of any species, in that she does every thing but talk. I mean audibly: for Mab is right eloquent at times. She has a quiet way of asking for drink at noontide, which it would do your heart good to witness. The front door of Oakwood opens into the park which gives the place its name; and in the dim distance of the leafy vista, when suns are hot and breezes are asleep, may be seen, leisurely approaching you, as you sit, book in hand, upon the piazza, the gazelle-eyed Mab. Coming quite up to your feet, she looks in your face, drops her head as if, modestly and ladylike, to avoid your answering gaze, plucks a tuft of clover, and

proceeds with dainty pace around the corner of the house, casting one sidelong glance at you as she goes. You follow her, and find her footsteps are tending springward. But Mab is dainty and particular: she must drink out of her own proper bucket:

"The moss-covered bucket that hangs in the well;"

and, if you would have her amble well on your next ride, you must draw for her now.

Mab will not go ride, whenever you like, unless she like to do so too. Catch her afield, at such time, if you can! Yet when this fit of playfulness is over, she will come up to your hand, and winking knowingly at you, will ask you, (more plainly than the ass asked Balaam, if he was not ashamed of himself to whip her so cruelly,) if you have a mind to ride to-day? She is as full of tricks as Puck, and has a delightful one, which she uses upon occasion, especially with humans, of her own sex,—that of sitting quietly down in the centre of a bubbling runlet, while the bridle is loosened to permit her to refresh herself with a drink from the shady stream. The slyness with which she regards, aslant, the unfortunate lady, whose

"Clothes (like Ophelia's,) spread wide,
And mermaid-like, awhile do bear her up,"

is one of the most laughable things in nature. Even the victim of the joke enjoys it highly, and is like to drown, less from the depth of the water than the height of her hysterics. But enough of Mab; I was to talk of trees.

Old Wotton, in the time of James the First, had pleasant associations, with sylvan retreats. Hear him!

"Welcome pure thoughts! Welcome ye silent groves!
These guests, these courts, my soul most dearly loves!
Now the wing'd people of the sky shall sing
Most cheerful anthems to the gladsome spring!
Here dwell no hateful looks, no palace cares;
No broken vows dwell here, nor pale-faced fears.
Here, if Contentment be a stranger—then
I'll ne'er look for it, but in heaven, again!"

The nights, when moons shine clear, are the times for country enjoyment after all. Such a time is this at which I write. The days, even among woods, are too hot, in August, to ramble wide from home. Spring water, with brook ice—thorough draughts through open passages—the sun-beams, which escape the leafy canopy, shut out of house by Venetian blinds—Mary Howitt's "Wood Leighton," or Isaac Walton, or White of Selbourne, or Gardiner's "Musie of Nature," in hand, upon the trelliced portico, will make the days pass serenely enough, while town thermometers stand at ninety-five; but

"In the starry light
Of the summer night,"

that is the time to enjoy the country: and at no hour is Oakwood so lovely. What says "Rare Ben Jonson" in his "Cynthia?" See how these verses make themselves vocal:

"Queene and huntresse, chaste and faire,
Now the sunne is laid to sleepe,

*Seated in thy silver chaire,
State in wonted manner keepe!
Hesperus intreats thy light,
Goddesse, excellently bright!*

"Earth, let not thy envious shade
Dare itself to interpose!
*Cynthia's shining orbe was made
Heaven to cleave, when day did close.*

"Lay thy bow of pearle apart,
And thy crystal-shining quiver,
Give unto the flying hart
Space to breathe, how short soever!
*Thou, that mak'st a day of night—
Goddesse excellently bright!"*

There is a little nook in the tree tops here, which the garish light of day prevents the gazer from distinguishing, but which is brought out most beautifully, when "the sunne is laid to sleepe." The trees of unequal heights and varying distances, present a dark undulating line against the sky, and the array of stars, which gild that part of the firmament, passes like a brilliant panorama before the open spaces thus formed before the eye of the beholder. This is our night-dial, here at Oakwood. As Orlando says,

"There's no clock in the forest."

When the sun goes down, Venus has passed over the disk of our dial, and Jupiter is shedding his slant-wise rays over the tree tops into its depth: but you do not see Jupiter on the plate; he is near the zenith of our wood-bounded firmament. Yet as he goes down, there is a bright constellation shining in the very midst of the vista, on which we gaze and watch the lapse of the hours. We trace the brilliant succession as they appear, pass over the blue path, and each in turn fade from our view behind the western boundary of the wood, and have come to learn them all, each in its proper moment, as we know the figures on the clock. As Libra finishes its slow and well-balanced journey from the eastern to the western verge of our fanciful dial, the close of its career is taken as the signal for our retiring; and then we welcome "sleep, that knits up the ravelled sleeve" of each day's cares and pleasures. Thus do we sylvans find out the meaning of the quaint cognomen that Shakspeare gives the "bald old sexton," when he calls him "old Time, the clock-setter."

Unhappy, yet nobly courageous Richard of England, in his dungeon at Pomfret, thus moralizes from the similitudes of a clock. He says,

"I have been studying how I may compare
This prison where I live; unto the world,
For now hath Time made me his numbering clock.
My thoughts are minutes; and, with sighs, they jar
Their watches [that is, *tick the time*,] on mine eyes, the
outward watch [or dial,]

Whereto my finger, like a dial's point,
Is pointing still, in cleansing them from tears.
Now, sir, the sound, that tells what hour it is,
Are clamorous groans, that strike upon my heart,
Which is the bell. So sighs, and tears and groans.
Show minutes, times, and hours," &c.

But this is another digression. Our present business is with the woods.

I sent you, months since, some notice of Phineas Fletcher, his "Purple Island," with extracts, but the following was not among them. How beautiful! The poet is writing of the shepherd:

"His certain life, that never can deceive him,
Is full of thousand sweets, and rich content,
The smooth-leaved beeches in the field receive him,
With coolest shades, till noontide's rage is spent.
His life is neither tost in boisterous seas,
Of troublous world, nor lost in slothful ease;
Pleased and full blest he lives," &c. &c.

The spring flowers had all passed away before the heats of summer, before I came to Oakwood, and ever since that time I have had to watch the decay of many succeeding buds and blossoms of beautiful variety. The wood flowers just now in bloom are but few, but there is yet to come a brilliant array of autumn ones. Among the most beautiful of those now visible is the large *Convolvulus*, which peeps out from the hedge rows at the foot of the oaks, under fences, and sometimes straggling up with the wild vine, over the trunks of trees, and among the underwood of the forest. But they wither almost the moment they are plucked, and you must admire their beauty, (short-lived at best,) upon the spot which gives them birth. Oh, gentle Herrick!

"Faire flowers! we weep to see
You haste away so soone;
As yet the early rising sun
Has not attained his noone!
Stay, stay,
Until the hastening day,
Has run
But to the even song;
And, having pray'd together, we
Will goe with you along!

"We have short time to stay, as you—
We have as short a spring;
As quick a growth to meet decay
As you, or any thing.
We die
As do you; and drie
Away,
Like to the summer's raine,
Or as the pearles of morning dew,
Ne'er to be found again!"

Is not that a gem?

The season has been remarkable for the frequency and severity of the thunder-gusts. Hardly a day since I have been at Oakwood, has passed, without lightning and thunder; and some of my favorites of the forest have suffered greatly in consequence. There is one noble oak in the centre of a neighboring wood, beneath which I threw myself along, but a fortnight ago, and sang

"The song of the oak, the brave old oak,
Who hath stood in this land so long!
Long health and renown, to his broad green crown,
And his fifty arms so strong!"

I fancied the age he had attained to be more than a century and a half, and longed to see his heart, to count the circles around it, to ascertain how nearly I had guessed the truth. Then I thought of the sin, the crime, the sacrilege, of cutting down such a magnificent tree, to gratify a curiosity so trifling: nay, for any purpose! and my song involuntarily changed:

"Spare, oh spare that tree;
Touch not a single bough;
In peace it shelters me,
And I'll protect it now."

A few days after this, a cloud of terrible blackness rose from the south, directly over that broad woodland. The lightning was fearfully vivid, and the thunder was one continuous crash for more than half an hour. Each flash and each report seemed more and more directly over head, till at length there came a dazzling glare, and on the instant a terrific peal, which startled our household from their seats. The bolt fell into the very midst of the forest, and when, on the next day, I wandered thither, and sought my noble old oak, behold! there it lay, rent asunder in two equal parts by the fatal bolt, its "broad green crown" dragged in the underwood, and its wealth of foliage torn and scattered by the awful crash! I thought, as I went melancholy home, of that fine simile of old Waller—

"Thus the tall oak which now aspires
Above the fear of private fires,
Grown and designed for nobler use,
Not to make warm but build the house;
Though from our meaner fires secure,
Must that which falls from heaven endure!"

But, perhaps, this is enough woodland gossiping for one month. Come and see me here, and we'll go on with it at leisure. And, by the bye, why did you not do so, a fortnight since, when only within two miles of this very table, and, as I hear, in search of me? It is a delightful spot, and reminds one, by its location, of the opening of Denham's "Cooper's Hill"—

"Mine eye, descending from the hill, surveys
Where Thames among the wanton vallies strays."

Write Potomac for Thames, and the following lines, from the same refreshing poem, will describe Oakwood to you, like a guide-book:

"The wood-topped hill his forest summits hides
Among the clouds. His shoulders and his sides
A shady mantle clothes: his curled brows
Frown on the gentle stream, which calmly flows
While winds and storms his lofty forehead beat:
The common fate of all that's high or great.
Low at his foot a spacious plain is placed,
Between the mountain and the stream embraced,
Which shade and shelter from the hill receives,
While the kind river wealth and beauty gives:
And, in the mixture of all these appears
Variety, which all the rest endears!"

I will endeavor to give you some autumn foliage for October. Till then, adieu!

Oakwood, Va., Aug. 1, 1838.

J. F. O

EXPLORING EXPEDITION.

Thoughts suggested by its approaching departure.

Three periods characterize the history of the progress of navigation:—

In the first, Columbus discovers a new world. At a later period, hardy adventurers launch into the immense sea lying between the continents of America and Asia, discovering continents and islands, the inhabitants of which, it seemed to have condemned to remain forever unknown. By their hazardous voyages, the domain of geography is enriched with those numberless islands and fertile archipelagos, scattered throughout the great ocean, and all the numerous lands whose extent, position, formation, as well as the origin of their inhabitants, offer so vast a field to political enterprise, to the researches of the man of science, and the meditation of the philosopher.

These brilliant discoveries, dissipating the last shadows of the middle age, roused the spirit of conquest and of commercial speculation: ambition incited sovereigns, cupidity animated their subjects, and gold, the charms of which all men are capable of knowing and appreciating, was the sole object of every enterprise. And so passed the second period, of more than two centuries, during which the vessels of every maritime nation in Europe traversed the seas in every direction, adding to the discoveries of their predecessors such islands only as the fortune of their route might throw in their way. But no elevated sentiment governing this general and simultaneous movement, little advantage resulted from it to the acquisition of positive geographical knowledge. Nautical science was still in its infancy; it possessed only arbitrary and uncertain methods for the determination of longitudes at sea; and the men under whose command the vessels were placed, were, from their habits and education, more inclined to an adventurous pursuit of fortune, than to the advancement of the art on which depended the success of their profession. The positions of the accumulating discoveries, not being determined with even approximate accuracy upon the charts, and the most important of these discoveries being often kept secret, through the jealousy of certain nations, it sometimes happened that the same place was supposed to be discovered several times, and the science of geography was then at its epoch of disorder and confusion, during which, the navigator knew not on what to depend for his government, nor the historian from what document he could draw for authentic information.

Forty years of inaction succeeded this eager thirst of gold, war and conquest, upon these remote shores. During this time, the intelligence of Europe became emancipated; a revolution in feeling took place, the sciences shed a bright light over the theory of the celestial world, and over every branch of natural philosophy; the arts, enlightened by them, exerted a reciprocal influence, by extending their application, and civilization commenced an empire, henceforth never to be disputed. With better times came better principles—principles now more moral and more enlightened, more liberal and more humane, placing men in proper relation with the new state of things, and bringing back to their bosoms a sentiment of true glory.

Enlightened governments recognised at last the ne-

cessity of perfecting the knowledge of the globe—of describing the newly discovered portions, of fixing their relative positions, and of enriching science, commerce and the arts with the natural products of their different climates. England was the first to start in this glorious career, the era of which terminates the second period of the progress of navigation: she can boast a Cook, who established the geography of the oceanic seas, and founded the school from which proceeded Foster, Davis, Vancouver and others. France followed with honor: she had her Bougainville, Laperouse, Marchand, d'Entrecasteaux, &c. The public was put in possession of those interesting and instructive journals redounding so much to the credit of these illustrious men, and gaining for them universal gratitude and the admiration of navigators and geographers—journals forming of themselves complete encyclopedias; displaying the skill of the navigator and the veracity of the historian; from the rich records of which the statesman may draw his details for projects of public utility, and the philosopher and man of science the information to elucidate the phenomena of nature and of man.

The third period belongs to our own age. It is not remarkable for any great discoveries in geography, to immortalize the names of those who have made them. But a new spirit characterizes it, and a new glory is open to it:—a glory not less solid that it is more difficult to acquire, that it does not depend on fortune, and that it must be sought with trouble and danger to be merited. This period is immediately interesting to us, and will justify our entering into some details to make known the spirit which characterizes it.

The world may be said to have been known only in *mass*. The multitudes of voyages performed in every direction, had nearly demonstrated that there remained no more important lands to discover; that nothing more could be hoped than to fall upon some small islands on an unfrequented route, and perhaps some uninhabitable lands of little extent, which might be still shut up in the ices of the poles, that had as yet barred all access to them. How fatal to the advancement of human knowledge, had enlightened rulers, and learned societies, and navigators, and geographers, imagined then, that the full harvest had been reaped—that all had been done! Every thing, on the contrary, it may be asserted, with the exception of discoveries, remained to be done! The same ground was again to be gone over, but with more efficient material aid, and more precise and exact scientific means than the preceding age had been able to afford. Fortunately, Europe, recovering from its long wars, could at last enjoy the benefits of peace, and with the proof of its advance in science and intelligence, proclaim the high degree of civilization it had attained. The crowned heads of Europe perceived that the only ambition to be permitted them, was that of laboring for the prosperity and well-being of their people, in cherishing that elevated love of science, which had been developed, and which is now a characteristic of every nation. The epoch was ready. Astronomy had reached that sublime perfection as to strike with astonishment even him who is familiar with it. It taught numerous new methods of observation and calculation, applicable under all circumstances of navigation. The celestial Ephemerides, an indispensable work for the scientific traveller, and the most useful of the monuments raised

by the liberality and wisdom of France and England to the commerce of nations and in aid of humanity, were calculated with a degree of exactness till then unknown, and offered to the navigator a chart of the heavens, with which he could compare with confidence the sky of the regions which he visited, and safely deduce from this comparison all the elements of position, direction and distance that the object of his pursuit might require.

The mechanic arts had perfected the astronomical instruments, and those for measuring time; the ingenuity of the economic arts was taxed to improve the number and quality of articles of subsistence, in contriving new modes of preparation; and better means of preserving the health and comfort of the lonely adventurer, was secured by a variety and abundance of wholesome food. Finally, the improvements in naval architecture, by a better arrangement of the parts of the vessel, both as regarded the strength of the ship and the accommodation of the crew, conduced to the security and comfort of those, for whom it was so long to be the home. A vessel thus equipped for objects solely of science and humanity, may be considered the most wonderful production of the genius of man,—displaying at once his civilization and advancement in science and art, his elevated sentiments in the religion which he practises, and the desire of doing good which animates him; the polish of his manners, in the justice and moderation of discipline; and his energy and courage in the patriotism and devotion which he is called to display.

Thus, with respect to the state of navigation, science and the arts, every thing was in readiness to resume with ardor the geographic investigations, and place the knowledge of the globe in a fitting relation with the wants and with the knowledge of the age. Governments were well disposed, and men capable of carrying out the enterprises were not wanting. A state of war had been the means of founding brilliant schools of officers, of civil, military and marine engineers; it was a sound policy, to profit by the leisure of peace to obtain extended means of instruction, and keep in activity their bravery and intelligence.

UPON LAND:—Some portions of continents remain still unexplored, and others have been visited only with difficulty. Long voyages have been made, and yet only a faint light breaks through the thick darkness that still overshadows large portions of Asia and of Africa.

The nations of Europe were for a long time ignorant of their true respective limits, and the superficial extent of their possessions. Territorial property, public and private, was wanting in that *accurate determination*, which secures order and morality in society, by establishing the rights of its members. The people demanded that communications for purposes of commerce should be opened, and that outlets for the products of the agricultural and mechanic arts should be contrived. In order to accomplish these different objects of public interest, the necessity of one fundamental document is immediately recognised,—this is, a *map of the country*; but a map mathematically exact, based upon astronomical and geodesical observations, measures and calculations, on which should be delineated all the features of the country, in the minutest details. The undertaking of these extensive works has been ordered at great expense; the operations, requiring great skill and information,

have been conducted with zeal and fidelity; and within a period of about twenty years, Europe has been gradually covered with a network of triangles, embracing every corner of the land; upon this groundwork, by operations of another order, are delineated the *courses of streams, chains of mountains, outlines of coasts, &c.*; and topography furnished additional means of expressing the *relief* of all these different parts. Maps, thus constructed, afford a basis whereon to fix the extent and rights of territorial possessions, from the boundaries of a nation to those of the smallest farm. Civil engineers find there those grand inequalities of ground, a knowledge of which is necessary for their projects of roads and canals;—military engineers, those by which to determine a system of attack and defence, and the local administrations, the information required to carry on their various labors of public service.

UPON THE SEA:—The analogy existing with the land is perfect. The celebrated expeditions which had so honorably illustrated the close of the eighteenth century, had been able to execute their labors only on a scale of exactness commensurate with the state of the sciences at that period. It was known that several of their determinations required verification; that there were doubts to clear up; many discoveries to confirm or complete; that lands had only been visited, not explored; that some of the archipelagos were known only in their mass and not in detail; that every day brought with it through the commercial marine, knowledge of new islands and new isolated reefs, which were but indefinitely determined. It was perceived that everywhere navigation was deficient in good geographical positions, in places of refuge from tempests, and in ports for refitting; that everywhere it was attended with doubt and danger, and that everywhere a great want of nautical information was felt.

Navigation, which had enriched science and the world at large, had the right to expect a return; it had a right to demand the construction of nautical charts, general and particular, of every sea, founded upon the best astronomical and hydrographical observations.

It was these considerations that induced those useful expeditions which have been carried on in our own time, in which the officers appointed to conduct them have been called upon to display at once the qualities of the sailor, the officer, the diplomatist, and the man of science and literature; with whom learned men are glad to associate themselves, to have an opportunity of personally observing the phenomena of natural and physical science, which till this time they had been able to study only in their quiet homes.

England, France and Russia have entered this career, interrupted at intervals, only to await a more favorable opportunity, and to be renewed with ardor. Magnificent works containing the results of these expeditions have been published, and form a rich addition to the library of the scholar; they delight our leisure, enlarge our ideas, and extend the empire of the world. But the more brightly they merit our admiration and gratitude, for the information already to be derived from them, the more sensibly do we feel the want of what yet remains to be accomplished. Civilized nations are eager for new and positive knowledge, because it is becoming indispensable to the development of their education and of their institutions. In this respect, the

career so nobly commenced, will not be fully accomplished, till we see all those nations, whose interests and whose honor are concerned, entering frankly and heartily the lists of honorable emulation.

From the period when the United States so gloriously achieved their independence, their attention has been fully occupied with their civil and political institutions, with the material wants of a growing community and with the means of promoting the development of their population over the vast extent of their possessions. An unprejudiced observer will not consider it then at all surprising, that they have been unable to devote themselves at once to the cultivation of the arts and sciences. But though circumstances have precluded their contributing in this way to the march of civilization, has it not received powerful assistance in other respects quite as essential? It would be unjust to deny it. It was by the American people that *liberty* has been revived and cherished: it is they who have demonstrated to the world its blessings! it is they who have taught, by the force of their example, how rapidly a nation, under the shelter of its ægis, may obtain the highest degree of prosperity, and how securely it may base those institutions which will ever be the dearest to humanity. They are not yet ready for all the refinements of older and more advanced nations, but a spirit of attention is already developing, and the first essay in a new track is now about to be made.

Scarcely was American liberty assured, when the flag of the republic was to be seen waving over every coast of Europe: in the Indies, and on the shores of China; a spirit of speculation and enterprise bore it over the two oceans, and into all the internal seas, rousing a languid commerce, multiplying the exchanges of continent with continent, and nation with nation; and under the auspices of a wise neutrality, becoming the carriers of contending nations.

American commerce, disappointed for a moment in the hopes it had founded upon Asia, as a market for the produce of their soil and industry, undismayed in its weary voyage, goes to seek on its remote north-western coast, a substitute in the furs for which it would be sure to meet with a demand. These articles of exchange, though to the eye within an easy grasp of the American, were not all of them available; the most valuable, those of the wild regions of the western coast, were separated by a barrier hitherto deemed insurmountable; and while nature offered with one hand the tempting prize to the enterprise of the east, she pointed with the other to a weary and circuitous track of more than sixteen thousand miles, that must be traversed to procure it. But this difficulty could not arrest the enterprise of the American. He sets out on his long voyage, twice coasting the continent of the new world—from north to south, and from south again to north, and penetrates the high latitudes of the western coast of his country, to seek there a medium wherewith to open a lucrative commerce with the empire of China. Upon his route, he harpoons the whale upon the coasts of Brazil, pursues it into the frozen regions of the Antarctic seas, and amidst the numberless shoals and reefs of the archipelagos of the Pacific ocean up to the most remote regions of the north where his prey takes refuge.

Whilst the hardy mariner of New England is thus

opening to his country the commerce of the seas, the pioneers of Virginia and Pennsylvania traverse the Alleghanies at all points, explore the valley of the west and pitch their tents upon the borders of the Mississippi. By their efforts in settling the country, and industry in developing its resources, they lay the foundation of an interior commerce through the unknown nations inhabiting the forests beyond the mighty river of the west.

Government has also lent its aid to this energetic and extraordinary spirit of enterprise, which is displaying itself upon every point of the national territory. Lewis and Clarke accomplish their memorable journey from the Mississippi across the immense prairies watered by the Missouri, over the Rocky mountains, to the Pacific ocean. Major Pike and Major Long, in their successive expeditions, extend our knowledge of the far west, and commence its physical geography; and the adventurous trader, following now the tracks of these celebrated travellers, arrives at Santa Fe, California, or the mouth of the Columbia, and there meets the whaling captain of the eastern merchant, who has despatched them both.

From this time, the ardent commercial enterprise of the Americans has been more and more displayed upon sea and land; seconded by a spirit of association, the advantages of which are so well appreciated, every channel of abundance and prosperity has been opened; public wealth has been considerably augmented; the population has quintupled, the mercantile marine is inferior now only to one, and the United States have assumed a rank among the first nations in the world.

The people of the United States, after having strengthened their institutions and secured forever their nationality, could not fail to turn their attention to those great public improvements which characterize the civilization of the nineteenth century. And have they not acquired a right to some portion of national pride, when they contemplate what has been projected, and in part already executed, in their own country, of this character; when they see distinguished foreigners cross the ocean to examine and admire the vast system of internal communication and facilities of transport, which is extending with every day, new ramifications over new territories, where a new population is growing up?

Experience is showing every day, that the Atlantic coast is but very imperfectly known, and that this want of knowledge is becoming more and more destructive to life and to property, in proportion as the relations between the two worlds become more intimate. There is but one remedy—to make a *survey of the coast*.

The necessity of such a measure is obvious, from its importance to the security of commerce and navigation, and the influence it will exert over the choice of a good system of defence for the maritime frontier; society will also reap the benefit of the instruction that will be received from it by men of talents, when they leave the high theoretical and practical school that this great measure must of necessity create.

The survey has been ordered, and for some years has been conducted upon a plan which leaves nothing to be desired, when compared with the most perfect works of the kind that have yet been executed. The liberality of the means is commensurate with the mag-

nitude of the undertaking, and when finished, it will constitute one of the noblest monuments of public utility that science can raise to the glory of a nation.

We are now brought to an epoch, when interests not less considerable, and our national honor, make it a duty to take a direct and active part in the advancement of the geography and navigation of those remote seas hitherto so little known.

The increase of our commerce is such that not less than two to three hundred whaling vessels belonging to our countrymen, with from nine to twelve thousand men, are in the habit of frequenting the Pacific ocean, engaged in pursuits, the profits of which are so much the greater, as in most instances not dependent on a mere exchange of commodities, they are drawn by labor from the bottom of the deep. But these operations are difficult and hazardous, and the lives of the sailors are always in peril. We navigate the whole ocean—but we draw almost all our knowledge of it from the contributions of others. This state of things cannot fail to excite the solicitude of an enlightened people, who wish to fulfil their high destinies.

It has been determined, that a scientific expedition should be despatched to explore the South seas and Pacific ocean. Its primary object, is the promotion of the great interests of commerce, and the advancement of navigation and geography. Promotion of natural sciences is considered an object of great, but secondary importance.

The inquiries relative to these two objects naturally divide themselves into two distinct classes. The first class comprehends all researches referring to nautical art, to hydrography, to geography, to terrestrial magnetism, and to meteorology. These researches are the exclusive province of the officers of the navy, who sail in the expedition. The second class comprehends all the researches relative to the different branches of the natural history of the earth, to the history of the native tribes, to philology, &c. These researches are entrusted particularly to the scientific corps, which is to make part of the expedition, chosen from individuals not of the navy, each one of whom will have special charge of the department under which he is nominated.

August 7, 1833.

PRINCE TALLEYRAND.

To the Editor of the Southern Literary Messenger.

SIR: At a time when the recent death of that extraordinary man Talleyrand, attracts so much attention to his character, I have thought that a translation of the discourse which he delivered at the French Academy, a few months before his decease, might not be altogether unacceptable to your readers. It is in itself a remarkable circumstance, that this veteran statesman and courtier, loaded with years, riches and honors, should at an age so advanced, present himself at the literary tribune. The purpose too was an amiable one, for it was to bear testimony, which he alone could render, to the merits of a man of humble birth, of different religion, and of position and functions, often, comparatively obscure.

But what gives the greatest interest to this production is, that it contains the diplomatic creed of perhaps the greatest negotiator of ancient or modern times. It is gratifying to observe, that he repels with something like indignation, the prevalent notion that deception and duplicity are indispensable to the diplomatist. He proclaims *good faith*, not only to be a duty but a necessary one, in negotiating, as the sole foundation in fact of confidence, but accompanied by discretion and reserve. Dr. Franklin could not have expressed a more true or republican sentiment. In hazarding the opinion that theologians make the best diplomatists, Talleyrand pays an indirect compliment to himself, as he is perhaps the most remarkable illustration of the proposition, which could be adduced. The remarks of the veteran statesman upon the obligation of duty, the religion of duty, as he expressively calls it, are philosophical, sagacious, and well worthy of deep consideration. But I did not set out with the intention of analyzing this remarkable discourse. It is distinguished by an elegant, yet severe simplicity of style, characteristic of the best age of French literature. Clear, yet forcible; pointed, yet flowing; it has none of the *faux brillant* of the present school. It was listened to with admiration, by an audience composed of all the rank, wit and intelligence of the French metropolis. I have preserved its phraseology, as much as is consistent with the English idiom.

Before I close, I cannot resist the temptation of relating an anecdote which I have never seen in print. It is strikingly illustrative of the perfect self-control of Talleyrand; his *impassibility*, as the French term it. I think it was in 1827, while attending in his capacity of Grand Chamberlain, the anniversary commemoration of the death of Louis XVI, in the cathedral of St. Denis, as he was leaving the door, he was struck to the earth by a certain *de Maubreuil*, and remained some time insensible, stunned either by the force of the blow or of the fall. This *de Maubreuil* asserted, that he had been employed by Talleyrand, after the fall of Napoleon, to attack or assassinate some of the members of the Bonaparte family, in order to recover the crown jewels. He did not succeed in his mission, and when he applied for his reward, as he asserted, Talleyrand refused to recognize him, and ever after persisted in disavowing him. Spurred to frenzy by this alleged neglect, he could find no other means of revenging himself, than by this public outrage. The story of *de Maubreuil* who was looked upon as deranged, obtained but little credence. I happened during a residence of several years in Paris, to be well acquainted with the Baroness de Bourgoing, widow of a distinguished ambassador, who wrote a very good work on Spain, and mother-in-law of Marshal Macdonald, a woman of superior intelligence and manners, who was then "*Surintendante*, of the royal establishment of the Legion of Honor at St. Denis." Her house was the resort of the best company, and I recollect, among others, to have spent a morning there with Madame Recamier, so famous in the annals of beauty and fashion. No longer young, she was still unusually attractive in face and person, and of exceedingly modest and interesting manners. She was really what the French call *de beaux restes*. This by way of episode. To return to my story; a son of Madame de Bourgoing told me, that the Prince, after the outrage, was brought into his mother's apartment, and that as soon as he re-

covered, he ordered himself to be driven to Paris, which is five or six miles from St. Denis. Young de Bourgoing and another gentleman accompanied him, but although he spoke with usual animation upon the ordinary topics, he never once alluded to the occurrence which a few minutes before, had nearly deprived him of life. This proceeded from his habitual caution. He would not trust himself to speak of the event, at such a moment. It was the reserve of the diplomatist. Speaking, in his discourse, of the qualities appropriate to a Minister of Foreign Affairs, he ends by saying "in short, he should not cease, one moment in the twenty-four hours, to be Minister of Foreign Affairs."

Very respectfully your obedient servant,

J. L. M.

Washington, 27th July, 1838.

COUNT REINHART.

A Discourse pronounced by M. de Talleyrand at the Academy of Moral and Political Sciences of Paris, on the 3d March, 1838.

Gentlemen: I was in America when you were good enough to elect me a member of the Institute, and to attach me to the class of moral and political sciences, to which, since its origin, I have the honor to belong.

Upon my return to France, my first care was to attend its sittings, and to express to the persons who then composed it, many of whom have bequeathed us just regrets, the pleasure which I felt at being one of their colleagues. At the first sitting at which I was present, I had the honor of being appointed secretary. The minutes, which for the space of six months, it was my duty to record, with all the care of which I was capable, exhibited perhaps, in too great a degree, the indications of my diffidence; for I was called upon to describe a work with which I was by no means familiar. This work, which had doubtless cost one of our most learned colleagues, much time and labor, was entitled: "A Dissertation upon Ripary laws." About the same time, I also read, at our public meetings, several papers, which, thanks to the indulgence accorded to me, were inserted in the memoirs of the Institute. Since that period forty years have elapsed, during which time, this Tribune has been in a manner interdicted to me, first, by frequent absence; then, by occupations to which duty compelled me to devote myself entirely; I should add also, by the discretion which difficult times exact of a public man; and at last, by the infirmities which age generally brings with it, or, which it never fails, at least, to aggravate.

But to-day, I feel it a desire and a duty, to present myself here, for the last time, that the memory of a man known to all Europe, of a man whom I loved, and who, from the formation of the Institute was our colleague, might receive a public testimony of our esteem and regret. His position and mine, enable me to proclaim, at least partially, his merits. His chief, I will not say his only title to renown, consists in a correspondence, of forty years, necessarily unknown to the public, and which, probably, it will never see. "Who, I said to myself, will speak of it, within this precinct, if it be not I, who received the greater part of it, to whom it was always so entertaining, and sometimes so useful in the ministerial duties which I fulfilled under three reigns. . . . so different?"

Count Reinhart, when I saw him for the first time was thirty, and I, thirty-seven years of age. He entered public life with a large fund of acquired knowledge. He knew five or six languages, and was familiar with their various literature. He might have rendered himself celebrated, as a poet, as a historian, or as a geographer; and it was in this last capacity that he became a member of the Institute at its creation.

At this epoch, he was already a member of the Academy of Sciences of Gottingen. Born and educated in Germany, he had published in his youth, some poetical efforts, which had honored him with the notice of Gessner, of Wieland, and of Schiller. At a later period, obliged by the state of his health to have recourse to the waters of Carlsbad, he had the good fortune, to meet frequently with the celebrated Goethe, who appreciated his taste and his acquisitions, so well as to desire to be kept informed by him of every thing which produced any sensation in French literature. M. Reinhart promised to oblige him: engagements of this kind between men of a superior order, are always reciprocal, and soon become bonds of friendship; those which were formed between M. Reinhart and Goethe, gave rise to a correspondence, which is about to be printed in Germany.

It will be learned from thence, that having arrived at that time of life, when it becomes necessary to decide upon a profession, M. Reinhart reflected deeply upon himself, upon his tastes, his position and that of his family, before coming to a determination; and then, what was remarkable at such a time, to a career which might have made him independent, he preferred one in which it was not possible to be so. He gave the preference to the diplomatic career, and he did well; adapted to all the employments of this profession, he filled them all successively, and all with distinction.

I will hazard the opinion here, that he had been happily prepared for it by his early studies. That of theology, particularly, in which he had distinguished himself at the seminary of Denkendorf, and in that of the Protestant Faculty at Tubingen, had given him a force and at the same time a suppleness of logic, which is to be observed in all the productions of his pen. To escape the apprehension of yielding to an idea which might seem paradoxical, I feel myself obliged to recall here, the names of several of our great negotiators, all theologians, and all distinguished in history for having conducted the most important political affairs of their time; the cardinal chancellor Duprat, equally versed in the civil and canon law, who settled with Leo X the basis of the *Concordat*, of which several dispositions are still in force: cardinal d'Ossat, who in spite of the efforts of several great powers, succeeded in reconciling Henry IV to the court of Rome, the collection of whose letters is still prescribed to young men destined to public business: cardinal de Polignac, theologian, poet and negotiator, who, after so many disastrous wars, was enabled, by the treaty of Utrecht, to preserve to France, the conquests of Louis XIV. It was also in the midst of theological books, that his father, then bishop of Gap, commenced the education of M. de Lyonne, whose name has acquired a new lustre by a recent and important publication.

The names which I have just cited, appear to me sufficient to sustain the influence which, in my opinion,

was exerted upon M. Reinhart by the early studies to which he had been directed by paternal care.

The various and solid knowledge, which he had acquired, caused him to be called to Bordeaux, to fulfil the honorable and modest duties of preceptor in a Protestant family of that city.

There, he naturally found himself in relation with several of the men, whose talents, errors and death, threw so much *éclat* upon our first legislative assembly. M. Reinhart, was easily persuaded by them to attach himself to the service of France.

I will not constrain myself to follow him step by step, through the vicissitudes which marked his long career. In the numerous employments confided to him, of an order sometimes superior, sometimes inferior, there seems to be an incongruity, an absence of catenation, which is difficult to conceive, at present. But at that period as little prejudice was attached to places, as to persons. In other times, favor, sometimes discernment, called men to eminent stations. At the period of which I speak, every position was conquered. Such a state of things soon leads to confusion.

Thus we see M. Reinhart, first Secretary of Legation at London—occupying the same place at Naples—Minister Plenipotentiary near the Hanseatic towns, Hamburg, Bremen and Lubec—Head of the third division in the department of foreign affairs—Minister Plenipotentiary at Florence—Minister of Foreign Relations—Minister Plenipotentiary in Helvetia—Consul General at Milan—Minister Plenipotentiary near the circle of Lower Saxony—Resident in the Turkish provinces beyond the Danube, and commissary general of commercial relations in Moldavia—Minister Plenipotentiary near the king of Wirtemberg—Director of the Chancellery of the department of foreign affairs—Minister Plenipotentiary near the Germanic Diet, and of the free city of Frankfort,—and last of all, Minister Plenipotentiary at Dresden.

How many places, how many duties, how many interests, confided to one man, and that at an epoch, when talents seemed to be the less appreciated, as war appeared to take charge of every thing!

You will not expect it of me, gentlemen, to recount in detail and in order of date, all the labors of M. Reinhart in the different employments, which you have just heard enumerated. This would require a book.

I am to speak to you only of the manner in which he comprehended the functions which he had to fulfil, whether as a head of division, minister or consul.

Although M. Reinhart had not then the advantage, which he enjoyed some years later, of studying excellent models, he already knew, how many and how diverse qualities, should distinguish a head of division in the department of foreign affairs. A delicate tact had taught him that his habits should be simple, regular, retired; that, a stranger to the turmoil of the world, he should live for business alone, and vow to it an impenetrable secrecy; that, ever ready to give information on men and things, he should always have present in his memory, the whole series of treaties; know historically their dates; discern with accuracy their strong and feeble points, their antecedents and their consequences; recollect in fine the names of the principal negotiators, and even their family relations; yet that while employing this knowledge, he should take care not to alarm the pride of the

ministry, and that even while leading it to his opinion, his success must remain in the shade; for he knew, that he ought to shine with a reflected light alone; but he knew likewise, that no small share of consideration is naturally attached to so pure and modest a life.

The spirit of observation of M. Reinhart did not stop there; it had led him to discover how rare is the combination of qualities necessary to a minister of foreign affairs. A minister of foreign affairs should be endowed with a sort of instinct, which giving him prompt notice, prevents him, before discussion, from ever compromising himself. He requires the faculty of appearing open while he is impenetrable; of being reserved with an air of carelessness; of being politic even in the choice of his recreations: his conversation must be simple, various, unexpected, always natural and sometimes ingenuous; in a word, he should never cease, for one moment in the twenty-four hours, to be minister of foreign affairs.

Nevertheless, all these qualities, rare as they are, might not suffice, if good faith did not furnish them with a guarantee of which they almost always stand in need. No, I must pronounce it here, in order to destroy a prejudice which generally prevails, diplomacy is not a science of cunning and duplicity. If good faith is ever necessary, it is chiefly so in public transactions, for it is this which renders them solid and durable. Reserve has been confounded with deception. Good faith never authorises deception, but it permits reserve, and reserve has this peculiarity, that it augments confidence.

Governed by the honor and interest of his country, by the honor and interest of his prince, by the love of liberty founded upon order and upon the rights of all, a minister of foreign affairs, if he understands his position, is thus placed in the noblest situation to which an elevated mind can aspire.

After having been a skilful minister, how many things must yet be known to be a good consul! for the duties of a consul are infinitely various; they are of a character totally different from those of the other functionaries of foreign affairs. They demand much practical knowledge for which a particular education is necessary. Consuls are in a situation to be called upon to exercise towards their countrymen, to the extent of their jurisdiction, the functions of judges, arbitrators and mediators; they are often civil officers; they perform the task of notaries, often that of naval administrators; they determine questions of sanitary regulation; it is they who, by their stated communications, can give a just and complete account of the state of commerce, navigation and manufactures of the countries in which they reside. Accordingly M. Reinhart, who neglected nothing in order to assure himself of the accuracy of the information, which he was able to communicate to his government, and the justice of the decisions he was called upon to make, as a political or consular agent, or as naval administrator, had made a profound study of national and maritime law. This study had led him to the belief, that a time would come, when by contrivances skilfully prepared, a general system of commerce and navigation might be established, in which the interests of all nations should be respected, and with such a basis, that war could not alter the principle, even though it should suspend some of its consequences. He was also skilled to resolve with certainty and prompti-

tude all questions of exchange, of arbitration, of the conversion of currency, weights and measures, and all this without a single remonstrance ever having been addressed, against the information which he gave, or the decisions which he pronounced. It is true, indeed, that the personal consideration which accompanied him throughout his career, gave weight to his intervention in the transactions referred to his examination or arbitration.

But extensive as the knowledge of a man may be, however large his capacity, a perfect diplomatist is rare; yet M. Reinhart would perhaps have been one, had he possessed one more faculty: he saw and comprehended clearly; pen in hand, he described admirably what he had seen or heard. His style was copious, easy, lively and pointed; hence of all the diplomatic correspondence, there was none to which the Emperor Napoleon, who was necessarily and by right difficult to please, did not prefer that of Count Reinhart. But this same man who wrote admirably, expressed himself with difficulty. To develop itself, his mind required more time than could be obtained in conversation. In order that his internal language might readily reproduce itself, it was necessary that he should be alone and unaccompanied.

In spite of this real inconvenience, M. Reinhart succeeded always, in doing and doing well too, every thing with which he was charged. Where then did he find the means of success? Whence came his inspirations?

He derived them, gentlemen, from a true and profound sentiment which governed all his actions—from the sentiment of duty. The efficacy of this sentiment is not sufficiently understood. A life devoted entirely to duty, is very easily disengaged from ambition. The life of M. Reinhart, was one devoted entirely to the duties which he had to perform, without ever exhibiting a trace of personal calculation, or of pretension to precipitate advancement.

This religion of duty, to which M. Reinhart was faithful all his life, consisted in an exact submission to the instructions and orders of his principals; in an unceasing vigilance which, united to great perspicacity, never left them in ignorance of what it was requisite they should know; in a scrupulous veracity in all his communications, were they pleasant or disagreeable; in an impenetrable discretion; in a regularity of life which invoked confidence and esteem; in a decorous bearing; in fine, in a constant attention to give to the acts of his government that color and those explanations which were called for by the intent of the affairs in which he participated.

Although age had indicated to M. Reinhart the time for repose, he would never have asked to retire, such was his fear of exhibiting a lukewarmness to serve in a career which had been that of his whole life. It was necessary, that the royal beneficence, always so attentive, should anticipate him, by giving to this great servant of France, the most honorable station, in calling him to the Chamber of Peers.

Count Reinhart did not enjoy this honor sufficiently long; he died, almost suddenly, on the twenty-fifth of December, 1837.

M. Reinhart was twice married. He left a son by his first marriage, who has entered upon political life. The best wish that can be made for the son of such a father, is, that he may resemble him.

THE BLIND DAUGHTER.

BY ELORA.

Around a cottage-door
Bright honey-suckles twined,
And roses, of the richest bloom,
Were lavish of their sweet perfume,
To charm the evening wind.
Not yet the sun had left the sky,
Though the pale moon was rising high.

Soft fell the purple light
On flower and guardian tree;
It wandered o'er the moss-grown eaves,
And played among the dancing leaves,
Like a spirit—silently;
At last it found a resting place
Upon a pale and quiet face.

Alas, for earthly joy!
Death had been busy there;—
And yet so lightly did he pass,
He had not bent one blade of grass,
Or stirred the summer air.
But ah, too surely aimed his dart
Against one true and loving heart!

Smooth o'er the marble brow
Reposed the glossy hair,
While here and there a tress of gray,
Amid its jet, like silver ray,
Tokened of grief and care.
But on the lips there lingered yet
The seal which parting love had set!

No sound shall wake her more
Whether of joy or woe:
All vainly doth her loved one weep,
She heeds not in her dreamless sleep,
Whose tears of sorrow flow.
Ah happy, that she doth not see
Her daughter's hopeless agony.

Woe, for that weeping girl!
Hers is a mournful lot.
For though her eyes like violets bright,
Are beauteous in the starry light,
Like them, she seeth not.
Hark! while her tears of anguish flow,
She speaks in broken music low.

"Oh, God! It cannot be—
I could bear all but this!
I have not murmured that these eyes
Looked not upon the glorious skies,
Thy home of light and bliss.
I asked no more to make me blest
Than in my mother's arms to rest.

"Her voice was always soft—
I never knew it chide;
And often when I'd hear them tell
The color of some floweret's bell,
I felt a tender pride,
In thinking it was like a word
Of music, from my mother heard.

"I loved to kiss her brow—
 Her lip, her cheek, her hand ;—
 To twine my fingers in her hair,
 Far-floating o'er her shoulders bare,
 Loosed at my gay command.
 And I was happy, till there came
 The blight of sickness o'er her frame !

"Then burst the tempest forth !
 Her voice grew faint and low—
 Each day I felt she was more weak—
 Until at last she could not speak,
 Or I her wishes know.
 Vainly I bent my eager ear—
 She tried to tell—I could not hear !

"Her friends came kindly in,
 They tended her with care ;
 They answered to her asking eye
 With ever-ready sympathy
 Whilst I sat idle there.
 Yes, I, who loved her more than all,
 Sat useless by the cottage wall.

"But when at last they told
 My mother soon must die,
 When I stood breathless by the bed,
 And some one came to me, and said,
 For the last time her eye,
 Loving and as an angel mild,
 Was gazing on her darling child ;

"Maddened and sick at heart,
 I strained my sightless eyes ;
 But all was dark—no blessed ray
 To show me where my mother lay
 Fell from the pitying skies.
 I could not mark each change that came
 In warning o'er her gentle frame.

"I thought my heart would break,
 Knowing she looked on me—
 That o'er each feature of my face
 She lingered with a dying gaze—
 A gaze I might not see !
 Silent I stood—as turned to stone—
 Waiting to hear her parting groan.

"I felt her hand grow cold—
 It tightened in its grasp ;—
 My tears were frozen in my heart,
 Until at length they tried to part
 Her fingers from their clasp.
 Then with a storm of anguish vain,
 They gushing fell like summer rain.

"Who now will lead my feet
 Where whispering waters glide ?
 Or sit with me beneath the trees,
 Sweet converse holding with the breeze,
 That roams the forest wide ?
 Or rest, amid the odorous bowers,
 To hear the murmurs of the flowers ?

"Mother ! we will not part—
 Death cannot long divide.
 But in a far-off world of light,

Where God shall gift thy child with sight
 We'll wander side by side.
 Joyful I spring to thy embrace
 Seeing at last thy blessed face !"

She paused—her eager ear
 Had caught the warning sound
 Of voices and approaching feet—
 She waited not their steps to greet,
 But with a sudden bound
 Towards the bier, one cry she gave,
 And died with her she could not save !
 Philadelphia, 1838.

MISS SEDGWICK.

To Mr. T. W. WHITE,

Editor of Southern Literary Messenger.

My Dear Sir:—Being at present much occupied with domestic duties, and never in the habit of writing for more dignified periodicals than souvenirs, and having nothing better to send you than the following passages, I should have foreborne, but that I wished to express to you my desire to comply with your request, and my very grateful sense of your repeated attentions in sending your valuable Journal to me, and that during this hot season I imagine quantity may sometimes be desirable to you (as filling up) independent of quality.

Believe me, my dear sir,

Very respectfully and gratefully, yours,

C. M. SEDGWICK.

Stockbridge, Mass. July 20, 1838.

PASSAGES

FROM A JOURNAL AT ROCKAWAY.

If there is any time at which the love of nature is felt to be an universal passion—a love to which all other loves should be sacrificed—it is at the coming on of Spring, when Nature is to our senses a manifestation of the Creator—a realization of that belief of ancient philosophy, that in nature the Almighty Spirit lived and moved and had it's being. Even the poor pent-up denizen of the city, cabined, cribbed, confined as he is, at this season, when nature visibly begins her beautiful processes—makes some demonstrations that the love of her is not dead within him : the trees he has planted, (God's witnesses amidst brick walls) the birds (albeit stolen from their natural habitations in the green wood) in their cages, and the carefully tended plants at the open windows are signs of this love.

Those who have passed their childhood where Nature's choicest temples are fixed—who may be said, in some humble sort, to have served at her altars, are most impatient at the actual discomforts as well as privations of a summer city life. I do not know that I ever experienced a more delightful sensation than that produced a few days since by a change from New York to Rockaway—from frying in the city, to the life-giving breezes of this magnificent sea-shore. Perhaps neither heat nor cold should be positive evils to those in tolerable health ; but who is stoical enough to be independent of them ? No topic, not morals, politics, nor even religion, is, from the beginning to the end of life, so

often and so thoroughly discussed as the weather. It is the breath of life to old and young, to rich and poor, and when it comes, so fiercely hot as during the last week, we suffer—and suffering there are few that do not complain. Besides, is it not a positive evil during the month of June, when the summer is in the freshness and beauty of her youth, the only month that in our northern region shadows forth a poet's spring, is it not an evil to be imprisoned in a city, to have your senses deprived of the nutriment prepared by Heaven to restore them to their natural ministry to the mind; for, do not the odors and the music of June (to say nothing of the strawberries!) awaken the duldest imagination?

A week in the city, in June, is then always a loss, but a week like the last, when the mercury, in our coolest apartments, stood at 80°, and in the warmest at a point that would not have seemed enviable to the wretches in the hottest circle of Dante's *Inferno*: after such a week's experience in town, the change to Rockaway makes one feel, as Dives might have felt if the gulph had not been impassable that divided him from Lazarus. For the last seven days not a drop of rain had fallen, the air was thick and heavy with impalpable dust, the very leaves on the trees seemed to feel it too hot to move—and the poor little caged birds that had been singing themselves and us into forgetfulness of our exile from Nature, were withdrawn from their airings, and were silently languishing in darkened apartments. We had cast off every garment that could be dispensed with; our flannels were forgotten friends. I was suddenly summoned here to join a very dear invalid friend, and I set off to do the most agreeable thing in the world with the delightful self-complacency resulting from the performance of a duty. The golden cup given to the miser in Parnell's apologue is an illustration of the profuseness, with which Providence throws golden pleasures into the scale of our duties. My companion was a charming school-girl, who enjoyed with a school-girl's relish the unexpected transition from her tasks to our excursion. As we hurried down Broadway to take the four o'clock rail-car at Brooklyn, the heat was intense. In the ferry-boat we felt the life-restoring sea-breeze that came sweeping up the bay; and when the cars began their flight, we were cooled down to the temperate point. At Jamaica, where we were transferred to Mott's waggon and entered on the pretty country road that leads to the beach, the wind was so cool that we wrapped our blanket shawls close around us, and here we have found them sitting with the windows down, and we feel as if we had jumped from a hot bath into a snow-bank.

And here before my window is the "great and wide sea." What an image of eternity it is at this moment shrouded in mist! You hear its mighty voice—you know its reality, and that "therein are things innumerable;" but beyond the line where human feet tread, you see nothing—There where the breakers fall, as upon the borders of human life, is all the din and uproar. Beyond, through that immeasurable distance, all seems repose; and seems so only because it is like eternity, hidden from our vision.

Monday, P. M.—I went alone to walk on the beach. There had been a storm, and the clouds that were wildly scudding over the heavens here and there, broke away,

and the sunbeams poured from the bright world above them and kindled in the east a rainbow that dropped its column of colored light into the ocean. I would commend any one afflicted with self-exaggeration to a solitary walk on a sea-beach. All selfism is lost in an overpowering sentiment of reverence. I had an almost painful feeling of illimitable power, but as I turned from the surf which was breaking magnificently, a sweet breath from the landward clover-fields met me, and filled my eyes with tears and my heart with sensations like those that answer the voices of kindred, or are called forth by the little beam that greets us from the candle in our own home, when we return from a stranger's dwelling.

Monday evening brought me three letters. Where do letters not come except, as Johnson lamented, not to the grave? Chance could hardly throw together the productions of three more remarkable women than my correspondents—the least of them in the world's eye is the greatest, perhaps in the kingdom of heaven. — has many high faculties, some almost preternatural powers that — does not approach; clearer moral perceptions and loftier aspirations no one has. They are not unlike in that quality that, like a pure atmosphere gives vigor and effect to all others—naturalness. Neither has — the varied and enriching experience, the glowing imagination and the almost unlimited acquisitions of Mrs. —; but she has a healthier and therefore a happier spirit. She has the spontaneous richness and goodness that are God's gifts, and as superior to any acquired talents or results of virtuous efforts as sunlight to lamplight, or the gracious showers from the clouds to the pourings from a watering-pot. Her mind seems, without an effort (for you see no fluttering of the wings) to rise to the highest altitude: and, kind and patient, without any apparent stooping, to come down to the least duty. While poor — is beating her golden feathers off against every limit as if limits were prison walls, — is singing on every bough, feathering every nest as well as her own, and feeding every chance bird.

Tuesday.—The gay season for watering-places has not yet come, and beside the untiring and ever-exciting view of the sea, there is little to vary life here; there are drives on the beach, and when the tide is up, round the pretty rural lanes of the interior, past the farm-houses, where you see plenty of pig-nurseries and hen-coops, where generations are preparing for the all-devouring jaws of the New York market. Then we have those three great daily events of all watering-places, breakfast, dinner and tea, diversified by the liberality of Messrs. Blake & Mead, and the ingenuity of French cooks. And we have arrivals and departures. At this moment there is standing before the piazza a carriage built upon the model of an English mail-coach, with four grey horses, their master seated on the box with a friend; the coachman and footman in frock coats, shorts, and white top boots in the dickey, and the lady, her nurses and children, inside. The coach and harness are blazoned with stags' heads and other heraldic devices. Some impertinent whispers asking from which side of the house these anti-republican emblems are derived, are suppressed from respect to the unpretending lady, who, with her pretty children, the picture of an American matron, is courteously smiling

and bowing her adieux. The sarcasm is changed to a regret at the bad taste of appropriating unmeaning emblems.

Wednesday morning.—Would that some one who had Charles Lamb's art of putting *les petits morales* in picturesque lights, would write an essay upon the moralities of a watering-place! Essays have been written demonstrating that the most common extravagance consisted in the thoughtless expenditure of hours and shillings. Is there not a similar waste from carelessness of those lesser moralities, which make up the sum of most people's virtues? There are few (certainly few women,) born to "point a moral or adorn a tale"—few Charlotte Cordays or Elisabeth Frys; but all, by economising small but abundant opportunities of producing, not great good, but agreeable sensations, may add materially to the sum of human happiness. At a watering-place, for example, if a gentleman, instead of casting a doubtful or sarcastic glance at a newly arrived stranger, bestow some trifling courtesy—if it be but a bow or a word of kind greeting, enough to express "we are fellow-beings"—especially if the new comer happen to be not fashionable, not *comme il faut*, and the saluter be so—it will be seen that a sunbeam has fallen across the stranger's path: and who can estimate the value of a sunbeam, a moral sunbeam?

All the world are purveyors of pleasure for the fashionable and beautiful; but there are at all watering-places, unknown, unattractive and solitary beings, who are cheered by a slight courtesy expressing the courtesy of the heart. An invalid may be relieved of weary moments by a patient listener to his complaints: this is perhaps weakness, but never mind; let the weak profit by the strength of the strong, and an easy obedience will be rendered to the great precept, "Bear ye one another's burdens." An old man may be gratified (at small expense,) by the offer of precedence at table, or a privileged seat on a sofa.

I have known ladies, long disused to such courtesies, brightened for half an hour by a courteous picking up of a dropped pocket-handkerchief. There are small sins of commission, as well as of omission, thoughtlessly enacted. For instance, a wretched dyspeptic complained to me this morning that he lost his two hours' sleep (all the fiend allows him,) by reason of one of his neighbors taking a fancy to walk the gallery half the night in creaking boots. And at this moment half a dozen lawless children are shouting and screaming in the gallery adjoining the room of an invalid who is vainly trying to sleep. Are not these violations of the laws of humanity? and should creaking boots be worn by any but the confessed enemies of their race? and is it not enough to make a misanthrope of a Burchell, to have the music of children's footsteps converted into such an annoyance?

Ah when shall we see the principle of brotherhood, that informs the great operations of philanthropists, brought to bear upon the common charities of life—upon the social relations in these summer resorts, where people "most do congregate?"—How it would annihilate distances between man and man, bring down the loftiness of the lofty, and exalt the depressed!—How it would kindle up the evening horizon of the aged, and disperse the mists from the dawn of the young!

LETTER TO THE EDITOR.

COMMENCEMENT ANNIVERSARY. GEORGETOWN COLLEGE. THE DINNER, &c.

My dear White:—As the appropriate vehicle of such information, I beg to ask you to devote a page or two of the Southern Literary Messenger to the record of one of the most interesting, intellectual, and social treats it has ever been my good fortune to partake of. I allude to the Annual Commencement of the Georgetown College, which took place on the 24th July, 1839. You and your work were remembered both in the college, and at the festive board, upon that occasion, and in a manner, too, which would have given you much pleasure and pride to hear.

The literary exercises were, in the main, highly respectable to the students who had parts. Where all was so good, it would be invidious, perhaps, to particularise; yet I must say a few words with regard to the performances of the four graduates, and one or two of the undergraduates, who had exercises, for prizes and premiums. Of those who graduated, young Doyle of New York, and Green of Washington, had the first parts. The valedictory of Doyle was very well written, but delivered very badly, on account of the imperfectness with which it had been committed. Another part, by the same young gentleman, in defence of Natural, as compared with Moral Philosophy, as a science, was far more creditable to him, both in matter and manner, and was, as well as the oration of Green, upon Ancient and Modern Republics, a very good specimen of youthful composition and eloquence. The latter was perhaps too strongly imbued with a sectional political feeling,—a fault, which the obvious good sense and judgment of the talented young author will most surely correct, whenever he finds it obtruding upon more practical efforts, hereafter. I would here remark, that it seemed to be the general impression that Green was entitled, all things considered, and so far as those present could judge, to the first honor, instead of Doyle. Young Ford took up the defence of Moral, against the oration of Doyle in favor of Natural Philosophy, as a science, and produced a very creditable essay, in point of composition. The manner of treating it was somewhat common-place, however. Luckett of Maryland produced quite a sensation by his vigorous, spirited, and admirably delivered argument against the senseless practice of duelling, and gave promises thereby, of future distinction, if his life be spared, and his present ambition holds, in the councils of his country. As he has now stepped but a single pace upon the stage, will he pardon an admirer of his talents for suggesting to him one or two hints as to manner? His style is very fine and effective, but he speaks far too rapidly; a fault which was remarked also in the performance of Green, which, beautiful as it was, was yet greatly marred by the extreme indistinctness consequent upon the rapidity with which he spoke. Mr. Luckett must alter his present mode of pronouncing those familiar words in our language, which terminate in *ere*, before he can become a finished speaker. He invariably gave that termination the sound of simple *e* or *oe*; as *stoe* for "store," *befoe* for "before,"—and the like. I cannot forbear to add to this notice an expression of sincere and earnest hope that Mr. Luckett will carry out with him, from the University into the world, the same stern Roman sentiments with regard to the absurd custom of duelling, which he so eloquently and forcefully denounced in this oration.

While on the subject of verbal criticism, I will notice a common mispronunciation of one other of the most familiar words in the language, which struck my ear during the delivery of Green's performance. It is an error into which members of congress, in both chambers, are continually falling, but derives from that fact, no good philological sanction. I allude to the pronunciation of "inalienable" as if spelt *maleenable*, with the emphasis on the third syllable. Walker's Johnson gives the sound of this word thus: *in-ale-ye-nable*; which is certainly not only much easier to articulate, but is also a great deal more euphonical to the ear.

There were several performances from the pen of young Lewis (an undergraduate) of Tennessee, which promise very brightly for the future poetical fame of the precocious author. He seems to have adopted the heroic measure as his *forte*, and gave some very pretty paraphrases of passages in Grecian and Roman history, somewhat in the manner of Pope and Dryden.

But he has originality of genius enough to vary this style of composition; and if he would turn his attention to the lighter and more popular measures, he might make his verse the seed of greener and broader laurels than now deck the brows of many a modern poet.

Cuyler gave us a very good syllabus of American authors, with a clever running sketch of the growth and achievement of American literature. But I am at a loss to perceive the force of that criticism which concedes the palm of preference over all our writers to Mr. N. P. Willis, and places Bryant, Halleck, Percival, Irving, Cooper, and the rest, in a lower niche.

The prizes and premiums were awarded by Archbishop Eccleston of Baltimore, with much imposing ceremony, and the parts assigned to the recipients were all very creditably performed. There was very fine music by a well-conducted band interspersed among the exercises, and, at about noon, the large audience separated with great apparent satisfaction with the treat they had been enjoying.

After taking a view of the fine prospects which are to be seen from every point of view about the college, and having examined the well-ordered arrangements for the comfort, convenience, health and happiness of the students, I had the honor of sitting down, with other invited guests, at one of the most sumptuous and social banquets it was ever my happiness to partake of. The venerable Archbishop of Baltimore presided, with much dignity and urbanity, over the festive board, around which were seated citizens from every part of the District, with several from different states in the Union, without distinction of religious sect. It was truly delightful to witness the proofs of attachment and devotedness to the prosperity of their *Alma Mater* evinced by several of the Alumni, who were present,—while the invited guests, generally, with that liberality which is the sure promoter of socialness and good-feeling, were by no means backward in bearing their parts in the festivity of the occasion.

The first sentiment, after the cloth was removed, was given by the Rev. Mr. Mulledy, late principal of the college. Promising that it was a custom of the Institution to give a parting dinner to the graduates, annually, he said that he was reminded of the origin of the word "graduate,"—which came from *Gradier, gradi, gressus,—to walk*. His sentiment should be, May our graduates "walk" as they have been taught.

To which Mr. Doyle happily replied; expressing the hope, that the graduating class of that day might realize the wish of the reverend ex-president, by emulating the example, as well as remembering the teachings, of their instructors.

Mr. Lynch of Maryland was next toasted, in appropriate and flattering terms, as one of the Alumni of the Institution, who had, by his recent contributions to the Southern Literary Messenger, reflected great credit upon his *Alma Mater*. Among other happy things said in this connection was that from one of the faculty, in allusion to the article in the July number of the Messenger, upon the 'Influence of Romance upon Morals;' "*Lynch-law* to immoral writers!" This sally was received with much applause; but nothing would draw out the subject of it: his modesty was found to be indomitable, and nothing was heard from Mr. Lynch. *Sed pennâ loquitur*.

Mr. George Washington Park Custis, of Arlington, being complimented by the president of the day, as a steady friend of the Institution, and an ever-welcome guest at its festive board, entertained the company with a very interesting anecdote of General Washington and an Indian prophet, who, in the old war, had eloquently foretold the future greatness of *Pater Patriæ*. This was followed by the sentiment, "The Oratory of Nature: the only true Eloquence."

Mr. Mulledy here volunteered to bring in a proof of the correctness of this sentiment of Mr. Custis; and, having retired for a moment, soon returned with a very good "counterfeit presentment" of an Indian chieftain,

"All painted and plumed in his savage array,"—

and smoking the long pipe of peace. This character was sustained with great effect by a distinguished sculptor of the District, who has lately been making it his study for professional purposes. He [Mr. Petrich] delivered a very clever defence of the fine arts, and sculpture particularly, in the characteristic style of the red man, (a gentleman present acting as interpreter;) and maintained that the arts were the objects of admiration and delight to the sons of the forest, as well as to the

white man. This was a very pretty episode, and went off with much *acclat*.

Wm. B. Lewis, Esq., being called on for a toast, gave the health of the Archbishop of Baltimore, the President of the Day,—who happily replied,—and offered a sentiment in honor of the Order who had founded and reared the Institution, in whose halls the company were partaking of the pleasures of cordial hospitality. To this the Ex-Rector of the College responded appropriately, and gave the health of

William Joseph Walter, Esq., of England—one of the guests present, a literary friend and brother; who, in his turn, gave "The sons of St. Ignatius; the great promoters of enlightened education, and the firm upholders of truly liberal opinions, throughout the world."

Alexander Dimitry, Esq. of Washington,—late of Louisiana, and a distinguished Alumnus of the College,—being alluded to in a highly complimentary toast, proposed the health of "James F. Otis, Esq. : whose contributions to the Southern Messenger have rendered good service to the advancement of that literature, of which that periodical is the able organ." To this toast Mr. Otis briefly responded, and closed with the following sentiment:

"*Georgetown College*. In these classic shades may many an American scholar yet find his Academe, many a future poet his Castaly, and many a statesman his Egeria."

Mr. Hoban of Washington, one of the Alumni, having been complimented in a toast, by one of the graduates of the day, addressed the table with fine effect for a few moments; during which, in a strain of eloquence which reminded me of what I had heard of the style of Curran, Phillips and Shiel, he dwelt upon the variety of professions for which, in after life, the students of that Institution were fitted by the course of study there pursued. It was a beautiful tribute to his *Alma Mater*, and I regret that I was unable to jot down some notes, as he spoke, from which to present your readers with a better idea of the whole thing.

Mr. Haxton of Washington, being called on for a sentiment, indulged the company with a fine specimen of *badinage*, intended, obviously, as a humorous burlesque of the common style of addressing public assemblies. It was a piece of mock-heroic eloquence, which convulsed the audience with laughter, as well by the cleverness of the conception, as by the irresistible drollery with which it was delivered. It closed, characteristically, with a toast to "The memory of ——— *Julius Cæsar*!" This was a bit of fun worthy of "Box" himself.

The *Marine Band of Washington*, (who were in attendance during and after dinner,) were appropriately toasted by one of the Vice Presidents of the table, as "an annual source of pleasure to the residents and visitors of Georgetown College." Whereupon the band played a brilliant overture, which was rapturously applauded.

Rev. Mr. Ryder of Philadelphia, an Alumnus, was called on by a complimentary sentiment, offered to him, as an ex-president of one of the literary associations of the college, by one of the present members. His response was brief and appropriate, and closed with an allusion to Mr. Otis of New England, one of the guests: to which the latter responded, and took the occasion, as a native of Massachusetts, to pay a well-deserved tribute to the memory of the late Cardinal Cheverus; whose ministrations at Boston had won for him the universal respect and affection of the whole of that enlightened community, without any sectarian exceptions. This allusion was received with much satisfaction, and was feelingly acknowledged by the venerable president of the day, the Archbishop of the diocese.

Several other sentiments were offered, some songs were sung, and then, the hour being yet early, the table was dissolved,—the whole assembly separating with many a pleasing recollection to be called up hereafter, of a day so socially, intellectually and happily spent.

Yours, my dear White,

FLATTERY.

An elegant writer observes, "The coin that is most current among mankind is Flattery; the only benefit of which is, that by hearing what we are not, we may be instructed in what we ought to be."

SCIENTIÆ MISCELLANEA.

BY A. D. G.

No. III.

DEFINITIONS IN NATURAL HISTORY.

Plato is said, on a certain occasion, to have defined man to be "a featherless biped." The next day Diogenes, having plucked a chicken, placed it upon the philosopher's desk, with this label—"Plato's man." This mistake arose, not from a want of acuteness on the part of the Grecian philosopher, but from the intrinsic difficulty of his subject. One would be led to believe, from the language of natural history, as well as from that of common society, that there existed in the world of created things well defined lines of distinction, separating between the different genera, classes, &c. But when we come to search a little more closely for these lines, they are nowhere to be found. Even the three great kingdoms of nature, animals, vegetables, and minerals, at their extremities, run so much into each other, that naturalists have puzzled themselves in vain to fix upon the exact boundary of each; some placing a species in one kingdom, which others have placed in another. In distinguishing the more perfect species of one kingdom from those of another, this difficulty does not exist; and I would by no means be understood as saying, that we could not easily point out a difference between a man and a tree, or between a tree and a rock. It is in distinguishing between the more imperfect species only, the extremities of the several kingdoms, that this difficulty is met with.

It would seem, at first thought, to be an easy matter to distinguish an animal from a vegetable. But let us examine this matter a little more minutely. Wherein does this difference consist? What characteristic feature is there which may serve to distinguish between them? One of the first which suggests itself, is the possession of a power of locomotion. Yet many testacea and all zoophytes, (which are universally classed among animals) are found fastened to the rocks near the sea-shore, and spend their whole lives in the self same place where they were born;—whilst the sea-weed moves about continually upon the surface of the ocean, deriving nourishment from its waters.

The ability to move some of their parts by a power inherent in themselves, might seem characteristic of animals. Yet there are some vegetables which possess this power to a very considerable extent; whilst in some animals, it seems to be almost entirely wanting. A good instance of the possession of this power, by a plant, is afforded in the Venus flytrap, (*Dionea muscipula*) a plant indigenous to the Carolinas. Its leaves are jointed and furnished with two rows of strong prickles. The upper surface of the leaf is covered with a sweet liquid, very tempting to flies. But no sooner does an unwary fly attempt to rob it of its treasures, than the two lobes of the leaf instantly rise up, the rows of prickles lock into each other and squeeze the poor captive to death.

The possession of some one or all of the senses, might seem characteristic of animals. Naturalists allow to the oyster only one sense, that of feeling. This

same sense appears to be possessed, to an almost equal extent, by the sensitive plant (*Mimosa sensitiva*.) If you touch the oyster, it gives evidence of the possession of feeling, by closing its shell. Touch the sensitive plant, and immediately its leaves shrink, and, together with the branches, bend down towards the earth, as if in this way to escape further molestation.

This same difficulty meets us in attempting to draw a dividing line between the mineral and vegetable kingdoms. The light flocculent substance which often appears upon the surface of decaying fruit (commonly called mould,) is classed with vegetables;—whilst the substance, precisely similar to it in appearance, which is found upon the walls of damp cellars, is certainly a mineral (nitrate of potassa, or saltpetre.) These difficulties have deterred most modern naturalists from attempting to run the boundary line between the three kingdoms of nature. Linnæus attempted it. His distinction was: "minerals grow; plants grow and live; animals grow, live and think." This distinction would seem at first thought correct enough, yet it will not bear examination; in fact, it only removes the difficulty a step further off, and the inquirer may turn upon his instructor with the questions: "what is it to live? what is it to think?" But even supposing these last mentioned inquiries answered, how many thoughts have ever entered the—I cannot say head of an oyster, for it has none; neither can I say brain, for this is also wanting;—have ever entered the body of an oyster. There is an absurdity in the very form of the question. No one, I suppose, ever attributed thought to an oyster.

This gradual passage into each other, which characterizes the three great kingdoms of nature, is observable also in their subdivisions. The leather-winged bat is a connecting link between beasts and birds; lizzards between beasts and reptiles; reptiles themselves, between beasts and fishes. So in the vegetable kingdom, ferns and mosses, whose seeds are evident, serve as a connecting link between the more perfect plants and the numerous class of fungi, the most imperfect of vegetables. So also in the mineral kingdom. The numerous specimens, which assume a regular form by cleavage, serve to connect those which appear as rude and unshapen masses, with those which are presented to us, possessed of the high polish and all the beautiful regularity of form which characterize the perfect crystal.

An observation of these facts, probably gave rise to the "progressive theory," by which some philosophers have attempted to trace back the descent of man himself, through an indefinite line of ancestry, to simple organic mud. From so humble an original, they have, in imagination, seen him

"Rise each generation one key,
To Adam, who was but a monkey."

At any rate, it is on such observations they have founded some of their most plausible arguments in support of their strange fancy.

No. IV.

DEVELOPMENT OF PHYSICAL SCIENCE.

There are few pages in the general history of our race, which more strikingly display the powers of the human mind, than those which are devoted to the his-

tory of its achievements in the department of physical science. Moral and religious truth man has received by special revelation;—political knowledge, whilst much of it is the result of experience and observation, yet its great principles have been learned from the pages of inspiration;—physical science is entirely man's own. Who that has made himself acquainted with the wide extended and accurate knowledge of some important subject, which is now in our possession, and has traced it back to its origin in some insignificant and now almost forgotten observation, has noticed with what untiring perseverance the clue thus obtained has been followed; has observed how, at each step, nature has been forced to yield up her choicest secrets, in answer to the well directed inquiry of the philosopher;—who is there that has observed all this, and has not found his conceptions of the powers of the human intellect greatly exalted above that which they were before? The history of no particular branch of natural science presents this subject in a better point of view than that of electricity. The progress of our knowledge respecting this agent, may be fully compared to that of a stream whose fountain head is in some wild, sequestered spot, uninhabited and uninhabitable, but which in its course, receiving its tributaries on the right hand and on the left, swells at length into a mighty river, bearing upon its bosom the commerce of distant nations, and in a thousand ways blessing mankind. The knowledge of electricity possessed by the ancients, appears to have been confined to one solitary fact. They knew that when amber had been rubbed with a warm cloth, it would attract straws, or other light bodies to itself, and having held them in contact for a few moments, would repel them.

When after a long period of ignorance, the attention of mankind was again turned to the study of natural science, and they began to search among the records of antiquity for that which had been known to the old philosophers, this fact was all they found respecting electricity. The question might then have been asked, with much apparent good reason,—why notice so insignificant a fact as this?—of what importance can it be to investigate the nature of so feeble an attraction?—what light can possibly be thrown upon the laws which govern matter, by ascertaining how it is, and why it is, that amber attracts a piece of straw? Notwithstanding the unpromising appearance of electrical science at its first entry into the world, it has received no inconsiderable share of the attention of philosophers; and as the consequence, facts have been developed, surprising alike to the simpleton and the sage. Perhaps no discoveries have exerted a more powerful influence in directing attention to this study, than that of our countryman Franklin, in which he ascertained the identity of lightning and the electric fluid; and that of Sir Humphrey Davy, in which, by means of electricity, he discovered the compound nature of the alkalis. These have given a new impulse to the zeal with which this study has been pursued; and now, that agent which the savage knows only as the lightning flash, and beholds only to tremble before it, we can trace in the performance of a thousand works of mercy;—that attraction which was first made known to philosophers, in the motions of pieces of straw, is found to pervade all nature; “the heavens above, the earth beneath, and the waters

under the earth,” are full of it. In every department of nature it is found to act a more or less important part. Go to the botanist, and he will tell you, that in the bursting of a seed, and in the growth of a plant, he can trace its agency: go to the natural philosopher, and he will tell you, that in the lightnings of heaven, in the aurora which cheers the long night of polar regions, in the directive power of the magnetic needle, (for even the mystery of the earth's magnetism is at length satisfactorily solved,) he acknowledges its power: go to the geologist, and he will point you to the volcano, as lighted by its magic touch—to the metallic ores, as disposed in continuous veins by its agency: go to the chemist, and he will tell you, that in the course of a few years it has changed entirely his whole science, proving that many substances before considered simple, are in fact compounds, separating their elements and presenting them for examination in a tangible form; that it has pointed out to him one of the simplest and most beautiful systems of classification; and that, so far as he can see, it is likely yet to prove to be that which binds the ultimate particles of matter together,—the very cement of the universe.

It is at once the perfection of human science, and the glory of the human intellect, to be able to determine the manner in which the Creator has put this world together; and man may fearlessly appeal to it, as evidence of the greatness of the powers of the human mind, when those powers are properly developed. But how much superior must be the power of that eternal mind, which could not only determine, but contrive and execute this wondrous plan; could not only discover the same agent in such a vast variety of forms, but could cause it to assume such forms; could fill the world, and even the human body, with the lightning of heaven, and yet keep it under such perfect control, that for centuries man lived, and acted, and thought, and yet never discovered its existence. In intellect, as well as in stature, man may be said to stand

“Mid-way from nothing to infinity.”

When we feel that our intellectual powers are nothing, it is good to look beneath us; when we feel as if they were every thing, it is good to look above us.

MEMOIRS OF DOCTOR WILLIAM CAREY.

This work was published in 1836, but it never fell under the notice of the writer till within a few days past. It is not my purpose to review this production, because a great portion of the review would necessarily be inappropriate to a literary work. The policy of the East India Company—the improvement of agriculture in the British possessions—and the question whether the religious code of the Hindoos should be supplanted by an ecclesiastical establishment from England, are subjects which have been elaborately discussed. For this reason, we have no desire to enter into any speculations of the kind. Allow me further to say, that we are far from undervaluing either the sacred character or the missionary enterprise of the individual who is the subject of these memoirs. But as

essay is prefixed to the work, from the pen of President Wayland, in which justice is done in these respects to this eminent missionary, and with the estimate given by the essayist, we perfectly coincide.

Dr. Carey, it appears, from the views he entertained of himself, from the estimate of Wayland, from the statement of his biographer, and from the concession of all his admirers, was not what we call a man of genius. In the structure of his mind, the imaginative faculty was absent; and without some portion of this faculty the mind must always remain imperfect. By the absence of it, Dr. Carey escaped some sorrows; but lost at the same time many pleasures. His mind, in this respect, bore a resemblance to that of Scott, the commentator, who expresses his gratitude that his Creator had not made him a poet. He is willing to employ, for useful ends, the poetry of others; but not willing to contribute so much as a flower to the stock, in which mental ornament prevails over sheer utility. Imaginative men have acted on more generous principles. They have pursued their own devious thoughts; but have not forgotten at the same time to contribute a vast deal to plain common sense. This might be evinced by mentioning the names of a hundred poets; but Shakespeare is in himself an host. Dr. Carey was a remarkable example of what can be accomplished by industry without inventive powers. If diligence alone could bring to pass the results which this great man achieved, what might not genius accomplish, if combined with equal industry and the same attachment to objects judiciously selected? The talent of acquiring languages, does not imply the power of invention; because, in attending so closely to what has been created, it is natural to lose the desire to create. The accounts which tradition, rather than history, has preserved of the admirable Crichton, amount to an exaggerated fiction. If such a person ever lived, he might have been profound in a few of his attainments; but in many of them he was superficial. We are not acquainted with a more uninteresting writer than Professor Lee of Cambridge; and though skilled in a score of languages, he has not yet learned to compose in his vernacular tongue. The learning of Ross, a native of Scotland, was various as that of Professor Lee; but his premature death has deprived us of the power of estimating his amount of originality. Lord Teignmouth states the number of languages with which Sir William Jones was acquainted, at twenty eight; but we know of nothing that Sir William wrote of which it can be said, this never existed before. He could translate into English the thoughts of Persian and Italian poets; but the question never can be solved, whether he would have executed successfully the epic poem which he meditated writing before his death. The writer is incompetent to judge of his essay on bailments; but the views of that work are conveyed in graceful terms. It is equally true, that a man of small attainments may possess uncommon powers. A peasant once rose in Scotland, who could read and write, and was partially acquainted with arithmetic. This man said of himself, with an eloquence rarely equalled,—“The muse of Scottish poetry found me at the plough, and threw over me her inspiring mantle.” Burns has produced not one, but many things new and original. If they ever rose to the minds of other men, it is certain that they never found

egress upon the glowing vehicle of language. But into that vehicle he placed objects humorous, pathetic, or sublime, at his pleasure. When this untutored peasant appeared in the capital of his country, philosophers wondered and rhetoricians were baffled, because he possessed that by nature, which they could not acquire by art. As he reclined by the hawthorn bush, the vernal season unfolded its successive pages before him; and as he stirred his cottage fire, the leafless winter read to him its lessons. The vale opened its green lap, inviting him to repose; and the mountain was ambitious to cast its chains over such a noble captive. And this was all his education. The same remarks will apply to Goldsmith. He was a native of Lishoy, in Ireland, and in his circumstances scarcely above the condition of the Scottish ploughman. It has been aptly remarked of Goldsmith, that when literature took him, it robbed no other service. He could write, and that was all. Dr. Johnson said of him, “It is astonishing how little the man knows;” but he might have added, what a power does he possess of employing what he knows. The artisan need not care so much about the abundance of his materials, provided he be able to work into valuable fabrics the materials already in his possession. And this statement is pre-eminently true of Goldsmith. Durability is impressed on his works, and this cannot be said with truth of all the works of Johnson: when men are searching for the soft and winning pictures of life, they will be apt to turn towards that canvass which was spread out before the pencil of Oliver Goldsmith. We have drawn our own chair before that canvass more than once, and have gazed on the interesting objects with which it is filled. We have accompanied the solitary traveller as he was passing the Alps, and been cheered by the recreations of the smiling village, and have felt sad when that village went down into total declension. We have sympathised in the trials, and exulted in the prosperity of his Vicar. We have likened his “Animated Nature,” to a kind of folding place for flocks—or a mental park, in which the deer can gracefully recline—or to some meadow, in which the bee can carry on his flowery toils. We have seen Chinese customs diversify the scene, and English monarchs rising successively to view—and classic Greece, in the distance, whose heroes he portrayed, and all the prospect enlivened by rivers more captivating

“Than the lazy Scheld and wandering Po.”

We agree with President Wayland, that this biography of Dr. Carey is defective. The memory of such a man deserved a better monument. There is a painful destitution in the work. We do not allude to a destitution of facts. The locomotiveness of this great missionary is sufficiently well described. But there is no history of his mind. In the life of Dr. Scott this is the capital excellence. It matters but little that the commentator lived at Olney; that he was chaplain to the Lock Hospital in London, or rector of Aston Sandford, Buckinghamshire; but the progress of his mind is what lends interest to the book. We associate our feelings with those of the commentator. We enter into his laborious vigils, and rejoice when he leaves his sheepfold in Lincolnshire, to go forward to that moral and intellectual elevation for which he was designed. Had the Rev. Robert Hall been living at the time that Dr. Carey

died, he would have executed this task on a scale of proper dimensions. But by proper dimensions we do not mean that a bulky volume was necessary for the purpose. We wish the circle of biography to include all that it can legitimately be made to contain. With due deference to the author of *Lalla Rookh*, we think he made a circumference for the life of Lord Byron too vast to be filled up either with instruction or amusement; and five or six hundred letters deposited within it, ought to have found a place among the works, rather than the memoirs of the noble poet. This remark will apply to many lives in modern days, though there are some modern pieces of biography superior to any of which antiquity can boast.

But in beginning this communication, we had a specific object in view, and that was to take out of this memoir a few incidental facts which illustrate the value of literature. We looked then, in reading it, with anxiety, to find the source from whence Dr. Carey derived the first impulse to a missionary life, and happily we have the statement, not from the biographer, but from the subject of the biography. On page twelfth of the memoir, we find the following declaration: "Reading Cooke's *Voyages* was the first thing that engaged my mind to think of missions." We view this as an important literary fact. These *Voyages* may not be a finished production; but few works have ever wrought so powerfully on the human mind. Perhaps De Foe, as a writer, was more popular; but his was the romance of the sea, whilst Cooke gave us nothing but maritime realities. De Foe fixed attention on a solitary man; but Cooke, on masses of men hitherto unknown. Many regarded De Foe's as a puerile performance, and would not look into the deep moral lessons which he taught, whilst no prejudice of the kind existed against Cooke. Even the occupants of farm-houses could follow the track of the navigator, under the conviction that it would lead not to fictitious scenes, but to islands luxuriant in tropical fruits, among which many of our species had found a home. Customs entirely novel, trees laden with unusual fruits and flowers, expanded by the sun, took their place among the colorings of the human imagination. These things appeared marvellous at the time, and realized a declaration since made, that

"Truth is strange—
Stranger than fiction."

These voyages not only influenced many to attempt the perils of the deep; but, by enlarging the boundaries of human knowledge, they incited many powerful minds. Sir Joseph Banks, and Solander, a pupil of Linnaeus, accompanied Cooke in one of his voyages. Having taken a record of plants in their native lands, they went in search of other and cognate families. But these voyages affected the complexion of poetry. The poet, tired of objects which he had seen, longed to describe what he had not seen; and we would ask whether Coleridge, Byron and Montgomery have written nothing, the materials of which have been brought from the grottos of the deep, the beaches of the sea, and the islands of the restless ocean. In this way, the book on which we are remarking has become interwoven with polite letters; and we have proved that this book awoke the moral chord which has vibrated throughout

India, and that vibration was a loud and melodious tribute to the genius of literature.

The memoir contains other facts illustrating the value of literature. Dr. Carey's impressions of missionary life, were deepened by his geographical studies. It appears that he taught school in England. He had a facility in acquiring knowledge, but not the talent of imparting it; and hence he succeeded but indifferently with his school. The superficial are always prompt to deal out what they know; but in the most of his attainments, Dr. Carey was profound. It is likely, however, that he was too much bent on the improvement of his own mind, to give an undivided attention to the minds of his pupils. He was constantly engaged in collecting the statistics of geography, and in search of recondite facts—of customs not yet accurately defined, and systems of religion differing from the one received in England. Geography has been called a science; but it ought scarcely to be dignified with such a title. The earth lies so open to investigation, and an acquaintance with it demands so small a portion of abstract talent, that the science is claimed as belonging rather to the general than to the precise operations of the mind. The literary man cannot be indifferent to geographical information, because so many of the materials with which he works are brought from this source. There are many things which the poet uses, with which he may not be scientifically acquainted. There never was a poet who did not admire the stars; but all poets have not been conversant with astronomy. Thus Thompson honored the memory of Sir Isaac Newton in his verse, but sought from others the amount of philosophical information necessary to the execution of his task. But it is recorded in the *Life of Thompson*, that he was inordinately fond of voyages and travels. Such works feed the poetical mind, and some of the most imaginative men have derived advantages from going abroad. This may be said of Homer, Camoens, Milton and Byron. It was by this general study that the taste of Dr. Carey was fostered for missionary life, and no man did more to stop the car of Juggernaut, to abolish suttee, or to rupture the first links in the chain of the caste.

It further appears from the memoir, that Dr. Carey was a botanist. It is not the object of the biographer to represent him in his character as a philosopher, nor is it ours to speak of him in his religious character. But he was always writing back to England for works on plants. He was always wanting the newest publications on this and kindred subjects, and that at a time when he had no home but the pinnacle, the jungle, and the sunderbund. The passion he had formed in England was not the less vigorous, because the person in whom it resided was transferred to India. It is admitted that botany is a science existing from the earliest times, but brought to a high state of improvement by the immortal Swede. This science has been appropriated by literature to its own service. It forms one of the elegant pursuits, and belongs clearly to that region of ideal enchantment over which poets delight to rove. The sun of science has here distributed his rays; but they have been combined into a thousand diamond and planetary points of beauty. Let it not then be forgotten, that in this pursuit, Dr. Carey employed moments of relaxation from the toils which consumed his valuable life. He did not disdain the analysis of a Hindoo

plant, even when he was grappling with all the dialects of Asia. And then it appears that he was anxious to compose a system of Hindoo ornithology. Every branch of natural history engaged his attention; but it is probable that in some branches he was simply an amateur. His translation to India introduced him into a new world. The translation of Wilson to this country, produced the ornithological taste by which he was distinguished. Grahame wrote a poem entitled the "Birds of Scotland," but the genius of Wilson was never awakened in North Britain. Far be it from the writer to insinuate that Dr. Carey was devoted to pursuits of this kind, to the injury or neglect of his appropriate vocation. But the eagle, when poisoning himself in playfulness, may keep his eye on the sun; and this good man kept his wide awake to the central mark at which he aimed. It appears, too, that he engaged in the translation of a sanscrit poem. This employment, however, does not seem to have been congenial to his taste; and this was owing probably to the defectiveness of his imagination. One of his reviewers has remarked, that a mytho-epic poem was scarcely in harmony with missionary employment. Nor was an indigo factory at Malda in unison with the same employment. But he found that he must subsist, or the mission die, and therefore he superintended such a factory. It is probable, then, that the translation of the poem was subsidiary to acquiring a knowledge of the language, and of the religious belief of the Hindoos. Without an acquaintance with the Hindoo religion, how could he possibly subvert it; and without perfecting himself in the language, how could he have compiled the grammars and dictionaries of which he was the author. But the value of literature is pre-eminently seen in the contrast between where literature found him, and the unparalleled usefulness to which he was elevated by its power. It may be said that his piety accomplished much in his behalf; but the object of piety is to confer moral rather than intellectual worth. When he lost sight of England, he left in it many a miner, hedger and toll-gatherer as pious as himself; but he went forth under the auspices of religious literature, and in her name, wrought for the benefit of millions, who, existing prospectively in the ocean of divine wisdom, will one day arrive on the beaches of our island world. Dr. Carey was born in Paulerspury, Northamptonshire, of obscure parents. He was apprenticed to a mechanic. He felt a desire to learn, which he could not suppress. He teaches school, and officiates as a preacher in several obscure towns. We wish his biographer had described these localities more fully. He seems destitute of the associating faculty. He does not so much as hint that Doddridge and Hervey officiated in the same shire—that it was one of the visiting places of Akenside, and the birth-place of Dryden. But Dr. Carey goes forth poor and unknown. Perplexed by the suspicious policy of the East India Company, he takes refuge in Serampore, a Danish town. Many go, year after year, from England to India, but they are allured by the love of gain. When Leyden was dying, he saw a piece of India gold, and he closed his life in the act of inditing to it a pathetic sonnet. When property enough is secured, these adventurers expect, with their acquired rupees, to purchase some greenwood home in England. But Dr. Carey expatriates himself as a perpetual exile. He be-

comes rich; but by his disinterestedness he dies poor. He is the associate of pundits, rajahs, and viceroys, and the King of Denmark presents him with a medal. Many great names are connected with India, but among them all there is not one brighter than that of the subject of this memoir. Comparisons are invidious among the living, but not among those who have fulfilled their appointed tasks. Sir William Jones was a man of more polished mind, and Bishop Heber of more refined taste, and Bishop Middleton was a more profound Greek scholar; but they were sustained by the patronage of the government. The one was fortified by the seal of his king, and the others carried to India crosiers from the church established by law; but when did either or all of them publish the scriptures in forty dialects. Much then as we revere such benefactors of our race as Sir James McIntosh, or Sir Stamford Raffles, or Claudius Buchanan, or Henry Martyn, let us generously yield the palm to the man who has deserved it. The name of Carey will not be forgotten. It will float forever on the tide of the Ganges; it is associated with each grassy jungle, and it shall be more conspicuous, when the children of the east shall weave millennial flowers into the mane of the lion, or entwine them round the antlers of the Persian gazelle. When the Ganges is low, the million who inhabit Calcutta are refreshed at a reservoir of vast dimensions excavated in their city. When their antiquated systems of religious error are exhausted, and the people shall be ready to die of mental and moral thirst, they will turn, we hope, to those transparent cisterns of truth, which have been excavated by the hand of religious literature.

Finally, we go for missions, and if asked for a reason, we reply, for the present, in the words of the lamented Heber—

"From Greenland's icy mountains,
To India's coral strand,
Where Afric's sunny fountains
Roll down their golden sand—
From many an ancient river,
From many a palmy plain,
They call us to deliver
Their land from error's chain."

CLERICUS.

BAR ASSOCIATIONS.*

It is well known that there exist, at divers places in the southern country, certain combinations among the gentlemen of the bar, commonly styled Bar Associations, for the purpose of exacting from the community higher fees than could be obtained, were a free competition permitted among the bar for professional business. Sincerely believing that I have correctly described the true, substantial character of these confederations, whatever be their ostensible objects, or whatever subordinate purposes they may effect, I shall endeavor to show that they are wrong in principle, and injurious in their practical results, both to the legal profession and the community at large. To prevent all misapprehen-

* The following communications have been endorsed by one of the ablest political economists in the southern country, to whom they were submitted. He says: "I am against professional as well as trades unions. I consider them as conspiracies against the community at large, and against the younger and less experienced members of the craft."

sion, I must say distinctly, at the outset, that I do not impeach the motives of the members of these associations. Far be it from me to hold up to public execration my respected brethren of the bar, as money-thirsty Shylocks, wickedly conspiring together to practice wholesale extortion upon a suffering community. I would do them no such injustice; and it taxes not my charity in the slightest degree to admit, as I sincerely do, that, unconsciously biased by the insidious influence of self-interest, they no doubt see in these associations nothing objectionable, but much that is commendable. It is hard to see the truth through the bewildering and distorting mists of self-interest. Than self-interest nothing is more insidious and ingenious. It is constantly operating upon the human heart, and we daily see it giving a wrong determination to the judgments of the best of men. Whilst, therefore, I cheerfully acquit these gentlemen of *intentional* wrong, I shall express my sentiments freely with regard to the principles and effects of all such organizations.

It is necessary to premise, that the members of these associations solemnly pledge themselves to each other, not to receive from their clients *less* than certain stipulated fees for certain defined professional services; pledging themselves, also, to suspend all professional intercourse with, and to withhold every professional courtesy from such refractory members of the bar as contumaciously refuse to join the confederation. First, then, these associations are wrong on *principle*.

It is a fundamental maxim in political economy, that the freest competition should not only be permitted, but encouraged in every department of human exertion. Competition is admitted by the common sense of mankind to be, according to the trite adage, emphatically "the life of business." It presents the most powerful stimulus to exertion. It arouses not only the self-interest, but also the pride and vanity of the human heart. It nerves the brawny arm of the laborer for ceaseless toil by day, and it chains the pale student over his dizzy page by his midnight lamp. It gives skill and vigor to the physical powers, and it sharpens and strengthens all the faculties of the mind. It is the patron of industry and enterprise, and the foster-mother of the arts and sciences. It gives life and energy to society, and it is in fact the great propelling power of the world. It is one of the great conservative and progressive principles of society.

Destroy competition, and you cut the sinews of industry; you paralyze enterprise; and you palsy the spirit of improvement. Society becomes at once a lifeless, stagnant pool, whose putrid exhalations will soon fill the whole atmosphere with its deadly miasmata.

But this is not all. Competition is not only the great stimulus to enterprise, and the parent of skill and ingenuity, but it is also the great guaranty of society against the unconscionable exactions of self-interest. Competition brings everything down to its proper level. Its natural tendency is to reduce all commodities to their fair average prices. Is an article unnaturally high?—capital and labor are attracted towards it; competition ensues; the market is glutted, and prices sink. Everything is thus reduced to its proper level; prices are left free to adapt themselves to the ever changing condition of human affairs; society is protected against

imposition, and all the best interests of mankind are advanced.

Now, it is perfectly evident that all associations among the members of particular avocations, establishing certain fixed prices for their commodities, and pledging themselves not to undersell each other, are in flagrant hostility to the great commercial law we have been discussing. They prevent competition. The great strife in competition, is, to furnish the best article, or to render a certain service in the best manner, for the *least* compensation. A fixed uniform price is then plainly at war with the great animating principle of all commercial enterprise.

Let us suppose for a moment that all other professions and avocations enter into similar combinations—that merchants and artisans pledge themselves not to take less than certain stipulated prices for their commodities or services—what an unnatural scene society would present! What an utter subversion of the fundamental principles of commerce would be exhibited! Buy where you can buy cheapest; sell where you can sell dearest—these common sense axioms of all sound traffic would be exterminated; industry and enterprise would be in a measure paralyzed; the spirit of improvement would be palsied; society would be iron-bound and stereotyped, and, instead of advancing to higher and still higher degrees of improvement, would present from age to age the same dull, inanimate features. But where competition is unfettered, where trade is free, where it is untrammelled by unnatural restraints, its direct tendency is to stimulate enterprise to its mightiest efforts, to create skill and ingenuity, to reduce prices to their proper level, to adapt them to the ever fluctuating tide of human affairs, and thus to promote the best interests of society, and to carry forward the great work of human improvement. These associations, then, conflicting as they do, with great and pervading public principles of vital importance to society at large, are wrong in their very constitution, and ought therefore to be abolished.

My second position was, that these confederations are injurious to the legal profession. I do not mean in a pecuniary point of view, but in their influence upon the character of the bar for professional acquirements and abilities. Competition creates skill and ability; it sharpens the mental faculties, and stimulates the individual to the greatest possible exertion. But as these associations, in some degree at least, prevent competition, they must, also, in the same degree, tend to suppress the ability which competition would elicit. Every one would naturally expect to find the most skilful artisans, and the ablest professional men, where there was the keenest and freest competition.

There is another view of this subject. These fixed tariffs of fees are ordinarily much too high for the plain, formal, ordinary business of the profession, which any one can transact. The consequence is, that the profession is surcharged with petty retainers, who add nothing to its dignity and respectability. Were a free competition permitted, this sort of petty business would soon fall to its proper level; the emoluments of the profession would be reserved as the rewards of learning, talent and worth; the number of pettifoggers would be diminished, and the respectability of the profession advanced.

My last position was, that these associations are injurious to the community at large; and if there is any truth in the general scope of the preceding rude hints, (for these crude remarks aspire to no higher character) that position is already sufficiently established. But these confederations inflict a direct injury upon society, by exacting higher fees than a free competition would tolerate. If they do not have this effect, they are useless to the bar; if they do, they are injurious to the community. We all know that members of the bar frequently refuse to accept less than the stipulated fee, not because they could not in justice to themselves accept a smaller compensation for their services, but because they had pledged themselves not to take less than the tariff fee. These associations thus exact large sums of money from the community at large.

If then, these associations are, as I have endeavored to show, wrong in principle and injurious in their practical effects, they ought to be forthwith dissolved. They are unworthy of the enlightened profession of the law. They are far behind the free spirit of the age. They savor too much of the shackles and manacles of the dark ages. A freer spirit is abroad upon the earth, bidding the spirit of enterprise go forth unshackled, as free as the gales which swell the sails of the adventurous mariner. Free trade, honorable traffic—these are the maxims of the age, and the true principles of all commercial prosperity; and any association which may oppose this free spirit, will one day be swept away like a bulrush before the swelling tide.

Similar associations have not been found necessary elsewhere, to secure the rights and to sustain the dignity of the profession; nor are they necessary here. To assert that they are, is to libel the profession.

The legality of these associations, too, is almost as questionable as their policy. It deserves serious consideration, whether they are not indictable at common law as conspiracies to raise or sustain the price of labor. They certainly come within the spirit, if not within the letter, of the doctrine.

But if these organizations are objectionable in these various aspects, the penalties by which they enforce obedience to their arbitrary laws, even upon those who may be conscientiously opposed to them, are liable to still severer reprehension. Recusants are to be summarily *Lynched*! Yes, sir; all who refuse to join the conspiracy are to be outlawed; all professional courtesy is to be withheld from them; non-intercourse is to be declared; every legal advantage is to be taken of them; they are to be kicked out of court on all occasions; their professional reputation is to be destroyed, and themselves, if possible, driven from the profession in disgrace! They are lawful game, and the whole pack of bloodhounds is to be let loose upon them! Is this right? Is it just? Is it worthy the generous profession of the law? If a member of the bar degrades himself by dishonorable conduct, spurn him from you; but what right have you to force me to join a confederation which I disapprove? What right have you to attempt to blast my professional reputation, because I choose to exercise my profession like a freeman? because I do not choose to do violence to my conscience, by adopting your arbitrary laws? because I will not permit you to dictate to me the rules of my professional conduct, and officiously to interfere with my private

contracts with my clients? Is it to be supposed that high minded and spirited men, who are conscientiously opposed to these associations, will, with the craven and dastardly spirit of a slave, tamely bow their necks to the yoke? I tell you, nay. No man in whose bosom beats a manly heart, will be deterred by any menaces, or by any unfounded imputation of sordid motives, from the plain path of duty. He will resist to the last gasp, all attempts to tyrannise over his conscience; and in this high course, I doubt not he would be triumphantly sustained by an enlightened and virtuous community.

A MEMBER OF THE ALABAMA BAR.

BAR ASSOCIATIONS.

These Associations present three questions.

1. Are they just to the public?
2. Are they just, as between the parties?
3. Is their tendency to elevate or degrade the profession?

1. They partake of the nature of all agreements among the venders of any article, to fix among themselves a tariff of price. These again partake of the nature of monopoly. When all venders are of one mind, it is the same as if there were but one vender. Such associations, therefore, are attended by the practical evils of monopoly.

All monopolies are odious. The odium varies in degree, according to the nature of the article monopolized. Thus we may suppose—1. Monopolies of articles the use of which is pernicious. These are easily borne. Hence the high prices of tippling shops. 2. Of articles of mere luxury. Of these, for various reasons, some founded in justice, some in vanity, some in mere recklessness, men rarely complain. 3. Of articles of necessity, but for which substitutes may be found, or which the consumer may make for himself. 4. Of articles of necessity, which cannot be substituted or made by the consumer.

To which of these classes does this monopoly belong? Clearly to the last and most odious. Men cannot investigate their rights, or pursue them, when ascertained, without the aid of the bar. Wherein then does this differ from an agreement among the owners of all the springs in any neighborhood, to fix a tariff of the price of water? In this: the necessity for water is one of God's creation. The other is the work of society and legislation. Men are especially bound not to abuse a power over artificial wants of their own creation. Besides, it is easier for every man to dig his own well, than for every man to be his own lawyer. "He who is his own lawyer," says the proverb, "has a fool for his client."

These associations are also unjust to the public, because they force a man to give for an inferior article, which he happens to want, the value of a superior article, which he does not want: to buy the time of a mere drudge, at the price of the time of a man of genius and learning: to pay coach hire, though he rides in a cart. It is as if the manufacturers of broadcloth should engage the manufacturer of Kendal cottons not to undersell them.

II. These associations are unjust as between the

parties. The terms are generally prescribed by the superior members, who thus take away the main inducement of the suitor to engage the services of inferior men. Such men may manage particular cases quite successfully, but there is a sense of security produced, by the knowledge that our business is in able hands, that decides us in favor of the superior man, if to be had at the same price.

III. These associations degrade the bar. By securing to the leading members of the profession a large share of the plain business, and that at a higher price, they feel less inducement to qualify themselves for distinction in the more elevated departments. On the younger and inferior members their operation is yet more pernicious. If left to fight their way without any private understanding, they would get business in the beginning by low charges. In this case they could expect no indulgence or forbearance from the superior whom they had underbid. They must take care to conduct their cases with order and regularity, which is a great source of improvement. The rules of pleading are like the commandments of the Lord. "In keeping them there is great reward," for he who is capable of correct pleading, and actually practises it, necessarily becomes an able lawyer.

Now in all these associations, there is a tacit compact for mutual indulgence, which ends in blank declarations, and in formal pleadings, and uncertain issues, and an utter confusion of ideas, on subjects where nothing is known *rightly*, which is not known *precisely*. And this must be so. The tyro, who is forced to content himself with an occasional fee of \$50, instead of ten fees of \$5 each, will have a right to complain, if he, who has compelled him to charge the highest price for his article, should turn about and disgrace him by exposing its deficiencies. But this tacit understanding secures him in his ignorance. But for this, he would be fair game, and would presently find that he must quit the bar, or qualify himself for it. These associations save him from the necessity of doing either. And here is his inducement to acquiesce in such arrangements. They bribe him through his love of ease. It is much more convenient to receive a high price for little work, slightly done, than for a great deal done carefully. Such is the principle of the trades union. Hence loose practice, and its consequence, loose ideas of law.

Here again the parable of the cloth manufacturers applies. The maker of Kendal cotton sells only to those who care nothing about the fineness of the article. Hence he too is indifferent to it. Hence also he sells less, but being better paid for worse work, he is content.

The true tariff of prices is strict practice. No man incapable of learning the mysteries of pleading, is capable of being a good lawyer. Strict practice is an ordeal which excludes from the bar all who have no business to be there, and thus leaves full employment and rich rewards for the rest. But the system of *mutual indulgence*, which is but another name for sloth and *self-indulgence*, puts an end to strict practice. This opens the door to a multitude of pretenders. To drive these out again is the object of bar associations. Would it not be more honorable and more manly to effect the same object, by frankly asserting and indus-

triously maintaining the superiority of genius, and ability, and application, over imbecility, ignorance and sloth.

[Some letters appear in Blackwood, purporting to be from the German Baron mentioned below: but we are really at a loss to determine, whether there was any such author as Baron Von Lauerwinkel, or whether these letters are not in fact the handiwork of Christopher North himself, or some one of his tory correspondents. Their strong English and conservative tone favors the latter supposition; as to the following, especially. None but a true born Briton, surely, could have either felt and thought, or expressed himself, in so *English* a manner. We are not to be considered as subscribing to all his praise of Pitt. But both portraits are finely drawn; and in many traits, truly.—Ed. Mex.]

From Blackwood's Magazine, 1818.

FOX AND THE YOUNGER PITT.

The following sketch is translated from a MS. letter of the Baron Von Lauerwinkel.

* * * * *

"I shall not easily forget the impression which was made upon me when I first found myself within the walls of the House of Commons. I was then a young man, and my temper was never a cold one. I had heard much of England. In the dearth of domestic freedom her great men had become ours; for the human mind is formed for veneration, and every heart is an altar, undignified without its divinity, and useless without its sacrifice.

"A lover of England, and an admirer of every thing which tends to her greatness, I contemplated, notwithstanding, with the impartiality of a foreigner, scenes of political debate and contention, which kindled into all the bigotries of wrath, the bosoms of those for whose benefit they were exhibited. Absurdities which found easy credence from the heated minds of the English, made small impression on the disinterested and dispassionate German. While rival politicians were exhausting against each other every engine of oratorical conflict, their constituents eyed the combatants, as if every ear and every hope sat on the issue of the field, and prayed for their friends, and cursed their enemies, with all the fervor of a more fatal warfare; but the calm spectator, whose optics were not blinded by the mists of prejudice, though his reason might make him wish the success of one party, was in no danger of despising the honest zeal or the valor of those who were opposed to them. With whomsoever the victory of the day might be, the very existence of the combat was to him a sufficient proof that the great issue was to be a good one—that the spirit of England was entire—that the system of *suspicion*, on which the *confidence* of her people is

founded, was yet in all its vigor—and that therefore, in spite of transient difficulties and petty disagreements, her freedom would eventually survive all the dangers to which, at that eventful period, by the mingled rage of despotism and democracy, its most sacred bulwarks were exposed.

"My eye formed acquaintance apace with the persons of all the eminent senators of England; but their first and last attraction was in those of Pitt and Fox. The names of these illustrious rivals had long been, even among foreigners, 'familiar as household words;' and I recognised them the moment I perceived them, from their likeness to innumerable prints and busts which I had seen. Fox, in repose, had by far the more striking external of the two. His face had the massiness, precision, and gravity of a bronze statue. His eyes, bright but gentle, seemed to lurk under a pair of rectilinear, ponderous, and shaggy eyebrows. His cheeks were square and firm; his forehead open and serene. The head could have done no dishonor to poet, philosopher, or prince. There was some little indecision in the lips, and a tinge of luxury all over the lower features of the face. But benignity, mingled with power, was the predominant as well as the primary expression of the whole; and no man need have started had he been told that such was the physiognomy of Theseus, Sophocles, or Trajan. Pitt, in the same state of inaction, would not have made nearly such an impression on those who knew him not. It must have required the united skill of Lavater and Spurzheim to discover in him *prima facie*, a great man. His position was stiff, his person meagre; his nose was ill-formed, and on a very anti-grecian angle; his lips were inelegantly wavering in their line; his cheekbone projected too much, and his chin too little. The countenance seemed expressive of much cleverness, but it was not till he spoke that the marks of genius seized upon the attention. Had an utter stranger been shown the heads at a theatre, and informed that they were those of the two great politicians of England, he would certainly have imagined the dark eyebrows and solemn simplicity to belong to the son of Chatham, and guessed the less stately physiognomy to be the property of his more mercurial antagonist.

"Not so, had he seen either of them for the first time in the act of speaking. A few sentences, combined with the mode of their delivery, were sufficient to bring matters to their due level—to raise Mr. Pitt, at least to the original standard of his rival, and I rather think, to take away somewhat of the first effect produced by the imposing majesty of Mr. Fox's features. They were both exquisite speakers, and yet no two things could be more dissimilar than their modes of oratory. Fox displayed less calmness and dignity than his physiognomy might have seemed to promise. In

speaking, his other features retained every mark of energy; his eyes and his mouth alone betrayed the debauchee. There is a certain glassiness in the eye, and a certain tremulous smoothness in the lips, which I never missed in the countenance of a man of pleasure when he speaks. Fox had both in perfection; it was only in the moments of his highest enthusiasm that they entirely disappeared. Then, indeed, when his physiognomy was lighted up with wrath or indignation, or intensest earnestness—then, indeed, the activity of his features did full justice to their repose. The gambler was no longer to be discovered—you saw only the orator and the patriot. They tell us, that modern oratory and modern action are tame, when compared with what the ancients witnessed. I doubt, however, if either in the Pnyx or the Forum, more over-mastering energy, both of language and of gesture, was ever exhibited, than I have seen displayed in the House of Commons by Mr. Fox. When he sat down, it seemed as if he had been, like the Pythoness of old, filled and agitated *ἑως ἄνευ θεῶν*.* His whole body was dissolved in floods of perspiration, and his fingers continued for some minutes to vibrate, as if he had been recovering from a convulsion.

"Mr. Fox was a finer orator than Mr. Pitt. His mode of speaking was in itself more passionate, and it had more power over the passions of those to whom it was addressed. His language was indeed loose and inaccurate at times; but in the midst of all its faults, no trace could ever be discovered of the only fault unpardonable in orators as in poets—weakness. He was evidently a man of a strong and grasping intellect, filled with enthusiastic devotion to his cause, and possessing, in a mind saturated with the most multifarious information, abundant means of confirming his position by all the engines of illustration and allusion. It was my fortune to hear him speak before Mr. Pitt, and, I confess, that upon the conclusion of his harangue, filled with admiration for his warmth, his elegance, and the apparent wisdom of the measures he recommended, it was not my expectation, certainly not my wish, that an impression equal or superior in power should be left upon me by the eloquence of the rival statesman.

"Nevertheless, it was so. I do not say that I consider Mr. Pitt as so nearly allied to the great politician-orator of Athens as his rival; but I think he exhibited a far higher specimen of what a statesman-orator should be, than Mr. Fox—perhaps than Demosthenes himself ever did. It is true, that the illustrious ancient addressed a motley multitude of clever, violent, light, uncertain, self-conceited, and withal, bigotted Athenians; and that the nature of his oratory was, perhaps, better than any other, adapted to such an au-

* With intense inspiration.

dience, invested by the absurdities of a corrupted constitution, with powers which no similar assembly ever can possess without usurpation, or exercise without tyranny. Mr. Fox had a strong leaning—as I apprehend, by far too strong a leaning—to the democratic part of the British constitution. He even spoke more for the multitude without, than for the few within, the walls of the House of Commons; and his resemblance to Demosthenes was perhaps a fault, rather than an excellence. Mr. Pitt always remembered that it was his business to address and convince, not the British ΔΗΜΟΣ,* but the British senate.

“His mode of speaking was totally devoid of hesitation, and equally so of affectation. The stream of his discourse flowed on smoothly, uninterruptedly, copiously. The tide of Fox’s eloquence might present a view of more windings and cataracts, but it by no means suggested the same idea of utility;—nor, upon the whole, was the impression it produced of so majestic a character. Mr. Pitt was, without all doubt, a consummate speaker, but in the midst of his eloquence, it was impossible to avoid regarding him at all times, as being more of a philosopher than of an orator. What to other men seems to be a most magnificent end, he appeared to regard only as one among many means for accomplishing his great purpose. Statesmanship was, indeed, with him the τέχνη ἀρχιτεκτονική, and every thing was kept in strict subservience to it. What Plato vainly wished to see in a king, had he lived in our days, he might have beheld in a minister.

“By men of barren or paltry minds, I can conceive it quite possible that Pitt, as a speaker, might have been contemplated with very little admiration. That which they are qualified to admire in a speech, was exactly what he, from principle, despised and omitted. He presented what he conceived to be the truth, that is, the wisdom of the case in simplicity, in noble simplicity, as it was. Minds of grasp and nerve comprehended him, and such alone were worthy of doing so. The small men who spend their lives in pointing epigrams or weaving periods, could not enter into the feelings which made him despise the opportunity of displaying, for the sake of doing; and they reviled him as if the power, not the will, had been wanting.

Δίος ὠρὸς ὀρνίθα θείον.†

Pindar, Olymp. II.

“Instead of following with reverent gaze the far ascending flight and beaming eye of the eagle,

* Populace.

† Powerful in empty sound, like ravens that vainly clamor against the majestic bird of Jove.

they criticised him, like the peacocks of the Hindoo fable, because he had no starry feathers in his tail, and because the beauty of his pinions consisted only in the uniform majesty of their strength.

“The style of speaking which was employed by this great man, seems to be the only style worthy of such a spirit as his was, intrusted with such duties as he discharged. *Intellect embodied in language by a patriot*—these few words comprehend every thing that can be said of it. Every sentence proceeded from his mouth as perfect, in all respects, as if it had been balanced and elaborated in the retirement of his closet: and yet no man for an instant suspected him of bestowing any previous attention whatever on the form or language of his harangues. His most splendid appearances were indeed most frequently replies, so that no such supposition could exist in the minds of those who heard him. I have heard many eloquent orators in England as well as elsewhere, but the only one who never seemed to be at a loss for a single word, or to use the less exact instead of the more precise expression, or to close a sentence as if the beginning of it had passed from his recollection, was William Pitt. The thoughts of the feelings of such a soul would have disdained to be set forth in a shape mutilated or imperfect. In like manner, the intellect of Pitt would have scorned to borrow any ornament excepting only from his patriotism. The sole fire of which he made use was the pure original element of heaven. It was only for such as him to be eloquent after that sort. The casket was not a gaudy one; but it was so rich, that it must have appeared ridiculous around a more ordinary jewel.

“While Pitt and Fox were both alive, and in the fullness of their strength, in one or other of the great parties of England, each of these illustrious men possessed an inflexible host of revilers; almost, such is the blindness of party spirit, of contemners. It is a strange anomalous circumstance in the constitution of our nature that it should be so, but the fact itself is quite certain, that, in all ages, of the world, political, even more than military leaders, have been subjected to this absurd use of the privilege which their inferiors have of judging them. So spake the Macedonian vulgar of Demosthenes; so the more pernicious Athenian rabble of Philip. The voice of detraction, however, is silenced by death; none would listen to it over the tomb of the illustrious. A noble and patriotic poet* of England has already embalmed, in lines that will never die, those feelings of regret and admiration wherewith every Englishman now walks above the

* Sir Walter Scott.

“Genius, and taste, and talent gone,
Forever tomb’d beneath this stone,
Where (taming thought to human pride!)
The mighty chiefs sleep side by side.
Drop upon Fox’s grave the tear;
‘Twill trickle to his rival’s bier.”

mingled ashes of Pitt and Fox. The genius, the integrity, the patriotism of either, is no longer disputed. The keenest partisan of the one departed chief would not wish to see the laurel blighted on the bust of his antagonist. Under other names the same political contests are continued; and so, while England is England, must they ever be. But already, such is the untarrying generosity of this great nation, and such the natural calmness of its spirit, the public judgment is as one concerning the men themselves. The stormy passions of St. Stephen's chapel are at once chastened into repose by the solemn stillness of Westminster Abbey.

"It is probable that this national generosity has been carried too far. For me, I partake in the general admiration—I refuse to neither the honor that is his due. But as I did while they were alive, so, now they are dead, I still judge them impartially. There is no reason why I should join in the atonement, since I was guiltless of the sin.

"Mr. Fox was, I think, a man of great talents and of great virtues, whose talents and virtues were both better fitted for a leader of Parliamentary opposition, than for a prime-minister of England; for his talents were rather of the *destructive* than of the *constructive* kind, and his virtues were more those of an easy and gentle heart, than of a firm unshaken will. Providence fixed him, during the far greater part of his life, where he was best fitted to be, and was equally wise in determining the brighter fortune of his rival. That fortune, however bright, was nevertheless, to judge as men commonly do, no very enviable boon. The life of Pitt was spent all in labor—much of it in sorrow; but, England and Europe may thank their God his great spirit was formed for its destiny, and never sunk into despondence. Year after year rolled over his head, and saw his hairs turning gray from care, not for himself, but for his country; but every succeeding year left this Atlas of the world as proudly inflexible, beneath his gigantic burden, as before. Rarely, very rarely, has it happened that one man has had it in his power to be so splendidly, so eternally, the benefactor of his species. So long as England preserves, within her 'guarded shore,' the palladium of all her heroes—the sacred pledge of Freedom,—his name will be the pride and glory of the soil that gave him birth. Nay, even should, at some distant day, the liberty of that favored land expire, in the memory of strangers he shall abundantly have his reward; for that holy treasure which he preserved to England might, but for the high resolution of this patriot martyr, have been lost for ever, not to her only, but to the world.

'He was a man, take him for all in all,
We shall not look upon his like again.' "

NOTES AND ANECDOTES,

Political and Miscellaneous—from 1798 to 1830.—Drawn from the Portfolio of an Officer of the Empire—and translated from the French for the Messenger, by a gentleman in Paris.

M. DE MARTIGNAC—HIS MINISTRY.

The restoration must be viewed from its commencement, for the purpose of forming a correct opinion of M. de Martignac and his Ministry; they were a plank of safety thrown to Charles X, who disdainfully rejected it, to precipitate himself in the gulf which soon swallowed him.

Louis XVIII loved the charter as one does anything of his own creation. He would have it believed that it was freely given to the people, though he knew better than any one else that it had been imposed upon him by necessity. Louis XVIII had comprehended, from its commencement, the revolution of 1799; he had coveted the power to regulate its movement, and he attempted to do it, but he was without credit. He had been accused of treating, with a view to his private interests, with the enemies of the monarchy.

In 1814, Louis XVIII felt, that without the charter, France could not be governed six months; but he had not strength to suppress the false steps of men who had shared his misfortunes, but who had not, like himself, profitted by the lessons of experience. His weakness was punished by a second exile; he then avowed his guilt, and his first expression, on re-entering France, was—"My government has committed faults." Such a confession, at such a moment, was not without dignity.

But a rival power had raised itself up by the side of the throne of Louis XVIII, full of indignation against what is called *concessions made to the revolution*, never speaking of the charter in any language but that of contempt, or of its author without disdain; tormenting and disgusting those Ministers who refused to bend their knee before it, and to assume its colors; calling religion to its aid, for the purpose of using it as an instrument; invading all the public offices; covering France with its adherents; introducing corruption into the electoral colleges, for the purpose of afterwards controlling the chamber; and, in fine, holding itself in readiness to profit by every event. This power was known under the name of the *pavillon marsan*. It had been denounced to the chamber and to France as a concealed government. It was Charles X, with his secret council, preparing, during the lifetime of his brother, the work of July, 1830.

Louis XVIII struggled, with various success, during five years against the *pavillon marsan*. Sometimes yielding to well directed attacks, now having recourse to stratagem, to secure himself a victory; sometimes, also, showing himself jealous of his power, and striking, as with the ordinance of the 5th of September, an energetic blow. But Louis XVIII was old and infirm. This intestine war, this war waged daily, exhausted his strength. He felt his end approaching, and desired to die in peace. To accelerate its triumph, the faction, inimical to the new institutions of France, had skilfully profitted by the deplorable assassination of the Duke of Berri. Was the attempt of Louvel a political crime? Was it not rather an act of personal vengeance? Per-

haps at some future day it may be explained. It was, nevertheless, used as a political crime for the purpose of showing to Louis XVIII the danger of doctrines which were developed by his charter. The old King had too much tact and intelligence to suffer himself to be deceived, or to fail to perceive the future dangers contained in the remedy proposed to him; but overcome by fatigue he opposed but a feeble resistance, and soon resigned himself into the hands of others.

Selfish, like all old men, Louis XVIII probably said to himself, as Louis XV had done before—"All this will last, at least, as long as I do. My successors may arrange for themselves as well as they can;" and calling M. de Villèle into the Ministry, he placed, in fact, all authority in the hands of his brother, of whose absolute incapacity he was, nevertheless, perfectly convinced.

The reign of Charles X then really dates from the moment of M. de Villèle's coming into power. From that time the schemes of the dominant faction might be seen through. Renouncing the concealed warfare which had been carried on from 1815, against the charter, it commenced an open attack upon the institutions which Louis XVIII had conferred upon France.

I was present in the month of December, 1830, at one of the sittings of the court, during the trial of the Ministers. I carried home a celebrated orator, who for a long time figured in the first rank at the bar, and now occupies an exalted situation in the magistracy. We were conversing on the subject of the request pronounced by one of the Commissioners of the Chamber of Deputies.

"The Commissioners of the Chamber," he said, "are wrong; they do not understand their parts; they reduce an immense process—that of France against the restoration—to the narrow proportions of a prosecution against individuals. If I had had to speak in this affair, I would have traced these facts to their true source. Throwing Louis XVIII aside, who acted in my opinion with perfect sincerity, I would have exhibited Charles X, swearing to the charter, first as a Prince, and afterwards as King, with the settled determination of destroying it. I would have followed him through fifteen years, laboring incessantly at his work, sometimes yielding, but only that he might the more perfectly succeed in his deceptions; and, because the moment for action did not appear to have yet arrived, down to the day on which he found Ministers, whose blind devotion and weak understanding allowed them to associate themselves with his mad enterprize; and I would, as by accident, have encountered these four heads, whom I would scarcely have deigned to touch."

The Ministry of M. de Martignac was one of those impediments to which Charles X had to submit. This Ministry was composed of honest men whose good intentions were, however, never acknowledged by the opposition, which made no allowance for the actual good which it accomplished, or for the extra-parliamentary resistance which it everywhere encountered. The most enlightened members of the opposition, and among the number, Cassimir Périer, Benjamin Constant, and General Sébastiani, appreciated the Martignac Ministry; and if they did not frankly and openly unite themselves to it, it was because they foresaw that this Ministry—imposed on the crown by public opinion—could

have but an ephemeral existence, and thought it necessary to prepare themselves for resisting a storm that was gathering in the sombre distance.

M. de Martignac, a man of delicate and enlightened mind—a man of concession and conciliation might have secured the safety of the tottering throne of Charles X. He labored to do so conscientiously, and in opposition to Charles X himself; and to do so required some courage. He had first to struggle in the Council, to obtain leave to effect a little good, and afterwards to combat in the Chamber two oppositions—the one repelling the good—the other wishing for more than he offered—the one accusing him of stripping the monarch of his prerogatives—the other reproaching him with refusing to France the perfection of her institutions. To be the Minister of a King who refused him his confidence, and to see his good intentions misconstrued, was, for two years, the political fate of M. de Martignac. It will be acknowledged, that to purchase power at such a price, is to pay for it dearly enough.

M. de Martignac had filled important posts under the Ministry of M. de Villèle. Charles X hoped to find in him a man disposed to follow, under perhaps more conciliatory forms, the system of his predecessors. He thought that he would be enabled, with M. de Martignac, as with M. de Villèle, to arrive insensibly at the accomplishment of his schemes; he calculated on making but an apparent concession to public opinion. This was also the idea of the opposition. Charles X was deceived, and the opposition believed itself so. The acts of the Martignac Ministry soon disabused Charles X, and he hastened to break an instrument which no longer answered his purpose. Afterwards, convinced that success was impossible by any such means, he determined to act with open force; and the Polignac Ministry was formed.

M. de Martignac had given all that an honest man could give to his King and his country; he had given his health and his life. After his retirement from office, those who had been his adversaries, rendered full homage to his honorable character, and his pure intentions. I have before said that this is the only justice which statesmen can expect.

PRINCE POLIGNAC—COUNT REAL.

M. de Polignac was named Minister of Foreign Affairs; his nomination, announced a long time in advance, was a defiance thrown in the teeth of the nation. It replied by a unanimous cry of anger and indignation. Arrived at power, M. de Polignac remained, what he had always been, presumptuous almost to madness, regarding everything which he had dreamed of as possible and easy; and he had dreamed of the overthrow of our institutions. M. de Polignac had, since 1815, shared the sentiments of Charles X. He was the person that Charles X was to call upon at the moment of the execution of his schemes.

At the time of the conspiracy of Georges, and under the empire, Count Real had frequently occasion to render important services to the Messrs. Polignac. I must do them the justice to state, that they never failed to show themselves grateful.

After his return from exile, M. Real instituted a suit

against the Caraman family, who, profiting by his absence, had possessed themselves of several shares of stock in the canal du Midi, which had been given him by the Emperor. The spoliation of M. Real, executed in virtue of an ordinance, which had been surprised from Louis XVIII, was a monstrous iniquity; without the revolution of July, he would, however, have very probably lost his suit, as the heirs of Count Fermon, placed in absolutely identical circumstances, had lost theirs against the same individuals. The judges of the restoration allowed the unconstitutionality of the imperial decrees to be pleaded before them; but they bowed before a royal ordinance, whether defective or not in form, or consistent with, or contrary to the law, with all the respect that is shown in Turkey to a firman of the sultan.

M. Real, instructed by the failure of the heirs of M. de Fermon, had carried his suit before the Council of State. It was there at the period of M. de Polignac's elevation to the Ministry. M. Real thought that he might solicit the support of one who did not hesitate to say that he was under obligations to him.

The vehemence with which the journals expressed themselves, on the occasion of the formation of the Polignac Ministry, cannot be forgotten. M. Real was still affected by what he had just read, when he presented himself in the office of the Minister of Foreign Affairs. Being immediately admitted to an audience with the Minister, he was surprised at the perfect serenity of M. de Polignac, and the tranquil and calm tone in which he expressed himself. After a few words had been exchanged on the business which brought M. Real to the office, they began to speak of public affairs.

"Well, Count, what do you think of the situation in which we find ourselves?"

"I do not know whether I should congratulate, or condole with your excellency."

"Condole with me—and why?"

"The struggle seems to be so seriously waged, that one cannot say who will win or who will lose."

"And are you, a man of experience, frightened by these idle clamors?"

"It is exactly because I am a man of experience, that I have hesitated whether to address your excellency compliments of congratulation or condolence."

"Things are not so desperate, M. Real, as you appear to think; all will be calm."

"I wish it may be so; but, in the meantime, your excellency does not seem to be upon a bed of roses."

"It is true; but you know that I have been worse off; when I was in your custody, for example, I managed to extricate myself; and I will again extricate myself with the aid of Providence."

"But should Providence, accidentally, refuse to meddle with your affairs."

"Oh! Providence is with us—he will not abandon us."

M. Real saw M. de Polignac but once afterwards. It was in the Chamber of Peers during the trial of the Ministers. M. de Polignac had been accused in some publications of having participated in the attempt at assassination of the 3d Nivose. M. de Martignac, the defender of the ex-president of the Council, had applied to M. Real on the subject, who replied by letter, that having been charged with the duty of

attending to all the preparations for the trial of those concerned in that affair, he could declare that the name of M. de Polignac was not once mentioned in the whole process.

M. Real had gone to the Court of Peers the very day that this letter was read by M. de Martignac. He had found a place in the tribune of the journalists. I was seated near him. M. de Polignac directed his opera glass to the different tribunes with the most perfect indifference. He at last recognized M. Real; and after having indicated his position to his fellow prisoner, saluted him in the kindest and most affable manner.

"It was in that same manner," said M. Real to me, "that he saluted me the day that I visited him at the office of the Minister of Foreign Affairs."

M. DE MONBEL.

M. de Monbel—I will not say the Baron de Monbel, because M. de Monbel is no more a Baron than M. d'Arlincourt is a Viscount. M. de Monbel's real name is Baron; he added the *de Monbel* to his patronimique because having been born in a village of the name of Monbel. M. d'Arlincourt's name is Victor d'Arlincourt: he signed himself V. d'Arlincourt. On one occasion, and because of the V which preceded his name, Louis XVIII called him a Viscount, and he has suffered himself to pass under that name ever since. The article in the penal code, which punished the usurpation of titles, having been abolished, one has nothing more to say to the Baron de Monbel than to the Viscount d'Arlincourt.

M. Baron, of Monbel, (department *de la Haute-Garonne*,) could hardly have anticipated, in 1825, the fortune which he afterwards possessed, or the career which was to be opened to him. He was the son of an individual whose income did not exceed four thousand francs, and was educated at the college of Serreze. In 1825, (the proof of this fact is to be found in the office of the Minister of the Interior,) he solicited, in virtue of the devotion of his whole family, and in consideration of his limited means, the place of councillor of prefecture at Toulouse. It was about this time, (he was then forty years of age,) that, having married a rich woman, he caused himself to be nominated a deputy. He appeared in the Chamber, for the first time, in 1827, during the ministry of M. de Martignac. For his *debut* he supported, in conformity with the interest of the Villèle ministry, the accusation brought forward by M. Labbey de Pompières against the ministry of M. de Martignac. Already he had himself called M. le Baron de Monbel. Under this assumed title and false name, he became a minister, and was tried and condemned.

THE REFUSAL TO PAY TAXES—A Precedent.

The associations for the refusal of taxes, followed quickly after the formation of the Polignac ministry. Facts have since proved that France was not deceived in its anticipations, and that it wisely comprehended the hostility to its institutions to be expected from such men as Messrs. de Polignac, Bourmont, and Labourdonnaie; nor was the government, on its side, long in un-

derstanding the full power of the means of resistance then seized for the first time by the people. The refusal to pay taxes, is in fact the last reason of the people, and by a much juster title than the cannon is that of kings. Orders were given to all the attorneys general and king's attorneys, to prosecute with the greatest rigor every journal that registered the acts of association for the refusal of taxes, and invited their readers to subscribe to them.

Among the newspapers thus prosecuted, was a provincial journal, *La Sentinelle des Deux-Sèvres*. This journal, which was conducted with courage and talent, had published a letter on the subject of the refusal of taxes, by M. Mauquin, who had been simultaneously nominated as deputy by the department *des Deux-Sèvres*, and by that of *la Côte d'Or*. This journal was prosecuted for the publication of the letter. M. Mauquin hastened to offer the support of his fine talents to a journal which was involved in difficulties on his account; and notwithstanding the excessive cold of the winter of 1829-'30, proceeded to Niort to defend, before the court which was to try the offence, a cause which he regarded as a personal one.

The threat to refuse the payment of taxes in the event of a violation of the charter, said the prosecutor, was a gratuitous outrage to the government, which the most odious hostility could alone believe capable of forgetting its oaths and betraying its duties. The right of the citizens to refuse, in any state of things, the payment of taxes, and thus to deprive the government of all means of action, and to deliver the country up to anarchy, was questioned.

The answer of the counsel for the defence was simple. Whether with justice or not, said they, we distrust you: if we are deceived, if you respect the charter, our association will fall of itself, and the taxes, freely voted by a legally constituted Chamber, will be paid as they have heretofore been.

M. Mauquin had to defend before the tribunal of Niort, an offence which had already been tried before nearly every tribunal of France. He had to prove that the constitutional government, which was already but a fiction, would become a mere chimera, if the Chambers were not permitted to refuse the subsidies which they are called upon to vote, and if, without a regular vote of the regularly constituted Chambers, the citizens could be forced to pay a tax, which, according to the true spirit of the law, should be *freely agreed*.

Opposed to so lucid and powerful a speaker as M. Mauquin, the duty of the public prosecutor became one of no little difficulty. He could only effect a partial escape from the embarrassment of his situation—shut in between simple propositions—by vague declamation against revolutionary factions, evil passions, the fury of parties, &c. &c. From amplification to amplification, the king's attorney for Niort had at length come to sustain the proposition, that the refusal of taxes, supposing it to be in any case a right, was not of so exorbitant a character, that it would be a crime even to dream of exercising it: he added, that at no period, not even during the worst of our political storms, had the payment of taxes ever been questioned.

At this point M. Mauquin wished him to arrive. This was the proposition which he expected to hear him sustain. Rising immediately in reply, he drew a paper

from his port-folio, and read before the tribunal sitting in judgment in the name of Charles X, an authentic declaration addressed to Louis XVI, when king, by his brother the Count d'Artois, (afterwards Charles X,) by the Prince of Condé, the Duke of Bourbon, and the Duke d'Enghien. These princes announced to the king by this declaration, respectfully, but formally, their determination to refuse the payment of all taxes, in the event of the constituent assembly's attempting any infringement of the rights and prerogatives of the nobility. But one prince of the royal family had refused to sign this paper; this person was Monsieur, Count of Provence, afterwards Louis XVIII. No one had even dreamt of asking the signatures of the princes of the Orleans branch.

The effect on the tribunal, produced by reading this piece, was magical. The king's attorney was put down, and the journal, after some forms had been gone through, was acquitted, amidst the applauses of the whole audience.

SKETCH OF THE LIFE OF

LAWRENCE EVERHEART.

BY A CITIZEN OF FREDERICK COUNTY, MARYLAND.

The deeds of the illustrious patriots of our revolution have been either eulogized by the orator, or recorded by the faithful historian. Their virtues, talents, and achievements have been admired and remembered by a grateful country. No bosom can be found so cold, as not to glow with holy enthusiasm, while the eventful measures, the chequered and thrilling scenes, which marked the high and lofty career of the father of his country, are recorded. The dauntless courage and tried skill of Greene, Wayne, Howard; Putnam, Williams, and Starke, have constituted the subject of interesting biography, and contributed largely to form the military character of America. It is my design in the following sketch, to introduce to the notice of his countrymen, Sergeant LAWRENCE EVERHEART, of the regiment of cavalry under command of Lieut. Colonel William Washington, the *Cœur de Leon* of his day, who was emphatically "without fear, and without reproach."

EVERHEART was born of German parents, in Middletown valley, Frederick county, Maryland, May 6, 1755; and enrolled himself as a common soldier at Taney Town, in a militia company commanded by Capt. Jacob Goode, on the 1st of August, 1776. He was then in the twenty-second year of his age, tall of stature, and of powerful, brawny limbs, capable of enduring fatigue and hardship; of noble, manly countenance, and an eye beaming with the lustre of genuine courage; with a heart beating high and strong to redress the wrongs of his country. He left behind the lovely beauties of his native residence, the endearments of home, and all the relations of social life; preferring the perils of camp, the tumult of battle,

and the hazards of war, to inglorious and unsatisfying ease. On the 2d of August, he set out for Annapolis, thence through Philadelphia to New York, where, being united to Beall's regiment, he fought at York Island, August 27th, 1776. The disasters of that unfortunate day created universal gloom and despondency. The city of New York was evacuated, and at once passed into the possession of the enemy. On the 28th October of that year, the battle of White Plains took place, in which our young recruit displayed a gallantry worthy of his name, and of the cause in which he had perilled his life. Chief Justice Marshall tells us that the engagement was very animated on both sides. The loss of our army was between three and four hundred. Among the wounded was the intrepid Col. Smallwood, one of the noblest sons of Maryland, who, in the subsequent stages of the mighty struggle for independence, acquired for himself never fading laurels.

From this place, Everheart, with part of the army, retreated to Fishkill, on the Hudson, and thence to Fort Washington. It was situated on a high bluff of land on the river, and difficult of ascent. On the 15th November, the garrison was summoned to surrender, on pain of death, by a numerous and well disciplined force, commanded by Howe and Cornwallis. Col. Magaw, an intelligent and tried officer, replied that the place should be defended to the last extremity. Gen. Washington was now at Fort Lee, immediately opposite, and could see all the operations of the British. How full of anxiety must his bosom have been, when on the bank of the river he beheld the unequal contest; heard the roar of artillery and small arms, the lines and redoubts carried, and the banner of his country struck to a haughty foe! The capitulation was obtained at the point of the bayonet. While it was progressing, the General sent a billet to the colonel, requesting him to hold out until evening, when he would endeavor to bring off the garrison; but the preliminaries had been signed, and it was now too late. Our loss was estimated at 2,000, that of the British at 800. Everheart was not included in the capitulation, having fortunately escaped with some of his comrades in a boat, after the surrender, and arrived at Fort Lee. Cornwallis resolved on surprising this place, crossed the river with six thousand troops, below Dobb's Ferry, and endeavored to enclose the garrison; but the characteristic caution and foresight of our chief thwarted this scheme by a timely retreat to the narrow neck of land lying between the Hudson and Hackensack. Miserable and forlorn in the extreme, was now the condition of the little army of patriots; in a level country, without a single intrenching tool, exposed to inclement weather, without tents, provisions, or forage; in the midst of a people, in no wise zealous in the cause of

liberty; troops undisciplined, desertions frequent, and deep, general depression and gloom, arising from these combined causes. Here Everheart saw and conversed with the general-in-chief. Overwhelmed with grief and despair, his manly features were bathed with tears; the darkest clouds of adversity had gathered on his brow; no cheering hope gilded to his vision the horizon of freedom; "a brave man struggling with the storms of fate;" the sternness of a soldier yielding to the softer feelings of his noble heart! Æneas looked on the flames of Troy from the prow of his bark, but not without being melted down at the awful scene! Driven from this last position, Washington took post at Newark, on the south side of the Passaic, whence he retreated to Brunswick on the Raritan, Nov. 28, 1776. The period had now arrived when the troops composing the flying camp were discharged, their term of service having expired. To the extreme mortification of the general, his army was much enfeebled from this cause, even in sight of the enemy, led on by the accomplished Cornwallis. Not so with Everheart: he still remained to share the fate of the Americans. The retreat through Jersey has ever been considered, by military men, a masterly performance. The sufferings and perils of our troops during that period are almost beyond description. It is true, however, in the moral, as in the natural world, that the darkest hour is just before the dawn of day. Literally was it verified in the unexpected and extraordinary change of affairs which occurred at Trenton, on the 26th Dec. 1776, when the tide of war was turned in our favor. One thousand prisoners, six pieces of artillery, a large amount of arms, were the trophies of this memorable night. The sun of prosperity once more lighted up the countenance of the successful chief; drops of grief gave place to smiles of joy. Remaining with the army until the spring of '77, Everheart returned to his birth-place; but his ardent spirit would not allow him to remain long inactive. Accordingly, in the summer of 1778, he enlisted at Frederick, in the regiment of horse, of which Col. Washington was commander. Between this period and March, '79, he remained here with the corps, actively engaged in daring feats of horsemanship, in acquiring a thorough knowledge of tactics, and in making preparations for the arduous duties of a southern campaign. His virtues, as a soldier, caught the eye of the colonel, and he was soon commissioned a sergeant. Arriving at Petersburg, Va., they were placed in charge of captain Stith, by whom they were, at proper seasons, disciplined and drilled, until Christmas of that year, when Col. Washington returned from the north, where he had been on service. In April, 1780, the regiment arrived at Charleston, Carolina; and soon after, near Stony Church, seven miles from Dorchester, the regiments of

light dragoons of Pulaski, Bland, and Baylor, led by the lieutenant-colonel, attacked for the first time, the celebrated Tarleton. He retreated with loss. The Americans retiring to Monk's corner, were soon after attacked before day, by that enterprising British officer, who had concealed himself for sometime in a swamp. Major Vannier, of Pulaski's corps, was killed, and about fifty of our men were taken. Collecting our scattered forces, our troops pressed on to Murray's ferry, subsisting for several days on parched corn and a little bacon. Crossing the Pedee on the 3d of May, every effort was made by forced marches to overtake Tarleton, but in vain, in consequence of the numerous Tories infesting that neighborhood, who proved constant and liege subjects, and friends to the devastating foe. On the 6th of May, they captured one company of British dragoons, consisting of forty persons, and retired back again to the ferry; Buford then lying on the northern side of the river. In vain did the colonel insist on crossing the Pedee, but was overruled by White, who had recently arrived to assume the command of Bland's regiment; Tarleton at once took advantage of this impolitic movement, and not only recaptured the prisoners recently taken, but also forty Americans. Two days afterwards, the scattered regiments were once more collected together, below Leneau's ferry, where the heavy baggage lay. On the 29th of May, Tarleton tarnished his laurels at the Waxhaws, in his attack on Buford, by an indiscriminate massacre of one hundred and thirteen Americans; the wounding of one hundred and fifty in a barbarous and inhuman manner, after quarter had been demanded: fifty-three were taken prisoners. "In the annals of Indian war, nothing is to be found more shocking; and this bloody day only wanted the war dance and the roasting fire, to have placed it first in the records of torture and of death in the west." After encountering many perils and hardships, parrying the onsets of foreign and intestine enemies; harrassed with all the accidents and trials of warfare, in a country infested with traitors, whose business it was, not only to aid the British, but to burn, devastate, and overwhelm in ruin the property of their neighbors, and deliver it up almost to indiscriminate ruin; Everheart, with his regiment, arrived at Halifax on the first of June, where they remained until September, recruiting their exhausted ranks with men and horses from the north. Being now in fine order, they set out again for the scene of war in South Carolina. At Rudgeley's mill, the lieutenant colonel putting a painted pine log on a cart, induced Rudgeley to believe it a piece of artillery, and being summoned by a corporal with a flag, or on failure, he would be blown to atoms, that officer, with more than one hundred prisoners, capitulated without firing a gun. Washington, with his cavalry, being now placed under

Morgan, by direction of Gates, he resumed his accustomed active service, and was essentially useful in the important trust confided to Morgan. Greene succeeding Gates, after the ill-fated catastrophe at Camden, Morgan was detached with the corps to which Everheart belonged, to hang on the enemy's flank, and to threaten Ninety-Six. After various vicissitudes incident to the life of a soldier, Morgan halted near the Pacolet river, on the 1st of January, 1781. Washington set out for Hammond's store, so notorious for being the rendezvous of Tories, (leaving the sergeant in charge of the baggage,) whence he returned in two days, after killing several, and taking fifty or sixty prisoners. From this period until the 17th of the month, the Americans were continually engaged in reconnoitering the British. That was indeed a day, full of glory to our country. On the heights of Cowpens, the unyielding valor of men determined to be free, shone with unrivalled lustre. With his characteristic ardor, Tarleton pressed hard on his adversary through the night of the 16th, and passed over the ground on which the American general had been encamped, a few hours after the latter had left it.

The following letter of Lieutenant Simons to Colonel (afterwards General) William Washington, will prove what part Everheart bore on that glorious occasion.

" CHARLESTON, Nov. 3, 1803.

" DEAR GENERAL,

" In reply to your letter of the 23d ultimo, and to the letter which you enclosed for my perusal, I do hereby (not only from recollection, but from a journal now in my possession, which I kept at the time,) certify, that about the dawn of day on the 17th of January, 1781, you selected Sergeant Everheart from your regiment, and thirteen men, whom you sent to reconnoitre Lieut. Col. Tarleton's army. The advanced guard of his army were mounted, as we understood and believed, on some of the fleetest race horses, which he had impressed from their owners, in this country, and which enabled them to take Sergeant Everheart and one of the men; but the other twelve men returned and gave you information of the approach of the enemy. Immediately after the battle of the Cowpens commenced, you well recollect that your first charge was made on the enemy's cavalry, (who were cutting down our militia,) and whom, after a smart action, you instantly defeated, leaving in the course of ten minutes eighteen of their brave 17th dragoons dead on the spot, and whom, you will recollect, were deserted by Col. Tarleton's legionary cavalry. The former wore an uniform of red and buff, with sheep skin on their caps; the latter wore an uniform of green with black facings. In pursuit of their cavalry, you overtook their artillery, whom you immediately made prisoners;

but the drivers of the horses who were galloping off with two three-pounders, you could not make surrender, until after repeated commands from you, you were obliged to order to be shot. After securing these field pieces, your third charge was made upon the right wing of their army, composed of legionary infantry, intermixed with the battalion of the brave 71st, under the command of Major McArthur; and who, under the operation of an universal panic, having been successfully charged on the left of their army, by our friend Colonel Howard, instantly surrendered. Immediately after securing the prisoners, your fourth charge was in pursuit of their cavalry, who finding they could no longer keep Everheart a prisoner, shot him with a pistol on the head, over one of his eyes, (I cannot remember which.) Being then intermixed with the enemy, Everheart pointed out to me the man who shot him, and on whom a just retaliation was exercised, and who, by my orders was instantly shot, and his horse, as well as I recollect, given to Everheart, whom I ordered in the rear to the surgeons. It was at this period of the action, that we sustained the greatest loss of men, Lieutenant Bell having previously taken off with him, in pursuit of the enemy on our left, nearly a fourth part of your regiment. The enemy were obliged to retreat, and were pursued by you twenty-two miles, taking several prisoners and wounded. To the best of my recollection, Sergeant Everheart was so disabled from his wounds, that he received a discharge from you, and he retired from the army. That Sergeant Everheart was a brave soldier, there is no better proof than your selecting him at such an important moment for such important service; that Everheart would have been promoted to the rank of an officer, had he been able to remain with our regiment, your practice in several similar instances, leaves no room to doubt, as the meritorious was certain of promotion from you. To recompense, therefore, in the evening of his days, for past services, an old, gallant, and meritorious wounded soldier, will, I am persuaded, be a great satisfaction to all with whom the decision of this question can rest.

I am, dear General,
Your old brother officer, and sincere friend,
JAMES SIMONS.
Brig. Gen. WASHINGTON."

Personally appeared before me, Major James Simons, who being duly sworn, doth declare, that the circumstances stated in the foregoing letter, are, to the best of his recollection, true.

JAMES SIMONS.

Sworn to before me, at Charleston, November 8, 1803. ABM. CROUCH, *Notary Public*.

On the back of the above document is the following:

"I believe the circumstances detailed in the certificate of James Simons, relative to Lawrence Everheart, are strictly just; and can with truth aver, that Sergeant Everheart was a brave and meritorious soldier during our revolutionary struggle.

W. WASHINGTON.

SANDY HILL, Nov. 13, 1803."

The following letter in the hand-writing of his colonel, constitutes part of the documents on which a pension was recently obtained, under the act of Congress of June 7, 1832.

"SANDY HILL, Nov. 11, 1803.

"DEAR SIR:—I should have answered your favor of August 4th long since, but the certificate of James Simons could not be obtained till a few days ago. Such a length of time has elapsed, that all the circumstances relative to the services and discharge of Lawrence Everheart, are not so fully within my recollection as to justify my making an affidavit of the same; but doubtless, the certificate and affidavit of James Simons, who was a lieutenant and adjutant in our regiment, fully meets all the requisitions of the law of Congress. It gives me much pleasure that you and my old friend Howard are about to advocate the pretensions of that brave and meritorious soldier, Lawrence Everheart; and I cannot be induced to believe that Congress will reject the just claims of an old soldier, who was instrumental in accomplishing that independent situation which they now enjoy; and who, in consequence of his bravery, was unfortunately deprived of the means of supporting himself comfortably in old age.

I am, dear sir, with much respect and esteem,
Your very obedient, humble servant,

W. WASHINGTON.

Enclosed herewith, you will receive the certificate and affidavit of James Simons."

In order fully to understand these documents, it will be necessary here to recapitulate some of the events in which Everheart participated. It was not until after a severe and bloody contest between the advance of Tarleton and his party, that he was captured. On his left hand are now to be seen the wounds received on that morning from the sabres of the enemy. Even with this disadvantage, he would have escaped, but his favorite charger, to his great sorrow, fell dead under him, by a shot from the enemy. At this moment, our army was about three miles in the rear. He was taken by quartermaster Wade, with whom he had accidentally formed a slight acquaintance at Monk's corner, (and who was slain on that very day,) to Col. Tarleton. That officer dismounting, the following conversation occurred: "Do you expect Mr. Washington and Mr. Morgan will fight me to-day?" "Yes, if they can keep together two

hundred men." "Then," said the former, "it will be another Gates defeat." "I hope to God it will be another Tarleton's defeat," replied the gallant son of Middletown Valley. "I am Col. Tarleton, sir." "And I am Sergeant Everheart, sir." It was a reply worthy of Roman or Spartan courage. Suffering intensely from his wounds, they were speedily dressed by the British surgeon, and he was treated with distinguished kindness. Now a prisoner of war, he was taken with the enemy's army to the scene of action. At eight o'clock in the morning, Morgan halting near the Broad river, awaited the approach of his adversary. The ground about the Cowpens was covered with open wood, allowing the cavalry to operate with ease, in which the British trebled our forces. The detachment of Tarleton numbered one thousand;—that of Morgan, eight hundred. Although the plan of battle on the part of the American brigadier, was, in the estimation of some military men, rather injudicious, yet it was impossible that the issue could have been more fortunate. The first line was composed of militia under Major McDowel, of North Carolina, and Major Cunningham, of Georgia, who were ordered to feel the enemy as he approached, then to fall back on the front line, and renew the conflict. The main body of militia composed this line, under Gen. Pickens. In the rear of the first line was stationed a second, composed of the continental infantry, and Virginia militia, under Captains Triplett and Taite, commanded by Howard. Washington's cavalry, reinforced by a company of mounted militia, was held in reserve, convenient to support the infantry, and to protect the horses of the rifle corps, which, agreeably to usage, were tied in the rear. "The gloomy host" now advanced, sure of conquest. At this solemn period, Morgan, who had fought at Quebec under Montgomery, and fully established his fame at Saratoga, addressed his troops in a style worthy of a Hannibal or Scipio Africanus. Uneducated as he was, his eloquence was from the heart, and thrilled through every bosom. He exhorted the militia to the exercise of firmness and zeal, and declared his entire confidence in their valor and patriotism. He pointed them to the fields of his exploits; to his fortune and experience; to the destructive fire of his unerring riflemen; to the mortification he had experienced at being hitherto forced to retire before the enemy; and that now was the time to strike for their country. To the continentals he said little, except to remind them that *they* needed no exhortation to do *their* duty. He took his station. The situation of Everheart, when the first line fell back, and the shout of the enemy was heard in all directions, must have been truly appalling, because he knew not that this movement formed part of the plan of battle. But rushing on the front line, which held its station, they instantly

poured in on the British a destructive fire; but continuing to advance with the bayonet on our militia, the latter retired and gained the second line. Here, with part of the corps, Pickens took post on Howard's right, and the rest fled to their horses. Tarleton pushed forward, and was received by Morgan with unshaken firmness. Each party struggled hard for victory; the enemy ordered up his reserve. McArthur's regiment animated the whole British line, which, outstretching our front, endangered Howard. That officer defended his flank by directing his right company to change its front; but by mistake it fell back; the line began to retire, and they were ordered to retreat to the cavalry. This manœuvre being quickly performed, the new position was immediately resumed. The British line now rushed on with impetuosity, but as it drew near, Howard faced about, and delivered a close and severe fire. The enemy recoiled;—the advantage was followed up with the bayonet, and the day was ours. At this instant, Washington charged, as Major Simons has stated, on the enemy's cavalry, who had gained our rear, and were "cutting down" our militia. He proved himself the "thunderbolt of war." What language can paint the emotions which then filled the bosom of his friend, a captive in the hands of that enemy whom the colonel was destroying; himself liable at every moment to fall by the hands of his countrymen? His beloved chief was then in the prime of life, six feet in height, broad, strong, and corpulent, courting danger, impetuous and irresistible. In proof of this, Marshall, in his 4th vol. page 347, says: "In the eagerness of pursuit, Washington advanced near thirty yards in front of his regiment. Observing this, three British officers wheeled about and made a charge upon him? The officer on his right was aiming to cut him down, when a sergeant came up and intercepted the blow, by disabling his sword arm. At the same instant, the officer on his left was about to make a stroke at him, when a waiter, too small to wield a sword, saved him by wounding the officer with a ball discharged from a pistol. At this moment, the officer in the centre, who was believed to be Tarleton, made a thrust at him, which he parried, upon which the officer retreated a few paces, and then discharged a pistol at him, which wounded his knee." The sergeant here spoken of was Everheart. Under Providence, he was his shield and buckler. How great the benefit conferred on his country! Had Washington fallen, we should not only have lost his all-important services on that day, when victory settled on our banner, but also his valor and skill at the subsequent actions of Guilford and Eutaw, at which last place he was, to the great grief of the whole army, thrown from his horse while charging the enemy, and carried away a prisoner to Charleston. Morgan now pressed his

success; the pursuit became general. The British cavalry were covering the retreat; but, according to the evidence of Major Simons, nothing could restrain the ardor of the colonel. He pursued them twenty-two miles, within a short distance of Cornwallis' camp, at Fisher's creek, where the British under Tarleton retreated. Sometime after this affair, the British colonel observed in company, that he should be pleased to see Mr. Washington, of whom he had heard so much; to which a lady very significantly replied, that he might have been gratified had he only looked behind him at the Cowpens!

In this action, of the enemy there were one hundred, including ten officers, killed; twenty-three officers and five hundred privates were taken. Their artillery, 800 muskets, two standards, thirty-five baggage wagons, and one hundred horses fell into our hands; while our loss was only seventy, of whom twelve were killed. Everheart informs me, that while the dragoons were making the charges described by Major Simons, he could hear them distinctly cry out as their watchword, "Buford's play," referring to the odious massacre perpetrated on the detachment commanded by that officer, as before detailed. Yet for all this, although the innocent blood of their companions, shed contrary to the laws of civilized warfare, yet remained unavenged; and the very persons who did the foul deed, were now in the open field of honorable combat, or held as prisoners fairly vanquished; no instance occurred on the part of our troops in which the dreadful precedent was followed. Washington now returning from the chase, with joy embraced his wounded friend, and sent him, under the care of two dragoons, three miles distant from the Cowpens, where his wounds were dressed by Dr. Pindall, formerly of Hagerstown, Maryland, then surgeon of the regiment. He remained at this position until the last of February, and then set out for Catawba river. Passing through Salem, he arrived at Guilford Court House immediately before the battle fought there, March 15, 1781. Here it is expedient to explain a part of the affidavit of Major Simons, where it is said that the subject of this memoir had retired from the army. That officer, not being at Guilford, did not of course see Everheart there; and no doubt thinking that his wounds were so very severe as to compel him to retire from service, and not hearing any thing to the contrary, he took for granted that it was the fact. At this place, the interview between the colonel and sergeant was truly joyous. He apprised Washington that his debility would prevent his participating in the coming conflict, and he was requested by that officer merely to take charge of the baggage wagons. Yet such was his love of battle, that he took his station on a hill where he could distinctly see every movement, and hear every shock of both

armies. He was, during the whole time, within range of the enemy's shot. I cannot forbear relating a singular event detailed to me by Charles Magill, Esq., late of Winchester, Virginia, who was aid-de-camp to Greene during this engagement. A captain was under arrest for cowardice. As the enemy displayed their columns, and formed their line, the unfortunate man, after protesting his innocence of the charge, desired the major to gallop to the general, and ask a suspension only during the action, that he might retrieve his character. It was soon done, and he was placed at the head of his company. On the first fire he fled from his station, and sheltered himself behind an apple tree. Magill invoked him in the strongest terms to reflect on his conduct and situation, and urged him to resume his command. At the first step he took from behind the tree, a ball from the enemy laid him dead at the feet of his friend. It was his opinion that the captain was born a coward; but that he would have been in less danger at his command, than in the situation he had assumed. As Everheart did not participate in the battle of Guilford, I shall notice only a few of its particulars, connected with the part which his colonel performed on that occasion. At the most important crisis, Washington charged the British guards with tremendous fury, and perceiving an officer at some distance surrounded by aids-de-camp, whom he supposed to be Cornwallis, he rushed on with the hope of making him prisoner, but was prevented by accident. His cap fell on the ground, and, as he dismounted to recover it, the officer leading the column was shot through the body, and rendered incapable of managing his horse. The animal wheeled round with his rider and galloped off the field. The cavalry followed, supposing that this movement had been ordered. But for this circumstance, it is highly probable that the amiable and accomplished Cornwallis would have been spared the pain of surrendering his whole army shortly afterwards at York, in Virginia. Greene, it is true, retreated—but only after such an obstinate contest as induced Charles Fox, in the House of Commons, to tell the ministry, with his usual sarcasm, that such another victory would destroy the British army. The official accounts estimate our loss in killed, wounded and missing, at fourteen commissioned officers, and three hundred and twelve non-commissioned officers and privates of the continental line. In the militia, there were four captains and seventeen privates killed; and besides General Stephens, there were one major, three captains, eight subalterns, and sixty privates wounded. The loss of the British was five hundred and thirty-two men; among them several officers of distinguished talents. Cornwallis retired to Ramsay's mills, and Greene set out in pursuit of him. The sergeant remained for several weeks in the vicinity of the

court house, that he might have the benefit of the professional skill of Dr. Wallis, in the healing of his wounds. During the summer, being once more ready for service, he was, by the order of Greene, employed in collecting horses in North Carolina, for the use of the army; and on the 18th of October, 1781, was present at the capitulation of the British army at Yorktown. Here his acquaintance with Lafayette commenced, which to the satisfaction of both parties, was renewed at Baltimore in 1825, when the patriot revisited our shores. He now returned to his county; but in November following, at the request of Col. Baylor, who had been exchanged, and restored to the command of his regiment, he repaired to Petersburg. With him he remained through the succeeding summer, and, in the fall of 1782, was honorably discharged, and once more returned to his lovely valley. With him, "the sword was converted into the plough-share." Embarking in agricultural pursuits, the sternness of the warrior was now subdued. Having married, and become the father of several children, his time was chiefly employed in providing for their wants by honest industry and toil. After some years, he became a preacher in the respectable denomination of christians called Methodists. Even here, as I am informed, "the ruling passion" would at times follow him; and when in the pulpit was a soldier still. He would sometimes introduce his discourses by informing his hearers, that, in his youth, he drew his sword in behalf of his country, but now in behalf of his Saviour! Washington frequently wrote to Everheart, offering to make him wealthy if he would emigrate to Carolina, but he declined his solicitations. When the troops of the United States were stationed at Harper's ferry, in 1799, his colonel, then holding a distinguished rank in that corps, passed through Middletown, and inquired for his old and faithful friend, desiring that he would pass the next day with him in Frederick. A large collection of citizens assembled to witness the interview. On approaching, they rushed into each other's arms, kissed and gave vent to their feelings in tears of joy. This was the last time they ever met. Everheart tells me, that on this occasion they walked together over those fields, where, in 1780, the regiment was disciplined for service; and that the feelings and scenes of those days were again revived; that he was urged by his chief to remove to Carolina, where wealth, ease and happiness awaited him. It was in vain. The colonel wrung the hand which had saved his life at Cowpens, and disappeared forever.

Admired and beloved by all, this venerable man yet retains uncommon vigor and elasticity of body and unbroken health. Florid in countenance, erect in gait, with every mark of military deportment; possessing great decision of character, and a name unsullied by a single stain; he is the de-

light of the neighborhood in which he resides. Not far from the place of his birth he passes the evening of his days in peace and tranquillity, awaiting with christian humility the awful summons of that Almighty Being, who was his tower of defence in the day of battle.

RAKINGS OF THE STUDY.

NO. I.

MARTIN LUTHER—HIS CHARACTER AND TIMES.

Genius illius temporis, velut incantatione quâdam, à moribus revocetur. *Bacon: De augm. Scient. L. II. Cap. 4.*

The present disposition of minds, together with general circumstances, is not the most favorable to a full appreciation of Luther's character and times. There is but little, if any community of feelings and doctrines between the nineteenth and the sixteenth centuries. Questions of a purely dogmatic nature are no longer invested with the sovereign importance which they once possessed. Proverbially fierce as the spirit of religious controversy may be; we seldom admit, in our theological wrangles, the fanatical acerbity, which quailed not before the imminent danger of the Turk, encamped at the gates of Vienna, and which stood undaunted by the cruel extravagances of the followers of John of Leyden, and the awakened passions of the peasants of Muntzer, ravaging the plains of Germany.

To curb the ambitious cupidity of popes, and check the temporal aggressions of the church;—to reduce the excessive number of its ministers and the exorbitant increase of its wealth;—to shake off the yoke of spiritual despotism, and conquer the rights of conscience, in behalf of man; are no longer exclusive objects of attainment with the apostles of reform in our day. The various revolutions through which Europe has passed within the last three hundred years, have assumed the task of mainly redressing the grievances which induced the reformation. Its pretensions, inasmuch as our country is concerned, are realized. As an instrument of revolution, it has no provisional mission to perform:—it can exercise no salutary influence on a period, the tendency of which is to throw off the rubbish of worn-out principles, collected by ages of fraud, on the natural and political rights of mankind; and the crowning development of which must be the sure, though gradual, reconstruction of the social fabric out of new elements of sociability.

This reference, therefore, to the great schism of the sixteenth century, is intended to show Luther rather as an individual than as a reformer;—rather as the living representative of new ideas, than the assailer of mere church corruptions. Indeed we do not think that Luther appears to the best advantage as the reformer of abuses. It were a strange, though an habitual illusion, to imagine him bound to an unwavering faith in his work, or sustained by an enlightened conscience in his principles and aim. His memoirs exhibit him reforming himself at each step which he took. Humble and subdued, at first, in the presence of Rome's au-

thority—then kindling into a spirit of disputations pride—insolent even to brutality and vulgar beyond measure—ignorant of the definite bearing of the discussion which he had started—alarmed at the very enthusiasm with which his first theses were received—shrinking before the consequences of the principles that he had laid down in his polemics, and driven, by some irresistible fatality, from negation to negation;—we find him denying the pope the power of indulgences, denying the merits of good works, denying the institution of the papacy, denying the church as a visible body, denying the prayers for the dead, denying the freedom of will and the indissolubility of the marriage bond. He successively revolutionized not only the discipline of the church, and its religious and dogmatic authority, but also the received opinions of mankind concerning morals, the family state, and political society itself. Breathing in turn the most sublime eloquence, and in turn sinking into the most abject foolery; denouncing the temporal powers, and then bending in ignominious subserviency to their views; Luther could at times command the language of protection and mercy in behalf of the wretched peasantry, who had reared the standard of rebellion in the name of his reformation; at others, mark them out for the cruel butcheries of the inexorable barons, and solicit their arm to the work of carnage and torture. “The peasantry,” he writes, “deserve no mercy—no toleration; but the indignation of the vilest of men. They are under the ban of God and of the empire. It is lawful to kill them like mad dogs!” He was truly of that stern race of Saxons, whom Karl the Great could not bring under the christian law, until converted by fire and sword.

A dark and fatal predestination of trials and conflicts harbingered Luther's birth. He was born in blood. Jahn Luther, his father, having accidentally killed a man, who tended his flock, was compelled to fly. His wife, who had followed him in spite of her critical situation, gave birth to Martin on reaching the town of Eisleben. His father's cognizance—for the mechanics and even the serfs of those days, in imitation of the nobility, bore armorial devices—has a miner's sledge. With this sledge the son was destined to dint the papal tiara and shiver the pastoral staff of the catholic hierarchy:—the same instrument, which, in the course of time, passing through the hands of Cromwell, Robespierre and Napoleon, hammered regal crowns and regal baubles into fragments.

Early indications of talent, given by Luther, induced in his mother, who though grossly illiterate, seems to have been a woman of high energies, a desire to see him trained up as a scholar. How far her laudable, maternal ambition was realized, the after life of the reformer abundantly proves. The courses of his youth, however, were wild and unruly:—it required the voice of thunder to call young Luther away from the proverbial excesses of a German student's life. Like St. Paul, on the road to Damascus, he was solemnly warned by the voice of God. In the year 1505, Luther, whilst walking with a bosom friend, saw him struck into a heap of cinders by the lightning of heaven. He shrieked a vow to St. Anne; and that vow was to take orders, if spared. On the seventeenth of July of the same year, therefore, after having spent a

merry evening—an evening of poetry and song—with several of his friends; he entered, in the dead of night, the cloisters of the Augustine monks at Erfurth. Plautus and Virgil,* were the only companions that he brought along. With his life of seclusion began a life of sadness, of anguish and of doubts:—then arose that fearful conflict between daring thoughts and checked propensities, which assailed him throughout his existence. There is a wide difference between the spiritual trials of the German reformer and those of the eremites, saints and doctors of the primitive church. Temptation never reached the faith of the latter; it assailed the flesh merely, which neither fastings nor macerations, vigils nor prayers, could entirely subdue: while, in Luther, we find, at once, the temptings of the spirit and the flesh—the rebellion of the intellect and the war of the senses—hot passions and racking doubts—Satan rushing on his soul, and, according to his own quaint expression, “beating it with his fists.” Many and bitter were the nights, as he relates himself, which he spent in monastic solitude; wrestling with the spirit of evil, and clinging in prayerful watches to the foot of the cross.

The mind-sick and restless monk resolved to carry his doubts to the very centre of faith; and, in the hope of certainty and peace, to lay down his agony before St. Peter's chair. He left, therefore, his cell at Erfurth to visit the Vatican; but, like one of the greatest living geniuses of the age, he returned, from the capital of the christian world, to curse the vanity of his pilgrimage and the obstinacy of the pope.†

In the year 1517, after his return from Italy, Luther began his attacks against the church of Rome; and published and maintained his propositions against the doctrine of indulgences. The records of the revolutions of the mind do not furnish a more striking instance of total disproportion between effect and cause, than do the annals of the great reformation of the sixteenth century in its origin and its development. Singular indeed as it may appear, we may, without straining probabilities, trace up the most important schism in the church of Christ, since the heresies of Arianism, to motives of personal interest and baffled lucre.‡

No event in history has proven, more forcibly than the reformation, how the tendencies of a period may overmaster the spirit of man, even when that man is

* The choice of these two authors is measurably characteristic of Luther's disposition. Virgil's melancholy tenderness harmonises with Luther's keen sensibilities—ever an adjunct of true genius; while the somewhat coarse and vulgar style of Plautus' comedies assimilates with the unaccountable tendency to ribaldry, which marks many of the compositions of the reformer.

† Lamennais, the democratic priest, and powerful editor of the *Avenir*. Admonished by Gregory the XVI, of the “libertine tendencies” of his editorial labors, he repaired to Rome to explain his views of political and religious freedom; and they were answered by the memorable encyclic letter of the month of August, 1832, urging all patriarchs, primates, archbishops and bishops to stem the torrent of innovations sweeping over christendom.

‡ It is not intended, neither is this the place, to renew the interminable disputes of Staupitz and Tetzel; but those who are acquainted with the history of the sixteenth century, will find a clue to the allusion, in the contest of the Augustinians and Dominicans in the monopoly of the indulgences.

one of confessed and commanding genius. We have mentioned Luther's alarm at the enthusiasm which hailed the appearance of his propositions through Germany; and adverted to his controversial propensities, his waverings, his contradictions and his doubts. The latter are so peculiarly characteristic of his course, that he may be said to have rather followed than directed the onward march of intellectual freedom. Of the reform of abuses, as far as it went, Luther cannot fairly claim the exclusive merit:—it had, for three centuries at least, been a question of internal church discipline—the object of the meditations and censures of the most illustrious and venerated of its members of St. Bernard, Gerson, Pietro, Alliaco, among other champions of the hierarchy. Three famous councils—those of Pisa, Constance and Basil—had begun the reform, which was repelled by the church as soon as attempted to be enforced by violence. Inasmuch as dogmas were concerned, the different heresies of the sectarians, Peter de Bruys, Berengarius, Abeilard, Roscelyn, Arnaldo di Brescia, Savonarola,* Wycliff, John Huss and Jerome of Praga—had amply smoothed the way for Luther, and stripped his task of much of its arduousness. In 1546, the very year of his death, he witnessed the achievement of the great revolution, attempted by those whom we have mentioned, and brought to a successful close by his agency. All who had preceded him in this perilous career, had either been satisfied with the fame of the schoolmen, or had perished by fire and steel. In matters depending on opinion merely, opinion is all powerful:—John Huss and Jerome of Praga, were burned, at the council of Constance, for the defence of a majority of the propositions, which a hundred years afterwards convulsed Europe through Luther's lips, and cut off one half of its dominions from the spiritual authority of the pope. The Henricians, the Wuldenses, the Petrobrusians and the Hussites form one unbroken chain of innovators, whose exertions and life-blood prepared the triumph of the reformation under political influences.

It cannot be proven from the scriptures, says Wycliff, who wrote in the course of the fourteenth century, that Christ has instituted the rites of the mass. The

* After the mercantile aristocracy of Florence had opened their career of oppression, and the conflict begun between the corrupt ambition of immoderate wealth and the laborious pride of the democracy; there suddenly rose a champion, who was at once a priest—a tribune—and a martyr. While Machiavelli was reducing the doctrines of despotism into systematic and ingenious forms; Savonarola, the poor Dominican Monk, terrorised the soul of the Medici; and, from the pulpits, and in the streets and thoroughfares of Florence, preached, not only the reform of abuses and fear of God; but also the love of freedom and the equality of human rights. With a boldly democratic hand he inscribed, over the judgment seat of the great council, the following republican stanza, in direct opposition to a contemplated treaty with the banished Medici. Carlo Coechi, for a mere attempt to induce a departure from the poetical monitions of this religious tribune, was doomed to the block:

“Se questo popular consiglio, e certo
Governo, popol, della tua cittate
Conservi, che da Dio t'è stato offerto,
In pace starai sempre e'n libertate;
Tien Dunque l'occhio della mente aperto,
Che molte insidie ognor ti sien parate;
E sappi, che chi vuol far parlamento
Vuol torti delle mani il reggimento.”

bread and wine are not transubstantiated into the body and blood of Christ. After Urban the VI, no pope should be acknowledged; but we should live according to our own conscience, and after the manner of the Greeks. It is repugnant to the gospel that churchmen should hold personal property. All mendicant monks are heretics. The people have a right to correct their rulers when they fall into error. Whoever enters a convent is less fitted for the observance of God's commandments. Those who establish monasteries are sinners; and those who live in them are devils. The election of the pope by the cardinals is a device of Satan. Belief in the sovereignty of the church of Rome, is not necessary to the salvation of souls.

Besides these theological propositions, closely assimilating with Luther's, it may not be irrelevant to quote a few philosophic dicta, which will more fully characterise Wycliff's theories. He maintained that the idea of all things is in God from all eternity; and, therefore, that all things occurring in the course of time are eternal. According to his doctrines, everything in God is God. Hence this, for the fourteenth century, bold proposition, which is not far removed from the pantheism of Spinoza and Schelling:—every creature is God. He also laid down the thesis, that God can annihilate nothing; and that all things happen through an invincible necessity; a broad confession of fatalism, which may be put in juxtaposition with Luther's tenets on the freedom of man, which the reformer completely subordinated to divine grace.

Wycliff's heresies had barely gone beyond the threshold of the schools; and it was not until the year 1415, sometime after his death, that they passed the precincts of the university and were summoned before the council held at Constance. His works were amerced, instead of his body; his books and bones were publicly burned, and his memory ritually damned. John Huss, though not half as daring as Wycliff, was certainly more unfortunate. The despotism of the popes and the derelictions of the clergy—the protracted schism of the church and total depravation of the ecclesiastical body, loudly called for the reform of so many and scandalous abuses. The very council, before which Huss appeared, deposed three popes, who had mutually excommunicated each other; and one of whom, John XXIII, if not belied by history, was steeped in execrable crimes. Huss was condemned, and burnt alive, in violation of the safe conduct granted him by king Sigismund, who was present at the council. This breach of plighted faith, is one of the most remarkable in the annals of the world; because committed after mature reflection and by a pious senate of prelates, doctors and priests. Universal christendom was made a participant, through its representatives, in this felon deed; and never did a more solemn conclave taint their souls with an act of more solemn perfidy. Swayed by a perversion of principle and a lust of cruelty which have no parallel in the blood-written pages of fanaticism, they remorselessly gave to a horrid death, one who had been entrapped by the lying promises of their safe conduct. A few independent minds and honest hearts did blame the execution of Huss; but the council issued an ordinance to allay the scruples of the weaklings and muzzle the officiousness of the censors. The text of the rescript, by which the

council absolves themselves and the emperor, is a curious monument of the political and religious morality of the times.

The period which followed the sessions of the council of Constance, brought no change in the disposition of minds. The clergy did not amend, and the popes continued to be ambitious princes, stained with as glaring vices as the earthly rulers, their cotemporaries. The accession of Alexander the Sixth to the pontifical throne—his sacrilegious loves with his daughter, Lucrezia, in whose incestuous affections and favors he was rivalled by his sons, the duke of Gandia and Cesar Borgia—his course of murders, exactions and simony—were not in any degree likely to bring men back to respect and cherish the ancient and hallowed catholicism of the Roman church. And in those days, the German peasantry, among whom the reformation was destined to enlist so many proselytes, indulged in this significant proverb: *Je näher Rom, je böser der Christ*; the nearer to Rome, the worse the christian. Luther's doctrines, therefore, found a loud and long echo in minds thus prepared; and yet these were, at first, but mild remonstrances against the sale of indulgences. Urged, as much by the solicitations of Staupitz as by the promptings of his vanity, he deemed himself bound to controvert propositions and denounce a traffic, which seemed to him to be unchristian and scandalous; and, whatever danger was pointed out to him in the attempt, he determined to publish the programme of a thesis, subdivided into various propositions, in which he condemned the practice of indulgences. Such is the origin of a theological wrangle, which induced a revolution, at once fatal to papal authority and friendly to intellectual freedom.

Viewing the question as one of a purely historical character, it may not be inappropriate to trace the rise of this singular traffic. The practice seems to have originated under Urbanus the Second, who, in the eleventh century, granted a plenary indulgence, or remission of sins, to such as should engage in the wars of the holy land. This example, followed by many of the popes, was also practised by Leo the Tenth, who had exhausted the resources of the church, by a gorgeous liberality extended to kinsmen, courtiers, men of letters and artists. In the year 1516, he published throughout christendom, an indulgence to such as would contribute moneys. Its benefits were extended to the dead; whose spirits were delivered from the bonds of purgatory, in consideration of the soul-tax paid in their behalf:—to this was added leave to use eggs and milk on days of abstinence—to choose one's own confessor—and other such spiritual facilities. Leo, having promulgated his bull of indulgence, disposed of a portion of its proceeds before they were actually received. To different persons he assigned the revenue of different provinces; reserving that of the most lucrative ones for the use of the apostolic chamber. In this division, he conferred all that was to accrue from Saxony, and the part of Germany extending thence to the sea, to his sister Madelena, the wife of Cibo—a spurious son of Innocent the Eighth, who, in favor of this marriage, elevated Leo to the cardinalate, at the early age of fourteen, and, by this act of spiritual despotism, gave the Medici family access to the high dignities and temporal honors of the church.

It must, at first, seem extraordinary that the remission of sin could have been bought at the price of gold. But a theory had been started to explain and justify the practice. The scholastic doctors, assuming that the penances and merits of one individual might be transferred to another, admitted the existence of a treasury, filled up with the excess of merits, gathered among the faithful, through christendom. The dispensation of its contents was entrusted to the pope, who distributed them in the shape of indulgences. This doctrine, maintained by the very ingenious and powerful logic of St. Thomas and St. Buonaventura, was inwoven in the bull which Clement the Sixth promulgated for the jubilee of the fourteenth century. The indulgences were drafts on this sinking fund of good works:—redeemable in heaven, and discounted on earth for ready cash; they formed no inconsiderable portion of the revenue of the church. This system, by which, he said, the last became the first; while, by the true treasure of the gospel, the first became the last; Luther vigorously assailed in his opening thesis. Harping upon the same antithesis, he adds "the treasury of the scriptures is the net with which the apostles fished for men of wealth; but the treasury of indulgences is the net with which we fish for the wealth of men."

While opposing the theological principle and the actual sale of indulgences, Luther had no foresight of the effect which he was about to produce both on others and on himself. He was astonished—even alarmed, at his success. But when it became necessary to maintain the conflict which he had solicited—when he began to judge what he had, at first, merely believed—when his mind, partially shaking off its misgivings, proceeded from daring to daring, to investigate pontifical power and church government;—he then embraced the full extent of the work of reform, and clearly defined the aim which he intended to reach. The conflict grew out of the gratification of scholastic vanity, and ended in the subversion of tradition and authority. But he soon found himself launched on a sea of varying opinions, where he needed the guidings of a compass. That was found in the scriptures—a compass less unerring than he had at first imagined; for a book, written by human hands—sufficient as may be the divine inspiration under which it was composed—is ever liable to human interpretation. And this, the more likely, when a portion of that book, the old testament, was drawn out in an ancient and lost language, with an imperfect system of orthography, in which the vowels are far from being accurately marked. From the moment that the reformer declared that he constantly appealed to the scriptures as a rule of faith, and rejected the sanction of tradition, the interpretations of the fathers, and the decisions of the councils of the church; from that moment, the essentials of christian belief were brought in *discrimine*; it became necessary for Luther to supply the proofs of his argument, and consequently to publish a German translation of the Bible itself. But other innovators had, long before him, sought, by like translations, means of disseminating their peculiar doctrines. Gerson, the chancellor of the university of Paris, that tremendous engine of mental despotism in the fifteenth and sixteenth centuries; Gerson, who was the master spirit of the council of Constance, censuring, in his treatise against communion under both species,

the literal interpretation of the scriptures, adds: "from this venomous stock sprung the errors of the Begards, the mendicants of Lyons, and their like. There be many laymen among them, who hold copies of the Bible in the vulgar tongue, to the great detriment and scandal of Catholic truth."

The ultimate action of these elements of opposition, was to strip the church of Rome of the support of tradition and authority, and to transfer the latter to the scriptural text,—saving the freedom of interpretation, which the innovators reserved to themselves. In this we may clearly trace the march of all opinions, which suddenly modify the state of society; as well as the transitions through which they necessarily pass. It would seem, considering things in the abstract, that human reason, unshackled in its operations, and free spontaneously to combine the *data* of the intellect, might overleap time, space and circumstance, and indiscriminately attain this or that extremity at will. But the award of experience stands to the contrary:—although the limits of the intellectual domain are neither visible to the eye nor tangible to the hand, they are not, therefore, the less accurately defined. An additional proof—though in a different order of observation, that intellect is dependant on and bound to the laws of a continuous development, the progress of which is in harmony with the development of the rest of earthly things. Luther contested and annihilated the infallibility of the pope and of the church; but he referred the principle of authority to the Bible. Though seemingly a retroaction, this was virtually an achievement—and, considering the period, the only achievement which the human mind could have made. To go from the authority of the holy see to the authority of the holy book;—to seek for a rule of faith, not in the teachings of the church, who decided for the faithful; but in a revealed text, whence each was free to draw forth his inspirations and his proofs;—to pass from the rule of submission to that of inquiry, though an inquiry hemmed within certain bounds; such were the labors and achievements of the reformers—and such the terms, beyond which they were forbidden to go by the nature of things. But this term once attained, the authority of the scriptures themselves was in turn examined—questioned—denied:—revelation was contested, and christianity shaken to its centre. This was the work of the reformers of the eighteenth century, who ceased to limit investigation to the texts of a book, which they no longer deemed divinely inspired.

The religious revolution, started by Luther's doctrines, induced great changes both in the order of politics and the distribution of wealth. It secularised many a church fief; sequestered the property of convents and monasteries, and enlarged the authority of the temporal magistracy at the expense of the ecclesiastical tribunals. But this political movement progressed still farther; and the commotion threatened the very basis of the fabric of social order in Germany. The peasantry swarmed from their hovels and beset the strong holds of the barons. The anabaptists enlisted the interests of earth under the banner of heaven; and declared war against all existing powers:—this state of intestine feuds was powerfully assisted by the external enmities which the ambition of Charles the

Fifth had excited against the holy empire. Germany, thenceforth, became the theatre of bloody and relentless wars. If history affords frequent instances of what it is fashionable to call the inferior classes—the laborers, the peasantry and the mechanics—rising against that social order, which oppresses them; the issue of their insurgency is, nevertheless, rarely of a successful character. And for this we can easily account. They generally want all the necessary elements of success—skilful organization, proper leaders, and adequate means: they bring but stout hearts and willing hands to the contest. Yet there are examples of triumph in the case of the corporations of mechanics, who freed themselves in some of the cities of Europe, during the middle ages; and wrung charters of rights from the reluctant grasp of barons, bishops and kings. In ancient history we find a solitary fact of this kind on record:—that of the inhabitants of Brutium—slaves, who shook off the yoke of the Lucanians, their masters; and who, branded with the contemptuous appellation of *brutiates*—brutes—prided themselves, like the beggars of Flanders, in a name which they hallowed by successful resistance against the power of despotism. But the servile wars of antiquity generally terminated fatally to the serfs. The peasantry of Cisalpine Gaul, known in history under the name of *Bagauda*, who revolted at the period of the dismemberment of the Roman empire, were hewn into subjection; and the *Jacqueries* of the fourteenth century were massacred by the nobles, who banded from one extremity of Europe to the other, in a war of extermination.

The insurgent peasantry of Germany shared a similar fate. They and the anabaptists were incited, in this temporary revolution, by the twofold motive of politics and religion. This religious democracy of the sixteenth century widely differs from the democracy which prepared the great revolution of the eighteenth. In the blindness of their mysticism, they assailed the sciences, which, in the course of history, constitute the main safety of democracies. The ceaseless tendency of science is, as far as practicable, to equalise the bodily and mental faculties of man; and knowledge is the only armory from which the masses can draw trusty weapons of defence against the aggressions of the privileged orders:—the plebeian of Rome did not bulwark himself behind the limits of the *Mons Sacer*, until he had looked into the pious frauds of the augurs, and caught a glimpse of the mysteries of *Panda*. This brutal hostility to the arts and sciences establishes a well defined distinction between the politico-religious levellers of the reformation and the democrats of the American revolution, as well as those who inherited their principles and doctrines.

When we consult the records of those days of religious controversy, we marvel at the violence of language which condemns and the rigor of punishment which visits mere opinions on points of theology, the most incomprehensible and abstruse. There is no expression sufficiently strong to characterise the flagitiousness of the man who does not know whether Christ have two natures or two wills: no amercement is adequately severe—none too atrocious for the mis-giving heretic. Rome burns the Calvinist, who declines belief in the intercession of saints; the Calvinist condemns the Unitarian to fire and oil. The Gomarist

mailed in hopeless predestination, gives up to popular frenzy the Arminian, who maintains the doctrine of free will. It must be confessed, that behind these seemingly religious opinions, whether assailing or assailed, were screened questions of high political interests, which also acted on the offensive or defensive ground. Hence, if in our own country, we lately saw a tribunal passing sentence on an union of trades, and proscribing an enunciation of opinions, it is because both the union and their opinions threaten the growing aristocratic privileges of the country; and these privileges—as did the religious dogmas of other days—defend themselves behind a rampart of laws and punishments, not enacted in our land, not provided by our own statutes, but drawn from the dust of a foreign soil, the muniments of feudalism, originally intended to check Saxon serfs and Norman vassals.

Luther, who had introduced freedom of inquiry in religious matters, in his system of theology, sacrificed the freedom of man to the power of grace. He stoutly maintained that God does everything in man, sin as well as virtue; and that free will is incompatible with human corruption and divine prescience. This problem of man's freedom, as well as that of the existence and cause of evil necessarily connected with it, has been vexed both by the philosopher and the theologian. Baronius, in his *Philosophia Theologiae Ancellans*, has said that the former was a Hagar near a Sarah, and ought to be expelled with her Ishmaël, whenever he attempted to play the rebel. But the time is gone by for the admission of such doctrines. Theology has clearly proved inadequate to solve the problem; and the proof lies in this—that the different christian sects have drawn from the same sources, which they hold sacred, the most conflicting interpretations—free will and servile will. Philosophy also came to the assay; but bound to restrict its pretensions to a subordinate sphere, it can only point to acknowledged facts, nor attempt to offer an evidently impossible solution. Man feels himself morally free. This feeling is derived from his conscience; but it is hemmed within narrow limits, and varies according to the individual. To admit that freedom, under its restrictions—to point out its inequalities according to the differences of organization, of climate and education—differences which do not depend on individual will, and which, under another form, reproduce the differences of theological grace;—to receive the existence of evil as a fact, without attempting to reconcile it with divine omnipotence and divine foreknowledge, which are not known to us;—to compass the means of circumscribing evil, and of substituting, as much as possible, human freedom and intelligence to the fatality of nature;—such, the true scope of philosophy and science—the actual state of the question of free will, and the relation which it bears to the existence of evil through the world. To go beyond this, man must make up his mind to launch into gratuitous hypotheses and speculations, or yield, at once, to the suggestions of faith, which speaks differently to different capacities, and equally justifies the Protestant and the Catholic, the Mussulman and the Brahmin. We must accept, without weakness, as without pride, both the mysterious darkness which overhangs the primitive facts of nature, and the faint, vacillating, but only light which our reason affords.

Luther's reforms were, in some respects, highly important. The authority of the popes was curtailed, and confession abolished. Convents were suppressed, and celibacy ceased to be binding on the priesthood. The priests and monks who left their monasteries—the nuns who were restored to the world—availed themselves of the privilege of marriage. Luther himself, an unhooded monk of the order of the Augustines, married a nun, Catharine à Bohran; and Erasmus, the elegant railer, who, though no Protestant, was but a sorry Catholic, writes thus:—"People may contend that Lutheranism is a tragical affair;—for my part, I am convinced that nothing can be more comical;—for the upshot is always of a merry cast, and the catastrophe turns into a wedding!"

Lutheranism is not at issue with catholicism on the great question of the eucharist;—the former, as well as the latter, maintains that the bread and wine are converted into the very body and blood of Christ, by the power of the sacramental words. Some of the reformers went beyond the Lutherans:—they sacrificed the mystery of transubstantiation, and saw, in the last supper, but a memorial and a type. Other protestant sects have still further trenched upon the interpretation of the mysteries, and, at the extremity of this school, are the Socinians, who deny the divinity of Christ, and hold him as a man blessed with peculiar gifts from the hand of God. We should not confound Socinianism, which rests its belief on the scriptures, with pure deism, which holds the Bible to be a book "like one another"—a mere monument of the human intellect.

That which would be a serious obstacle to any sudden religious revolution in our day, is founded on the fact, that the nineteenth century is not marked by any excessive propensity to believe:—that which stamped the reformation with a peculiar character of arduousness, was that Luther's age was credulous even unto gross superstition. The fact is learned from Luther himself. He was long checked in his course by the idea of the responsibility which he was about to assume; and of the perdition into which so many would be whelmed, should he be deceived. The thought tortures him—and frequently recurs to his mind:—to have witnessed the delinquencies of Rome is an indirect justification of his course. "For," says he, "had I not seen this city of abominations, I would have remained in the dread of doing injustice to the pope." Luther constituted himself the head of the new heresy;—and, in so doing, he had to make use of his own rudely picturesque language, Sisyphus-like, an enormous rock to roll. The doubts which distracted his mind, are readily conceived; and the agony which racked him, when his jaded spirits flagged in their almost brutal energies, can be as easily realised. He battled, but with unequalled vigor and success, the so much respected authority of tradition, and the deeply dreaded power of the Roman church, which, up to his times, had been sanctioned into right by the consentient opinions of mankind. With the force of habit, that overmastering element in the nature of man; and with the obstinacy of faith, of its own nature opposed to reasoning, he manfully grappled. But before laying a desecrating hand on a tabernacle which men had deemed holy with sheer antiquity, long and frequent

were his self-communings:—and even after the deal ne of the blow, he questioned himself, at different intervals, to satisfy his conscience of the uprightness of his deed. Indeed we cannot, at any time, advance a grave proposition, in politics, religion, philosophy, or even science, without feeling some of the misgivings, which Luther experienced:—from a deep and thorough conviction of the necessity of peace, Hobbes was led to a radically false conclusion—the necessity of strict bondage and political inequality.

The reformer of Germany has left voluminous works to posterity. His correspondence, tracts, and minutest sayings, have been collected by his friends and disciples, and handed down to us with religious care. Melancthon, especially, has exhibited every phasis of his full-toned existence; yet no one, I think, has judged Luther better than Luther himself. The following letter, to a friend of his, is a choice *morceau*; and may be considered as a correct judgment, passed by Luther upon himself:

"To J. Brentius:—I do not wish to flatter thee. Neither do I deceive thee or myself, when I say that I prefer thy writings to mine. Not Brentius do I praise; but the holy spirit, that is gentler in thee than in me:—thy words flow on more purely and mildly. My style, unskilful and untutored, pours along, a flood, a chaos of words, turbulent as an impetuous athlete, ever struggling with a thousand succeeding monsters; and, if I dared to compare small things with great ones, it would seem that something of the fourfold spirit of Elias has been granted unto me—something rapid as the wind, and devouring as fire, which uproots the mountain and consumes the rock. Thine, on the contrary, are the gentle murmur—the soft and cooling breeze. One thing comforts me: the divine father of the human race needs, in this, his immense family, the rude for the rude—the harsh for the harsh—like a sturdy wedge for sturdy knots. To purify the air and fertilize the soil, the watering rain is not sufficient;—the flashings of the lightning are also required."

This letter sums up the whole of Luther's individuality;—his bluntness and impetuosity—his incoherence and vanity are unwittingly defined, by his own pen, in a few hasty and graphic lines. So much for Luther as a man. But as to the moving causes, which favored the development of the reformation, there are many, independent of both its spirit and its doctrines, which exclusively belong to the province of history. The Protestant christian, in order to throw a relief upon his peculiar creed, in contradistinction with that of the Catholic christian, assimilates it with freedom, and vindicates it as a progress of the human mind and a triumph of human liberty. For our part, we are at a loss to say how it advanced the cause of freedom, while the iron hand of Charles V, and the exactions of his petty barons, continued to weigh upon the people of Germany. They, in fact, lost by the change in many instances; for while it served the interest of Rome, the bull of excommunication was at hand; and the varietal serf might sometimes thank the tyranny of the spiritual master for a respite from the tyranny of the temporal lord. But the thunder of the Vatican being once quenched, and the bull of the pope stripped of its terrors; the baron, unawed and unchecked,

ground down the people into a bitterer bondage than Rome had ever imposed. To admit, therefore, the unconditional and paramount influence of the reformation in spreading freedom abroad, is not only to reject the sounder teachings of subsequent experience—but it is to assume, as a fact, that which is controverted by every page of history. The reformation has been tested by the ordeal of more than three centuries. And it is a debatable question whether Germany, the cradle of its birth, is at the present day politically freer than either Italy or Spain.* If we turn even to England, which has systematised Protestantism into a form of government; we find that the safeguards of her liberties had been established by the Catholic barons, long before the lust of her royal headsman had suggested the idea of his becoming the founder of a church.

But to resume the subject of the reformation itself, we must rank, among its principal causes, the antagonism of German and Italian nature—the opposition of the northern and the southern man—an opposition which has existed in all countries and through all times—and which, in this instance, availed itself of the slightest pretext of separation, and ended in the defeat and oppression of the south by the north. We should also keep in view the political state of Germany in the sixteenth century—its oligarchy of princes and dukes, margraves and counts, bishops and abbots, convents and free towns, whose desire of independence and thirst of lucre were marvellously subserved by Luther's doctrines; and who were among the first to adopt and defend the reformation. In Holland, Switzerland, Sweden and England, reasons purely political, contributed to its success:—the same powers that subdued the hosts of anabaptists, and the two hundred thousand followers of Thomas Munzer, might have crushed the reformation, had not the reformation essentially befriended their temporal interests. Protestantism—once a political, though now a religious distinction—Protestantism necessarily incurred the penalty of a close alliance between religion and politics. For if the religious interest was originally the primary motive of action—that which aroused kings and nations and drew them together, it was soon mastered and absorbed by the political interest; and the world witnessed an adulterous union between church and state, more hideous than the semi-temporal authority of Rome; and which, under any circumstances, has ever been a cause of vituperation and impotence in religion. She basely cast her holy attributes at the footstool of power; and, in the witheringly vigorous line of Dante Alighieri, was seen *pulviscogliar co' regi*, shamelessly wantoning with kings. Such was the fate which Luther marked out for his religion, from the moment that he placed himself at the mercy of the elector of Saxony, and wilfully pandered to the debaucheries of the Landgrave of Hesse.

Δ

* We do not speak this disparagingly of Germany: she is the mother of deep and unrivalled scholarship. Her *sevens* have largely paid their tribute to the cause of freedom, science and humanity. But their usefulness and influence are restricted to the university walls:—the light passes not from them to cheer the masses, whose limbs, in this our boastful century, bear shackles, which their Teutonic ancestry knew not in their rudest days of barbaric ignorance.

FRANCIS ARMINE.

A ROMANCE.

BY A NOVICE.

CHAPTER V.

The winds were hushed, and not a cloud was driven
Along the fair face of the sleeping heaven :
And stillest night, the beautiful, the bland,
Walked like a spirit o'er the lovely land.

Oh! from the outward scene that we could win
Some spell to sooth the restless world within !

E. L. Bulwer.

Hopes, that like rainbows melt in shade,
And pass away.

L. E. London.

The stars were glittering, without a cloud to obscure their light; but the full moon was slowly sinking beneath the western waters. Sweetly, calmly, like a good man gliding in peace to the land of sleepers, did it throw its mellowing light upon the city, and along the shores of the Seine, ere it sank to its wavy couch.

Who that has once gazed upon that beautiful sight, has ever forgotten it? Who has not, as he gazed, felt its hallowing influences, and lifted up his heart to the golden pavilions of the sky in silent worship? And who that has gazed, has not felt their feebleness, and longed to flee upon the pinions of the dove to their far home in the heavens?

Even as I write, she is slowly sinking beneath the distant horizon, which rests on the deep, blue expanse, like a long silken lash on the brow of the beautiful. She has thus set through months, and years, and centuries. She has thus shone over that bright water since creation dawned, and will thus shine until the records of time shall be rolled together, and the earth and the heavens sink into chaos. She has risen upon free and happy states, and has glittered upon their monuments. Imperial Rome, rich in empire, was beheld by her who now casts her mystic and undimmed light upon its rotting ruins. Unchanged and unchangeable, she has looked from her silent home upon forgotten Thebes, sceptreless Lariææ, and unremembered Philippi, as she did when the world trembled at their frown, or perished beneath their tread.

Her course through the heavens is now the same as the one on which she trod generations since. Like the dew, they have gone, and her path is on and still on. Cities have changed and passed away. Nations have arisen and decayed. The hills have mouldered, and the eternal mountains have bowed their cloud-capt palaces to dust. Oceans, hoarse with telling the flight of centuries, have moved from their unfathomed beds; and empires, big with conquest, swept like sparks from the fire. Towering pyramids have crumbled, and they who reposed beneath their shadow, passed to nothingness. Calmly has she thus looked from her far chambers, all glorious and undimmed, upon these, as we would upon wave chasing wave, on the bosom of the great deep, and yet her course is onward and still onward.

The thread of my tale carries the reader, for a short time, again with Francis Armine. From a disturbed slumber he had awaked and dressed, and was now

leaning over his table with depressed spirits. Alas! that the summer sunshine flees before the chill of the wintry wind. Alas! that the summer flowers wither at the touch of autumn's frost. Alas! that the heart's deep fountain knows no second springtime, save when it gushes forth near the pavilions of the first and last!

Armine's life had been a long and somewhat saddened dream—a dream of broken hopes and disappointed desires—a dream of unsolved mystery and phantom, because unlooked events. Oh! in the deep bitterness of his soul, how he longed for the happy and innocent days of his infancy—the free step, the buoyant spirit, the light heart, the gladdened mind, and the sweet, profound sleep—the mother's tender affection—the father's kind attention—and the sister's treasured love. Often had he stood above the voiceless resting places of the departed, and watched them in their unbroken sleep—a sleep that was not the companion of the boyish couch, the watchful burdensome rest of manhood, nor the fearful and restless pall that comes upon the eyelids of the aged; but the dark, the awful, the eternal sleep of death! And her who watched there with him, whither had she departed? Hope plants her tread on the shore, but sorrow washes out its trace with tears.

The swift winged hopes, the gentle thoughts, the ardent aspirings, the pure and beautiful dreams of our early years!—when gone, they never—never return. The heart's scarce budded flower, when withered, never opens again—the mind's secret chambers, when dimmed, never brighten again. They rise and fall like the summer wave, which when it sweeps away, leaves no mark of its existence on the wide waste of waters!

The past, whether bright or shadowy, still mirrors itself in the future. How sweet is it, then, as we approach the dim twilight of our present life, to bear with us no harrowing reflection from its ample stores—to know that the heart's sanctuary is pure and uncontaminated—that the incense of the soul is as fragrant and unquenched as when the priest first entered its aisles. Awful, thrice awful, is the knowledge of an ill-spent youth! Awful, fearfully awful, is the recollection of its faults, and errors, and sins, and crimes. They will forever haunt us like dim ghosts. They will turn the pleasures of an old age to bitterest gall upon the lip. They will gnaw, as with viper fangs, about the heart, and change its hopes and dreams to dust and ashes. Oh! then, in life's "morning march," let us wander through the flowery path unmindful of the vice and crime that lure to cheat and disappoint, and our existence, flowing from so clear a fount, will pass on to its far home in the heavens, without shadow and without coloring.

Armine thus could look back to the past without fear, for it was not of crime, but disappointment and mystery that haunted him. Notwithstanding the lateness of the hour, he resolved to wander forth. Again upon his horse, which he had taken noiselessly from its stable, he gave it the reins, and went he knew not whither.

The soft moonlight streamed upon Paris, as it was sinking away, and, with the light of the many stars, rendered it one of those bright nights which are so well calculated to wean us from the smoke and stir of day, to a dreamy forgetfulness of its troubles and trials, and

draw from the coldest worldling a wish that the days were merged into nights as clear, as bright, as still as was the present. The long, solemn, death-like streets, were unlit, save by the moon and stars, that hung above them like jewels on the bosom of the sky, and a few feeble lamps, that flickered and gradually expired away, shamed as it seemed by the glorious lights poured upon the sleeping earth, from the unexhausted urns of heaven. He had soon passed the streets and entered upon the open road that wound its serpentine path along the river shore. Away in the distance was stretched the dark forests, whose tall and noble trees, as they were stirred by the air, resembled ranks of armies, waving on high their dark green plumes. Beyond them could be seen the blue mountains bordering the distant view. No sound was forth, save the sighings of the southerly wind, rich with scent from the plains and vineyards over which it had passed, and the low and not unmusical murmur of the Seine, as its sky-mirroring waters moved along the thick grass or rippled among the pebbles on its shore.

Leaving Armine on the road, we would call the attention of the reader to others.

CHAPTER VI.

Alas! alas!

Crime indeed hath mingled in your cup
Of life.

Henry Neale.

She was to him all else above:
The fountain in a desert land;
The shade midst Afric's burning sand;
The star that lends its glimmering ray
To light the traveller's lonely way:
She was that fount, that shade, that star;
He loved—nay, but he worshipped her!

Ay—but who is it?

As You Like It.

How very convenient it would be to take the reader from the task of perusing this history, and convey him to some arena on which each character would appear—deliver his thoughts—do his deeds and depart. And then how very pleasant would it be to the writer, who is now annoyed with shifting and changing, to keep a disjointed tale together—now chatting with a hero upon the street, and now whispering sweet words in a drawing room, in the ears of a heroine—now moving quietly down a stream, with the reader wistfully gazing after him—and again taking the self same reader, against the advice of all old women, into the damp night air, fearless of coughs and colds, to meet a character upon the gloomy midnight road. I have perused many beautiful definitions of that singular creature, an author. They were all interested as the writers well knew. He resembles a fellow whom I have seen at a cattle show, placed amid the dirt and flare and stench of oil behind the curtain, to raise and drop and shift some dirty canvases, misnamed scenery—or, if that resemblance is not striking, his occupation is much like that of the clown on stilts, whose duty in the ring is to tease the spectator by directing his already sated attention to the extraordinary performances of a goodly number of ferocious and well fed animals. With the reader's permission, I will mount the stilts again and turn to my narrative.

It was a long time before Montanvers recovered from the fearful and deathlike swoon. When he did so, his mind was heavy and depressed, and his whole frame tottering as if under the effects of some dreadful disease. Manifold thoughts served to weigh him down—thoughts of pain and misery and death—but with a powerful exertion, he threw them from him. Moving from the road, he wended down a narrow path, and stood before the Seine, a draught of whose cooling waters refreshed and invigorated him. On the green turf, which at that point stretches down to the water's edge, he sat, to reflect and scheme, where we will leave him to follow some persons not yet known to the reader.

Some two miles distant the road assumed a different appearance, becoming wider and more level; and beyond it, for miles around, the view was uninterrupted by a single hill, or a rise or fall in the ground. The river wended in a crooked, serpentine path hard by, and the far off mountains hung upon the skylike palaces of snow upon battlemented clouds.

Along that road there was driven a small but neat carriage, drawn by two horses, which, from their appearance, had travelled without ceasing for the whole of the day that had passed. Its passengers consisted of a young clergyman, well known near Paris, and his lady. There was something in the countenance of the young man which seemed to denote his profession. His face was pale and heavy, and rather unprepossessing, had it not been for the brightness of the eye, and the gaiety which lingered in the curl of the mouth. There too was a plainness and neatness in his dress, a meekness and humility in his demeanor, and a gentleness in all of his actions, which at one glance bespoke the messenger of glad tidings sent to brighten man's pathway through the adamant gates up to the golden pavilions of the New Jerusalem. Such was the reverend George Morton. His lady was, or rather had been, beautiful. Sorrows and tears had thrown their nun-like veil over her, and from the fair girl that Morton had wedded, she had passed to the stately and noble wife—not, however, without traces of her former beauty still lingering around her. She was a delightful companion for such a husband.

After riding for some distance in silence, he began a conversation which they seemed to have before commenced.

"But, my dear, there are afflictions deeper than those through which you have already gone. Afflictions that well might wither the mother's heart and scorch the husband's brain, were they not administered by Him in whom we trust; afflictions too deep and overpowering, save to those who can behold in them the visitations of a high and holy power. And He who tempers the wind to the shorn lamb, will still watch over and guard the meek and humble."

He spoke in a low and somewhat agitated voice, but continued in a clearer tone:

"What are the pomps and glories of the world, that in hankering after them we should forget their worthlessness? We are but wanderers upon a dreary wilderness—starting forth to-day and cut down to-morrow. Why then should we waste our days in sorrow and in grief? Why then should we repine, when the angel of death flaps his funeral wing over friends or kindred. The springs of existence, which

cease here, flow back to their original fountain. The beings who leave us now, will be joined to us hereafter in a brighter and a purer sphere, and we will then wander with them forever."

"To what do your words tend, dear George?" asked Mrs. Morton, as a suspicion of their meaning for the first time flashed upon her.

"Our child!" was the only reply.

"What of her? what of her?" exclaimed the now distracted mother.

"Calm yourself, my best, my dearest, or I cannot speak," said he. He hesitated—it was but a moment, for he noticed the calm resignation of his wife. "You may have noticed that a stranger handed me a letter whilst supping to-night. By that letter I learned that our child, while walking by its nurse's side, was accidentally trodden upon by the horse of a stranger who had just entered Paris—an Italian nobleman, from what I can gather. The letter is not minute; but our child is either suffering, or perhaps dead!"

She did not answer, for before the words were finished, the carriage had been stopped, and in the next moment the window was opened, and a masked form was before them. The intruder, noticing the lady, spoke to her companion in a softer voice than he had probably intended, or than would in all cases suit his occupation as a gentleman of the road—

"Ah! my dear sir—sorry to trouble at so late an hour, but my wants are urgent. Be so good as to loan me your purse and watch."

The traveller hesitated complying with even so polite a request, and the robber, withdrawing from a concealed belt a pair of pistols, pointed one at the breast of the lady, and the other at the head of the man, and shouted in a loud and angry tone—

"Deliver or you die!"

"Never!" replied the brave minister, dashing the pistol of the robber from his wife's bosom, and pointing one that he had in the mean time drawn from his carriage, full in the face of the robber. It flashed. Just at this moment the sound of an approaching horse was heard in the distance, and the robber maddened by the resistance and bravery of the man, and rendered desperate by the approach of others, suddenly fired upon the unfortunate minister. A loud shriek went forth from the wife's lips, as her husband's arm fell from the waist around which it had twined, and he dropped, steeped in his flowing blood, at her side.

"Oh! my own—my love—my life. You will not die! Speak, speak!" she cried.

That soft, sweet, musical voice, brought back the gem-like memories of the past, and stopped the spirit's wing ere it soared to the far off world. That voice! It had first weaved the golden chain of love around him: it had echoed in his ears like a spirit's whisper, amid the bloom and brightness of youth, and in the darker pathway of manhood, and now it came as sweet as ever when death's dread angel hovered around the fleeting soul like a stern and mysterious conqueror. He smiled as he looked for the last time upon her; as he heard for the last time the rich tones of her voice; and faintly whispered, "Bless thee, my wife; we will meet again—there—there!"

He lifted his eyes for a moment, and again they fell; the dull glazed film of death came upon them. He

pressed his cold lips upon her cheek, and then came the pang, the struggle, the agony, the convulsion, the silence. She stood, at that solemn hour, alone with the dead!

Ere that, the robber had rifled the unfortunate man of purse and watch, and had drawn from the finger of the lady its only ornament, a small plain ring. The approaching horseman came nearer; but ere he reached the spot, Montanvers, for he was the robber, had departed.

The horseman was Francis Armine. His horse suddenly started, from some object in the road, which the rider on noticing approached. It was the carriage of the unfortunate Morton. Opening the door, he beheld the murdered man and the lifeless woman. He entered; the blood was still oozing from the wound of the man—the limbs stiffened, and the body cold. But the woman—she moved, she breathed, and was not dead. A thought flashed upon him. In the darkness of the night, he rushed to the water's edge—he did not walk; the hope of saving the life of a fellow creature swiftened his pace—he almost flew. He reached the river's side, and with a handful of water flew back. The carriage had gone. A sound was heard in the distance; it was—oh no! it was not a human cry; he listened again, and through the deathlike stillness, was heard the shriek of the night-bird—dread omen!

We find a long lost treasure—and knowing it not, lose it!

SUMMER MURMURS,

HOW UNLIKE "SPRING JOYS."

BY HENRY J. BRENT,

Author of "Spring Joys," "Love at the Shrines," &c. &c.

I have sung of spring and its delicious joys—but alas! the blossom has fallen from the tree, and the rose-bud has withered on its stem. I am half dead with ennui. The sun gets slowly from his bed of molten lead, and angrily keeps up his journey through the day. We open the windows of a morning, and stretch out our hands among the honeysuckles that cluster around the sills. The smell of those flowers cheer us for awhile, and the buzz of the humming bird prolongs the decaying memory of active and sportive springtime. But the long-billed lilliputian is off, and he wanders about among the stern and irresponsive apple trees, hoping to find some bud that has been spared by the genius of ripening nature. What yawns and stretches occupy our time before the coming of the cool water from the pump. We see the drowsy servant, half full of dreams, lounging along and stumbling forth, pitcher in hand. The perspiration of impatience beads itself upon our brow, and the first power of heat is brought upon us, by our halloing to the valet to make haste. We sit at the open window in the meantime, with our sleeves rolled up, while the flies, mustering in dark groupes, dash like the armed Arabs at our neck and hands, and fly off laden with their tiny cargoes of blood. Anon comes the servant, with his pitcher half full of the limpid water—step by step we count his approach—we hear his lazy and heavy foot ascending the stairs—

we rush to meet him—we lift the pitcher high in the air—out flows the delicious stream—our head, ears and flowing locks are in the basin, and the beautiful emotion of morning freshness, of youth, speeds, fanning as it flies, through every vein and fibre of our body. To the heart—to the brain it goes, and we lift our crown reeking with pearly drops, and “Richard is himself again.”

The poorest hind on earth, with his head in a basin, or a tub it may be, of cold, sparkling water, is as happy, oh happier, than the proudest king who bathes in lavender and cologne. But it must be in the midday tide of the summer fires, when the dog-star rages hot.

Poetry, and eloquence, and music, and oh! thou richest, and dearest of all earthly thoughts, bright love, may come to us along the impalpable atmosphere of dreams and delusions, may wind themselves around us, until we fancy the earth a paradise, and ourselves gods; but how dull, how void are they all when the sun rises on the first limb of the heavens, and pours down his consuming rays upon the earth. We are no longer men, to feel the soft influences of those natural impulses that enlighten and elevate us. We are the torpid creatures of heat, the whole burnt offerings to fire.

The cook has done her best to drown, in the aromatic coffee, all ideas of the passionate sun that is mounting the fiery walls of heaven, with his hordes of satellites, all clothed in burnished gold. The black demons of summer, the flies, creep down the ends of my fingers, get upon the spoon, and with all the insolence of people out of debt, drink of the coffee. The servant, in driving them away, dips his peacock feathers in the cup, and lo! my white pants, the pride of the wash tub, and my delicate vest, (exultations of washerwomen,) are spattered with deep brown stains. The window shutter flies open, and the honeysuckle has crept down, that the sun-beam may fall upon my forehead with its full powers. The waiter, even now dosing over the back of one of the chairs, has forgotten to ice the butter, and it looks like a melted lake. The biscuits are burning hot, and the unmindful cook has made no toast. Even the refrigerator is out of sorts, and the thermometer, smiling in the coolest place about the house, luxuriates with its silver blood up to 90s. I'll plunge the measure of heat into the spring among the ice, and try and regulate the weather in that way.

It is singular, but true, that whenever there is a tremendous siege of hot, suffocating weather, without wind, or breeze, or infantile zephyr, or impotent breath of a zephyr, that the dust is sure to mount from its dry bed in the street, and make its appearance into your house. Just as my second cup was getting creamed, and my hand, gemmed with flies, was outstretched to receive it, a puff of dust took its position upon everything in the room. How it came in heaven only knows. How it mounted from the street no priest of the oracle of Delphos could tell; but there it was, sandy and choking. There is a mystery in dust that goes beyond my penetration, puzzles the will, and confounds the understanding. Shade of McAdam expound it to us!

Not a breath of air stirs among the trees—the chickens, with their wings outstretched, and beaks open, pursue their search for food no longer—the sun, like a magnetizer, has touched their nerves, and even they, more voracious than the slandered pig, are still at last.

The dog has scratched up the earth, and nestled him-

self upon the cooler mould—the pump, swayed to and fro by the hands of perspiration, creaks as if its very founts were boiling hot—the horse laps the surplus water from the stones, and with insane eye and ferocious teeth snaps at the tormenting fly. The cows look piteously to the skies, and their long tails flash through the air like scorched serpents. The distant brickkilns send up their tribute of hot air, and the corners of houses emit a thick and trembling body of heat. The universal nature, from the topmost zenith of the firmament to the shadiest nook of the thick woods, seems to pant and sink and die—a hush, like the silence of a burnt empire, glooms down upon the world, and despair and fire and fever, the triumvirate of the solstice, sway mankind with a rod of lighted lava. Oh how the head swims and the inmost recesses of the heart throb, as we look forth upon the immovable face of things. Books are thrown aside—the pen is only retained, lest the apathetic soul should flee away in the torture of this withering idleness; and even the loved breath of our youngest child, breathed so gently and so sweet upon our cheek, and that ought to be so cool, is burning now. The sun is on his march of desolation. Phaeton once more has robbed his sire of the reins and madly drives the chariot through the zodiac signs. The scorpion and the great bear, and orion, the belted knight of heaven, are writhing under the burning hoofs of the enraged steeds. He shoots, like the comet that consumeth worlds, through the palaces of the clouds; and as his axle revolves, we see the lightning and hear the crashing thunder bellowing over our heads. The ocean and the lakes—the rivers and the rivulets, from the broad Atlantic down to the gentle stream that creeps amid the flowers of a lady's garden, are cool no more. Gods, will round-jackets cure it? will summer clothes abate the evil? will getting shaved twice a day do ought to stem the tide of suffering? Are there no gentle showers in yonder brazen arch—no drops of dew to fall upon the wilderness—no tear of pity to moisten the parched fields, and bring back the dying lily to its beautiful existence?

There is a speck shading the western sky—a little cloud that inspires me with hope—with joy—with a delicious thirst. It rises gradually over the top of the horizon, and I now perceive that it stretches forth like an eagle who poises his wings amid the eternal mountains. From a speck of dust blown by the unfelt current of the upper air, upon the face of the skies, it boldly spreads forth its mantle to shadow the earth. It is a dusky cloud, not black like the monumental clouds of gloom that battle with the winds after a fierce tempest upon the seas. It is grayish, with an inky fringe, and it rolls upward with its highest point whitened like a billow crested with foam. Gently on my forehead flows an almost imperceptible breath, as if a spirit troop was passing through the air, and breathing on me as they passed—a motion is perceived among the trees—bands of flies crowd in at the windows—the sounds multiply in the streets, and I can almost imagine I hear a throb of joy coming from the dark bosom of the earth. I watch that cloud with a more abiding interest than ever lover gazed upon the rising planet that signalled him to the interview with his mistress. The whole people are watching it—they seem to cry aloud “there is rain in yonder cloud!”

Even while I write it has darkened the western heaven, and a glorious shadow has fallen from its pinions. The thunder is awake—I hear the muttering giant, and see that he has seized his spear, which already gleams around the universe. His banner is unfurled, and his mighty hosts are crowding up the sky-paths from every mountain pass and hoary sea. The drops are falling on the trembling trees—the rush of the tempest is on my ears—the thunder and the lightning are abroad, the heat reigns no more—there is music among the spheres, as if a thousand bards had struck their musical harps, and sang united around the footstool of the Most High. While the war of majesty and glory is in progress, I will turn me on yonder couch and sleep until the servant wakes me to cool air and comfortable tea and toast.

Washington, July 12, 1838.

THE MAGNOLIA.

Amidst the great variety of trees indigenous to the United States, there is, perhaps, none which more forcibly claims attention or commands admiration than the Magnolia. This beautiful genus or family of trees, consists of about fifteen species, and is almost equally divided betwixt the United States and China. The generic term Magnolia is derived from Magnol, a distinguished French botanist of the eighteenth century. The genus is arranged under the class, Polyandria, and order Polygynia, of the sexual system of Linnæus. The two most interesting and ornamental species are the *Magnolia Grandiflora*, and *Magnolia Macrophylla*. In Florida where the former flourishes in extreme luxuriance and grandeur, the forest, during the flowery season, is represented as being sublimely picturesque, and presenting one of the most enchanting views in nature. It not unfrequently presents a living column of eighty or ninety feet in elevation, almost unobstructed by branches, and terminating in a spreading top of the deepest perennial verdure. It has a pyramidal, or semi-elliptical head, when not injured by accident. From May to August, in favorable situations, it is generally covered with brilliant white flowers on the extremities of the young branches. Another species of Magnolia frequently met with in our forests, and which has been cultivated to some extent, is the cucumber tree (*Magnolia Acuminata*.) It derives its familiar name from a resemblance betwixt its cone, or seed-vessel, and the common garden cucumber. But it is the *Magnolia Macrophylla* which attracts the greatest share of attention, and on which it is chiefly intended to make a few desultory observations. The extent of this species in the United States is extremely limited, and its diffusions but partial wherever found. Nuttall observed it on the banks of the Cumberland river, Tennessee, but of very small size. He also points out its most noted locality in a "narrow tract of about two miles in length, twelve miles south-east of Lincolnton, Lincoln county, North Carolina." The limits, however, of this species are more extensive than those assigned by the above distinguished naturalist. In Lincoln county I have been enabled to discover several other localities in the section of country

bordering on the Catawba river. It has also been found in Florida and Kentucky. In all of its different situations it seems to prefer a light, virgin soil. It may be frequently seen growing very luxuriantly on some rugged and abrupt hill side, where it is protected from the sun by the surrounding growth. Indeed, a cool situation seems to be greatly conducive to its prosperity. Yet it is not exclusively restricted to this its native and favorite situation. It bears transplanting very well, provided some attention is paid in having it occasionally irrigated during dry seasons. To ensure its future growth, with some degree of certainty, after removal, I would recommend, as a precautionary measure, the planting of rose bushes, lilacs (*syringa vulgaris*) or other small undergrowth about its roots. These will keep up a coolness and moisture during the heat of summer. The Magnolia may also be raised from the seed; and this method is, perhaps, the most advisable when young plants cannot be easily procured. It is admitted by the most assiduous collectors in Botany, that this species of Magnolia has the largest leaves and flowers of any other tree in North America. It is in the vegetable kingdom that we behold the finest delineations of nature amply and richly portrayed. Her choicest pencilling, her most delicate tints, and brilliant hues, we find attractively displayed on the variegated flower. And with what pleasurable emotions do we recognize her beautiful finger-work as exhibited in the large and snow like blossoms of the Magnolia. The magnitude of the leaves is not a little remarkable, and naturally suggests to the inquisitive mind the idea of coolness, shade, and protection. They are frequently found measuring from eight to twelve inches, in breadth, and from twenty-five to thirty inches in length. These dimensions, it is true, are vastly inferior in size to the leaves of the Palm trees of Ceylon, which are said, by a distinguished writer, to be capable of sheltering whole families from the inclemency of the weather. But it may be observed, that in tropical climates all plants assume a more luxuriant growth, and the magnitude of the leaves seems to be the result of benevolent design by the author of the universe in consulting the health, the comforts, and the pleasures of the inhabitants destined to live beneath the scorching rays of a torrid sun. Even in a medical point of view, the Magnolia is worthy of attention. The bark of all the species are known to possess camphorated, aromatic, and tonic qualities. In intermittent fevers, chronic rheumatism, &c., several species have been advantageously used. But it would be foreign to this sketch to enter into detail. The preceding remarks are made with a view of pointing out the most desirable species of Magnolia, and presenting to the general reader a brief outline of its natural history. In Philadelphia and other northern cities, where the Magnolia has been successfully cultivated, a great value is attached to it as an ornamental tree; but in our own more favored clime, in this respect, it is too frequently doomed to realize the line of the poet,

"Born to blush unseen,"

and deck its secluded retreat in solitary grandeur. To the lovers of Flora, and particularly to the ladies, who delight to see dame nature attired in her inimitable drapery, from the purest white to

the most exquisite and variegated tints, is the appeal made to cultivate the Magnolia. Wherever known in the United States it has acquired the merited appellation of "beauty of the forest," and is justly deemed the most splendid and magnificent tree in North America.

A BACKWOODSMAN BOTANIST.

LIFE IS BUT A DREAM.*

Oh human life, thou mystery of mysteries the first,
Whose shadowy veil no mortal grasp can rend aside or burst,
Art thou, indeed, as some have deemed, a visionary dream,
Whose shifting scenes of light and shade, are not, but only seem?

And is it but a fairy world of fancy's gay domain,
This gorgeous globe of land and sea, of mountain and of plain,
And rivers bright that lave the walls of cities proud and fair,
Hoar forests, flowers of myriad dye, whose fragrance charms the air?

Yon sun, that like a golden shield, all glorious, hangs on high,
The crescent moon of silvery hue, that gems the liquid sky,
The host of heaven whose ancient fires of unconsuming light,
Illume like beacons far descried, the watches of the night?

Are these but phantoms of the mind, that doth itself delude
With dazzling shapes, the meteor forms of visionary brood,
Which mighty worlds we fondly deem, launched forth in infinite space
By God's almighty arm, to run a fixed, though trackless race?

Hark! 'tis the thunder's awful voice that, booming, peals on high,
While vivid lightnings flash their blaze athwart the lurid sky,
Is that dread sound of tempest birth, an echo of the soul,
And spirit-born those winged fires that flame from pole to pole?

Nought but the fiction of a dream, each animated form,
That cleaves, or ranges air, earth, sea, with life and motion warm,
And he who reigns with lofty brow, the monarch of them all,
The godlike creature whom with pride creation's lord we call?

Are they but shade, man's form divine, and woman's seraph face,
The venerable brow of eld, and childhood's sportive grace;
Aspiring youth, with beaming eye of rapture-kindled fire
Gazing on maiden loveliness, with fond and chaste desire?

* These lines were suggested by the common figurative expression "Life is but a Dream," which has been the actual belief of some.

Sad thought! to deem that all we prize and cherish, is but nought,
That all things precious to the soul, exist not, but in thought,
That she whom now with fond embrace unto my heart I clasp,
Is nought but unsubstantial form alone, that melts within the grasp!

The generations, that have passed forever more away,
Strewing time's shores with human wrecks, since nature's primal day,
With those who linger yet, the thronging multitudes of earth,
Are they, indeed, but ghostly forms of reeling fancy's birth?

Dread thought! from which with shuddering awe, the startled soul doth shrink
As from a fathomless abyss, beneath a dizzy brink,
A thought like that which chills the mind, when gazing on the tomb,
The darkness of that prison-house appals with spectral gloom.

Yet not without its charm for him, whose weary life hath been
A waste, where neither flowers nor fruits, adorn the dismal scene,
Who hath not reaped for all his toil, nor happiness nor fame,
Yet lives with disenchanted soul, cut off from hope or aim.

Nor yet to him, I ween, who oft a fearful look doth cast
With conscience-stricken spirit through the irrevocable past;
Whom shapes of guilt, unexorcised, assail with startling power,
When stretched upon the sleepless couch, or even at noontide hour.

Nor sad the thought to him, on whom existence bears, a load,
A burden weary to be borne, along a dreary road;
That all the crushing cares which weigh his spirit down to earth
Are empty as the shadowy forms of unsubstantial birth.

Life but a dream? what were we then, I ask with speechless dread
Ere fell upon our souls benumbed, this sleep as of the dead,
And when and where, as from a trance aroused, shall we awake,
And truth and light, at length upon our startled spirits break?

Was it when first we oped our eyes upon earth's varied show,
We fell into the sleep profound in which we slumber now,
Whose bonds the touch of death alone can sever and set free
The long bound prisoner waked at length, to life and liberty?

Shall we not then true substance grasp, not shadows dim, as here,
The veil then drawn aside, shall not the mystery be clear,
This world of gross, material form, a baseless fabric prove,
And spirit but survive the wreck, which sought no change or move?

SOUTHERN LITERARY MESSENGER.

VOL. IV.

RICHMOND, OCTOBER, 1838.

No. X.

T. W. WHITE, *Editor and Proprietor.*

FIVE DOLLARS PER ANNUM.

MEMOIR ON SLAVERY.

Read before "the South Carolina Society for the Advancement of Learning."

BY JUDGE HARPER, OF SOUTH CAROLINA.*

The institution of domestic slavery exists over far the greater portion of the inhabited earth. Until within a very few centuries, it may be said to have existed over the whole earth—at least in all those portions of it which had made any advances towards civilization. We might safely conclude then that it is deeply founded in the nature of man and the exigencies of human society. Yet, in the few countries in which it has been abolished—claiming, perhaps justly, to be farthest advanced in civilization and intelligence, but which have had the smallest opportunity of observing its true character and effects—it is denounced as the most intolerable of social and political evils. Its existence, and every hour of its continuance, is regarded as the crime of the communities in which it is found. Even by those in the countries alluded to, who regard it with the most indulgence or the least abhorrence—who attribute no criminality to the present generation—who found it in existence, and have not yet been able to devise the means of abolishing it, it is pronounced a misfortune and a curse, injurious and dangerous always, and which must be finally fatal to the societies which admit it. This is no longer regarded as a subject of argument and investigation. The opinions referred to are assumed as settled, or the truth of them as self-evident. If any

*We make no apology for laying before our readers this very able paper by Judge Harper of South Carolina, which we republish, with the author's corrections, from the 'Southern Literary Journal.' Whilst we have carefully excluded from our columns all discussions of a mere party character, we are not willing to withhold a calm, powerful and argumentative appeal, upon a subject vitally affecting the well-being, and very existence of the republic. It is not to be disguised that an infuriated, but we hope in point of numbers at least, an insignificant class of our northern brethren, have for some time past been employed in schemes and agitations which if not rebuked by the stern voice of public reprobation, may lead to the most frightful consequences. To avert them, we invoke the aid of the more liberal and enlightened of our countrymen north and east;—for it is upon them we solemnly believe that the chief responsibility rests of extinguishing the wild fire of fanaticism kindled among them, which, in its destructive course, is rapidly severing the bonds of brotherhood and turning even the milk of female kindness into the gall of bitterness.

Whilst we commend to the attention of our readers the candid, philosophical, and eloquent memoir of Judge Harper, we do not wish to be understood as assenting to all his arguments and conclusions. The Judge is rather *ultra* in some of his views, and so, we think, are most of the South Carolina gentlemen, who have written upon the perplexing and delicate subject of slavery in the abstract. The safer and more rational course, it seems to us, would be, to treat the whole question as one of federal compact, and exclusive domestic or state regulation. Upon that ground the whole south is, and will be, unanimous in maintaining its rights; whereas there is danger of division, if we attempt to intermingle with it principles of ethics which cannot be grasped or received by every mind.—[*Ed. So. Lit. Mess.*]

voice is raised among ourselves to extenuate or to vindicate, it is unheard. The judgment is made up. We can have no hearing before the tribunal of the civilized world.

Yet, on this very account, it is more important that we, the inhabitants of the slave holding states of America, insulated as we are, by this institution, and cut off, in some degree, from the communion and sympathies of the world by which we are surrounded, or with which we have intercourse, and exposed continually to their animadversions and attacks, should thoroughly understand this subject and our strength and weakness in relation to it. If it be thus criminal, dangerous and fatal; and if it be possible to devise means of freeing ourselves from it, we ought at once to set about the employing of those means. It would be the most wretched and imbecile fatuity, to shut our eyes to the impending dangers and horrors, and "drive darkling down the current of our fate," till we are overwhelmed in the final destruction. If we are tyrants, cruel, unjust, oppressive, let us humble ourselves and repent in the sight of Heaven, that the foul stain may be cleansed, and we enabled to stand erect as having common claims to humanity with our fellow-men.

But if we are nothing of all this; if we commit no injustice or cruelty; if the maintenance of our institutions be essential to our prosperity, our character, our safety, and the safety of all that is dear to us, let us enlighten our minds and fortify our hearts to defend them.

It is a somewhat singular evidence of the indisposition of the rest of the world to hear any thing more on this subject, that perhaps the most profound, original and truly philosophical treatise, which has appeared within the time of my recollection,* seems not to have attracted the slightest attention out of the limits of the slave holding states themselves. If truth, reason and conclusive argument, propounded with admirable temper and perfect candor, might be supposed to have an effect on the minds of men, we should think this work would have put an end to agitation on the subject. The author has rendered inappreciable service to the south in enlightening them on the subject of their own institutions, and turning back that monstrous tide of folly and madness which, if it had rolled on, would have involved his own great state along with the rest of the slave holding states in a common ruin. But beyond these, he seems to have produced no effect whatever. The denouncers of slavery, with whose productions the press groans, seem to be unaware of his existence—unaware that there is reason to be encountered, or argument to be answered. They assume that the truth is known and settled, and only requires to be enforced by denunciation.

Another vindicator of the south has appeared in an individual who is among those that have done honor to American literature.† With conclusive argument, and

* President Dew's Review of the Virginia Debates on the subject of Slavery.
† Paulding on Slavery.

great force of expression he has defended slavery from the charge of injustice or immorality, and shewn clearly the unspeakable cruelty and mischief which must result from any scheme of abolition. He does not live among slave holders, and it cannot be said of him as of others, that his mind is warped by interest, or his moral sense blunted by habit and familiarity with abuse. These circumstances, it might be supposed, would have secured him hearing and consideration. He seems to be equally unheeded, and the work of denunciation, disdaining argument, still goes on.

President Dew has shewn that the institution of slavery is a principal cause of civilization. Perhaps nothing can be more evident than that it is the sole cause. If any thing can be predicated as universally true of uncultivated man, it is that he will not labor beyond what is absolutely necessary to maintain his existence. Labor is pain to those who are unaccustomed to it, and the nature of man is averse to pain. Even with all the training, the helps and motives of civilization, we find that this aversion cannot be overcome in many individuals of the most cultivated societies. The coercion of slavery alone is adequate to form man to habits of labor. Without it, there can be no accumulation of property, no providence for the future, no taste for comforts or elegancies, which are the characteristics and essentials of civilization. He who has obtained the command of another's labor, first begins to accumulate and provide for the future, and the foundations of civilization are laid. We find confirmed by experience that which is so evident in theory. Since the existence of man upon the earth, with no exception whatever, either of ancient or modern times, every society which has attained civilization, has advanced to it through this process.

Will those who regard slavery as immoral, or crime in itself, tell us that man was not intended for civilization, but to roam the earth as a biped brute? That he was not to raise his eyes to Heaven, or be conformed in his nobler faculties to the image of his Maker? Or will they say that the Judge of all the earth has done wrong in ordaining the means by which alone that end can be attained? It is true that the Creator can make the wickedness as well as the wrath of man to praise him, and bring forth the most benevolent results from the most atrocious actions. But in such cases, it is the motive of the actor alone which condemns the action. The act itself is good, if it promotes the good purposes of God, and would be approved by him, if that result only were intended. Do they not blaspheme the providence of God who denounce as wickedness and outrage, that which is rendered indispensable to his purposes in the government of the world? Or at what stage of the progress of society will they say that slavery ceases to be necessary, and its very existence becomes sin and crime? I am aware that such argument would have little effect on those with whom it would be degrading to contend—who pervert the inspired writings—which in some parts expressly sanction slavery, and throughout indicate most clearly that it is a civil institution, with which religion has no concern—with a shallowness and presumption not less flagrant and shameless than his, who would justify murder from the text, "and Phineas arose and executed judgment."

There seems to be something in this subject, which

blunts the perceptions, and darkens and confuses the understandings and moral feelings of men. Tell them that, of necessity, in every civilized society, there must be an infinite variety of conditions and employments, from the most eminent and intellectual, to the most servile and laborious; that the negro race, from their temperament and capacity, are peculiarly suited to the situation which they occupy, and not less happy in it than any corresponding class to be found in the world; prove incontestably that no scheme of emancipation could be carried into effect without the most intolerable mischiefs and calamities to both master and slave, or without probably throwing a large and fertile portion of the earth's surface out of the pale of civilization—and you have done nothing. They reply, that whatever may be the consequence, you are bound to do right; that man has a right to himself, and man cannot have a property in man; that if the negro race be naturally inferior in mind and character, they are not less entitled to the rights of humanity; that if they are happy in their condition, it affords but the stronger evidence of their degradation, and renders them still more objects of commiseration. They repeat, as the fundamental maxim of our civil policy, that all men are born free and equal, and quote from our Declaration of Independence, "that men are endowed by their Creator with certain inalienable rights, among which are life, liberty, and the pursuit of happiness."

It is not the first time that I have had occasion to observe that men may repeat with the utmost confidence, some maxim or sentimental phrase, as self-evident or admitted truth, which is either palpably false or to which, upon examination, it will be found that they attach no definite idea. Notwithstanding our respect for the important document which declared our independence, yet if any thing be found in it, and especially in what may be regarded rather as its ornament than its substance—false, sophistical or unmeaning, that respect should not screen it from the freest examination.

All men are born free and equal. Is it not palpably nearer the truth to say that no man was ever born free, and that no two men were ever born equal? Man is born in a state of the most helpless dependence on others. He continues subject to the absolute control of others, and remains without many of the civil, and all of the political privileges of his society, until the period which the laws have fixed, as that at which he is supposed to attain the maturity of his faculties. Then inequality is further developed, and becomes infinite in every society, and under whatever form of government. Wealth and poverty, fame or obscurity, strength or weakness, knowledge or ignorance, ease or labor, power or subjection, mark the endless diversity in the condition of men.

But we have not arrived at the profundity of the maxim. This inequality is in a great measure the result of abuses in the institutions of society. They do not speak of what exists, but of what ought to exist. Every one should be left at liberty to obtain all the advantages of society which he can compass, by the free exertion of his faculties, unimpeded by civil restraints. It may be said that this would not remedy the evils of society which are complained of. The inequalities to which I have referred, with the misery resulting from

them, would exist in fact under the freest and most popular form of government that man could devise. But what is the foundation of the bold dogma so confidently announced? Females are human and rational beings. They may be found of better faculties and better qualified to exercise political privileges and to attain the distinctions of society than many men; yet who complains of the order of society by which they are excluded from them? For I do not speak of the few who would desecrate them; do violence to the nature which their Creator has impressed upon them; drag them from the position which they necessarily occupy for the existence of civilized society, and in which they constitute its blessing and ornament—the only position which they have ever occupied in any human society—to place them in a situation in which they would be alike miserable and degraded. Low as we descend in combatting the theories of presumptuous dogmatists, it cannot be necessary to stoop to this. A youth of eighteen may have powers which cast into the shade those of any of his more advanced cotemporaries. He may be capable of serving or saving his country, and if not permitted to do so now, the occasion may have been lost forever. But he can exercise no political privilege or aspire to any political distinction. It is said that of necessity, society must exclude from some civil and political privileges those who are unfitted to exercise them, by infirmity, unsuitableness of character, or defect of discretion; that of necessity there must be some general rule on the subject, and that any rule which can be devised will operate with hardship and injustice on individuals. This is all that can be said and all that need be said. It is saying, in other words, that the privileges in question are no matter of natural right, but to be settled by convention, as the good and safety of society may require. If society should disfranchise individuals convicted of infamous crimes, would this be an invasion of natural right? Yet this would not be justified on the score of their moral guilt, but that the good of society required, or would be promoted by it. We admit the existence of a moral law, binding on societies as on individuals. Society must act in good faith. No man or body of men has a right to inflict pain or privation on others, unless with a view, after full and impartial deliberation, to prevent a greater evil. If this deliberation be had, and the decision made in good faith, there can be no imputation of moral guilt. Has any politician contended that the very existence of governments in which there are orders privileged by law, constitutes a violation of morality; that their continuance is a crime, which men are bound to put an end to without any consideration of the good or evil to result from the change? Yet this is the natural inference from the dogma of the natural equality of men as applied to our institution of slavery—an equality not to be invaded without injustice and wrong, and requiring to be restored instantly, unqualifiedly, and without reference to consequences.

This is sufficiently common-place, but we are sometimes driven to common-places. It is no less a false and shallow than a presumptuous philosophy, which theorizes on the affairs of men as of a problem to be solved by some unerring rule of human reason, without reference to the designs of a superior intelligence, so far as he has been pleased to indicate them, in their creation

and destiny. Man is born to subjection. Not only during infancy is he dependant and under the control of others; at all ages, it is the very bias of his nature, that the strong and the wise should control the weak and the ignorant. So it has been since the days of Nimrod. The existence of some form of slavery in all ages and countries, is proof enough of this. He is born to subjection as he is born in sin and ignorance. To make any considerable progress in knowledge, the continued efforts of successive generations, and the diligent training and unwearied exertions of the individual are requisite. To make progress in moral virtue, not less time and effort, aided by superior help, are necessary; and it is only by the matured exercise of his knowledge and his virtue, that he can attain to civil freedom. Of all things, the existence of civil liberty is most the result of artificial institution. The proclivity of the natural man is to domineer or to be subservient. A noble result indeed, but in the attaining of which, as in the instances of knowledge and virtue, the Creator, for his own purposes, has set a limit beyond which we cannot go.

But he who is most advanced in knowledge, is most sensible of his own ignorance, and how much must forever be unknown to man in his present condition. As I have heard it expressed, the further you extend the circle of light, the wider is the horizon of darkness. He who has made the greatest progress in moral purity, is most sensible of the depravity, not only of the world around him, but of his own heart and the imperfection of his best motives, and this he knows that men must feel and lament so long as they continue men. So when the greatest progress in civil liberty has been made, the enlightened lover of liberty will know that there must remain much inequality, much injustice, much slavery, which no human wisdom or virtue will ever be able wholly to prevent or redress. As I have before had the honor to say to this society, the condition of our whole existence is but to struggle with evils—to compare them—to choose between them, and so far as we can, to mitigate them. To say that there is evil in any institution, is only to say that it is human.

And can we doubt but that this long discipline and laborious process, by which men are required to work out the elevation and improvement of their individual nature and their social condition, is imposed for a great and benevolent end? Our faculties are not adequate to the solution of the mystery, why it should be so; but the truth is clear, that the world was not intended for the seat of universal knowledge or goodness or happiness or freedom.

Man has been endowed by his Creator with certain inalienable rights, among which are life, liberty and the pursuit of happiness. What is meant by the inalienable right of liberty? Has any one who has used the words ever asked himself this question? Does it mean that a man has no right to alienate his own liberty—to sell himself and his posterity for slaves? This would seem to be the more obvious meaning. When the word *right* is used, it has reference to some law which sanctions it, and would be violated by its invasion. It must refer either to the general law of morality or the law of the country—the law of God or the law of man. If the law of any country permitted it, it would of course be absurd to say that the law of that country was violated

by such alienation. If it have any meaning in this respect, it must mean that though the law of the country permitted it, the man would be guilty of an immoral act who should thus alienate his liberty. A fit question for schoolmen to discuss, and the consequences resulting from its decision as important as from any of theirs. Yet who will say that the man pressed by famine and in prospect of death, would be criminal for such an act? Self-preservation as is truly said, is the first law of nature. High and peculiar characters, by elaborate cultivation, may be taught to prefer death to slavery, but it would be folly to prescribe this as a duty to the mass of mankind.

If any rational meaning can be attributed to the sentence I have quoted, it is this:—That the society, or the individuals who exercise the powers of government, are guilty of a violation of the law of God or of morality, when by any law or public act, they deprive men of life or liberty, or restrain them in the pursuit of happiness. Yet every government does, and of necessity must, deprive men of life and liberty for offences against society. Restrain them in the pursuit of happiness! Why all the laws of society are intended for nothing else but to restrain men from the pursuit of happiness, according to their own ideas of happiness or advantage—which the phrase must mean if it means any thing. And by what right does society punish by the loss of life or liberty? Not on account of the moral guilt of the criminal—not by impiously and arrogantly assuming the prerogative of the Almighty, to dispense justice or suffering, according to moral desert. It is for its own protection—it is the right of self-defence. If there existed the blackest moral turpitude, which by its example or consequences, could be of no evil to society, government would have nothing to do with that. If an action, the most harmless in its moral character, could be dangerous to the security of society, society would have the perfect right to punish it. If the possession of a black skin would be otherwise dangerous to society, society has the same right to protect itself by disfranchising the possessor of civil privileges, and to continue the disability to his posterity, if the same danger would be incurred by its removal. Society inflicts these forfeitures for the security of the lives of its members; it inflicts them for the security of their property, the great essential of civilization; it inflicts them also for the protection of its political institutions; the forcible attempt to overturn which, has always been justly regarded as the greatest crime; and who has questioned its right so to inflict? "Man cannot have property in man"—a phrase as full of meaning as, "who slays fat oxen should himself be fat." Certainly he may, if the laws of society allow it, and if it be on sufficient grounds, neither he nor society do wrong.

And is it by this—as we must call it, however recommended to our higher feelings by its associations—well-sounding, but unmeaning verbiage of natural equality and inalienable rights, that our lives are to be put in jeopardy, our property destroyed, and our political institutions overturned or endangered? If a people had on its borders a tribe of barbarians, whom no treaties or faith could bind, and by whose attacks they were constantly endangered, against whom they could devise no security, but that they should be exterminated

or enslaved; would they not have the right to enslave them, and keep them in slavery so long as the same danger would be incurred by their manumission? If a civilized man and a savage were by chance placed together on a desolate island, and the former, by the superior power of civilization, would reduce the latter to subjection, would he not have the same right? Would this not be the strictest self-defence? I do not now consider, how far we can make out a similar case to justify our enslaving of the negroes. I speak to those who contend for inalienable rights, and that the existence of slavery always, and under all circumstances, involves injustice and crime.

As I have said, we acknowledge the existence of a moral law. It is not necessary for us to resort to the theory which resolves all right into force. The existence of such a law is imprinted on the hearts of all human beings. But though its existence be acknowledged, the mind of man has hitherto been tasked in vain to discover an unerring standard of morality. It is a common and undoubted maxim of morality, that you shall not do evil that good may come. You shall not do injustice or commit an invasion of the rights of others, for the sake of a greater ulterior good. But what is injustice, and what are the rights of others? And why are we not to commit the one or invade the others? It is because it inflicts pain or suffering, present or prospective, or cuts them off from enjoyment which they might otherwise attain. The Creator has sufficiently revealed to us that *happiness* is the great end of existence, the sole object of all animated and sentient beings. To this he has directed their aspirations and efforts, and we feel that we thwart his benevolent purposes when we destroy or impede that happiness. This is the only natural right of man. All other rights result from the conventions of society, and these, to be sure, we are not to invade, whatever good may appear to us likely to follow. Yet are we in no instance to inflict pain or suffering, or disturb enjoyment for the sake of producing a greater good? Is the madman not to be restrained who would bring destruction on himself or others? Is pain not to be inflicted on the child, when it is the only means by which he can be effectually instructed to provide for his own future happiness? Is the surgeon guilty of wrong who amputates a limb to preserve life? Is it not the object of all penal legislation, to inflict suffering for the sake of greater good to be secured to society?

By what right is it that man exercises dominion over the beasts of the field; subdues them to painful labor, or deprives them of life for his sustenance or enjoyment? They are not rational beings. No, but they are the creatures of God, sentient beings, capable of suffering and enjoyment, and entitled to enjoy according to the measure of their capacities. Does not the voice of nature inform every one, that he is guilty of wrong when he inflicts on them pain without necessity or object? If their existence be limited to the present life, it affords the stronger argument for affording them the brief enjoyment of which it is capable. It is because the greater good is effected; not only to man but to the inferior animals themselves. The care of man gives the boon of existence to myriads who would never otherwise have enjoyed it, and the enjoyment of their existence is better provided for while it lasts. It

belongs to the being of superior faculties to judge of the relations which shall subsist between himself and inferior animals, and the use he shall make of them; and he may justly consider himself, who has the greater capacity of enjoyment, in the first instance. Yet he must do this conscientiously, and no doubt, moral guilt has been incurred by the infliction of pain on these animals, with no adequate benefit to be expected. I do no disparagement to the dignity of human nature, even in its humblest form, when I say that on the very same foundation, with the difference only of circumstance and degree, rests the right of the civilized and cultivated man, over the savage and ignorant. It is the order of nature and of God, that the being of superior faculties and knowledge, and therefore of superior power, should control and dispose of those who are inferior. It is as much in the order of nature, that men should enslave each other, as that other animals should prey upon each other. I admit that he does this under the highest moral responsibility, and is most guilty if he wantonly inflicts misery or privation on beings more capable of enjoyment or suffering than brutes, without necessity or any view to the greater good which is to result. If we conceive of society existing without government, and that one man by his superior strength, courage or wisdom, could obtain the mastery of his fellows, he would have a perfect right to do so. He would be morally responsible for the use of his power, and guilty if he failed to direct them so as to promote their happiness as well as his own. Moralists have denounced the injustice and cruelty which have been practised towards our aboriginal Indians, by which they have been driven from their native seats and exterminated—and no doubt with much justice. No doubt, much fraud and injustice has been practised in the circumstances and the manner of their removal. Yet who has contended that civilized man had no moral right to possess himself of the country? That he was bound to leave this wide and fertile continent, which is capable of sustaining uncounted myriads of a civilized race, to a few roving and ignorant barbarians? Yet if any thing is certain, it is certain that there were no means by which he could possess the country, without exterminating or enslaving them. Savage and civilized man cannot live together, and the savage can only be tamed by being enslaved or by having slaves. By enslaving alone could he have preserved them.* And who shall take upon himself to decide that the more benevolent course and more pleasing to God, was pursued towards them, or that it would not have been better that they had been enslaved generally, as they were in particular instances? It is a refined philosophy, and utterly false in its application to general nature, or the mass of human kind, which teaches that existence is not the greatest of all boons, and worthy of being preserved even under the most adverse circumstances. The strongest instinct of all animated beings sufficiently proclaims this. When the last red man shall have vanished from our forests, the sole remaining traces of his blood will be found among our remaining population.† The African slave trade

has given, and will give the boon of existence to millions and millions in our country, who would otherwise never have enjoyed it, and the enjoyment of their existence is better provided for while it lasts. Or if, for the rights of man over inferior animals, we are referred to revelation, which pronounces—"ye shall have dominion over the beasts of the field, and over the fowls of the air," we refer to the same which declares not the less explicitly—

"Both the bondmen and bondmaids which thou shalt have, shall be of the heathen that are among you. Of them shall you buy bondmen and bondmaids."

"Moreover of the children of strangers that do sojourn among you, of them shall ye buy, and of their families that are with you, which they begot in your land, and they shall be your possession. And ye shall take them as an inheritance for your children after you, to inherit them by possession. They shall be your bondmen forever."

In moral investigations, ambiguity is often occasioned by confounding the intrinsic nature of an action, as determined by its consequences, with the motives of the actor, involving moral guilt or innocence. If poison be given with a view to destroy another, and it cures him of disease, the poisoner is guilty, but the act is beneficent in its results. If medicine be given with a view to heal, and it happens to kill, he who administered it is innocent, but the act is a noxious one. If they who begun and prosecuted the slave trade, practised horrible cruelties and inflicted much suffering—as no doubt they did, though these have been much exaggerated—for merely selfish purposes, and with no view to future good, they were morally most guilty. So far as unnecessary cruelty was practised, the motive and the act were alike bad. But if we could be sure that the entire effect of the trade has been to produce more happiness than would otherwise have existed, we must pronounce it good, and that it has happened in the ordering of God's providence, to whom evil cannot be imputed. Moral guilt has not been imputed to Las Casas, and if the importation of African slaves into America, had the effect of preventing more suffering than it inflicted, it was good, both in the motive and the result. I freely admit that, it is hardly possible to justify morally, those who begun and carried on the slave trade. No speculation of future good to be brought about could compensate the enormous amount of evil it occasioned.

If we should refer to the common moral sense of mankind, as determined by their conduct in all ages and countries, for a standard of morality, it would seem to be in favor of slavery. The will of God, as determined by utility, would be an infallible standard, if we had an unerring measure of utility. The Utilitarian Philosophy, as it is commonly understood, referring only to the animal wants and enjoyments, and physical condition of man, is utterly false and degrading. If a sufficiently extended definition be given to utility, so as to include every thing that may be a source of enjoyment or suffering, it is for the most part useless. How can you compare the pleasures resulting from the exercise of the understanding, the taste and the imagination, with the animal enjoyments of the senses—the gratification derived from a fine poem with that from a rich banquet? How are we to weigh the pains

* I refer to President Dew on this subject.

† It is not uncommon, especially in Charleston, to see slaves, after many descents and having mingled their blood with the Africans, possessing Indian hair and features.

and enjoyments of one man highly cultivated and of great sensibility, against those of many men of blunter capacity for enjoyment or suffering? And if we could determine with certainty in what utility consists, we are so short-sighted with respect to consequences—the remote results of our best considered actions, are so often wide of our anticipations, or contrary to them, that we should still be very much in the dark. But though we cannot arrive at absolute certainty with respect to the utility of actions, it is always fairly matter of argument. Though an imperfect standard, it is the best we have, and perhaps the Creator did not intend that we should arrive at perfect certainty with regard to the morality of many actions. If after the most careful examination of consequences that we are able to make, with due distrust of ourselves, we impartially and in good faith, decide for that which appears likely to produce the greatest good, we are free from moral guilt. And I would impress most earnestly, that with our imperfect and limited faculties, and short-sighted as we are to the future, we can rarely, very rarely indeed, be justified in producing considerable present evil or suffering, in the expectation of remote future good—if indeed this can ever be justified.

In considering this subject, I shall not regard it in the first instance in reference to the present position of the slave holding states, or the difficulties which lie in the way of their emancipating their slaves, but as a naked, abstract question—whether it is better that the institution of praedial and domestic slavery should, or should not exist in civilized society. And though some of my remarks may seem to have such a tendency, let me not be understood as taking upon myself to determine that it is better that it should exist. God forbid that the responsibility of deciding such a question should ever be thrown on me or my countrymen. But this I will say, and not without confidence, that it is in the power of no human intellect to establish the contrary proposition—that it is better it should not exist. This is probably known but to one being, and concealed from human sagacity.

There have existed in various ages, and we now see existing in the world, people in every stage of civilization, from the most barbarous to the most refined. Man, as I have said, is not born to civilization. He is born rude and ignorant. But it will be, I suppose, admitted that it is the design of his Creator that he should attain to civilization: That religion should be known, that the comforts and elegancies of life should be enjoyed, that letters and arts should be cultivated, in short, that there should be the greatest possible development of moral and intellectual excellence. It can hardly be necessary to say any thing of those who have extolled the superior virtues and enjoyments of savage life—a life of physical wants and sufferings, of continual insecurity, of furious passions and depraved vices. Those who have praised savage life, are those who have known nothing of it, or who have become savages themselves. But as I have said, so far as reason or universal experience instruct us, the institution of slavery is an essential process in emerging from savage life. It must then produce good, and promote the designs of the Creator.

I add further, that *slavery anticipates the benefits of civilization, and retards the evils of civilization.* The

former part of this proposition has been so fully established by a writer of great power of thought—though I fear his practical conclusions will be found of little value—that it is hardly necessary to urge it.* Property—the accumulation of capital, as it is commonly called, is the first element of civilization. But to accumulate, or to use capital to any considerable extent, the combination of labor is necessary. In early stages of society, when people are thinly scattered over an extensive territory, the labor necessary to extensive works, cannot be commanded. Men are independent of each other. Having the command of abundance of land, no one will submit to be employed in the service of his neighbor. No one, therefore, can employ more capital than he can use with his own hands, or those of his family, nor have an income much beyond the necessities of life. There can, therefore, be little leisure for intellectual pursuits, or means of acquiring the comforts or elegancies of life. It is hardly necessary to say however, that if a man has the command of slaves, he may combine labor, and use capital to any required extent, and therefore accumulate wealth. He shows that no colonies have been successfully planted without some sort of slavery. So we find the fact to be. It is only in the slave holding states of our confederacy, that wealth can be acquired by agriculture—which is the general employment of our whole country. Among us, we know that there is no one, however humble his beginning, who with persevering industry, intelligence, and orderly and virtuous habits, may not attain to considerable opulence. So far as wealth has been accumulated in the states which do not possess slaves, it has been in cities by the pursuits of commerce, or lately, by manufactures. But the products of slave labor furnish more than two-thirds of the materials of our foreign commerce, which the industry of those states is employed in transporting and exchanging; and among the slave holding states is to be found the great market for all the productions of their industry, of whatever kind. The prosperity of those states, therefore, and the civilization of their cities, have been for the most part created by the existence of slavery. Even in the cities, but for a class of population, which our institutions have marked as servile, it would be scarcely possible to preserve the ordinary habitudes of civilized life, by commanding the necessary menial and domestic service.

Every stage of human society, from the most barbarous to the most refined, has its own peculiar evils to mark it as the condition of mortality; and perhaps there is none but Omnipotence who can say in which the scale of good or evil most preponderates. We need say nothing of the evils of savage life. There is a state of society elevated somewhat above it, which is to be found in some of the more thinly peopled portions of our own country—the rudest agricultural state—which is thus characterized by the author to whom I have referred. "The American of the back woods has often been described to the English as grossly ignorant, dirty, unsocial, delighting in rum and tobacco, attached to nothing but his rifle, adventurous, restless,

* The author of "England and America." We do, however, most indignantly repudiate his conclusion, that we are bound to submit to a tariff of protection, as an expedient for retaining our slaves "the force of the whole union, being required to preserve slavery, to keep down the slaves."

more than half savage. Deprived of social enjoyments or excitements, he has recourse to those of savage life, and becomes (for in this respect the Americans degenerate) unfit for society." This is no very inviting picture, which though exaggerated, we know not to be without likeness. The evils of such a state, I suppose, will hardly be thought compensated by unbounded freedom, perfect equality, and ample means of subsistence.

But let us take another stage in the progress—which to many will appear to offer all that is desirable in existence, and realize another Utopia. Let us suppose a state of society in which all shall have property, and there shall be no great inequality of property—in which society shall be so much condensed as to afford the means of social intercourse, without being crowded, so as to create difficulty in obtaining the means of subsistence—in which every family that chooses may have as much land as will employ its own hands, while others may employ their industry in forming such products as it may be desirable to exchange with them. Schools are generally established, and the rudiments of education universally diffused. Religion is taught, and every village has its church, neat though humble, lifting its spire to Heaven. Here is a situation apparently the most favorable to happiness. I say *apparently*, for the greatest source of human misery is not in external circumstances, but in men themselves—in their depraved inclinations, their wayward passions and perverse wills. Here is room for all the petty competition, the envy, hatred, malice and dissimulation, that torture the heart in what may be supposed the most sophisticated states of society; and though less marked and offensive, there may be much of the licentiousness.

But apart from this, in such a condition of society, if there is little suffering, there is little high enjoyment. The even flow of life forbids the high excitement which is necessary for it. If there is little vice, there is little place for the eminent virtues, which employ themselves in controlling the disorders and remedying the evils of society, which like war and revolution, call forth the highest powers of man, whether for good or for evil. If there is little misery, there is little room for benevolence. Useful public institutions we may suppose to be created, but not such as are merely ornamental. Elegant arts can be little cultivated, for there are no means to reward the artists nor the higher literature, for no one will have leisure or means to cultivate it for its own sake. Those who acquire what may be called liberal education, will do so in order to employ it as the means of their own subsistence or advancement in a profession, and literature itself will partake of the sordidness of trade. In short, it is plain that in such a state of society, the moral and intellectual faculties cannot be cultivated to their highest perfection.

But whether that which I have described be the most desirable state of society or no, it is certain that it cannot continue. Mutation and progress is the condition of human affairs. Though retarded for a time by extraneous or accidental circumstances, the wheel must roll on. The tendency of population is to become crowded, increasing the difficulty of obtaining subsistence. There will be some without any property except the capacity for labor. This they must sell to those who have the means of employing them, thereby

swelling the amount of their capital, and increasing inequality. The process still goes on. The number of laborers increases until there is a difficulty in obtaining employment. Then competition is established. The remuneration of the laborer becomes gradually less and less; a larger and larger proportion of the product of his labor goes to swell the fortune of the capitalist; inequality becomes still greater and more invidious, until the process ends in the establishment of such a state of things, as the same author describes as now existing in England. After a most imposing picture of her greatness and resources; of her superabounding capital, and all-pervading industry and enterprise; of her public institutions for purposes of art, learning and benevolence; her public improvements, by which intercourse is facilitated, and the convenience of man subverted; the conveniences and luxuries of life enjoyed by those who are in possession of fortune, or have profitable employments; of all, in short, that places her at the head of modern civilization, he proceeds to give the reverse of the picture. And here I shall use his own words. "The laboring class compose the bulk of the people; the great body of the people; the vast majority of the people—these are the terms by which English writers and speakers usually describe those whose only property is their labor."

"Of comprehensive words, the two most frequently used in English politics, are distress and pauperism. After these, of expressions applied to the state of the poor, the most common are vice and misery, wretchedness, sufferings, ignorance, degradation, discontent, depravity, drunkenness, and the increase of crime; with many more of the like nature."

He goes on to give the details of this inequality and wretchedness, in terms calculated to sicken and appal one to whom the picture is new. That he has painted strongly we may suppose; but there is ample corroborating testimony, if such were needed, that the representation is substantially just. Where so much misery exists, there must of course be much discontent, and many have been disposed to trace the sources of the former in vicious legislation, or the structure of government; and the author gives the various schemes, sometimes contradictory, sometimes ludicrous, which projectors have devised as a remedy for all this evil to which flesh is heir. That ill judged legislation may have sometimes aggravated the general suffering, or that its extremity may be mitigated by the well directed efforts of the wise and virtuous, there can be no doubt. One purpose for which it has been permitted to exist is, that it may call forth such efforts, and awaken powers and virtues which would otherwise have slumbered for want of object. But remedy there is none, unless it be to abandon their civilization. This inequality, this vice, this misery, this *slavery*, is the price of England's civilization. They suffer the lot of humanity. But perhaps we may be permitted humbly to hope, that great, intense and widely spread as this misery undoubtedly is in reality, it may yet be less so than in appearance. We can estimate but very, very imperfectly the good and evil of individual condition, as of different states of society. Some unexpected solace arises to alleviate the severest calamity. Wonderful is the power of custom, in making the hardest condition tolerable; the most generally wretched life, has circum-

stances of mitigation, and moments of vivid enjoyment, of which the more seemingly happy can scarcely conceive; though the lives of individuals be shortened, the aggregate of existence is increased; even the various forms of death accelerated by want, familiarized to the contemplation, like death to the soldier on the field of battle, may become scarcely more formidable, than what we are accustomed to regard as nature's ordinary outlets of existence. If we could perfectly analyze the enjoyments and sufferings of the most happy, and the most miserable man, we should perhaps be startled to find the difference so much less than our previous impressions had led us to conceive. But it is not for us to assume the province of omniscience. The particular theory of the author quoted, seems to be founded on an assumption of this sort—that there is a certain stage in the progress, when there is a certain balance between the demand for labor, and the supply of it, which is more desirable than any other—when the territory is so thickly peopled that all cannot own land and cultivate the soil for themselves, but a portion will be compelled to sell their labor to others; still leaving, however, the wages of labor high, and the laborer independent. It is plain, however, that this would in like manner partake of the good and the evil of other states of society. There would be less of equality and less rudeness, than in the early stages; less civilization and less suffering, than in the latter.

It is the competition for employment, which is the source of this misery of society, that gives rise to all excellence in art and knowledge. When the demand for labor exceeds the supply, the services of the most ordinarily qualified laborer will be eagerly retained. When the supply begins to exceed, and competition is established, higher and higher qualifications will be required, until at length, when it becomes very intense, none but the most consummately skilful can be sure to be employed. Nothing but necessity can drive men to the exertions which are necessary so to qualify themselves. But it is not in arts, merely mechanical alone, that this superior excellence will be required. It will be extended to every intellectual employment; and though this may not be the effect in the instance of every individual, yet it will fix the habits and character of the society, and prescribe every where, and in every department, the highest possible standard of attainment.

But how is it that the existence of slavery as with us, will retard the evils of civilization? Very obviously. It is the intense competition of civilized life, that gives rise to the excessive cheapness of labor, and the excessive cheapness of labor, is the cause of the evils in question. Slave labor can never be so cheap as what is called free labor. Political economists have established as the natural standard of wages in a fully peopled country, the value of the laborer's subsistence. I shall not stop to inquire into the precise truth of this proposition. It certainly approximates the truth. Where competition is intense, men will labor for a bare subsistence, and less than a competent subsistence. The employer of free laborers obtains their services during the time of their health and vigor, without the charge of rearing them from infancy, or supporting them in sickness or old age. This charge is imposed on the employer of slave labor, who, therefore, pays higher wages, and cuts off the principal source of misery—the

wants and sufferings of infancy, sickness, and old age. Laborers too will be less skilful, and perform less work—enhancing the price of that sort of labor. The poor laws of England are an attempt—but an awkward and empirical attempt—to supply the place of that which we should suppose the feelings of every human heart would declare to be a natural obligation—that he who has received the benefit of the laborer's services during his health and vigor, should maintain him when he becomes unable to provide for his own support. They answer their purpose, however, very imperfectly, and are unjustly, and unequally imposed. There is no attempt to apportion the burden according to the benefit received—and perhaps there could be none. This is one of the evils of their condition.

In periods of commercial revulsion and distress, like the present, the distress, in countries of free labor, falls principally on the laborers. In those of slave labor, it falls almost exclusively on the employer. In the former, when a business becomes unprofitable, the employer dismisses his laborers or lowers their wages. But with us, it is the very period at which we are least able to dismiss our laborers; and if we would not suffer a further loss, we cannot reduce their wages. To receive the benefit of the services of which they are capable, we must provide for maintaining their health and vigor. In point of fact, we know that this is accounted among the necessary expenses of management. If the income of every planter of the southern states were permanently reduced one half, or even much more than that, it would not take one jot from the support and comforts of the slaves. And this can never be materially altered, until they shall become so unprofitable that slavery must be of necessity abandoned. It is probable that the accumulation of individual wealth will never be carried to quite so great an extent in a slave holding country, as in one of free labor; but a consequence will be, that there will be less inequality and less suffering.

Servitude is the condition of civilization. It was decreed, when the command was given, "be fruitful, and multiply and replenish the earth, and subdue it," and when it was added, "in the sweat of thy face shalt thou eat bread." And what human being shall arrogate to himself the authority to pronounce that our form of it is worse in itself, or more displeasing to God than that which exists elsewhere? Shall it be said that the servitude of other countries grows out of the exigency of their circumstances, and therefore society is not responsible for it? But if we know that in the progress of things it is to come, would it not seem the part of wisdom and foresight, to make provision for it, and thereby, if we can, mitigate the severity of its evils? But the fact is not so. Let any one who doubts, read the book to which I have several times referred, and he may be satisfied that it was forced upon us by the extreme exigency of circumstances, in a struggle for very existence. Without it, it is doubtful whether a white man would be now existing on this continent—certain, that if there were, they would be in a state of the utmost destitution, weakness and misery. It was forced on us by necessity, and further fastened upon us, by the superior authority of the mother country. I, for one, neither deprecate nor resent the gift. Nor did we institute slavery. The Africans brought to us had been, speaking in the general, slaves in their own country, and

only underwent a change of masters. In the countries of Europe, and the states of our confederacy, in which slavery has ceased to exist, it was abolished by positive legislation. If the order of nature has been departed from, and a forced and artificial state of things introduced, it has been, as the experience of all the world declares, by them and not by us.

That there are great evils in a society where slavery exists, and that the institution is liable to great abuse, I have already said. To say otherwise, would be to say that they were not human. But the whole of human life is a system of evils and compensations. We have no reason to believe that the compensations with us are fewer, or smaller in proportion to the evils, than those of any other condition of society. Tell me of an evil or abuse; of an instance of cruelty, oppression, licentiousness, crime or suffering, and I will point out, and often in five-fold degree, an equivalent evil or abuse in countries where slavery does not exist.

Let us examine without blenching, the actual and alleged evils of slavery, and the array of horrors which many suppose to be its universal concomitants. It is said that the slave is out of the protection of the law; that if the law purports to protect him in life and limb, it is but imperfectly executed; that he is still subject to excessive labor, degrading blows, or any other sort of torture, which a master pampered and brutalized by the exercise of arbitrary power, may think proper to inflict; he is cut off from the opportunity of intellectual, moral, or religious improvement, and even positive enactments are directed against his acquiring the rudiments of knowledge; he is cut off forever from the hope of raising his condition in society, whatever may be his merit, talents, or virtues, and therefore deprived of the strongest incentive to useful and praiseworthy exertion; his physical degradation begets a corresponding moral degradation; he is without moral principle, and addicted to the lowest vices, particularly theft and falsehood; if marriage be not disallowed, it is little better than a state of concubinage, from which results general licentiousness, and the want of chastity among females—this indeed is not protected by law, but is subject to the outrages of brutal lust; both sexes are liable to have their dearest affections violated; to be sold like brutes; husbands to be torn from wives, children from parents;—this is the picture commonly presented by the denouncers of slavery.

It is a somewhat singular fact, that when there existed in our state no law for punishing the murder of a slave, other than a pecuniary fine, there were, I will venture to say, at least ten murders of freemen, for one murder of a slave. Yet it is supposed they are less protected, or less secure than their masters. Why, they are protected by their very situation in society, and therefore less need the protection of law. With any other person than their master, it is hardly possible for them to come into such sort of collision as usually gives rise to furious and revengeful passions; they offer no temptation to the murderer for gain; against the master himself, they have the security of his own interest, and by his superintendence and authority, they are protected from the revengeful passions of each other. I am by no means sure that the cause of humanity has been served by the change in jurisprudence, which has placed their murder on the same footing with that of a

freeman. The change was made in subservience to the opinions and clamor of others, who were utterly incompetent to form an opinion on the subject; and a wise act is seldom the result of legislation in this spirit. From the fact which I have stated, it is plain that they less need protection. Juries are, therefore, less willing to convict, and it may sometimes happen that the guilty will escape all punishment. *Security* is one of the compensations of their humble position. We challenge the comparison, that with us there have been fewer murders of slaves, than of parents, children, apprentices, and other murders, cruel and unnatural, in societies where slavery does not exist.

But short of life or limb, various cruelties may be practised as the passions of the master may dictate. To this the same reply has been often given—that they are secured by the master's interest. If the state of slavery is to exist at all, the master must have, and ought to have, such power of punishment as will compel them to perform the duties of their station. And is not this for their advantage as well as his? No human being can be contented, who does not perform the duties of his station. Has the master any temptation to go beyond this? If he inflicts on him such punishment as will permanently impair his strength, he inflicts a loss on himself, and so if he requires of him excessive labor. Compare the labor required of the slave, with those of the free agricultural, or manufacturing laborer in Europe, or even in the more thickly peopled portions of the non-slave holding states of our confederacy—though these last are no fair subjects of comparison—they enjoying, as I have said, in a great degree, the advantages of slavery along with those of an early and simple state of society. Read the English parliamentary reports, on the condition of the manufacturing operatives, and the children employed in factories. And such is the impotence of man to remedy the evils which the condition of his existence has imposed on him, that it is much to be doubted whether the attempts by legislation to improve their situation, will not aggravate its evils. They resort to this excessive labor as a choice of evils. If so, the amount of their compensation will be lessened also with the diminished labor; for this is a matter which legislation cannot regulate. Is it the part of benevolence then to cut them off even from this miserable liberty of choice? Yet would these evils exist in the same degree, if the laborers were the *property* of the master—having a direct interest in preserving their lives, their health and strength? Who but a drivelling fanatic, has thought of the necessity of protecting domestic animals from the cruelty of their owners? And yet are not great and wanton cruelties practised on these animals? Compare the whole of the cruelties inflicted on slaves throughout our southern country, with those elsewhere, inflicted by ignorant and depraved portions of the community, on those whom the relations of society put into their power—of brutal husbands on their wives; of brutal parents—subdued against the strongest instincts of nature to that brutality by the extremity of their misery—on their children; of brutal masters on apprentices. And if it should be asked, are not similar cruelties inflicted, and miseries endured in your society? I answer in no comparable degree. The class in question are placed under the control of others, who are interested to restrain their excesses of cruelty or rage.

Wives are protected from their husbands, and children from their parents. And this is no inconsiderable compensation of the evils of our system; and would so appear, if we could form any conception of the immense amount of misery which is elsewhere thus inflicted. The other class of society, more elevated in their position, are also (speaking of course in the general) more elevated in character, and more responsible to public opinion.

But besides the interest of their master, there is another security against cruelty. The relation of master and slave, when there is no mischievous interference between them, is, as the experience of all the world declares, naturally one of kindness. As to the fact, we should be held interested witnesses, but we appeal to universal nature. Is it not natural that a man should be attached to that which is *his own*, and which has contributed to his convenience, his enjoyment, or his vanity? This is felt even towards animals, and inanimate objects. How much more towards a being of superior intelligence and usefulness, who can appreciate our feelings towards him, and return them? Is it not natural that we should be interested in that which is dependant on us for protection and support? Do not men every where contract kind feelings towards their dependants? Is it not natural that men should be more attached to those whom they have long known—whom, perhaps, they have reared or been associated with from infancy—than to one with whom their connexion has been casual and temporary? What is there in our atmosphere or institutions, to produce a perversion of the general feelings of nature? To be sure, in this as in all other relations, there is frequent cause of offence or excitement—on one side, for some omission of duty, on the other, on account of reproof or punishment inflicted. But this is common to the relation of parent and child; and I will venture to say that if punishment be justly inflicted—and there is no temptation to inflict it unjustly—it is as little likely to occasion permanent estrangement or resentment as in that case. Slaves are perpetual children. It is not the common nature of man, unless it be depraved by his own misery, to delight in witnessing pain. It is more grateful to behold contented and cheerful beings, than sullen and wretched ones. That men are sometimes wayward, depraved and brutal, we know. That atrocious and brutal cruelties have been perpetrated on slaves, and on those who were not slaves, by such wretches, we also know. But that the institution of slavery has a natural tendency to form such a character, that such crimes are more common, or more aggravated than in other states of society, or produce among us less surprise and horror, we utterly deny, and challenge the comparison. Indeed I have little hesitation in saying, that if full evidence could be obtained, the comparison would result in our favor, and that the tendency of slavery is rather to humanize than to brutalize.

The accounts of travellers in oriental countries, give a very favorable representation of the kindly relations which exist between the master and slave; the latter being often the friend, and sometimes the heir of the former. Generally, however, especially if they be English travellers—if they say any thing which may seem to give a favorable complexion to slavery, they think it necessary to enter their protest, that they shall not be

taken to give any sanction to slavery as it exists in America. Yet human nature is the same in all countries. There are very obvious reasons why in those countries there should be a nearer approach to equality in their manners. The master and slave are often of cognate races, and therefore tend more to assimilate. There is in fact less inequality in mind and character, where the master is but imperfectly civilized. Less labor is exacted, because the master has fewer motives to accumulate. But is it an injury to a human being, that regular, if not excessive labor should be required of him? The primeval curse, with the usual benignity of providential contrivance, has been turned into the place of an existence that would be much more intolerable without it. If they labor less, they are much more subject to the outrages of capricious passion. If it were put to the choice of any human being, would he prefer to be the slave of a civilized man, or of a barbarian or semi-barbarian? But if the general tendency of the institution in those countries is to create kindly relations, can it be imagined why it should operate differently in this? It is true, as suggested by President Dew—with the exception of the ties of close consanguinity, it forms one of the most intimate relations of society. And it will be more and more so, the longer it continues to exist. The harshest features of slavery were created by those who were strangers to slavery—who supposed that it consisted in keeping savages in subjection by violence and terror. The severest laws to be found on our statute book, were enacted by such, and such are still found to be the severest masters. As society becomes settled, and the wandering habits of our countrymen altered, there will be a larger and larger proportion of those who were reared by the owner, or derived to him from his ancestors, and who therefore will be more and more intimately regarded, as forming a portion of his family.

It is true that the slave is driven to labor by stripes; and if the object of punishment be to produce obedience or reformation, with the least permanent injury, it is the best method of punishment. But is it not intolerable, that a being formed in the image of his Maker, should be degraded by *blows*? This is one of the perversions of mind and feeling, to which I shall have occasion again to refer. Such punishment would be degrading to a freeman, who had the thoughts and aspirations of a freeman. In general it is not degrading to a slave, nor is it felt to be so. The evil is the bodily pain. Is it degrading to a child? Or if in any particular instance it would be so felt, it is sure not to be inflicted—unless in those rare cases which constitute the startling and eccentric evils, from which no society is exempt, and against which no institutions of society can provide.

The slave is cut off from the means of intellectual, moral, and religious improvement, and in consequence his moral character becomes depraved, and he addicted to degrading vices. The slave receives such instruction as qualifies him to discharge the duties of his particular station. The Creator did not intend that every individual human being should be highly cultivated, morally and intellectually, for as we have seen, he has imposed conditions on society which would render this impossible. There must be general mediocrity, or the highest cultivation must exist along with ignorance, vice, and degradation.

But is there in the aggregate of society, less opportunity for intellectual and moral cultivation, on account of the existence of slavery? We must estimate institutions from their aggregate of good or evil. I refer to the views which I have before expressed to this society. It is by the existence of slavery, exempting so large a portion of our citizens from the necessity of bodily labor, that we have a greater proportion than any other people, who have leisure for intellectual pursuits, and the means of attaining a liberal education. If we throw away this opportunity, we shall be morally responsible for the neglect or abuse of our advantages, and shall most unquestionably pay the penalty. But the blame will rest on ourselves, and not on the character of our institutions.

I add further, notwithstanding that *equality* seems to be the passion of the day, if, as Providence has evidently decreed, there can be but a certain portion of intellectual excellence in any community, it is better that it should be *unequally* divided. It is better that a part should be fully, and highly cultivated, and the rest utterly ignorant. To constitute a society, a variety of offices must be discharged, from those requiring but the lowest degree of intellectual power, to those requiring the very highest, and it should seem that the endowments ought to be apportioned according to the exigencies of the situation. In the course of human affairs, there arise difficulties which can only be comprehended, or surmounted by the strongest native power of intellect, strengthened by the most assiduous exercise, and enriched with the most extended knowledge—and even these are sometimes found inadequate to the exigency. The first want of society is—leaders. Who shall estimate the value to Athens, of Solon, Aristides, Themistocles, Cymon, or Pericles? If society have not leaders qualified as I have said, they will have those who will lead them blindly to their loss and ruin. Men of no great native power of intellect, and of imperfect and superficial knowledge, are the most mischievous of all—none are so busy, meddling, confident, presumptuous, and intolerant. The whole of society receives the benefit of the exertions of a mind of extraordinary endowments. Of all communities, one of the least desirable, would be that in which imperfect, superficial, half-education should be universal. The first care of a state which regards its own safety, prosperity and honor, should be, that when minds of extraordinary power appear, to whatever department of knowledge, art or science, their exertions may be directed, the means should be provided of their most consummate cultivation. Next to this, that education should be as widely extended as possible.

Oidium has been cast upon our legislation, on account of its forbidding the elements of education to be communicated to slaves. But in truth what injury is done to them by this? He who works during the day with his hands, does not read in intervals of leisure for his amusement, or the improvement of his mind—or the exceptions are so very rare, as scarcely to need the being provided for. Of the many slaves whom I have known capable of reading, I have never known one to read any thing but the Bible, and this task they imposed on themselves as matter of duty. Of all methods of religious instruction, however, this, of reading for themselves, would be the most inefficient—their comprehen-

sion is defective, and the employment is to them an unusual and laborious one. There are but very few who do not enjoy other means, more effectual for religious instruction. There is no place of worship opened for the white population, from which they are excluded. I believe it a mistake, to say that the instructions there given are not adapted to their comprehension, or calculated to improve them. If they are given as they ought to be—practically, and without pretension, and are such as are generally intelligible to the free part of the audience, comprehending all grades of intellectual capacity, they will not be unintelligible to slaves. I doubt whether this be not better than instruction, addressed specially to themselves—which they might look upon as a device of the master's, to make them more obedient and profitable to himself. Their minds, generally, shew a strong religious tendency, and they are fond of assuming the office of religious instructors to each other; and perhaps their religious notions are not much more extravagant than those of a large portion of the free population of our country. I am not sure that there is a much smaller proportion of them, than of the free population, who make some sort of religious profession. It is certainly the master's *interest* that they should have proper religious sentiments, and if he fails in his duty towards them, we may be sure that the consequences will be visited not upon them, but upon him.

If there were any chance of their elevating their rank and condition in society, it might be matter of hardship, that they should be debarred those rudiments of knowledge which open the way to further attainments. But this they know cannot be, and that further attainments would be useless to them. Of the evil of this, I shall speak hereafter. A knowledge of reading, writing, and the elements of arithmetic, is convenient and important to the free laborer, who is the transactor of his own affairs, and the guardian of his own interests—but of what use would they be to the slave? These alone do not elevate the mind or character, if such elevation were desirable.

If we estimate their morals according to that which should be the standard of a free man's morality, then I grant they are degraded in morals—though by no means to the extent which those who are unacquainted with the institution seem to suppose. We justly suppose, that the Creator will require of man, the performance of the duties of the station in which his providence has placed him, and the cultivation of the virtues which are adapted to their performance; that he will make allowance for all imperfection of knowledge, and the absence of the usual helps and motives which lead to self-correction and improvement. The degradation of morals relates principally to loose notions of honesty, leading to petty thefts; to falsehood and to licentious intercourse between the sexes. Though with respect even to these, I protest against the opinion which seems to be elsewhere entertained, that they are universal, or that slaves, in respect to them, might not well bear a comparison with the lowest laborious class of other countries. But certainly there is much dishonesty leading to petty thefts. It leads, however, to nothing else. They have no contracts or dealings which might be a temptation to fraud, nor do I know that their characters have any tendency that way. They are restrained by the constant, vigilant, and interested superintendence

which is exercised over them, from the commission of offences of greater magnitude—even if they were disposed to them—which I am satisfied they are not. Nothing is so rarely heard of, as an atrocious crime committed by a slave; especially since they have worn off the savage character which their progenitors brought with them from Africa. Their offences are confined to petty depredations, principally for the gratification of their appetites, and these for reasons already given, are chiefly confined to the property of their owner, which is most exposed to them. They could make no use of a considerable booty, if they should obtain it. It is plain that this is a less evil to society in its consequences and example, than if committed by a freeman, who is master of his own time and actions. With reference to society then, the offence is less in itself—and may we not hope that it is less in the sight of God. A slave has no hope that by a course of integrity, he can materially elevate his condition in society, nor can his offence materially depress it, or affect his means of support, or that of his family. Compared to the freeman, he has no character to establish or to lose. He has not been exercised to self-government, and being without intellectual resources, can less resist the solicitations of appetite. Theft in a freeman is a crime; in a slave, it is a vice. I recollect to have heard it said, in reference to some question of a slave's theft which was agitated in a court, "courts of justice have no more to do with a slave's stealing, than with his lying—that is a matter for the domestic forum." It was truly said—the theft of a slave is no offence against society. Compare all the evils resulting from this, with the enormous amount of vice, crime and depravity, which in an European, or one of our northern cities, disgusts the moral feelings, and render life and property insecure. So with respect to his falsehood. I have never heard or observed, that slaves have any peculiar proclivity to falsehood, unless it be in denying, or concealing their own offences, or those of their fellows. I have never heard of falsehood told by a slave for a malicious purpose. Lies of vanity are sometimes told, as among the weak and ignorant of other conditions. Falsehood is not attributed to an individual charged with an offence before a court of justice, who pleads *not guilty*—and certainly the strong temptation to escape punishment, in the highest degree extenuates, if it does not excuse, falsehood told by a slave. If the object be to screen a fellow slave, the act bears some semblance of fidelity, and perhaps truth could not be told without breach of confidence. I know not how to characterize the falsehood of a slave.

It has often been said by the denouncers of slavery, that marriage does not exist among slaves. It is difficult to understand this, unless wilful falsehood were intended. We know that marriages are contracted; may be, and often are, solemnized with the forms usual among other classes of society, and often faithfully adhered to during life. The law has not provided for making those marriages indissoluble, nor could it do so. If a man abandons his wife, being without property, and being both property themselves, he cannot be required to maintain her. If he abandons his wife, and lives in a state of concubinage with another, the law cannot punish him for bigamy. It may perhaps be meant that the chastity of wives is not protected by

law from the outrages of violence. I answer, as with respect to their lives, that they are protected by manners, and their position. Who ever heard of such outrages being offered? At least as seldom, I will venture to say, as in other communities of different forms of polity. One reason doubtless may be, that often there is do disposition to resist. Another reason also may be, that there is little temptation to such violence, as there is so large a proportion of this class of females who set little value on chastity, and afford easy gratification to the passions of men. It might be supposed, from the representations of some writers, that a slave holding country were one wide stew for the indulgence of unbridled lust. Particular instances of intemperate and shameless debauchery are related, which may perhaps be true, and it is left to be inferred that this is the universal state of manners. Brutes and shameless debauchees there are in every country; we know that if such things are related as general or characteristic, the representation is false. Who would argue from the existence of a Col. Chartres in England, or of some individuals who might, perhaps, be named in other portions of this country, of the horrid dissoluteness of manners occasioned by the want of the institution of slavery. Yet the argument might be urged quite as fairly, and it really seems to me with a little more justice—for there such depravity is attended with much more pernicious consequences. Yet let us not deny or extenuate the truth. It is true that in this respect the morals of this class are very loose, (by no means so universally so as is often supposed,) and that the passions of men of the superior caste, tempt and find gratification in the easy chastity of the females. This is evil, and to be remedied, if we can do so, without the introduction of greater evil. But evil is incident to every condition of society, and as I have said, we have only to consider in which institution it most predominates.

Compare these prostitutes of our country, (if it is not injustice to call them so,) and their condition with those of other countries—the seventy thousand prostitutes of London, or of Paris, or the ten thousand of New York, or our other northern cities. Take the picture given of the first, from the author whom I have before quoted. "The laws and customs of England, conspire to sink this class of English women into a state of vice and misery, below that which necessarily belongs to their condition. Hence, their extreme degradation, their troopers' oaths, their love of gin, their desperate recklessness, and the shortness of their miserable lives."

"English women of this class, or rather girls, for few of them live to be women, die like sheep with the rot; so fast that soon there would be none left, if a fresh supply were not obtained equal to the number of deaths. But a fresh supply is always obtained without the least trouble: seduction easily keeps pace with prostitution or mortality. Those that die, are, like factory children that die, instantly succeeded by new competitors for misery and death." There is no hour of a summer's or a winter's night, in which there may not be found in the streets a ghastly wretch expiring under the double tortures of disease and famine. Though less aggravated in its features, the picture of prostitution in New York or Philadelphia would be of like character.

In such communities, the unmarried woman who becomes a mother, is an outcast from society—and

though sentimentalists lament the hardship of the case, it is justly and necessarily so. She is cut off from the hope of useful and profitable employment, and driven by necessity to further vice. Her misery, and the hopelessness of retrieving, render her desperate, until she sinks into every depth of depravity, and is prepared for every crime that can contaminate and infest society. She has given birth to a human being, who, if it be so unfortunate as to survive its miserable infancy, is commonly educated to a like course of vice, depravity and crime.

Compare with this the female slave under similar circumstances. She is not a less useful member of society than before. If shame be attached to her conduct, it is such shame as would be elsewhere felt for a venial impropriety. She has not impaired her means of support, nor materially impaired her character, or lowered her station in society; she has done no great injury to herself, or any other human being. Her offspring is not a burden, but an acquisition to her owner; his support is provided for, and he is brought up to usefulness; if the fruit of intercourse with a freeman, his condition is, perhaps, raised somewhat above that of his mother. Under these circumstances, with imperfect knowledge, tempted by the strongest of human passions—unrestrained by the motives which operate to restrain, but are so often found insufficient to restrain the conduct of females elsewhere, can it be matter of surprise that she should so often yield to the temptation? Is not the evil less in itself, and in reference to society—much less in the sight of God and man? As was said of theft—the want of chastity, which among females of other countries, is sometimes vice, sometimes crime—among the free of our own, much more aggravated; among slaves, hardly deserves a harsher term than that of weakness. I have heard of complaint made by a free prostitute, of the greater countenance and indulgence shown by society towards colored persons of her profession, (always regarded as of an inferior and servile class, though individually free,) than to those of her own complexion. The former readily obtain employment; are even admitted into families, and treated with some degree of kindness and familiarity, while any approach to intercourse with the latter is shunned as contamination. The distinction is habitually made, and it is founded on the unerring instinct of nature. The colored prostitute is, in fact, a far less contaminated and depraved being. Still many, in spite of temptation, do preserve a perfectly virtuous conduct, and I imagine it hardly ever entered into the mind of one of these, that she was likely to be forced from it by authority or violence.

It may be asked, if we have no prostitutes from the free class of society among ourselves. I answer in no assignable proportion. With general truth, it might be said, that there are none. When such a case occurs, it is among the rare evils of society. And apart from other and better reasons, which we believe to exist, it is plain that it must be so, from the comparative absence of temptation. Our brothels, comparatively very few—and these should not be permitted to exist at all—are filled, for the most part, by importation from the cities of our confederate states, where slavery does not exist. In return for the benefits which they receive from our slavery, along with tariffs, libels, opinions, moral, religious, or political—they furnish us also with a supply of thieves and prostitutes. Never, but in a single instance, have I heard of an imputation on the general

purity of manners, among the free females of the slave holding states. Such an imputation, however, and made in coarse terms, we have never heard here—*here* where divorce was never known—where no court was ever polluted by an action for criminal conversation with a wife—where it is related rather as matter of tradition, not unmingled with wonder, that a Carolinian woman of education and family, proved false to her conjugal faith—an imputation deserving only of such reply as self-respect would forbid us to give, if respect for the author of it did not. And can it be doubted, that this purity is caused by, and is a compensation for the evils resulting from the existence of an enslaved class of more relaxed morals?

It is mostly the warm passions of youth, which give rise to licentious intercourse. But I do not hesitate to say, that the intercourse which takes place with enslaved females, is less depraving in its effects, than when it is carried on with females of their own caste. In the first place, as like attracts like, that which is unlike repels; and though the strength of passion be sufficient to overcome the repulsion, still the attraction is less. He feels that he is connecting himself with one of an inferior and servile caste, and that there is something of degradation in the act. The intercourse is generally casual; he does not make her habitually an associate, and is less likely to receive any taint from her habits and manners. He is less liable to those extraordinary fascinations, with which worthless women sometimes entangle their victims, to the utter destruction of all principle, worth and vigor of character. The female of his own race offers greater allurements. The haunts of vice often present a shew of elegance, and various luxury tempts the senses. They are made an habitual resort, and their inmates associate, till the general character receives a taint from the corrupted atmosphere. Not only the practice is licentious, but the understanding is sophisticated; the moral feelings are bewildered, and the boundaries of virtue and vice confused. Where such licentiousness very extensively prevails, society is rotten to the heart.

But is it a small compensation for the evils attending the relation of the sexes among the enslaved class, that they have universally the opportunity of indulging the first instinct of nature, by forming matrimonial connexions? What painful restraint—what constant effort to struggle against the strongest impulses, are habitually practised elsewhere, and by other classes? And they must be practised, unless greater evils would be encountered. On the one side, all the evils of vice, with the miseries to which it leads—on the other, a marriage cursed and made hateful by want, the sufferings of children, and agonizing apprehensions concerning their future fate. Is it a small good, that the slave is free from all this? He knows that his own subsistence is secure, and that his children will be in as good a condition as himself. To a refined and intellectual nature, it may not be difficult to practise the restraint of which I have spoken. But the reasoning from such to the great mass of mankind, is most fallacious. To these, the supply of their natural and physical wants, and the indulgence of the natural domestic affections, must, for the most part, afford the greatest good of which they are capable. To the evils which sometimes attend their matrimonial connexions, arising from their looser morality, slaves, for obvious reasons, are comparatively insensible. I am no apologist of vice, nor would I extenuate the conduct of the profligate.

gate and unfeeling, who would violate the sanctity of even these engagements, and occasion the pain which such violations no doubt do often inflict. Yet such is the truth and we cannot make it otherwise. We know, that a woman's having been before a mother, is very seldom indeed an objection to her being made a wife. I know perfectly well how this will be regarded by a class of reasoners or declaimers, as imposing a character of deeper horror on the whole system; but still, I will say, that if they are to be exposed to the evil, it is mercy that the sensibility to it should be blunted. Is it no compensation also for the vices incident to slavery, that they are, to a great degree, secured against the temptation to greater crimes and more atrocious vices, and the miseries which attend them; against their own disposition to indolence, and the profligacy which is its common result?

But if they are subject to the vices, they have also the virtues of slaves. Fidelity—often proof against all temptation, even death itself; an eminently cheerful and social temper; what the Bible imposes as a duty, but which might seem an equivocal virtue in the code of modern morality—submission to constituted authority, and a disposition to be attached to, as well as to respect those whom they are taught to regard as superiors. They may have all the knowledge which will make them useful in the station in which God has been pleased to place them, and may cultivate the virtues which will render them acceptable to him. But what has the slave of any country to do with heroic virtues, liberal knowledge, or elegant accomplishments? It is for the master; arising out of his situation—imposed on him as duty—dangerous and disgraceful if neglected—to compensate for this, by his own more assiduous cultivation of the more generous virtues, and liberal attainments.

It has been supposed one of the great evils of slavery, that it affords the slave no opportunity of raising himself to a higher rank in society, and that he has, therefore, no inducement to meritorious exertion, or the cultivation of his faculties. The indolence and carelessness of the slave, and the less productive quality of his labor, are traced to the want of such excitement. The first compensation for this disadvantage, is his security. If he can rise no higher, he is just in the same degree secured against the chances of falling lower. It has been sometimes made a question whether it were better for man to be freed from the perturbations of hope and fear, or to be exposed to their vicissitudes. But I suppose there could be little question with respect to a situation, in which the fears must greatly predominate over the hopes. And such, I apprehend, to be the condition of the laboring poor in countries where slavery does not exist. If not exposed to present suffering, there is continual apprehension for the future—for themselves—for their children—of sickness and want, if not of actual starvation. They expect to improve their circumstances! Would any person of ordinary candor, say that there is one in a hundred of them, who does not well know, that with all the exertion he can make, it is out of his power materially to improve his circumstances? I speak not so much of menial servants, who are generally of a superior class, as of the agricultural and manufacturing laborers. They labor with no such view. It is the instinctive struggle to preserve existence—and when the superior efficiency of their labor over that of our slaves is pointed out, as being animated by a freeman's hopes, might it not well be

replied—it is because they labor under a sterner compulsion. The laws interpose no obstacle to their raising their condition in society. 'Tis a great boon; but as to the great mass, they know that they never will be able to raise it—and it should seem not very important in effect, whether it be the interdict of law, or imposed by the circumstances of the society. One in a thousand is successful. But does his success compensate for the sufferings of the many who are tantalized, baffled, and tortured in vain attempts to attain a like result? If the individual be conscious of intellectual power, the suffering is greater. Even where success is apparently attained, he sometimes gains it but to die; or with all capacity to enjoy it, exhausted—worn out in the struggle with fortune. If it be true that the African is an inferior variety of the human race, of less elevated character, and more limited intellect, is it not desirable that the inferior laboring class should be made up of such, who will conform to their condition without painful aspirations, and vain struggles?

The slave is certainly liable to be sold. But, perhaps, it may be questioned, whether this is a greater evil than the liability of the laborer, in fully peopled countries, to be dismissed by his employer, with the uncertainty of being able to obtain employment, or the means of subsistence elsewhere. With us, the employer cannot dismiss his laborer without providing him with another employer. His means of subsistence are secure, and this is a compensation for much. He is also liable to be separated from wife or child—though not more frequently, that I am aware of, than the exigency of their condition compels the separation of families among the laboring poor elsewhere; but from native character and temperament, the separation is much less severely felt. And it is one of the compensations, that he may sustain these relations without suffering a still severer penalty for the indulgence.

The love of liberty is a noble passion—to have the free, uncontrolled disposition of ourselves, our words and actions. But alas! it is one in which we know that a large portion of the human race can never be gratified. It is mockery, to say that the laborer anywhere has such disposition of himself; though there may be an approach to it in some peculiar, and those, perhaps, not the most desirable, states of society. But unless he be properly disciplined and prepared for its enjoyment, it is the most fatal boon that could be conferred—fatal to himself and others. If slaves have less freedom of action than other laborers, which I by no means admit, they are saved in a great degree from the responsibility of self-government, and the evils springing from their own perverse wills. Those who have looked most closely into life, and know how great a portion of human misery is derived from these sources—the undecided and wavering purpose, producing ineffectual exertion, or indolence with its thousand attendant evils—the wayward conduct—intemperance or profligacy—will most appreciate this benefit. The line of a slave's duty is marked out with precision, and he has no choice but to follow it. He is saved the double difficulty, first of determining the proper course for himself, and then of summoning up the energy which will sustain him in pursuing it.

If some superior power should impose on the laboring poor of any other country this, as their unalterable condition—you shall be saved from the torturing anxiety concerning your own future support, and that of your children, which now pursues you through life,

and haunts you in death—you shall be under the necessity of regular and healthful, though not excessive labor—in return, you shall have the ample supply of your natural wants—you may follow the instinct of nature in becoming parents, without apprehending that this supply will fail yourselves or your children—you shall be supported and relieved in sickness, and in old age wear out the remains of existence among familiar scenes and accustomed associates, without being driven to beg, or to resort to the hard and miserable charity of a work house—you shall of necessity be temperate, and shall have neither the temptation nor opportunity to commit great crimes, or practice the more destructive vices—how inappreciable would the boon be thought! And is not this a very near approach to the condition of our slaves? The evils of their situation they but lightly feel, and would hardly feel at all, if they were not sedulously instructed into sensibility. Certain it is, that if their fate were at the absolute disposal of a council of the most enlightened philanthropists in christendom, with unlimited resources, they could place them in no situation so favorable to themselves, as that which they at present occupy. But whatever good there may be, or whatever mitigation of evil, it is worse than valueless, because it is the result of *slavery*.

I am aware, that however often answered, it is likely to be repeated again and again—how can that institution be tolerable, by which a large class of society is cut off from the hope of improvement in knowledge; to whom blows are not degrading; theft no more than a fault; falsehood and the want of chastity almost venial, and in which a husband or parent looks with comparative indifference, on that which, to a freeman, would be the dishonor of a wife or child?

But why not, if it produces the greatest aggregate of good? Sin and ignorance are only evils because they lead to misery. It is not our institution, but the institution of nature, that in the progress of society a portion of it should be exposed to want, and the misery which it brings, and therefore involved in ignorance, vice, and depravity. In anticipating some of the good, we also anticipate a portion of the evil of civilization. But we have it in a mitigated form. The want and the misery are unknown; the ignorance is less a misfortune, because the being is not the guardian of himself, and partly on account of that involuntary ignorance, the vice is less vice—less hurtful to man, and less displeasing to God.

There is something in this word *slavery* which seems to partake of the qualities of the insane root, and distempers the minds of men. That which would be true in relation to one predicament, they misapply to another, to which it has no application at all. Some of the virtues of a freeman would be the vices of slaves. To submit to a blow, would be degrading to a freeman, because he is the protector of himself. It is not degrading to a slave—neither is it to a priest or a woman. And is it a misfortune that it should be so? The freeman of other countries is compelled to submit to indignities hardly more endurable than blows—indignities to make the sensitive feelings shrink, and the proud heart swell; and this very name of freeman gives them double rancor. If when a man is born in Europe, it were certainly foreseen that he was destined to a life of painful labor—to obscurity, contempt and privation—would it not be mercy that he should be reared in ignorance and apathy, and trained to the endurance of the evils he must encounter? It is not certainly foreseen as to any individual, but it is foreseen as to the

great mass of those born of the laboring poor; and it is for the mass, not for the exception, that the institutions of society are to provide. Is it not better that the character and intellect of the individual should be suited to the station which he is to occupy? Would you do a benefit to the horse or the ox, by giving him a cultivated understanding or fine feelings? So far as the mere laborer has the pride, the knowledge, or the aspirations of a freeman, he is unfitted for his situation, and must doubly feel its infelicity. If there are sordid, servile, and laborious offices to be performed, is it not better that there should be sordid, servile, and laborious beings to perform them? If there were infallible marks by which individuals of inferior intellect, and inferior character, could be selected at their birth—would not the interests of society be served, and would not some sort of fitness seem to require, that they should be selected for the inferior and servile offices? And if this race be generally marked by such inferiority, is it not fit that they should fill them?

I am well aware that those whose aspirations are after a state of society from which evil shall be banished, and who look in life for that which life will never afford, contemplate that all the offices of life may be performed without contempt or degradation—all be regarded as equally liberal, or equally respected. But theorists cannot control Nature and bend her to their views, and the inequality of which I have before spoken, is deeply founded in Nature. The offices which employ knowledge and intellect, will always be regarded as more liberal than those which only require the labor of the hands. When there is competition for employment, he who gives it bestows a favor, and it will be so received. He will assume superiority from the power of dismissing his laborers, and from fear of this, the latter will practice deference, often amounting to servility. Such in time will become the established relation between the employer and the employed, the rich and the poor. If want be accompanied with sordidness and squalor, though it be pitied, the pity will be mixed with some degree of contempt. If it lead to misery, and misery to vice, there will be disgust and aversion. What is the essential character of *slavery*, and in what does it differ from the *servitude* of other countries? If I should venture on a definition, I should say that where a man is compelled to labor at the will of another, and to give him much the greater portion of the product of his labor, there *slavery* exists; and it is immaterial by what sort of compulsion the will of the laborer is subdued. It is what no human being would do without some sort of compulsion. He cannot be compelled to labor by blows. No—but what difference does it make, if you can inflict any other sort of torture which will be equally effectual in subduing the will? if you can starve him, or alarm him for the subsistence of himself or his family? And is it not under this compulsion that the *freeman* labors? I do not mean in every particular case, but in the general. Will any one be hardy enough to say that he is at his own disposal, or has the government of himself? True, he may change his employer if he is dissatisfied with his conduct towards him; but this is a privilege he would in the majority of cases gladly abandon, and render the connexion between them indissoluble. There is far less of the interest and attachment in his relation to his employer, which so often exists between the master and the slave, and mitigates the condition of the latter. An intelligent English traveller has characterized as the most miserable and degraded of all

being, "a masterless slave." And is not the condition of the laboring poor of other countries too often that of masterless slaves? Take the following description of a *free* laborer, no doubt highly colored, quoted by the author to whom I have before referred.

"What is that defective being, with callous legs and stooping shoulders, weak in body and mind, inert, pusillanimous and stupid, whose premature wrinkles and furtive glance, tell of misery and degradation? That is an English peasant or pauper, for the words are synonymous. His sire was a pauper, and his mother's milk wanted nourishment. From infancy his food has been bad, as well as insufficient; and he now feels the pangs of unsatisfied hunger nearly whenever he is awake. But half clothed, and never supplied with more warmth than suffices to cook his scanty meals, cold and wet come to him, and stay by him with the weather. He is married, of course; for to this he would have been driven by the poor laws, even if he had been, as he never was, sufficiently comfortable and prudent to dread the burden of a family. But though instinct, and the overseer have given him a wife, he has not tasted the highest joys of husband and father. His partner and his little ones being like himself, often hungry, seldom warm, sometimes sick without aid, and always sorrowful without hope, are greedy, selfish, and vexing; so, to use his own expression, he hates the sight of them, and resorts to his hovel, only because a hedge affords less shelter from the wind and rain. Compelled by parish law to support his family, which means to join them in consuming an allowance from the parish, he frequently conspires with his wife to get that allowance increased, or prevent its being diminished. This brings beggary, trickery, and quarrelling, and ends in settled craft. Though he have the inclination, he wants the courage to become, like more energetic men of his class, a poacher or smuggler on a large scale, but he pilfers occasionally, and teaches his children to lie and steal. His subdued and slavish manner towards his great neighbors, shews that they treat him with suspicion and harshness. Consequently he at once dreads and hates them; but he will never harm them by violent means. Too degraded to be desperate, he is only thoroughly depraved. His miserable career will be short; rheumatism and asthma are conducting him to the work-house, where he will breathe his last without one pleasant recollection, and so make room for another wretch, who may live and die in the same way." And this description, or some other, not much less revolting, is applied to "the bulk of the people, the great body of the people." Take the following description of the condition of childhood, which has justly been called eloquent.*

"The children of the very poor have no young times; it makes the very heart bleed, to overhear the casual street talk between a poor woman and her little girl, a woman of the better sort of poor, in a condition rather above the squalid beings we have been contemplating. It is not of toys, of nursery books, of summer holidays, (fitting that age,) of the promised sight or play; of praised sufficiency at school. It is of mangling and clear starching; of the price of coals, or of potatoes. The questions of the child, that should be the very outpourings of curiosity in idleness, are marked with fore-cast and melancholy providence. It has come to be a woman, before it was a child. It has learnt to go to market; it chaffers, it haggles, it envies, it murmurs;

it is knowing, acute, sharpened; it never prattles." Imagine such a description applied to the children of negro slaves, the most vacant of human beings, whose life is a holiday.

And this people, to whom these horrors are familiar, are those who fill the world with clamor, concerning the injustice and cruelty of slavery. I speak in no invidious spirit. Neither the laws nor the government of England are to be reproached with the evils which are inseparable from the state of their society—as little, undoubtedly, are we to be reproached with the existence of our slavery. Including the whole of the United States—and for reasons already given, the whole ought to be included, as receiving in no unequal degree the benefit—may we not say justly that we have less slavery, and more mitigated slavery, than any other country in the civilized world?

That they are called free, undoubtedly aggravates the sufferings of the slaves of other regions. They see the enormous inequality which exists, and feel their own misery, and can hardly conceive otherwise, than that there is some injustice in the institutions of society to occasion these. They regard the apparently more fortunate class as oppressors, and it adds bitterness, that they should be of the same name and race. They feel indignity more acutely, and more of discontent and evil passion is excited; they feel that it is mockery that calls them free. Men do not so much hate and envy those who are separated from them by a wide distance, and some apparently impassable barrier, as those who approach nearer to their own condition, and with whom they habitually bring themselves into comparison. The slave with us is not tantalized with the name of freedom, to which his whole condition gives the lie, and would do so if he were emancipated tomorrow. The African slave sees that nature herself has marked him as a separate—and if left to himself, I have no doubt he would feel it to be an inferior—race, and interposed a barrier almost insuperable to his becoming a member of the same society, standing on the same footing of right and privilege with his master.

That the African negro is an inferior variety of the human race, is, I think, now generally admitted, and his distinguishing characteristics are such as peculiarly mark him out for the situation which he occupies among us. And these are no less marked in their original country, than as we have daily occasion to observe them. The most remarkable is their indifference to personal liberty. In this they have followed their instincts since we have any knowledge of their continent, by enslaving each other; but contrary to the experience of every other race, the possession of slaves has had no material effect in raising the character, and promoting the civilization of the master. Another trait is the want of domestic affections, and insensibility to the ties of kindred. In the travels of the Landers, after speaking of a single exception, in the person of a woman who betrayed some transient emotion in passing by the country from which she had been torn as a slave, the authors add: "that Africans, generally speaking, betray the most perfect indifference on losing their liberty, and being deprived of their relatives, while love of country is equally a stranger to their breasts, as social tenderness or domestic affection." "Marriage is celebrated by the nations as unconcernedly as possible; a man thinks as little of taking a wife, as of cutting an ear of corn—affection is altogether out of the question." They are, however, very submissive to auto-

ity, and seem to entertain great reverence for chiefs, priests, and masters. No greater indignity can be offered an individual, than to throw opprobrium on his parents. On this point of their character, I think I have remarked, that, contrary to the instinct of nature in other races, they entertain less regard for children than for parents, to whose authority they have been accustomed to submit. Their character is thus summed up by the travellers quoted: "The few opportunities we have had of studying their characters, induce us to believe that they are a simple, honest, inoffensive, but weak, timid, and cowardly race. They seem to have no social tenderness, very few of those amiable private virtues which could win our affections, and none of those public qualities that claim respect or command admiration. The love of country is not strong enough in their bosoms to incite them to defend it against a despicable foe; and of the active energy, noble sentiments, and contempt of danger which distinguishes the North American tribes and other savages, no traces are to be found among this slothful people. Regardless of the past, as reckless of the future, the present alone influences their actions. In this respect, they approach nearer to the nature of the brute creation, than perhaps any other people on the face of the globe." Let me ask if this people do not furnish the very material out of which slaves ought to be made, and whether it be not an improving of their condition to make them the slaves of civilized masters? There is a variety in the character of the tribes. Some are brutally and savagely ferocious and bloody, whom it would be merely to enslave. From the travellers' account, it seems not unlikely that the negro race is tending to extermination, being daily encroached on, and overrun by the superior Arab race. It may be, that when they shall have been lost from their native seats, they may be found numerous, and in no unhappy condition, on the continent to which they have been transplanted.

The opinion which connects form and features with character and intellectual power, is one so deeply impressed on the human mind, that perhaps there is scarcely any man who does not almost daily act upon it, and in some measure verify its truth. Yet in spite of this intimation of nature, and though the anatomist and physiologist may tell them that the races differ in every bone and muscle, and in the proportion of brain and nerves, yet there are some, who with a most bigoted and fanatical determination to free themselves from what they have prejudged to be prejudice, will still maintain that this physiognomy, evidently tending to that of the brute when compared to that of the Caucasian race, may be enlightened by as much thought, and animated by as lofty sentiment. We who have the best opportunity of judging, are pronounced to be incompetent to do so, and to be blinded by our interest and prejudices—often by those who have had no means of judging—and we are to be taught to distrust or disbelieve that which we daily observe, and familiarly know, on such authority. Our prejudices are spoken of. But the truth is, that, until very lately, since circumstances have compelled us to think for ourselves, we took our opinions on this subject, as on every other, ready formed from the country of our origin. And so deeply rooted were they, that we adhered to them, as most men will do to deeply rooted opinions, even against the evidence of our own observation, and our own

senses. If the inferiority exists, it is attributed to the apathy and degradation produced by slavery. Though of the hundreds of thousands scattered over other countries, where the laws impose no liability upon them, none has given evidence of an approach to even mediocrity of intellectual excellence; this too is attributed to the slavery of a portion of their race. They are regarded as a servile caste, and degraded by opinion, and thus every generous effort is repressed. Yet though this should be the general effect, this very estimation is calculated to produce the contrary effect in particular instances. It is observed by Bacon, with respect to deformed persons and eunuchs, that though in general there is something of perversity in their character, the disadvantage often leads to extraordinary displays of virtue and excellence. "Whoever hath any thing fixed in his person that doth induce contempt, hath also a perpetual spur in himself, to rescue and deliver himself from scorn." So it would be with them, if they were capable of European aspirations—genius, if they possessed it, would be doubly fired with noble rage to rescue itself from this scorn. Of course, I do not mean to say that there may not be found among them some of superior capacity to many white persons; but that great intellectual powers are, perhaps, never found among them, and that in general their capacity is very limited, and their feelings animal and coarse—fitting them peculiarly to discharge the lower, and merely mechanical offices of society.

And why should it not be so? We have among domestic animals, infinite varieties, distinguished by various degrees of sagacity, courage, strength, swiftness, and other qualities. And it may be observed, that this is no objection to their being derived from a common origin, which we suppose them to have had. Yet these accidental qualities, as they may be termed, however acquired in the first instance, we know that they transmit unimpaired to their posterity for an indefinite succession of generations. It is most important that these varieties should be preserved, and that each should be applied to the purposes for which it is best adapted. No philo-zoist, I believe, has suggested it as desirable that these varieties should be melted down into one equal, undistinguished race of curs or road horses.

Slavery, as it is said in an eloquent article published in a southern periodical work,⁴ to which I am indebted for other ideas, "has done more to elevate a degraded race in the scale of humanity; to tame the savage; to civilize the barbarous; to soften the ferocious; to enlighten the ignorant, and to spread the blessings of christianity among the heathen, than all the missionaries that philanthropy and religion have ever sent forth." Yet unquestionable as this is, and though human ingenuity and thought may be tasked in vain to devise any other means by which these blessings could have been conferred, yet a sort of sensibility which would be only mawkish and contemptible, if it were not mischievous, affects still to weep over the wrongs of "injured Africa." Can there be a doubt of the immense benefit which has been conferred on the race, by transplanting them from their native, dark, and barbarous regions, to the American continent and islands? There, three-fourths of the race are in a state of the most deplorable

⁴ Southern Literary Messenger, for January, 1835. Note to Blackstone's Commentaries.

personal slavery. And those who are not, are in a scarcely less deplorable condition of political slavery, to barbarous chiefs—who value neither life nor any other human right—or enthralled by priests to the most abject and atrocious superstitions. Take the following testimony of one of the few disinterested observers, who has had an opportunity of observing them in both situations.* “The wild savage is the child of passion, unaided by one ray of religion or morality to direct his course; in consequence of which his existence is stained with every crime that can debase human nature to a level with the brute creation. Who can say that the slaves in our colonies are such? Are they not, by comparison with their still savage brethren, enlightened beings? Is not the West Indian negro, therefore, greatly indebted to his master for making him what he is—for having raised him from the state of debasement in which he was born, and placed him in a scale of civilized society? How can he repay him? He is possessed of nothing—the only return in his power is his servitude. The man who has seen the wild African, roaming in his native woods, and the well fed, happy looking negro of the West Indies, may, perhaps, be able to judge of their comparative happiness: the former I strongly suspect would be glad to change his state of boasted freedom, starvation and disease, to become the slave of sinners, and the commiseration of saints.” It was a useful and beneficent work, approaching the heroic, to tame the wild horse, and subdue him to the use of man; how much more to tame the nobler animal that is capable of reason, and subdue him to usefulness?

We believe that the tendency of slavery is to elevate the character of the master. No doubt the character—especially of youth—has sometimes received a taint and premature knowledge of vice, from the contact and association with ignorant and servile beings of gross manners and morals. Yet still we believe that the entire tendency is to inspire disgust and aversion towards their peculiar vices. It was not without a knowledge of nature, that the Spartans exhibited the vices of slaves by way of negative example to their children. We flatter ourselves that the view of this degradation, mitigated as it is, has the effect of making probity more strict, the pride of character more high, the sense of honor more strong, than is commonly found where this institution does not exist. Whatever may be the prevailing faults or vices of the masters of slaves, they have not commonly been understood to be those of dishonesty, cowardice, meanness or falsehood. And so most unquestionably it ought to be. Our institutions would indeed be intolerable in the sight of God and man, if, condemning one portion of society to hopeless ignorance and comparative degradation, they should make no atonement by elevating the other class by higher virtues, and more liberal attainments—if, besides degraded slaves, there should be ignorant, ignoble, and degraded freemen. There is a broad and well marked line, beyond which no slavish vice should be regarded with the least toleration or allowance. One class is cut off from all interest in the State—that abstraction so potent to the feelings of a generous nature. The other must make compensation by increased assiduity and devotion to its honor and welfare. The love of

wealth—so laudable when kept within proper limits, so base and mischievous when it exceeds them—so infectious in its example—an infection to which I fear we have been too much exposed—should be pursued by no arts in any degree equivocal, or at any risk of injustice to others. So surely as there is a just and wise governor of the universe, who punishes the sins of nations and communities, as well as of individuals, so surely shall we suffer punishment, if we are indifferent to that moral and intellectual cultivation of which the means are furnished to us, and to which we are called and incited by our situation.

I would to Heaven I could express, as I feel, the conviction how necessary this cultivation is, not only to our prosperity and consideration, but to our safety and very existence. We, the slave holding States, are in a hopeless minority in our own confederated republic—to say nothing of the great confederacy of civilized States. It is admitted, I believe, not only by slave holders, but by others, that we have sent to our common councils more than our due share of talent, high character and eloquence. Yet in spite of all these most strenuously exerted, measures have been sometimes adopted which we believed to be dangerous and injurious to us, and threatening to be fatal. What would be our situation, if, instead of these, we were only represented by ignorant and grovelling men, incapable of raising their views beyond a job or petty office, and incapable of commanding hearing or consideration? May I be permitted to advert—by no means invidiously—to the late contest carried on by South Carolina against federal authority, and so happily terminated by the moderation which prevailed in our public councils? I have often reflected, what one circumstance, more than any other, contributed to the successful issue of a contest, apparently so hopeless, in which one weak and divided State was arrayed against the whole force of the confederacy—unsustained, and uncourtenanced, even by those who had a common interest with her. It seemed to me to be, that we had for leaders an unusual number of men of great intellectual power, co-operating cordially and in good faith, and commanding respect and confidence at home and abroad, by elevated and honorable character. It was from these that we—the followers at home—caught hope and confidence in the gloomiest aspect of our affairs. These, by their eloquence and the largeness of their views, at least shook the faith of the dominant majority in the wisdom and justice of their measures—or the practicability of carrying them into successful effect, and by their bearing and well known character, satisfied them that South Carolina would do all that she had pledged herself to do. Without these, how different might have been the result? And who shall say what at this day would have been the aspect of the now flourishing fields and cities of South Carolina? Or rather without these, it is probable the contest would never have been begun; but that without even the animation of a struggle, we should have sunk silently into a hopeless and degrading subjection. While I have memory—in the extremity of age—in sickness—under all the reverses and calamities of life—I shall have one source of pride and consolation—that of having been associated—according to my humbler position—with the noble spirits who stood prepared to devote themselves for Liberty—the Constitution—

* Journal of an officer employed in the expedition, under the command of Capt. Owen, on the western coast of Africa, 1822.

the Union. May such character and such talent, never be wanting to South Carolina.

I am sure that it is unnecessary to say to an assembly like this, that the conduct of the master to his slave should be distinguished by the utmost humanity. That we should indeed regard them as wards and dependants on our kindness, for whose well being in every way we are deeply responsible. This is no less the dictate of wisdom and just policy, than of right feeling. It is wise with respect to the services to be expected from them. I have never heard of an owner whose conduct in their management was distinguished by undue severity, whose slaves were not in a great degree worthless to him. A cheerful and kindly demeanor, with the expression of interest in themselves and their affairs, is, perhaps, calculated to have a better effect on them, than what might be esteemed more substantial favors and indulgencies. Throughout nature, attachment is the reward of attachment. It is wise too in relation to the civilized world around us, to avoid giving occasion to the odium which is so industriously excited against ourselves and our institutions. For this reason, public opinion should, if possible, bear even more strongly and indignantly than it does at present, on masters who practise any wanton cruelty on their slaves. The miscreant who is guilty of this, not only violates the law of God and of humanity, but as far as in him lies, by bringing odium upon, endangers the institutions of his country, and the safety of his countrymen. He casts a shade upon the character of every individual of his fellow-citizens, and does every one of them a personal injury. So of him who indulges in any odious excess of intemperate or licentious passion. It is detached instances of this sort, of which the existence is, perhaps, hardly known among ourselves, that, collected with pertinacious and malevolent industry, afford the most formidable weapons to the mischievous zealots, who array them as being characteristic of our general manners and state of society.

I would by no means be understood to intimate, that a vigorous, as well as just government, should not be exercised over slaves. This is part of our duty towards them, no less obligatory than any other duty, and no less necessary towards their well being than to ours. I believe that at least as much injury has been done and suffering inflicted by weak and injudicious indulgence, as by inordinate severity. He whose business is to labor, should be made to labor, and that with due diligence, and should be vigorously restrained from excess or vice. This is no less necessary to his happiness than to his usefulness. The master who neglects this, not only makes his slaves unprofitable to himself, but discontented and wretched—a nuisance to his neighbors and to society.

I have said that the tendency of our institution is to elevate the female character, as well as that of the other sex, and for similar reasons. In other states of society, there is no well defined limit to separate virtue and vice. There are degrees of vice from the most flagrant and odious, to that which scarcely incurs the censure of society. Many individuals occupy an unequivocal position; and as society becomes accustomed to this, there will be a less peremptory requirement of purity in female manners and conduct; and often the whole of the society will be in a tainted and uncertain

condition with respect to female virtue. Here, there is that certain and marked line, above which there is no toleration or allowance for any approach to license of manners or conduct, and she who falls below it, will fall far below even the slave. How many will incur this penalty?

And permit me to say that this elevation of the female character is no less important and essential to us, than the moral and intellectual cultivation of the other sex. It would indeed be intolerable, if, when one class of society is necessarily degraded in this respect, no compensation were made by the superior elevation and purity of the other. Not only essential purity of conduct, but the utmost purity of manners, and I will add, though it may incur the formidable charge of affectation or prudery,—a greater severity of decorum than is required elsewhere, is necessary among us. Always should be strenuously resisted the attempts which have been sometimes made to introduce among us the freedom of foreign or European, and especially of continental manners. This freedom, the remotest in the world from that which sometimes springs from simplicity of manners, is calculated and commonly intended to confound the outward distinctions of virtue and vice. It is to prepare the way for licentiousness—to produce this effect—that if those who are clothed with the outward color and garb of vice, may be well received by society, those who are actually guilty may hope to be so too. It may be said, that there is often perfect purity where there is very great freedom of manners. And, I have no doubt, this may be true in particular instances, but it is never true of any society in which this is the general state of manners. What guards can there be to purity, when every thing that *may possibly* be done innocently, is habitually practised; when there can be no impropriety which is not vice? And what must be the depth of the depravity when there is a departure from that which they admit as principle? Besides, things which may perhaps be practised innocently where they are familiar, produce a moral dilaceration in the course of their being introduced where they are new. Let us say, we will not have the manners of South Carolina changed.

I have before said that free labor is cheaper than the labor of slaves, and so far as it is so, the condition of the free laborer is worse. But I think President Dew has sufficiently shown that this is only true of northern countries. It is matter of familiar remark that the tendency of warm climates is to relax the human constitution and indispose to labor. The earth yields abundantly—in some regions almost spontaneously—under the influence of the sun, and the means of supporting life are obtained with but slight exertion: and men will use no greater exertion than is necessary to the purpose. This very luxuriance of vegetation, where no other cause concurs, renders the air less salubrious, and even when positive malady does not exist, the health is habitually impaired. Indolence renders the constitution more liable to these effects of the atmosphere, and these again aggravate the indolence. Nothing but the coercion of slavery can overcome the repugnance to labor under these circumstances, and by subduing the soil, improve and render wholesome the climate.

It is worthy of remark that there does not now exist on the face of the earth, a people in a tropical climate, or

one approaching to it, where slavery does not exist, that is in a state of high civilization, or exhibits the energies which mark the progress towards it. Mexico and the South American republics,* starting on their new career of independence, and having gone through a farce of abolishing slavery, are rapidly degenerating, even from semi-barbarism. The only portion of the South American continent which seems to be making any favorable progress, in spite of a weak and arbitrary civil government, is Brazil, in which slavery has been retained. Cuba, of the same race with the continental republics, is daily and rapidly advancing in industry and civilization; and this is owing exclusively to her slaves. St. Domingo is struck out of the map of civilized existence, and the British West Indies will shortly be so. On the other continent, Spain and Portugal are degenerate, and their rapid progress is downward. Their southern coast is infested by disease, arising from causes which industry might readily overcome, but that industry they will never exert. Greece is still barbarous and scantily peopled. The work of an English physician, distinguished by strong sense and power of observation,† gives a most affecting picture of the condition of Italy—especially south of the Appennines. With the decay of industry, the climate has degenerated towards the condition from which it was first rescued by the labor of slaves. There is poison in every man's veins, affecting the very springs of life, dulling or extinguishing, with the energies of the body, all energy of mind, and often exhibiting itself in the most appalling forms of disease. From year to year the pestilential atmosphere creeps forward, narrowing the circles within which it is possible to sustain human life. With disease and misery, industry still more rapidly decays, and if the process goes on, it seems that Italy too will soon be ready for another experiment in colonization.

Yet once it was not so, when Italy was possessed by the masters of slaves; when Rome contained her millions, and Italy was a garden; when their iron energies of body corresponded with the energies of mind which made them conquerors in every climate and on every

soil; rolled the tide of conquest, not as in later times, from the south to the north; extended their laws and their civilization, and created them lords of the earth.

"What confux leaving forth or entering in;
 Prætors, pro-consuls to their provinces,
 Hastening, or on return in robes of state.
 Lictors and rods, the ensigns of their power,
 Legions and cohorts, turms of horse and wings:
 Or embassies from regions far remote,
 In various habits, on the Appian road,
 Or on th' Emilian; some from farthest south,
 Syene, and where the shadow both way falls,
 Meroë, Nilotic isle, and more to West,
 The realms of Bacchus to the Blackmoor sea;
 From th' Asian kings, and Parthian among these;
 From India and the golden Chersonese,
 And utmost Indian isle, Taprobane,
 Dusky faces, with white silken turbans wreathed;
 From Gallia, Gades and the British West;
 Germans, and Seythians, and Sarmatians, North
 Beyond Danubius to the Tauric Pool!
 All nations now to Rome obedience pay."

Such was and such is the picture of Italy. Greece presents a contrast not less striking. What is the cause of the great change? Many causes, no doubt, have occurred; but though

"War, famine, pestilence, and flood and fire
 Have dealt upon the seven-hilled city's pride,"

I will venture to say that nothing has dealt upon it more heavily than the loss of domestic slavery. Is not this evident? If they had slaves, with an energetic civil government, would the deadly miasma be permitted to overspread the Campagna and invade Rome herself? Would not the soil be cultivated, and the wastes reclaimed? A late traveller* mentions a canal, cut for miles through rock and mountain, for the purpose of carrying off the waters of the lake of Celano, on which thirty thousand Roman slaves were employed for eleven years, and which remains almost perfect to the present day. This, the government of Naples was ten years in repairing with an hundred workmen. The imperishable works of Rome which remain to the present day, were for the most part executed by slaves. How different would be the condition of Naples, if for her wretched *lazzaroni* were substituted negro slaves, employed in rendering productive the plains whose fertility now serves only to infect the air!

To us, on whom this institution is fastened, and who could not shake it off, even if we desired to do so, the great republics of antiquity offer instruction of inestimable value. They teach us that slavery is compatible with the freedom, stability and long duration of civil government, with denseness of population, great power, and the highest civilization. And in what respect does this modern Europe, which claims to give opinions to the world, so far excel them—notwithstanding the immense advantages of the christian religion and the discovery of the art of printing? They are not more free, nor have performed more glorious actions, nor displayed more exalted virtue. In the higher departments of intellect—in all that relates to taste and imagination—they will hardly venture to claim equality. Where they have gone beyond them in the results of mechanical philosophy, or discoveries which contribute

* The author of England and America thus speaks of the Colombian republic:

"During some years, this colony has been an independent state; but the people dispersed over those vast and fertile plains, have almost ceased to cultivate the good land at their disposal; they subsist principally, many of them entirely, on the flesh of wild cattle; they have lost most of the arts of civilized life; not a few of them are in a state of deplorable misery; and if they should continue, as it seems probable they will, to retrograde as at present, the beautiful pampas of Buenos Ayres will soon be fit for another experiment in colonization. Slaves, black or yellow, would have cultivated those plains, would have kept together, would have been made to assist each other; would, by keeping together and assisting each other, have raised a surplus produce exchangeable in distant markets; would have kept their masters together for the sake of markets; would, by combination of labor, have preserved among their masters the arts and habits of civilized life." Yet this writer, the whole practical effect of whose work, whatever he may have thought or intended, is to show the absolute necessity, and immense benefits of slavery, finds it necessary to add, I suppose, in deference to the general sentiment of his countrymen, "that slavery might have done all this, seems not more plain, than that so much good would have been bought too dear, if its price had been slavery." Well may we say that the word makes men mad.

† Johnson on Change of Air.
